From the information received from the different officers I have sent on duty at various times to the points where these iron vessels are building, the same favorable report is made of their efficiency, and the good work that is being put on them; and in six months we will have a fleet of vessels that will keep this river against the fleets of the world, and be enabled to carry the war into the enemy's quarters, where there is anything like an equality in guns. I think too much has been expected of monitors heretofore, and the fact that two or three of them were not able to overcome obstacles formidable enough to keep out a large fleet of three-deckers has, in a measure, weakened the confidence of the public (who generally know little or nothing about such matters) in them.

But the monitors, for harbor defence, are just as valuable as they were on the

day when the first one drove the leviathan "Merrimack" back to her hole, and saved the honor of the nation. I am sure that monitors would have done much better on this river than the old Pook gunboats did, which were built for temporary purposes only, or until monitors could take their places. Earthworks on elevated positions are difficult to silence, it is true, except by a concentrated fire of many guns, and monitors are not well provided in numbers. No vessels have been more successful than the Mississippi gunboats, whenever they have been called on to attack such works. Still they were very deficient in one respect, as they were very vulnerable, suffered a good deal, and proved that in the end the monitor principle, from its invulnerability, was the only thing that could be safely depended on. For this reason I often wished that I had been provided with *one* good monitor, with which, at certain times, I could have accomplished more than with a fleet of such boats as we have here.

A new boat, the Ozark, has just arrived here. As far as her turret is concerned she is all right, but her hull is too high out of water, and she lacks more than three inches of iron on fifteen inches of oak. I have, moreover, noticed that where there is a backing of wood covered with three-inch iron, and *that* iron with wood again, the resistance of the latter will prevent balls of heavy size from entering the iron. In fact, it is hardly indented. This was particularly demonstrated in the passage of the fleet past Vicksburg, when it was necessary to take every precaution to insure success and prevent injury to the steamers. Heavy logs, twenty inches in diameter, were hung perpendicularly on the sides of the vessel, close together, and so secured that no shot could strike the side without passing through the logs. Bales of hay were also packed over the decks and sterns in sufficient thickness (it was supposed) to prevent the passage of any shot. Suffice it to say, the pressed hay was no protection whatever against shot or shell. They passed through four or five bales, and very much endangered the vessels by setting the hay on fire. Wherever the projectiles of the enemy struck the logs, they did no further damage; they would pass through the logs, strike the iron without leaving more than an indentation, and glance off. Many instances of narrow escapes could be mentioned, where the vessels were saved by the intervention of the wood, and in no instance were the vessels damaged where the logs were properly placed. The incidents of that night—the passing of the Vicksburg batteries—suggested to me the idea of first having a heavy backing of wood, then a layer of iron, and then a covering of wood over the iron, which will, I am convinced, make a vessel perfectly shot-proof. I notice that the idea is not an original one, but has been discovered and recommended by several persons. There are two vessels in this squadron, the Lafayette and Choctaw, which give proof of the value of heavy backing to iron. These vessels were built with heavy frames, covered on the outside with gutta-percha, and then with a light thickness of iron. Whenever these vessels have been struck on the iron where the wood backing was heavy, they resisted the shot of heaviest calibre, but where the backing was light shot went in at one side and out at the other. The defence of gutta-percha was not of the slightest use; on the contrary, it was a detriment, and aided very much in destroying the vessels by rot. It is so much extra weight that the vessels have to carry, without deriving the slightest benefit from it. The money that built the Lafayette and Choctaw would have built three monitors of such a model; that one monitor would have destroyed both of the first. I would here state that these two vessels will only be serviceable for a short time, as they are already showing signs of weakness. They are not very serviceable, have not speed enough, and are too unwieldy for rams, and in some parts are very vulnerable. They have, however, fine machinery, and when they wear out it can be fitted to better hulls. I consider these vessels only as temporary expedients, to give way to the monitor class, when there is a sufficient number built.

Another class of vessels in this squadron deserves mention, as showing the

different expedients resorted to to open and defend the Mississippi river. I allude to the Tuscumbia, Chillicothe, and Indianola. Two of these have been tried under batteries, and the Indianola in battle against vessels, and have shown that the monitor principle only was the right one. Their turrets were in no instance found impenetrable to the heavy rifled shot, and besides they were soon damaged in their wheels, which afforded fine targets for the enemy to fire at. Still, two of these vessels remained under fire as long as any monitors have been known to remain at one time, and if they did not come up to the monitors in invulnerability, they accomplished all that was required at the time, viz., the capture of the enemy's stronghold. The builders never claimed that they should be considered more than *temporary* expedients with which to harass the enemy; and, taken in that sense, they certainly may be considered very good vessels, and have fairly repaid all the money spent on them, taking into consideration the work they have done.

As to approving of any of the above-mentioned styles of gunboat, as part of a permanent system of national defence to be adopted in this country, that I cannot do. Any professional man who will lay aside his prejudices caused by the discomforts incident to the monitors, must admit that, as a harbor defence, they are the best and only vessels to be built; and I hope we shall see every harbor in the United States, where there is a chance of an enemy penetrating, supplied with two or three of these floating batteries. If they have not been able to penetrate the harbor of Charleston, where fifty guns to one was opposed to them, and where they had to contend with obstructions placed in their way impossible to be removed, it in no way detracts from their well-earned reputation for efficiency. They have done at Charleston what no other vessels ever built *could possibly have accomplished*; and though the army, as usual when combined operations are carried on, has monopolized all the honors, it is a very certain fact that the monitors held their own as no other vessels could have done, and under their shelter the army was enabled to perform their work successfully.

I hope, sir, you will excuse the unreasonable length of this communication on the subject of the monitors; but I know their value when properly used, have felt the want of them so much at times, that I would have exchanged several even of the best of my vessels for one of them, properly fitted. I have seen a whole army kept at bay for the want of one of these little "shot-proofs," and have, now and then, been tempted to do foolish things, in hopes of accomplishing what I deemed impracticable. The Cincinnati was sunk when my own judgment told me it was wrong to place her where I was called upon to order her. With a single monitor results would have been very different; and on that day, instead of having a vessel sunk, the right wing of our army would have gained a position commanding the most important works in and about Vicksburg. Vulnerable as this vessel was, it would not have done for the navy to hesitate, when the *army thought there was a prospect of success*.

In conclusion, sir, permit me to express the hope that the west may be converted into a large workshop for the building of future monitors of all sizes. I know of no part of the Union where the work can be done better or quicker.

I have the honor to be, sir, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral*.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

EXPEDITION AND MOVEMENTS UP YAZOO RIVER.

Report of Rear-Admiral D. D. Porter.

FLAG-SHIP BLACK HAWK. MISSISSIPPI SQUADRON,
Cairo, February 17, 1864.

SIR : Enclosed I send you a report of Lieutenant Commander Owen, in relation to an expedition I sent up Yazoo river to co-operate with General Sherman, (who is marching on Meridian,) and to confuse the enemy with regard to movements on foot. It appears the troops did not consider themselves strong enough to land and force the position. The vessels will work their way along cautiously until the water is high enough to send an iron-clad or two.

This move has had the effect of driving the guerrillas away from the Mississippi, as they are fearful it is intended to cut them off; I don't expect much from the expedition beyond diverting their attention.

I am, sir, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington D. C.

Report of Lieutenant E. K. Owen.

UNITED STATES STEAMER MARMORA,

Four miles below Yazoo City, February 5, 1864.

SIR: I have the honor to report the arrival of the expedition at this place last evening. To-day has been spent in reconnoitering the enemy's position, and so far have discovered a battery of two small guns situated in a valley seemingly perpendicularly to the river, and also a heavy force of infantry and cavalry behind a hill to the right of the battery, and running parallel to the river. On the 2d we arrived at Sartalia, and at 10 a. m. of the 3d we attacked the enemy at Liverpool, number about 2,700 men, under Ross, with two pieces of artillery. We silenced their guns, the army holding its position on the hills; at night-fall the troops re-embarked, and we dropped down for the night. The casualties were, the Petrel struck four times without any serious damage; the other vessels, Marmora, Exchange and Romeo receiving no damage of any consequence. The Exchange and Romeo were hit several times by sharpshooters. On the morning of the 4th we advanced for another attack but found the enemy had gone, only leaving a small force of about 200 sharpshooters to annoy us and the transports in passing. The wheel-houses of the sunken steamer Ivy are above water directly opposite Liverpool and in the narrowest part of the river; to the right of her, however, there is plenty of water. The river is high and rising. I forgot to mention the land forces lost eight killed and twenty-two wounded in the attack of the 3d. We understand that there are about 8,000 men, under Stark, Ross and Loring, at Yazoo City; our spies and scouts have failed to return. To-morrow will probably develop the strength of the enemy. I am happy to say that Col. Coates, commanding the land forces, and myself get along together very well, nor have any of the crews of the vessels touched any property of any description without sanction of the owners and paying the full value in money; I issued stringent orders in relation to pillag-

ing, &c. The Exchange was struck twice out of four shots to-day in the first reconnoissance; but no one hurt, one shot struck within two feet of the boilers without doing any damage.

I am, sir, very respectfully, your obedient servant,

E. K. OWEN.

Lieutenant Commander, Commanding 5th Dist.

Rear-Admiral D. D. PORTER,

Commanding Mississippi Squadron.

Letter from Rear-Admiral Porter, transmitting additional report of Lieutenant Commander E. K. Owen.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,
Red River, March 6, 1864.

SIR: I have the honor to enclose herewith copy of report from Lieutenant Commander E. K. Owen, in relation to movements up the Yazoo river.

I am, sir, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington D. C.

Additional report of Lieutenant Commander E. K. Owen.

UNITED STATES STEAMER MARMORA,
Off Greenwood, Mississippi, February 15, 1864.

SIR: I have the honor to report the arrival of the expedition at this place on last evening. We met with no opposition excepting a smart skirmish at the edge of the woods a mile back of this place, between the rebel cavalry under Forrest and our own under Colonel Osband. We had two wounded. The enemy has fallen back to Grenada and are fortifying that place. If the way is tolerably clear, and the force not too heavy, our cavalry force (250) and a portion of the infantry (500) will go out in the morning. If we find the enemy too strong we will go down the river, as the Tallahatchie and Yallabusha are entirely too low to ascend. This river is also falling rapidly, with only eight feet in the channel above Honey island. I shall take good care that no boats shall get caught. The Star of the West is still in the channel in the Tallahatchie, with her wheels and upper works out. Fort Pemberton is entirely destroyed, as also all the cotton out of which it was built. We have succeeded so far in gathering about four hundred and fifty bales of cotton, of which eighty are on the gunboats and the rest on the transports. Fifty-three bales are all of the C. S. A. that have been captured, though but very little of any is marked at all. When we leave here it will be to go up the Little Schula as far as the town of that name. Then we go down the river, fill up with coal, and ascend the Sunflower.

There has been no Union sentiment of any moment or value expressed since our advent into these waters. On the Sunflower, however, we have reason to believe it is prominent. This is an insignificant place, containing about forty houses of all kinds, and entirely of frame buildings. The inhabitants have mostly fled, leaving a few poor Irish. It is a rendezvous for dry-goods merchants, who obtain large supplies from Memphis *via* Friar's Point. We have met with no young men as yet, all having been forced into the army. The

last military order of the rebels is to remove or shoot all the negroes between the ages of forty-five and sixteen. Some few negroes have already been shot by the rebel scouts.

I have been up the Tallahatchie as far as where the Star of the West is sunk, which is directly opposite the Fort, (Pemberton.) At the mouth of the Yallahusha the Ed. J. Gay is sunk, the decks being just above water. About one mile below, the Arcadia is sunk, with her upper works out and nearly filling the river at this stage of water. We found great difficulty in turning and coming down, the light upper works suffering to some extent. The rebel steamer Sharpe was burnt a few days ago in the Yallahusha to prevent her falling into our hands. As the river is falling quite rapidly, and with thirteen boats in the fleet, I think I shall drop down below the bars.

I am, sir, very respectfully, your obedient servant,

E. K. OWEN,

Lieutenant, Commanding 5th District.

Rear-Admiral D. D. PORTER,

Commanding Mississippi Squadron.

ESCAPE OF TWO OF THE CREW OF THE HARRIET LANE.

Report of Rear-Admiral D. D. Porter.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,

Cairo, February 19, 1864.

SIR: I have the honor to report that Henry Woodfield, ordinary seaman, and W. J. T. Galway, second-class fireman, two of the crew of the Harriet Lane, arrived here to-day from Shreveport, Louisiana, having escaped and worked their way along amid insurmountable hardships to the river bank, where they were picked up by one of the gunboats. I have the honor to request that their accounts from the last quarter sent in be transmitted to me, that I may pay them some money, as they are entirely destitute.

They bring important information which will serve us.

I enclose the log of these poor fellows which shows, how much men will go through to gain their liberty.

I am, sir, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Log of the men who escaped.

DECEMBER 9, 1863.

At 10 o'clock left Camp Groce, Austin county, Texas, with a parole in my pocket, bound to Shreveport, Louisiana; marched sixteen miles to Groce Retreat.

10th. Marched nineteen miles to Anderson city.

11th. Marched twenty-five miles to Gebb's Retreat.

12th. Marched twenty miles to San Jacinto river.

13th. Marched fifteen miles to Huntsville.

14th. Marched sixteen miles to Robbin's ferry, on the Trinity river.

15th. Marched twenty-six miles to Camp Shiloh.

16th. Marched sixteen miles to the Coponation.

17th. Marched twenty-five miles to Haines's ferry, on the Natchez river.

18th. Marched thirty miles to Sorevilla.

19th. Marched sixteen miles to Rusk city.

20th. Marched twenty-three miles to Crockett.

21st. Marched eighteen miles through Mount Hopean and camped two miles south of Tyler city.

22d. Marched fifteen miles and camped half a mile of Camp Tyler.

23d. In camp having a good rest, and washed the ragged clothing I had on me.

24th. The best dinner we have had yet since we were captured, flour bread and corned beef.

25th. Marched fifteen miles to Camp's ferry, on the Sabine river.

26th. Marched eighteen miles and camped in Lorissa.

27th. Marched eighteen miles to Jackson city.

28th. Marched thirty-six miles to Marshall city.

29th. Marched nineteen miles and camped at Greenwood, (four hundred and seven miles in twenty-one days.)

30th. Marched twenty-two miles to camp of paroled prisoners, Caday parish, Louisiana, then commanded by Colonel H. Thayot, 27th Louisiana rebel cavalry.

On the 23d of January, 1864, at 4 o'clock a. m., left parole camp determined to try our utmost to get to our lines if possible, and escape rebel bondage, which we had endured for thirteen months, not having a chance to escape before. We then cherished hopes that when we got our paroles we would have been sent to our lines, but from what we were told by the rebel general, E. Kirby Smith, that General Banks could not come to terms on the exchanging, nor would he be allowed to receive us as paroled prisoners by our government, as the cartel was again closed for the next three months.

Our first adventure was in crossing Red river on a raft, which we made out of some timbers which we stole out of a rebel planter's cotton-shed, and part of his old, fence rails which we tied together with grape-vines. In our first attempt to regain our liberty we had a narrow escape of our lives, for as we launched our iron-clad raft on the swift-running tide of Red river, a steamboat hove in sight, about half a mile ahead, coming down the river, and to complete our danger the raft got snagged about forty yards from the opposite bank and we had to paddle across with a couple of old rails, until the blood spouted from our finger nails in a stream, but with the help of God we landed safe, with the exception of losing a haversack with some grub in it.

We marched twelve miles that night and staid on Cane island, quite near to the river, distance five miles from Shreveport.

24th. Marched fifteen miles—passed Shreveport about 4 o'clock in the day, and discovered all their batteries above and below the city, and a large powder mill at work. Stopped at Mr. Cook's and got some corn-bread and meat; found out that he was a strong Union man, and had been hid in the swamps for two months to avoid going into the rebel army, as they were then taking blind, lame and lazy; he gave us all the information he knew. Crossed on Red Shout ferry about 2 o'clock and camped in the woods; built a fire and warmed ourselves, as it was a bitter cold night.

25th. Marched twenty miles, crossed Bayou Touches, and ate some corn-bread and beef at Mrs. Butler's, who had then seven sons in the rebel army. She gave us all the information she could in regard to Minden town, which we were destined to go through that night; but lucky it was for us that we met some negroes on the road, who told us that several of our men had been caught going through Minden that day. They gave us some dried apples, sugar, bread, and a pickled ham, and showed us a road to go through the woods so as to avoid Minden completely. We had not gone very far before we met a soldier, who it appears had come down with corn to have it ground at a corn-mill then

quite near to us. He took notice of us as we passed, at our bare feet, and went back to Minden and reported us. It was not long before they had their bloodhounds on our track; but we were too sharp for them, and got into a swamp, where they lost scent of us.

26th. Marched thirty miles to Baynena; got some information on the road that the cavalry was scouting the woods in all directions for our men. Went into Mr. Bradius, another Union man, who gave us our supper and some valuable information in regard to the road.

27th. Marched fifteen miles to Athens on frozen ground; went into a house to get some grub; while in there two rebel officers came in and cross-questioned me to find out my regiment, company, colonel, and captain's name. I told him that I belonged to the 2d Texas cavalry, company H, Captain Burton; though after telling him all these particulars he still doubted me. Says he to me, You are a Yankee. Says I to him, If you think so, come down and see where our company is camped, about one mile from here. Where are your spurs, says he. I lost them this morning through the woods when I was chasing some Yankee prisoners. Well, says he, I will wait until morning and come and see if it is as you represent it to be. That night we were ten miles from them, and laughed to see how we played a Yankee trick on two smart rebel officers, as they called themselves.

28th. Marched eighteen miles; passed a negro on the road, who told us that a couple of fellows were caught yesterday. It appears from what he said that there was a negro belonging to his master who had betrayed them. The negro went to get them some bread, and he told his master about it; so, while the negro was baking the bread, the master sent for a guard. The negro then went ahead with the bread, and the guard followed. As soon as our boys got the bread they paid the negro ten dollars, (confederate) The guard then pounced on them and took them to Baynena. The master's name is James F. Gibson. The other negroes gave us some bread, meat, and potatoes, and did not charge us a cent. They said they were on the watch to kill the negro who betrayed our boys.

29th. Marched twenty-eight miles, and crossed Bayou Smith; saw several rebels on the look-out for us, but we passed them all safe.

30th. Marched fifteen miles, and came in sight of a camp this side of Trenton. Passed pretty near to them, and discovered they had a battery with them then going to Munroe. Nothing to eat that day but hard corn, and water to drink. Still marching barefoot on frozen ground. Discovered that our feet were all cut up that night, and all our tracks were full of blood. A hard road to travel; but freedom was our motto.

31st. Marched twenty-two miles through swamps and briers, and crossed Bayou Dorbin. Got talking to one of the paroled Vicksburg prisoners, who took us across the Washlou river, and would have come with us if he could have got some bread; but it was nowhere to be found for love or money. Wet clothes and barefooted; still eating hard corn; afraid to light a fire for fear of being caught.

February 1st. Marched thirty-six miles. Still on frozen ground as hard as the gate of hell. No houses in sight; faint, yet pressing. Lit a fire, parched some corn in the ashes, and ate what we thought was the best meal we had eaten for a long time. Slept two hours.

2d. Marched thirty-eight miles, and crossed the Big Bonada bayou; passed Quantrell's guerilla band camped in the swamps, but they did not see us; came up to a house, where we heard the welcome news that two of our boys had eaten their breakfast a couple of days before, and had gone on. We crossed Bath river that day on a raft made of old logs. Got some bread to eat that day. Went into a deserted house, whose owner had gone to Texas; killed a couple

of pigs, skinned them, went into the woods, then built a large fire, and roasted the wild boar meat. Had meat and corn then for three days.

3d. Marched thirty miles, barefooted as usual; crossed Bayou Mason; met a Mr. Hill, who was then moving to Arkansas; had a long talk with him; gave us three bottles of whiskey, which cheered our spirits up considerably, and made us march ten miles further.

4th. Marched thirty-three miles on the whiskey bottle; nothing in sight but cattle and cypress swamps. Had a good rest that day in a cotton-shed; observed negro tracks leading to the cotton-shed, followed in the tracks, and jumped on the steps. Lucky for us we did that, as half an hour after a rebel came on, riding h—lls bent to election, with a pack of hounds; but lost our track, and followed up the negro track to a blacksmith-shop, and came to bay, when the rebel, finding who it was, rode off, and left us in the cotton-shed nicely rolled up in the cotton.

5th. Marched forty miles through briers and thorns; pretty dry ground, but still frozen; up hills and down dales. Had a good feed of huckleberries.

6th. Marched twenty-five miles. All our corn out, and no sight to get any more. Still on the march; but with a light heart and an empty stomach. Nothing yet in sight to satisfy the craving appetites of hunger.

7th. Marched ten miles up to our knees in mud, and soon a house hove in sight to our longing eyes; went in and had a talk with the old woman and daughter, and found out in our conversation that she was Union to the backbone; then came out boldly and told her who we were, and that we wanted something, as we had not broken our fast for the last seventy-two hours. The old woman immediately dropped her knitting, and started a fire to bake us some corn-bread and boil some meat. She stood up in wonder and amazement to see that as fast as she filled the table we cleared it; but it did her heart good to see that she had plenty for us, and that we had good appetites to demolish it, such as it was.

8th. Marched forty-five miles, and crossed Little Bonada bayou. As it was pretty late, we could not get to Lake Providence that morning, so we came to the determination to stop at the first house or barn we came to that day. We had not got many miles before we espied a house; went up to the place and boldly told him who we were, and asked permission to stop in one of his barns and have a rest; but he did not let us do so, but made us come into his house, and kindly gave us breakfast and supper. We had a good rest on his feather-beds that day, and found out that he lived at Lake Providence city before our forces took that place; but that he was treated most scandalously by the negro troops, as they burned down his carriage-shop, blacksmith-shop, and dwelling-house, worth to him \$15,000; but still he was a bitter secessionist.

9th. Marched fifteen miles; got on a skiff at Lake Providence, and rowed down to the city, still thinking that when we got there we would be once more with our own men, but, to our sad disappointment, we found that our forces had evacuated the place.

10th. Marched eight miles, we not being able to get our lodgings in the city, as there was but one man living there, (by the name of Kemp,) whose house was then full of ladies, and a gentleman who had come to Providence to take up his brother's remains to take to Memphis. (459 miles in 20 days.)

11th. Marched six miles, intending to go to Goodrich's landing; but having met a negro on the road, who told us that Quantrell's men were there, on the way to attack the negro soldiers on duty at the fort, we then thought it best to go to work, if we could find the stuff, and build a raft, as we did not like to trust the roads any more. We then spied an old blacksmith-shop on the other side of the levee, where we got some pine posts, some spikes, an old axe, and a couple of hammers. The trouble now was to carry the logs down and to find a proper place to build the raft. It was just as much as we could both do to

carry the logs. We then commenced to build, every moment being then precious to us, as it was getting late. We spiked the boards to the logs pretty strong, put a chain on her, then shoved off, with three hearty cheers for Abe Lincoln. I quite forgot to say that in the morning, as we were walking along the bank, the Glasgow hove in sight going down the river. We tied an old handkerchief on a stick and waved to her, but she would not come near, as the captain was fired on in that same place by guerillas. We then sailed down the river on our iron-clad ram at the rate of seven miles an hour. We had not sailed far before a steamer hove in sight, coming up the river, which picked us up, but not before she was compelled so to do by the captain in command. We then got aboard in a skiff, and were received very kindly by the men on board of the Robert Emmet. One gave me a pair of socks, the other a pair of shoes, another a blanket; one gave me two dollars, and then we had a bully supper of cheese, sausage, soft-tack, Rio coffee, butter, and so on. But it appears that a captain on board, whose name I have not learned yet, doubted our statement, and suspected us of being rebel spies. What a bright youth to think that we would come aboard of a river-boat to act as spies! I would like to know what information could be got on such a craft as this. But he will suffer yet for this rough act to us, and will wish he had never done so, for as soon as we get to Porter, commander of the Upper Mississippi fleet, he will hear from us, and, if Admiral Porter is alive, I pity that captain's fate, as Porter knows our rank, and who we are, and what we are.

REBEL ATTACK ON GUARD STATION AT WATERLOO.

Report of Rear-Admiral D. D. Porter.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,
Vicksburg, February 26, 1864.

SIR: I enclosed a communication from Lieutenant Commander Greer in relation to an attack of rebels under General Harrison, on a guard station at Waterloo, and the dispersion of the enemy, and their four pieces of artillery by the tin-clad Forest Rose, after three desperate attempts to capture our negro troops, in which they would have been successful but for the Forest Rose.

These are efficient little vessels, and have never yet been driven from a battery, (though at times much cut up,) and have never yet failed to make the rebel field batteries beat a retreat. The commander, Acting Volunteer Lieutenant A. V. Johnston, deserves much credit for the service he performed.

I am sir, very respectfully, your obedient servant,

D. D. PORTER, *Rear Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Lieutenant Commander James A. Greer.

UNITED STATES STEAMER RATTLER,
Off Hurricane Island, February 15, 1864.

SIR: I have the honor to inform you that, since my letter of the 8th instant, the rebels have made no demonstrations in the vicinity of Natchez. The vessels at that point I left in charge of Acting Master E. C. Brannon, of the Benton, as I am engaged on court-martial duty. The Forest Rose has been stationed at

Cole's creek and Waterproof. As some of the marine brigade boats have been lying at and near Rodney, I have used this vessel for court-martial purposes, sending the tug Hyacinth, with an armed party from the Pittsburg to patrol as far as St. Joseph.

I have informed you in a previous letter that a detachment of about 200 negro troops have been stationed at Waterproof, making it a depot for negroes, cattle, &c.; this has aroused the indignation of the rebels, and on Saturday, the 14th instant, a force of about 800 cavalry of Harrison's command made an attack upon the post, driving in the pickets and pressing the troops very hard; fortunately for them the Forest Rose was present.

Captain Johnston immediately opened on them a rapid fire, which drove them back. He got his vessel under way and shelled the enemy whenever his guns would bear; finally they retreated to the woods. This affair lasted from 3 till 5.30 p. m.

At 8 p. m. the enemy attempted to make a dash into the town, but Captain Johnston, who was well posted as regards the approaches, drove them back with a few shell. Eight dead rebels and five prisoners were left in our hands. The loss of the Union troops was five killed and two wounded.

Captain Johnston says that "some of the negroes fought well, but, for want of proper discipline the majority did not."

I arrived with this vessel, but after the first fighting was over; I then proceeded to Natchez, and reported the facts of the case to the commander of the post, and asked him to send up re-enforcements. Next morning he despatched 200 men and some howitzer ammunition to Waterproof.

I got under way with this vessel on the afternoon of the 15th; upon arriving at Waterproof, learned that in the morning at 7.30 the enemy, who had been reenforced in the night, and whose forces consisted now of two regiments of infantry, one of cavalry, and four pieces of artillery, all under command of Brigadier General Harrison, had again attacked the post. The Forest Rose, whose commander ever seems to be on the alert, was ready for them. They attempted to plant their battery upon a plank road, but a few well-directed shells from the Parrott guns sent them in confusion out of range. The attempts of the remainder of the rebel force to advance were frustrated by the active movements of the Forest Rose.

Captain Johnston says Captain Anderson asked repeatedly for me to take his troops on board, and, sir, throws them across the river, while in every request I declined, and could only say to him to fight; his forces having all fallen back into his fortifications. After I got the enemy on the retreat, he felt more easy and discontinued his requests to cross the river. I do not think Anderson was intimidated, but by the bad discipline of his men, and the incapacity of his officers, they became panic stricken. The rebels fell back at 1 p. m., shortly after the reenforcements arrived from Natchez. The ram Switzerland arrived about the close of the fight and joined in. The rebel loss, as far as known, is seven killed; quite a number wounded were taken off, and several prisoners, among them a lieutenant who was an aid to Harrison. Our forces lost three killed and twelve wounded. I gave the Forest Rose some ammunition, and sent an order to Natchez for the B. to bring her up some coal, and then come up to this point, feeling sure the Forest Rose and Switzerland could take care of a much larger force of the enemy than had yet shown themselves. Upon my arrival here I sent the Ouachita to Waterproof with orders to Captain Wilson to remain there as long as his services were needed; then go to Natchez, coal, and return to this point.

I have written you a long account of this, but I desire that Captain Johnston shall have his good conduct brought to your notice. In the two days' fight the Forest Rose expended 270 shell.

February 16. I have received a despatch from Captain Johnston, dated the

15th instant, 10 p. m., stating that at 4 a. m. of that day the rebels made another and their final attack upon Waterproof in a storm of wind. The Forest Rose sent a few well-directed shell, which caused them to retire. They then commenced retreating towards Harrisonburg, burning the bridges behind them. The Switzerland dragged and fouled her anchor and did not participate. General Eliet, with two boats, arrived in the forenoon, and sent some cavalry to reconnoitre. After remaining a few hours he departed with his boats. A regiment of troops from Vicksburg passed down last evening.

The rebels cannot stand the fire of gunboats, and in the last ten days have received some severe lessens from the vessels of this district.

Very respectfully, your obedient servant,

JAMES A. GREER,
Lieutenant Commander.

Rear-Admiral DAVID D. PORTER,
Commanding Mississippi Squadron.

EXPEDITION BY LIEUTENANT COMMANDER T. O. SELFRIDGE.—CAPTURE
OF COTTON, &c.

Report of Rear-Admiral D. D. Porter,

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON.

At sea, February 26, 1864.

SIR: I enclose you a copy of a communication from Lieutenant Commander Thomas O. Selfridge, of the Conestoga, giving an account of the clever manner in which he landed 45 men, capturing a quantity of rebel cotton, capturing Colonel C. H. Tyler and Major J. F. O'Brien, Lieutenant Plantagu, and three privates, twenty mules, six wagons, two horses, four rifles, all of which he got safely back with, though much annoyed by the Texan cavalry.

I have the honor to be, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Report of Lieutenant Commander T. O. Selfridge.

UNITED STATES SHIP CONESTOGA,

Mississippi River, February 19, 1864.

SIR: Learning that there was a considerable amount of cotton belonging to the rebel government, under a small guard of soldiers, not far from where Old river intersects the main levee, I landed myself on the morning of the 13th with 45 seamen and some contrabands. After a march of about six miles I found the cotton, and would have captured the guard but for the accidental discharge of a musket.

On the way back was a good deal annoyed, and had a sharp skirmish with a body of Texan cavalry. The result of the expedition was the capture of thirty-two bales of rebel cotton, twenty mules, two horses, six wagons, four Enfield rifles, two shot-guns. Captured as prisoners: Colonel C. H. Tyler and Major J. F. O'Brien, of the confederate provisional army, on their way to join Magruder.

Both of the above officers were of the regular army before the war.

Lieutenant Plantagu, of the Louisiana artillery, and three privates.

Sent the mules, wagons, &c., to Natchez. Provisions were turned over to the military authorities at Port Hudson.

My officers and men behaved with great credit.

Very respectfully, your obedient servant,

THOS. O. SELFRIDGE,
Lieutenant Commander.

Lieut. Commander JAS. P. FOSTER,
Commanding Second Division.

P. S.—The day before the above, destroyed twenty-four hogsheads sugar about to cross the river, it being too bulky to take it on board.

SERVICES OF THE FOREST ROSE AT WATERPROOF, LOUISIANA.

FLAG-SHIP BLACK HATK, MISSISSIPPI SQUADRON,
Red River, March 5, 1864.

SIR: I have the honor to enclose herewith copy of a letter received from Capt J. M. Anderson, commanding post at Water Proof, Louisiana, in which he speaks of the good service performed by the Forest Rose, Acting Volunteer Lieutenant J. V. Johnston, at that place.

I am, sir, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Letter of acknowledgment from Captain Anderson.

HEADQUARTERS POST WATERPROOF, LA.,
February 19, 1864.

SIR: Permit me to return you many thanks for the gallant manner in which you defended my little force against the rebels force of Colonel Mores, Colonel McNeal, and Major Johnson, in their several attacks of Saturday, February 14, Sunday, the 15th, and Monday, the 16th of February, 1864.

I hope you will not consider it flattering when I say I never before saw more accurate artillery firing than you did on these engagements, invariably putting your shells to the right place ordered. My officers and men now feel perfectly secure against a large force, so long as we have the assistance of Captain Johnston and his most excellent drilled crew on board the No. 9.

I am, captain, your humble servant,

J. M. ANDERSON,
Captain, Commanding Post.
H. C. LUNT,
Lieutenant and Adjutant.

Captain JOHNSTON,
Commanding Gunboat No. 9.

EXPEDITION UP THE BLACK AND WASHITA RIVERS.

Report of Rear-Admiral D. D. Porter.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,
Red River, March 6, 1864.

SIR: I have the honor to report that I sent an expedition up the Black and Washita rivers on the 1st instant, under command of Lieutenant Commander F. M. Ramsay. The following vessels composed the expedition: Ouachita, Lieutenant Commander Byron Wilson; Fort Hindman, Acting Volunteer Lieutenant John Pierce; Osage, Acting Master Thomas Wright; Lexington, Lieutenant George M. Bache; Conestoga, Lieutenant Commander Thomas O. Selfridge; Cricket, Acting Master H. H. Gorringe.

The expedition was perfectly successful. The rebels, about two thousand strong, under General Polignac, were driven from point to point, some extensive works captured, and three heavy 32-pounders brought away. The works were destroyed. The enemy suffered severely from our guns, and the vessels brought away all the cotton they could find. They also destroyed a pontoon bridge, cutting the rebels off from their main body, at or near Alexandria, but having no force to put on shore they had time to escape.

The water falling very rapidly forced the expedition to give up the intended trip further into the interior. Some houses were necessarily destroyed, but as the community is all rebel it is not to be regretted.

I regret to say that we lost two killed and fourteen wounded, and the Fort Hindman was badly cut up with shot and shell, being struck 27 times, but nothing to impair her efficiency.

I enclose Lieutenant Commander Ramsay's report. I am well pleased with the result of the expedition.

I am, sir, very respectfully, your obedient servant,
DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Report of Lieutenant Commander F. A. Ramsay.

UNITED STATES STEAMSHIP CHOCTAW,
March 5, 1864.

SIR: In obedience to your order, I left here on the Fort Hindman at 1.30 p. m. on the 29th ultimo, taking the Osage, Cricket, Ouachita, Lexington, and Conestoga with me, and proceeding up Red river, anchored at dark about fifteen miles from the mouth of Black river. At daylight, on the 1st instant, I got under way and proceeded up Black river. At 4 p. m., when about fifteen miles below Trinity, we were fired into by sharpshooters concealed behind the levee. All the vessels immediately opened on them with shrapnell, grape and canister, and drove them away. When we reached Trinity, white flags were shown on the lower side of the town, but as soon as we rounded the point we were opened on by a battery of two 12-pounder rifle guns. We immediately opened fire, and in a few moments drove the rebels, who were under the command of General Polignac, from the town. I then proceeded two miles above the town and anchored for the night. At daylight on the 2d I got under way, and proceeded up the Ouachita, with the Osage leading and the Hindman next. We had not proceeded more than five miles when the Osage became disabled by the main wheel of the turret breaking in three pieces, which rendered it im-

possible to revolve the turret. Fortunately the guns were pointed directly ahead at the time of the accident. When we arrived within two miles of Harrisonburg, we were attacked by a brigade (General Polignac's) of sharpshooters, lying behind the levee, and a battery of 12-pounder rifle guns. The fire of the battery was directed entirely at the Fort Hindman. She was struck twenty-seven times by shot and shell, one shot disabling the starboard engine. I immediately dropped her down below the other vessels, and then went on board the Ouachita. The Ouachita was struck three times, but no damage done. The firing of the vessels was excellent, and soon drove the battery away. The banks were so high that it was impossible for the vessels abreast of the sharpshooters to do them any damage; but the lower vessels enfiladed the banks, and I afterwards learned killed and wounded a great many. A deserter reported that the colonel of his regiment was killed. Leaving the Hindman in a safe place, I proceeded up the river with the other vessels to Bayou Louis, which enters Sicily island. The water was so shoal that the lightest boat I had could not enter. I then proceeded to Catahoula shoals, where I found plenty of water to enable me to proceed to Monroe, but the water was falling so fast I deemed it best to return. On our arrival at Harrisonburg, I landed with the Ouachita and set fire to some of the largest houses in the town. While the houses were being fired, a body of cavalry and infantry were observed coming down a ravine. I called the men on board and opened fire from the vessels, causing the troops to scatter in every direction. The works at Harrisonburg are very formidable. There are four forts on high hills commanding the river for two miles below the town and more than a mile above. Rifle-pits run all around and connect the forts. At dark I anchored two miles above Trinity. At daylight on the 3d I got under way and proceeded to Trinity. At this place two excellent earth-works are thrown up, one of which commands the river for more than two miles. It was my intention to burn the town, but finding so many women and children in it I spared it.

We found there three 32-pounder guns and carriages. The guns I brought way, and burnt the carriages and platforms. Hearing that the rebels had a pontoon bridge a mile from the mouth of Little river, I sent the Cricket up, and burned it. I remained at Trinity until the morning of the 4th, when we proceeded down Black river, and picking up all the cotton near the bank, anchored at dark about 12 miles from the mouth. At daylight on the 5th I got under way and arrived at this place at meridian.

I am much indebted to the officers of the different vessels for the manner in which they performed their duty. I regret to report that eight men were wounded on the Fort Hindman, one mortally, (since dead,) and two severely. One man was wounded severely on the Osage; Acting Ensign Ezra Beaman, of the Choctaw, who I took with me as signal officer, was wounded in the right foot while on board of the Ouachita. I would respectfully bring to your notice James K. L. Duncan, ordinary seaman; Hugh Melloy, ordinary seaman; and William P. Johnson, landsman, of the Fort Hindman, for their gallant conduct during the engagement with the battery near Harrisonburg. A shell burst at the muzzle of one of the guns, setting fire to the tie of the cartridge which had just been put in the gun. Duncan immediately seized the burning cartridge, took it out of the gun, and threw it overboard. A shell pierced the bow casemate on the right of No. 1 gun, mortally wounding the 1st sponger, who had the sponge in his hand, which he dropped out of the port on the forecastle. Melloy immediately jumped out of the port on the forecastle, picked up the sponge, sponged and loaded the gun, standing outside, under a heavy fire of musketry. Johnson, although badly wounded in the hand, took the place of a wounded man, sponged and loaded the gun during the entire action.

The following is the list of casualties in the different vessels: Hindman,

one man mortally wounded, since dead; eight wounded, two severely; hit twenty-seven times. Osage, one wounded. Ouachita, one killed, two wounded, struck three times. Choctaw, one wounded.

I am, very respectfully, your obedient servant,

F. M. RAMSAY,

Com'dg Expedition to Black and Washita Rivers.

Rear-Admiral D. D. PORTER,

Commanding Mississippi Squadron.

CAPTURED REBEL CORRESPONDENCE.—REBEL TORPEDOES, &c.

Report of Rear-Admiral D. D. Porter.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,

Alexandria, Louisiana, March 20, 1864.

SIR: I have the honor to enclose you some rebel correspondence which was captured by the gunboat Signal a day or two since, while the rebel mail-carrier was crossing the river. It gives a complete history of the rebel torpedoes, the machine that blew up the Housatonic, and the manner in which it was done. They have just appointed a torpedo corps (I send one of the commissions) for the purpose of blowing up property of all kinds. Among other devilish inventions is a torpedo resembling a lump of coal, to be placed in coal piles, and among the coal put on board vessels. The names of the parties are all mentioned in the correspondence, and I send a photograph of one of them, which, if multiplied and put in the hands of detectives, may be of service. I have given orders to commanders of vessels not to be very particular about the treatment of any of these desperadoes if caught, only summary punishment will be effective. I trust that we will be prepared to avoid any of their machines.

I have the honor to be, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Letter from the rebel secretary of the navy to Colonel E. C. Cabell.

CONFEDERATE STATES OF AMERICA, NAVY DEPARTMENT,

Richmond, September 10, 1863.

SIR: Your letter of the 18th July, from Jacksonport, Arkansas, reached me a few days ago.

You inform me that a certain party "desires to obtain proper authority from the confederate government to undertake the destruction of gunboats, transports, &c., for such per centum of the value of the boats destroyed as may be offered," &c.

There is no legislation, of which I am aware, that satisfies precisely the conditions required.

The act of May 6, 1861, recognizing the existence of war with the United States, and providing for privateering, is not construed to permit privateering on inland waters.

A reference to the law for the establishment of a volunteer navy, a copy of which I enclose herewith, will show you that it cannot be made to embrace the parties to which you refer.

To facilitate organizations of parties to operate as you propose, in boats or

otherwise, against the enemy on our western rivers, they could be received into the navy, if they shipped regularly in accordance with existing laws, and then assigned to duty under an acting master upon those rivers. In this case, however, they would form a part of the regular navy establishment, drawing its pay and subsistence.

I infer from your letter that such is not the object of the parties in question, but that they desire to organize in small parties to operate as independent river guerilla parties, under their own leaders, and to look to prize money or reward from the country for destroying enemy's property, to defray expenses, &c., using an appointment from the government, to secure to them the rights of prisoners of war if captured.

Judging, from what you say, that you have not the acts of Congress at hand, I enclose copies of two acts, one of which possibly serves the desired purpose.

The president has authority to make such an arrangement as you refer to, and I would suggest that parties wishing to engage in the enterprise present to him their names, purposes, and terms, either directly or through your obedient servant

Very respectfully,

S. B. MALLORY,
Secretary of the Navy.

Colonel E. C. CABELL,
*Confederate States Army, Headquarters Price's Army,
Jacksonport, Arkansas.*

An act of the rebel congress to provide for special service, &c.

[No. 229.]

AN ACT to provide for local defence and special service.

SECTION 1. The Congress of the Confederate States do enact: That the President be, and he is hereby, authorized to accept the services of volunteers of such kind and in such proportion as he may deem expedient, to serve for such time as he may prescribe, for the defence of exposed places and localities, or such special service as he may deem expedient.

SECTION 2. And such forces shall be mustered into the service of the Confederate States, for the local defence or special service aforesaid, the muster-roll setting forth distinctly the services to be performed; and the said volunteers shall not be considered in actual service until thereunto ordered by the President; and they shall be entitled to pay or subsistence only for such time as they may be on duty, under the orders of the President, or by his direction.

Section 3. Such volunteer forces, when so accepted or ordered into service, shall be organized in accordance and subject to all the provisions of the act entitled "An act to provide for the public defence," approved March 6, 1861, and may be attached to such divisions, brigades, regiments or battalions as the President may direct, and when not organized into battalions and regiments before being mustered into service, the President shall appoint the field officers of the battalions and regiments when organized as such by him.

*An act of the rebel Congress for the formation of a secret service corps.—
Chapter LXIII.*

AN ACT to authorize the formation of volunteer companies for local defence.

The Congress of the Confederate States of America do enact: That, for the purpose of local defence in any portion of the Confederate States, any number of persons, not less than twenty, who are over the age of forty-five years, or otherwise not liable to military duty, may associate themselves as a military company, elect their own officers, and establish rules and regulations for their own government, and shall be considered as belonging to the provisional army of the Confederate States, serving without pay or allowances, and entitled when captured by the enemy to all the privileges of prisoners of war:

Provided, That such company shall, as soon as practicable, transmit their muster-roll or list of the names of the officers and privates thereof, to the governor of the State, the commanding general of the department, or any brigadier general in the State or confederate service, to be forwarded to the Secretary of War; but the President or commander of the district may, at any time, disband such companies: *Provided* that in the States and districts in which the act entitled "An act to further provide for the public defence," approved April 16, 1862, and the acts amendatory thereof, have been suspended persons of any age, resident within such States or districts, may volunteer and form part of such companies, so long as such suspension may continue: *Provided*, that no person shall become a member of said company until he shall have first taken the oath of allegiance to the Confederate States of America in writing, a copy of which shall be filed with the muster-roll of said company, as above prescribed.

Approved October 13, 1862.

Rebel general orders authorizing enlistment of secret service corps.

[Extract.]

HEADQUARTERS DISTRICT OF ARKANSAS,
Little Rock, August 18, 1863.

Special Orders, }
No. 135. }

* * * * *

VI. Thomas E. Courtenay, esq., is, by direction of the lieutenant general commanding the department of trans-Mississippi, authorized to enlist a secret service corps not exceeding twenty (20) men, to be employed by him, subject to the orders of the district commander.

* * * * *

By command of Major General Price.

THOMAS L. SNEAD,
Assistant Adjutant General.

THOMAS E. COURTENAY, Esq.

_____, 1864.

In accordance with the above, I hereby appoint _____, a member of the secret service corps, to report to me at _____, on or before the _____ day of _____, 1864.

THOMAS E. COURTENAY,
Captain Secret Service Corps.

R. W. Dunn appointed for special service.

CONFEDERATE STATES OF AMERICA,
War Dep't, Engineer Bureau, Richmond, Va., Sept. 15, 1863.

R. W. Dunn, having been selected for special service, is authorized by the Secretary of War to proceed to the headquarters of Lieutenant General E. Kirby Smith, commanding trans-Mississippi department, to be attached to one of the companies of engineer troops now being organized in that department, under the act of Congress, "to provide and organize engineer troops to serve during the war," approved March 20, 1863.

A. L. RIVES,
Lieutenant Colonel and Acting Chief of Bureau.

Approved :

JAMES A. SEDDON,
Secretary of War.

Additional list of men belonging to the secret service corps.

CONFEDERATE STATES OF AMERICA,
War Department, Engineer Bureau, September 15, 1863.

GENERAL: I have the honor to send, in addition to the names specified in my letter of the 20th ultimo, the following list of men who, by wish of the Hon. Secretary of War, are to be employed in your department on the special service of destroying the enemy's property by torpedoes and similar inventions, viz: (names.)

These men should each be enlisted in and form part of an engineer company, but will nevertheless be employed, so far as possible, on the service specified above. When the public interest, in your judgment, requires it, details of additional men may be made, either from the engineer troops or from the line, to aid them in their particular duties, and they may be furnished by the military authorities with the necessary ammunition. Their compensation to be fifty per cent. of the property destroyed by their new inventions, and all the arms and munitions captured by them, by the use of torpedoes or by similar devices. Beyond this they will be entitled to such other rewards as Congress may hereafter provide.

Very respectfully, your obedient servant,

A. L. RIVES,
Lieutenant Colonel and Acting Chief of Bureau.

Approved :

JAMES A. SEDDON,
Secretary of War.

Names of persons in secret service to introduce R. W. Dunn, E. C. Singer, and J. D. Braman to my friends.

B. C. Adams, Grenada; Captain Samuel Applegate, Winona; Colonel H. H. Miller, commanding regiment west of Grenada and Carrollton; W. P. Mellen, Natchez; Major John B. Peyton, Raymond; Judge D. H. Bosser, Woodville; F. A. Boyle, Woodville; Henry Skipwith, Clinton, Louisiana; Conrad McRae, Fordocke, Louisiana; W. Barton, Atchafalaya river, Louisiana; J. J. Morgan, Atchafalaya river, Louisiana; T. G. Calvit, Atchafalaya river, Louisiana; James

E. Lindsey, Atchafalaya river, Louisiana; William N. Lindsey, Atchafalaya river, Louisiana; William H. Neilson, Atchafalaya river, Louisiana; Samuel Faulkner, Atchafalaya river, Louisiana; Colonel James M. Porter, St. Landry, Louisiana; Colonel William B. Davis, St. Landry, Louisiana; Colonel William Offat, St. Landry, Louisiana; Captain James Capps, St. Landry, Louisiana; S. A. Scribner, St. Landry, Louisiana; Elbert Goull, St. Landry, Louisiana; T. C. Anderson, St. Landry, Louisiana; Simon Richard, St. Landry, Louisiana; Henderson Taylor, Marksville, Louisiana; S. L. Taylor, Marksville, Louisiana; H. Robertson, Alexandria, Louisiana; S. W. Henarie, Alexandria, Louisiana; Governor T. O. Moore, Alexandria, Louisiana; Colonel C. Manning, Alexandria, Louisiana; General M. Wells, Rapides and Aveyellos parish, Louisiana; General P. F. Kearny, Rapides and Aveyellos parish, Louisiana; Hugh M. Kearny, esq., Rapides and Aveyellos parish, Louisiana; B. F. Murdock, Rapides and Aveyellos parish, Louisiana; B. C. Crow, esq., Lafayette Parish, Louisiana; Hon. John Moore, St. Martin's parish; William Robertson, St. Martin's parish; Judge Baker, St. Mary's parish; T. J. Foster, St. Mary's parish; Judge Palfrey, St. Mary's parish; Daniel Dennett, editor Planter's Banner, St. Mary's parish; Mr. Sickles, editor Planter's Banner, kindred spirits, St. Mary's parish; Phanor Prudhomme, esq., St. Mary's parish; John Blair Smith, Nachitoches parish, Louisiana; Colonel H. J. G. Battle, Caddo, Louisiana; Reuben White, Caddo, Louisiana.

We must help one another, and those who can be efficient in our cause must receive all necessary hospitality, aid, and information. I introduce none but the worthy.

R. J. PAGE.

Report of a commission on Singer's torpedo.

ENGINEER HEADQUARTERS,
Department Northern Virginia, July 14, 1863.

COLONEL: In accordance with your order of the 13th, appointing the undersigned a commission to examine and report upon the merits of Mr. E. C. Singer's torpedo, we beg to state that we have carefully examined the same, and submit the following report:

First. "As to the plan for exploding the charge." In this plan or lock, in our opinion, consists the great merit of the invention. The lock is simple, strong, and not liable at any time to be out of order; and as the caps which ignite the charge are placed within the powder magazine, they are not likely to be affected by moisture; while the percussion is upon the exterior of the magazine, actual contact with the rod which acts as a trigger is necessary, but by mechanical contrivances the contact may be obtained in various ways.

Second. "The certainty of action" depends, of course, upon contact, but by the peculiar and excellent arrangement of the lock and plan of percussion mentioned above, the certainty of explosion is almost absolute. One great advantage this torpedo possesses over many others is, that its explosion does not depend upon the action or judgment of an individual; that it is safe from premature ignition, and at the same time is cheap and portable, while its position in river or harbor cannot readily be ascertained by an enemy's vessels.

Third. "The efficiency of its explosion, if made in deep channels," cannot well be ascertained without experiment, but would be the same as submarines fired by any other contrivance. We are of the opinion, however, from the best information accessible, that if the powder, say 100 pounds in quantity, is within the

distance of fifteen feet from the keel of the vessel when exploded, its efficient action is not materially affected by the depth of channel. Of course the quantity of power required would have to be determined by experiment. Rifle powder, from its more rapid combustion, would be preferable in deep water to cannon powder, while some of the detonating compounds would doubtless effect certain destruction to vessels passing over torpedoes at even much greater depth.

The peculiar arrangements for firing the batteries would have to be determined by the circumstances of position and draught of vessels and motion of currents, depth, and width of channels, and would require the exercise of great judgment on the part of those intrusted with the duty of placing them.

We are so well satisfied with the merits of Mr. Singer's torpedo that we recommend the engineer department to give it a thorough test, and, if practicable, to have some of them placed at an early day in some of the river approaches of Richmond.

General remarks.—The mode of loading this torpedo dispenses with any connexion through the case of the magazine, involving no packing of any kind.

The risk of the lock fouling by sand or mud, if on the bottom of a stream, we think can be prevented by enclosing it in a metal case, which would be nearly water-tight. In narrow streams these could be placed in *quincunx*, so that a vessel attempting to pass would be sure to come in contact with some one.

The inventor also claims to be able to go to a vessel with one or two and get them in contact so as to explode. This can be done, but so much depends on the nerve and daring of individuals that there is no certainty of it. Judging from the success of blasting rocks by powder, superposed upon the rock with a deep column of water over it, we are of the opinion that the depth of water below a torpedo would not interfere with its success. Lieutenant Bolton, who saw and blasted a great deal in East river, near New York, says 100 pounds of powder, 15 feet from the bottom of a vessel, would break her sides or bottom. We would add that a proposed adaptation of these locks to the explosion of shell or batteries under railroad tracks, for defences of approach to fortified works, and for blowing up bridges, seems to us very simple and effective, also an ingenious plan for affixing torpedoes to spar or bow of an iron-clad.

We consider the employment of submarines as a legitimate mode of defence, and, as officers connected with the defence of Richmond, feel it our duty to recommend torpedoes as a powerful accessory to our limited means. The moral effect of an explosion upon an enemy would be incalculable, and would doubtless deter them from attempting to bring troops, by transports, to points accessible to the city, as White House or Brandon.

Respectfully submitted.

W. H. STEVENS,
Colonel Engineers.
JOHN A. WILLIAMS,
Major Engineers.
W. G. TURPIN,
Captain Engineers

Colonel J. T. GILMER,
Chief Engineer.

Official copy.

A. L. RIVES,
Lieutenant Colonel and Acting Chief of Bureau.

*Letter of T. E. Courtenay to Colonel H. Clark.*RICHMOND, VIRGINIA, *January 19, 1864.*

MY DEAR COLONEL: I hope you have received all my letters. I wrote two to Mobile, one to Columbus, and two to Brandon; I now send this by a party who is going to Shreveport, and promised to learn your whereabouts, so as to forward it to you.

I have met with much delay and annoyance since you left. The castings have all been completed some time, and the *coal* is so perfect that the most critical eye could not detect it. The President thinks them perfect, but Mr. Seddon will do nothing without congressional action, so I have been engaged for the past two weeks in getting up a bill that will cover my case. At last it has met his approval, and will to-day go to the senate, hence to the house in secret session. It provides that the secretary of war shall have the power to organize a "secret service corps," commission, enlist, and detail parties who shall retain former rank and pay, also give such compensation as he may deem fit, not exceeding 50 per cent. for property partially and totally destroyed; also to advance, when necessary, out of the secret service fund, money to parties engaging to injure the enemy.

As soon as this bill becomes a law I have no doubt but I shall get a suitable commission, and means to progress with, and that all the appointments you or I have made will be confirmed. * * * *

Your friend,

T. E. COURTENAY.

Colonel H. E. CLARK,

7th Missouri Cavalry, Maj. Gen. Price's Headquarters, Arkansas.

REBEL ATTACK UPON YAZOO CITY.

Letter of Rear-Admiral Porter, transmitting report of Acting Master Thomas McElroy.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,
Off Alexandria, La., March 22, 1864.

SIR: I have the honor to enclose herewith a copy of a report from Acting Master Thomas McElroy, commanding naval forces at Yazoo City, detailing an account of a very handsome little affair that took place there.

I am, sir, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Acting Master Thomas McElroy.

UNITED STATES STEAMER PETREL,
Off Yazoo City, Mississippi, March 5, 1864.

SIR: I have the honor to report to you that Lieutenant Commander E. K. Owen turned over all vessels in this river, Yazoo, to my command on the 1st instant. I have not complied with his order in sending the Marmora up the river to the foot of Honey island, which is about 60 miles, as, from information received, I did not think it prudent.

This morning, at 9½ o'clock, the enemy made a fierce attack on the city and redoubt. Part of the 11th Illinois volunteers was stationed in the redoubt, supporting a 12-pounder rifled howitzer belonging to the gunboat Exchange, left in my charge. I sent an officer and crew to work the gun. The rest of the 11th were stationed with a colored regiment in and around the city.

It was reported to me that, after firing the howitzer several times, a shot got jammed in the gun and could not be removed. I then ordered Captain Gibson, of the Marmora, to dismount one of his rifled howitzers, mount it on a field-carriage and send it on shore, with a crew to work it. Before he could get the gun to the redoubt, the enemy had the hill completely surrounded. At this time the fighting in the city was hand to hand. The gun was placed in position in the street, and did good service, helping very much towards winning the day. The crew, at one time, was driven from the gun, they not having sufficient support to hold it, but the soldiers, seeing the crew driven, rallied, charged on the rebels and retook it, losing three men in the charge, and wounding James Stoddard, of the Marmona; he is improving.

During this time both vessels kept up a constant fire on the city until 4 p. m.; then I was requested to cease firing by Colonel Coats, as the enemy were retreating. We expended about 250 shell. I then went on shore with a fresh gun's crew, and took command of the howitzer, following the rebels up until they had retreated to the hills.

I am proud to say that the navy was well represented by three sailors, who nobly stood their ground through the whole action, fighting hand to hand to save the gun and the reputation of the navy.

The sailors are highly spoken of by the army officers for their gallant conduct. Their names are Bartlett Laffey, of this vessel, and James Stoddard and Wm. J. Franks, of the Marmora. I would commend them to your consideration. I have lost confidence in Acting Ensign Shepley R. Holmes, who was sent in charge of the howitzer, and as he has sent in his resignation I hope it may be accepted.

I have the honor to be, very respectfully, your obedient servant,

THOMAS McELROY,

Acting Master, Commanding.

Rear-Admiral D. D. PORTER,

Commanding Mississippi Squadron.

REBEL ATTACK ON PADUCAH.

[Telegram.]

CAIRO, ILL., *March 26, 1864.*

At three p. m., yesterday, the rebels made an attack upon Paducah, and the steamers Peosta, Paw Paw, and Fort Hindman at once opened fire. Colonel Hicks holds the fort. The front part of the city is destroyed, our shells setting fire to the houses on the levee. A brisk cannonading was continued until about ten o'clock p. m., when the fire of the rebels ceased. The attack may have been renewed this morning. Our despatches are received by boat, the telegraphic communication having been destroyed. The fort made a desperate resistance.

A. M. PENNOCK, *Fleet Captain, &c.*

Hon. GIDEON WELLES,

Secretary of the Navy.

[Telegram.]

CAIRO, *March* 26, 1864.

I have just received information that the enemy is still in force on our front at Paducah.

A flag of truce was sent in by them to negotiate an exchange of prisoners, which was refused. They demanded a surrender twice, saying they would give no quarter if refused. General Forrest has five hundred (500) prisoners from Union City. Re-enforcements are going forward. There is no danger of a surrender.

A. M. PENNOCK, *Fleet Captain, &c.*

Hon. GIDEON WELLES,
Secretary of the Navy.

[Telegram.]

CAIRO, *March* 26, 1864.

Paducah is safe. The rebels left at midnight.

A. M. PENNOCK, *Captain, &c.*

Hon. GIDEON WELLES,
Secretary of the Navy.

[Telegram.]

CAIRO, *March* 26, 1864.

Information has been received that the rebels have retreated from Paducah. Rebel loss, three hundred (300) killed; number of wounded unknown. Forrest's force said to be sixty-five hundred, (6,500,) and four (4) pieces of artillery. Rebel General A. B. Thompson is reported killed.

A. M. PENNOCK, *Fleet Captain, &c.*

Hon. GIDEON WELLES,
Secretary of the Navy.

CAPTURE OF FORT PILLOW BY THE REBELS.

[Telegram.]

CAIRO, ILL., *April* 15, 1864—3 p. m.

On the 13th instant the rebels demanded the surrender of Columbus, Kentucky, which was refused by Colonel Lawrence. Troops and two gunboats were sent from here, but the enemy had retired before they reached Columbus. Hearing that Fort Pillow had been attacked, I directed Lieutenant Commander Fitch, if he could be spared from Columbus, to proceed to Fort Pillow with gunboats Hastings and Moose. Last night I learned that Fort Pillow had been captured, after a deperate resistance by the garrison. The gunboat New Era assisted in the defence. Lieutenant Commander Fitch will, on his arrival, endeavor to shell the rebels from the fort, and to keep the river open at all hazards. The greater part of the rebel force is said to have left in the direction of Memphis. On the 14th a flag of truce was sent by the rebels to Paducah; one hour was given by them to move the women and children. At the expiration of the hour no attack was made.

Lieutenant Commander Shirk reports that the gunboats shelled the upper part of the town and drove the rebels out, and I am informed that the troops in the fort also shelled them and killed several. Paducah has been re-enforced by troops sent by General Brayman, and we have four gunboats there.

Information has reached me that the rebels are in force at Blandville, Kentucky, and will cross the Ohio into Illinois if they can, about twenty miles above Mound City. I have had all the ferries and skiffs between this place and Paducah destroyed, and will keep the river closely watched with all the force we have at our disposal.

A part of the rebel's programme is, I believe, to destroy the large amount of ordnance and ordnance stores we have at Mound City, and other government property at this place. We have taken every precaution in our power to guard against it. We have constantly to be on the look-out for incendiaries.

Admiral Porter has left me ample instructions for guidance during his absence, which I shall carry out to the extent of my ability.

I will telegraph you when I hear from Lieutenant Commander Fitch.

A. M. PENNOCK,

Fleet Captain and Commander of Station.

Hon. GIDEON WELLES,

Secretary of the Navy.

[Telegram.]

CAIRO, ILL., April 16, 1864.

Lieutenant Commander Fitch has returned from Fort Pillow. The fort had been taken on the 12th, after a fight lasting from daylight until 3 o'clock p. m., and Lieutenant Commander Fitch arrived there on the afternoon of the 14th. The enemy had left the fort, carrying off all the guns, consisting of four 12-pounders and two 10-pounder rifled Parrotts. Heavy forces of cavalry are just above, preparing to cross over to Island No. 30 to capture a number of steamers that have been detained. The Moose, Hastings, New Era, and Volunteer shelled the enemy from 4 o'clock until dark and routed them, driving them to Ashport, when they left on the Ripley road. The transports were then convoyed past Fort Pillow, and the gunboats landed at the fort and took on board the remainder of our wounded, also the women and children. The next morning Lieutenant Commander Fitch ordered the remainder of the dead to be buried, and seeing no more of the enemy in the immediate vicinity, started up the river. At Ashport he shelled a squad of cavalry that had encamped there the night before, and drove them off. The New Era was supplied with ammunition and left to guard the fort, and the Moose, Hastings, and Volunteer returned to this place.

A. M. PENNOCK, *Fleet Captain.*

Hon. GIDEON WELLES,

Secretary of the Navy.

REBEL ATTACK ON THE UNITED STATES STEAMER OSAGE.

UNITED STATES STEAMER OSAGE,

Grand Ecore, April 16, 1864.

SIR : I have the honor to inform you that while on my way down the river, having stopped at Blair's plantation, some 50 miles above this point, to protect the transport Alice Vivian, I was attacked by two brigades of dismounted cav-

alry and three pieces artillery, the whole under the command of General Green, amounting to not less than 2,500 men. I waited till they got into easy shelling range, and opened upon them a heavy fire of shrapnell and canister. The rebels fought with unusual pertinacity for over an hour, delivering the heaviest and most concentrated fire of musketry that I have ever witnessed. They finally broke in great confusion, leaving the ground covered with their dead and wounded, muskets, knapsacks, &c., for many yards from the bank.

Having received orders to rejoin you without delay, I regretted that I could not give the battle-field the inspection I desired. From the statement of the wounded, and the appearance of the field, the loss of the enemy could not have been less than 200. General Green, who commanded, a colonel, and major are known to have been killed. The Lexington, Lieutenant Commanding Bache, came down shortly after the action commenced, and, from her favorable position below, was enabled to pour in a most destructive enfilading fire, which materially hastened the result. Company A, 95th Illinois, were on board, and did good execution. Our total casualties amounted to seven wounded.

General Green will prove a great loss, he standing as one of the best rebel generals this side of the Mississippi.

Very respectfully, your obedient servant,

THOS. O. SELFRIDGE,
Lieutenant Commander.

Rear-Admiral DAVID D. PORTER,
Com'dg Mississippi Squadron.

ACTION WITH REBEL BATTERIES ABOVE YAZOO CITY.—NAVAL CO-OPERATION.

Report of Acting Master Thomas McElroy.

UNITED STATES GUNBOAT PETREL,
Above Yazoo City, April 21, 1864.

SIR: I have the honor to report the part taken by this vessel in to-day's action, in compliance with a despatch from Brigadier General McArthur, (please find copy enclosed).

I moved up the river, in company with land forces, at one (1) p. m., at the request of Colonel Schofield. I left the troops at Liverpool Bluffs, twenty (20) miles below Yazoo City, with this vessel, followed by the Prairie Bird and transport Freestone as despatch boats, to go up and draw the fire of the enemy, and divide their forces, if there. At 2.40 p. m. stopped at a plantation to make inquiries in regard to the number of the enemy. At 2.50 moved up to within twelve hundred (1,200) yards of the city, and came alongside of the bank, so as to communicate verbally with commanding officer of Prairie Bird, giving him orders not to come above the wreck of the Baron DeKalb. Not seeing any enemy in sight, at 3.30 p. m. moved up very slowly. Seeing a crowd of women and children on the levee, from what information I received below, I thought the place evacuated. At 4. p. m., when opposite the city, where the river makes a sharp turn, the enemy opened on me with four (4) guns. I opened on them with my starboard battery; at the same time made signal to Prairie Bird to commence action, which she did. Finding myself under a heavy fire, and the pilot, Mr. John Armstrong, said the vessel could not be backed down safe under such a fire, I ordered him to go ahead and pass the city, take their fire, and when out of range to turn around and come down again. While running stem to them they fired fifteen (15) shots at me, but did not strike the vessel. After turning around, I saw that the Prairie Bird had dropped below out of range; not deem-

ing it prudent to run by until I found out what was the matter with her, I sent a despatch to Colonel Schofield, telling him that, from what information I received, there were not one thousand (1,000) men (on this side of the Big Black river) of the enemy. This despatch I sent by transport Freestone. At 5 p. m. I found, by verbal report, that the Prairie Bird was partially disabled, but that the commanding officer would do his best to assist me when I run by the batteries, if the troops did not come up to my assistance. I have a code of signals by whistle established with Prairie Bird. All hands at quarters. The enemy, by their actions, think it was intentional on my part to run by their batteries to cover the landing of troops above the city. I am expecting the transport will return every moment with an answer to my despatch to Colonel Schofield.

I have the honor to be, very respectfully, your obedient servant,

THOMAS McELROY,

Acting Master, Com'dg Petrel and Naval Forces, Yazoo River.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Requisition from Brigadier General J. McArthur for naval co-operation.

HEADQUARTERS DISTRICT OF VICKSBURG,

Vicksburg, Miss., April 18, 1864.

CAPTAIN: An expedition, under command of Colonel Schofield, starts from Haines's Bluff, for Yazoo City, to-morrow, (Tuesday,) marching by land. You will please move up and co-operate with them, calculating to reach Yazoo City on Thursday night; afterwards patrolling the river sufficiently to keep open communication between that point and this place. You can communicate with Colonel Schofield before starting as to his probable camping places on the way up.

Your most obedient servant,

J. McARTHUR, *Brigadier General.*

P. S.—Steamboats, properly cleared, approved by me, will be allowed to proceed up the river under your protection.

J. McARTHUR, *Brigadier General.*

Captain McELROY,

Commanding Gunboat, &c., at Haines's Bluff.

CAPTURE OF THE UNITED STATES STEAMER PETREL.

Report of Rear-Admiral D. D. Porter.

FLAG-SHIP CRICKET, MISSISSIPPI SQUADRON,

Off Alexandria, La., April 28, 1864.

SIR: I beg leave to inform you of the loss of the United States steamer Petrel, belonging to this squadron. She was captured up Yazoo river by the rebels and destroyed. I enclose letters from her executive officer, commanding officer of the Prairie Bird, and also one from Commander Townsend, on the subject.

I am, sir, very respectfully, your obedient servant,

D. D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Acting Ensign M. E. Flanigan.

ON BOARD UNITED STATES STEAMER PRAIRIE BIRD,
April 23, 1864.

SIR: I have the honor to report the following facts in regard to the loss of the United States steamer Petrel:

In obedience to orders from General McArthur, we proceeded up Yazoo river, arriving at Liverpool Bluffs April 21, 1864, at 12.20 p. m. By request of Colonel Schofield we proceeded on up the river, in company with the United States steamer Prairie Bird and transport Freestone. At 3 p. m. we arrived at the navy yard below Yazoo City. Seeing no enemy in sight, we proceeded on up, leaving the Prairie Bird and Freestone at the navy yard. When abreast the city we fired several shots at the enemy, just then coming in sight on the hills. We steamed on up, and while rounding the point the enemy opened a brisk fire of cannon and musketry. The river being narrow, we could not round to, move on up out of range, and come to. We immediately made preparation to run by the batteries. Captain McElroy afterwards countermanded the order, remarking that he would wait until the following night.

On the 22d, at 1.30 p. m., we changed our position, moving up the river about one and a half mile, and commenced wooding. At 3, precisely, the enemy in ambush opened a heavy fire of cannon and musketry on our star-board quarter, the shot from their guns going clear through the vessel. Not being able to bring our guns to bear, armed the crew as sharpshooters and returned the fire, getting the vessel under way immediately. While shifting the engines two shots entered the vessel, one striking the cylinder, the other cutting the steam-pipe, thereby disabling us. The rebels then moved up. We then opened our great guns on them. After firing a few rounds we were unable to work the guns, as the men were shot as soon as going near the ports. The vessel being disabled, and unable to work our guns, the captain gave the order to set the vessel on fire, (which was done in three places,) arm ourselves, and jump ashore. At this juncture a shot entered the boilers, the steam rushing over the decks. All who were able jumped ashore and made their escape to the Prairie Bird, pursued by the rebels, who had by this time crossed the river. Nearly all, however, reached the boat safe by taking to the swamps. I would further state that during the engagement the officers and men acted most gallantly, with the exception of a few contrabands who were lately shipped.

I have the honor to be, very respectfully, your obedient servant,

M. E. FLANIGAN,

Acting Ensign, Executive Officer late U. S. Gunboat Petrel.

Rear-Admiral DAVID D. PORTER,

Commanding Mississippi Squadron.

Respectfully forwarded. The Essex having arrived here last night at midnight, this report was handed to me for transmission. Mr. Flanigan's report of names and condition of the officers and crew of the Petrel accompanies this statement.

ROBERT TOWNSEND,

Commander, U. S. N.

VICKSBURG, *April 24, 1864.*

P. S.—I understand that, when taken, the Petrel had on board an extraordinary quantity of ammunition—about 125 rounds to each of her eight 24-pounder howitzers.

R. T.

Report of Acting Ensign J. W. Chambers.

UNITED STATES STEAMER PRAIRIE BIRD,
Vicksburg, April 23, 1864.

SIR: It becomes my unpleasant duty to report the loss of the gunboat Petrel, she being captured by the enemy on the 22d instant. On the 19th I landed at Snyder's Bluff, and there found a despatch for the gunboat Petrel, she being up the Sunflower river. I proceeded up and delivered the said despatches on the night of the 20th. The said despatch was from General McArthur, commanding at Vicksburg. It was a request that Captain McElroy would take the two vessels up the Yazoo to co-operate with the land forces which General McArthur was sending to occupy Yazoo City. On the morning of the 21st Captain McElroy got under way and proceeded down the Sunflower, we accompanying, and then up the Yazoo to Liverpool Bluff; came to and found troops occupying the bluffs, under the command of Colonel Schofield. He reported that his cavalry had been skirmishing with the enemy that day. He requested Captain McElroy to take both boats and proceed to Yazoo City to reconnoitre, which Captain McElroy proceeded to do. On arriving at the navy yard below Yazoo City both boats were landed at 3 p. m. Captain McElroy then gave me instructions to remain there while he proceeded up to the city. As he got abreast of the city the enemy opened a battery on him, which compelled him to run his vessel up the river out of range. In the mean time the enemy had been firing upon this vessel with small arms, but as soon as the Petrel got out of range they opened on this vessel with two 10-pounder Parrotts, striking us three times. Two shots struck the hurricane roof, passing out through the cabin, doing little damage. The other shot came through the casemate and struck the starboard cylinder, causing it to leak, also wounding the second engineer and one fireman slightly. We then dropped down the river, waiting for communications from Captain McElroy, of which communications I have the honor to enclose a copy, bearing date of the 21st; also a copy of letter received the next day, and a copy of a letter received from Colonel Schofield to Captain McElroy, which I received *via* marine boat B. J. Adams. At this time firing was heard at a distance, and shortly afterwards the crew of the gunboat Petrel came running to my vessel, stating that the Petrel was captured by the enemy. The B. J. Adams remained there with me until dark. A scouting party was sent from the Adams, but found none of the crew. Thirteen officers and forty-six of the crew reached this vessel, which leaves a balance of two officers and eleven of the men missing. From information obtained from contrabands, I believe the Petrel's armament was all captured by the enemy, the escaping steam from the boilers and steam pipes having put out the fire set to her by the crew.

We expended while engaged with the enemy 26 shell and 7 shrapnell.

I have the honor to be, sir, very respectfully, your obedient servant,

J. W. CHAMBERS,
Acting Ensign, Commanding.

Rear-Admiral D. D. PORTER,
Commanding Mississippi Squadron.

Letter from Commander R. Townsend to Rear-Admiral Porter.

UNITED STATES IRON-CLAD STEAMER ESSEX,
Vicksburg, April 24, 1864.

ADMIRAL: I most deeply regret that the news from this quarter must add another weight to the load of harassing cares that is now pressing so heavily upon you. The Petrel was captured and destroyed by the enemy, some three

or four miles above Yazoo City, on the 22d instant. Enclosed herewith I send you the reports of Acting Ensign Chambers, commanding the *Prairie Bird*, and Acting Ensign Flanigan, late executive officer of the *Petrel*, giving the particulars of the disaster. I am sorry to say the dark cloud presents no silver lining. The investigation I have been able to give to the subject leads to the belief that a desire to procure cotton, rather than the noble ambition of advancing the public service, prompted the ill-fated expedition. I also fear that there may have been too obsequious and unquestioning a compliance with the requests of General McArthur on the part of Acting Master McElroy, the senior naval officer. The latter is now a prisoner, and cannot, therefore, give explanation of his conduct, if explanation there be. But I cannot learn or conceive any satisfactory reason why he did not turn around immediately, (the channel permitted,) repass the two field-pieces that had opened upon him, and, rejoining the *Prairie Bird* and *Freestone*, go back to Liverpool Bluffs, whence he had started on his rash reconnoissance. After closely questioning the actors, I have come to the conclusion that the enterprise was unwisely engaged in, to say the least; and that in the performance there was too much recklessness at first, succeeded by a weak wavering and paralysis of action that almost insured a disastrous closing to the scene. But the chief actor is absent. Perhaps he may be able to give a satisfactory explanation, although what that explanation might be I cannot possibly imagine.

Accompanying Acting Ensign Chambers's report are the following documents, viz: Copies of two letters from Acting Master McElroy, respectively of April 21, 4 p. m., and April 22, 12½ p. m.; copy of a letter from Colonel Schofield, commanding expedition, to Captain McElroy, dated April 22; the report of the senior engineer of the *Prairie Bird*, with remarks appended by me; and a telegram from Captain Foster, dated April 19, but not received till April 23. Had this telegram been received in time, the navy portion of the expedition would not have started. Did the cotton speculators delay it? Probably we shall never know; but they are such unprincipled scoundrels that we may believe anything shrewdly wicked regarding them. I also enclose with Acting Ensign Chambers's report the statement of the surgeon's steward in charge, regarding the three seriously wounded men—one from the *Prairie Bird*, the others from the *Petrel*—whom I ordered to be sent to the military hospital here, on the recommendation of my surgeon, Dr. Allen. Acting Ensign Flanigan's report is accompanied by a list of the officers and crew of the *Petrel*, designating their condition, whether escaped or missing, killed or wounded. Those that escaped brought with them nothing but what they stood in. That you may more easily understand the not very clear or perspicuous reports, I accompany them by a roughly sketched map that I prepared whilst gathering from Messrs. Chambers and Flanigan the particulars of the disaster. The *Wilson*, Captain Pollard, arriving this afternoon, I have sent by her, with orders to report to Captain Pennock, at Cairo, all the escaped officers of the *Petrel*, except Mr. Armstrong, the pilot, whom I have ordered to the *Prairie Bird*, and the surgeon's steward in charge, whom I have ordered to report to the fleet surgeon aboard the *Red River*. Of the crew I have transferred ten to the *Prairie Bird*, to strengthen her force; two are at the military hospital here, and the remaining thirty-one I send down by the *General Price* for the vessels below. I hope my disposition of them may meet with your approval. The information comes through cotton speculators, as well as contrabands, that the enemy succeeded in getting guns, ammunition, and all valuables from the *Petrel*, and then, about 8 p. m. of the 22d, set fire to and destroyed her. She must have been very imperfectly fired by her own crew if the escaping steam put out the flames. I hope, admiral, that I have been able to give you a passably clear idea of the occasion and circumstances of the loss of the *Petrel*. I certainly have endeavored to avoid anything like an over-statement of the cause

Report of Acting Ensign J. W. Chambers.

UNITED STATES STEAMER PRAIRIE BIRD,
Vicksburg, April 23, 1864.

SIR: It becomes my unpleasant duty to report the loss of the gunboat *Petrel*, she being captured by the enemy on the 22d instant. On the 19th I landed at Snyder's Bluff, and there found a despatch for the gunboat *Petrel*, she being up the Sunflower river. I proceeded up and delivered the said despatches on the night of the 20th. The said despatch was from General McArthur, commanding at Vicksburg. It was a request that Captain McElroy would take the two vessels up the Yazoo to co-operate with the land forces which General McArthur was sending to occupy Yazoo City. She must have been very imperfectly fired by her own crew if the escaping steam put out the flames. I hope, admiral, that I have been able to give you a passably clear idea of the occasion and circumstances of the loss of the *Petrel*. I certainly have endeavored to avoid anything like an over-statement of the cause

Report of Acting Ensign J. W. Chambers.

UNITED STATES STEAMER PRAIRIE BIRD,
Vicksburg, April 23, 1864.

SIR: It becomes my unpleasant duty to report the loss of the gunboat Petrel, she being captured by the enemy on the 22d instant. On the 19th I landed at Snyder's Bluff, and there found a despatch for the gunboat Petrel, she being up the Sunflower river. I proceeded up and delivered the said despatches on the night of the 20th. The said despatch was from General McArthur, commanding at Vicksburg. It was a request that Captain McElroy would take the two vessels up the Yazoo to co-operate with the land forces which General McArthur was sending to occupy Yazoo City. On the morning of the 21st Captain McElroy got under way and proceeded down the Sunflower, we accompanying, and then up the Yazoo to Liverpool Bluff; came to and found troops occupying the bluffs, under the command of Colonel Schofield. He reported that his cavalry had been skirmishing with the enemy that day. He requested Captain McElroy to take both boats and proceed to Yazoo City to reconnoitre, which Captain McElroy proceeded to do. On arriving at the navy yard below Yazoo City both boats were landed at 3 p. m. Captain McElroy then gave me instructions to remain there while he proceeded up to the city. As he got abreast of the city the enemy opened a battery on him, which compelled him to run his vessel up the river out of range. In the mean time the enemy had been firing upon this vessel with small arms, but as soon as the Petrel got out of range they opened on this vessel with two 10-pounder Parrotts, striking us three times. Two shots struck the hurricane roof, passing out through the cabin, doing little damage. The other shot came through the casemate and struck the starboard cylinder, causing it to leak, also wounding the second engineer and one fireman slightly. We then dropped down the river, waiting for communications from Captain McElroy, of which communications I have the honor to enclose a copy, bearing date of the 21st; also a copy of letter received the next day, and a copy of a letter received from Colonel Schofield to Captain McElroy, which I received *via* marine boat B. J. Adams. At this time firing was heard at a distance, and shortly afterwards the crew of the gunboat Petrel came running to my vessel, stating that the Petrel was captured by the enemy. The B. J. Adams remained there with me until dark. A scouting party was sent from the Adams, but found none of the crew. Thirteen officers and forty-six of the crew reached this vessel, which leaves a balance of two officers and eleven of the men missing. From information obtained from contrabands, I believe the Petrel's armament was all captured by the enemy, the escaping steam from the boilers and steam pipes having put out the fire set to her by the crew.

We expended while engaged with the enemy 26 shell and 7 shrapnell.

I have the honor to be, sir, very respectfully, your obedient servant,

J. W. CHAMBERS,
Acting Ensign, Commanding.

Rear-Admiral D. D. PORTER,
Commanding Mississippi Squadron.

Letter from Commander R. Townsend to Rear-Admiral Porter.

UNITED STATES IRON-CLAD STEAMER ESSEX,
Vicksburg, April 24, 1864.

ADMIRAL: I most deeply regret that the news from this quarter must add another weight to the load of harassing cares that is now pressing so heavily upon you. The Petrel was captured and destroyed by the enemy, some three

or four miles above Yazoo City, on the 22d instant. Enclosed herewith I send you the reports of Acting Ensign Chambers, commanding the *Prairie Bird*, and Acting Ensign Flanigan, late executive officer of the *Petrel*, giving the particulars of the disaster. I am sorry to say the dark cloud presents no silver lining. The investigation I have been able to give to the subject leads to the belief that a desire to procure cotton, rather than the noble ambition of advancing the public service, prompted the ill-fated expedition. I also fear that there may have been too obsequious and unquestioning a compliance with the requests of General McArthur on the part of Acting Master McElroy, the senior naval officer. The latter is now a prisoner, and cannot, therefore, give explanation of his conduct, if explanation there be. But I cannot learn or conceive any satisfactory reason why he did not turn around immediately, (the channel permitted,) repass the two field-pieces that had opened upon him, and, rejoining the *Prairie Bird* and *Freestone*, go back to Liverpool Bluffs, whence he had started on his rash reconnoissance. After closely questioning the actors, I have come to the conclusion that the enterprise was unwisely engaged in, to say the least; and that in the performance there was too much recklessness at first, succeeded by a weak wavering and paralysis of action that almost insured a disastrous closing to the scene. But the chief actor is absent. Perhaps he may be able to give a satisfactory explanation, although what that explanation might be I cannot possibly imagine.

Accompanying Acting Ensign Chambers's report are the following documents, viz: Copies of two letters from Acting Master McElroy, respectively of April 21, 4 p. m., and April 22, 12½ p. m.; copy of a letter from Colonel Schofield, commanding expedition, to Captain McElroy, dated April 22; the report of the senior engineer of the *Prairie Bird*, with remarks appended by me; and a telegram from Captain Foster, dated April 19, but not received till April 23. Had this telegram been received in time, the navy portion of the expedition would not have started. Did the cotton speculators delay it? Probably we shall never know; but they are such unprincipled scoundrels that we may believe anything shrewdly wicked regarding them. I also enclose with Acting Ensign Chambers's report the statement of the surgeon's steward in charge, regarding the three seriously wounded men—one from the *Prairie Bird*, the others from the *Petrel*—whom I ordered to be sent to the military hospital here, on the recommendation of my surgeon, Dr. Allen. Acting Ensign Flanigan's report is accompanied by a list of the officers and crew of the *Petrel*, designating their condition, whether escaped or missing, killed or wounded. Those that escaped brought with them nothing but what they stood in. That you may more easily understand the not very clear or perspicuous reports, I accompany them by a roughly sketched map that I prepared whilst gathering from Messrs. Chambers and Flanigan the particulars of the disaster. The *Wilson*, Captain Pollard, arriving this afternoon, I have sent by her, with orders to report to Captain Pennock, at Cairo, all the escaped officers of the *Petrel*, except Mr. Armstrong, the pilot, whom I have ordered to the *Prairie Bird*, and the surgeon's steward in charge, whom I have ordered to report to the fleet surgeon aboard the *Red River*. Of the crew I have transferred ten to the *Prairie Bird*, to strengthen her force; two are at the military hospital here, and the remaining thirty-one I send down by the *General Price* for the vessels below. I hope my disposition of them may meet with your approval. The information comes through cotton speculators, as well as contrabands, that the enemy succeeded in getting guns, ammunition, and all valuables from the *Petrel*, and then, about 8 p. m. of the 22d, set fire to and destroyed her. She must have been very imperfectly fired by her own crew if the escaping steam put out the flames. I hope, admiral, that I have been able to give you a passably clear idea of the occasion and circumstances of the loss of the *Petrel*. I certainly have endeavored to avoid anything like an over-statement of the cause

After closely questioning the actors, I have come to the conclusion that the enterprise was unwisely engaged in, to say the least; and that in the performance there was too much recklessness at first, succeeded by a weak wavering and paralysis of action that almost insured a disastrous closing to the scene. But the chief actor is absent. Perhaps he may be able to give a satisfactory explanation, although what that explanation might be I cannot possibly imagine.

Accompanying Acting Ensign Chambers's report are the following documents, viz: Copies of two letters from Acting Master McElroy, respectively of April 21, 4 p. m., and April 22, 12½ p. m.; copy of a letter from Colonel Schofield, commanding expedition, to Captain McElroy, dated April 22; the report of the senior engineer of the *Prairie Bird*, with remarks appended by me; and a telegram from Captain Foster, dated April 19, but not received till April 23. Had this telegram been received in time, the navy portion of the expedition would not have started. Did the cotton speculators delay it? Probably we shall never know; but they are such unprincipled scoundrels that we may believe anything shrewdly wicked regarding them. I also enclose with Acting Ensign Chambers's report the statement of the surgeon's steward in charge, regarding the three seriously wounded men—one from the *Prairie Bird*, the others from the *Petrel*—whom I ordered to be sent to the military hospital here, on the recommendation of my surgeon, Dr. Allen. Acting Ensign Flanigan's report is accompanied by a list of the officers and crew of the *Petrel*, designating their condition, whether escaped or missing, killed or wounded. Those that escaped brought with them nothing but what they stood in. That you may more easily understand the not very clear or perspicuous reports, I accompany them by a roughly sketched map that I prepared whilst gathering from Messrs. Chambers and Flanigan the particulars of the disaster. The *Wilson*, Captain Pollard, arriving this afternoon, I have sent by her, with orders to report to Captain Pennock, at Cairo, all the escaped officers of the *Petrel*, except Mr. Armstrong, the pilot, whom I have ordered to the *Prairie Bird*, and the surgeon's steward in charge, whom I have ordered to report to the fleet surgeon aboard the *Red River*. Of the crew I have transferred ten to the *Prairie Bird*, to strengthen her force; two are at the military hospital here, and the remaining thirty-one I send down by the *General Price* for the vessels below. I hope my disposition of them may meet with your approval. The information comes through cotton speculators, as well as contrabands, that the enemy succeeded in getting guns, ammunition, and all valuables from the *Petrel*, and then, about 8 p. m. of the 22d, set fire to and destroyed her. She must have been very imperfectly fired by her own crew if the escaping steam put out the flames. I hope, admiral, that I have been able to give you a passably clear idea of the occasion and circumstances of the loss of the *Petrel*. I certainly have endeavored to avoid anything like an over-statement of the cause

of the disaster. The Essex arrived here in tow of the Brilliant last night at midnight. Learning of the loss of the Petrel, I concluded to stop, investigate the affair, direct what should be done in the case, and report the result to you. Having done this, I shall take the first upward-bound steamer with sufficient power to tow us to Fort Pillow and the upper river, in obedience to your order. But I have become convinced, admiral, that it is essential, in more than one particular, to your honor and that of your squadron, that an officer of approved capacity, integrity, and judgment should be stationed here to take care of matters at Vicksburg, and throughout the long, morally pestiferous stretch of river between the mouth of White river and Natchez. I have, therefore, assumed the responsibility—you far away, oppressed with most engrossing cares—of ordering Captain Greer to Vicksburg, that he may take upon himself the above-mentioned charge. I enclose herewith a copy of my orders to Captain Greer. They are long, but I could scarcely say all that I felt to be necessary in fewer terms. I trust, admiral, that my reasons will prove satisfactory, and that you will approve the action I have taken.

The wrecking company with whom you made the contract to raise the sunken steamers in the Yazoo and other tributaries of the Mississippi is now here, prepared to operate, and very solicitous to begin. I informed Colonel Fouke that just now, with but one disabled tin-clad here, it was impossible to give him and his principals the necessary protection in Yazoo river; that the late disaster showed convincingly that only an iron-clad was competent to the task; that I must proceed up the river, but that I had sent for Captain Greer to come up to Vicksburg, and possibly matters might ere long assume such shape that he could give him requisite protection, at least for points below Yazoo City. Still, I could not hold out any flattering encouragement to him. His orders from yourself are very strong; his appeals, though perfectly gentlemanly and courteous, are very pressing; and yet the complication of adverse influences renders it impossible that anything of importance should at this time be done for him. I met his courteous advances in a kindred spirit, but at the same time frankly expressed to him my unfavorable opinion. I hate to bother you with these things now, admiral, but perhaps from your abundant resources you may be able to suggest something that may be done.

Earnestly hoping and faithfully believing that you will ere long surmount the great and numerous difficulties that encompass you in Red river,

I have the honor to remain, very respectfully, your obedient servant,

ROBT TOWNSEND,

Commander, U. S. N.

Rear-Admiral DAVID D. PORTER, U. S. N.,

Commanding Mississippi Squadron.

Report of Acting Master Thomas McElroy.

WOODBIDGE, October 24, 1864.

SIR: It is my painful duty to report to you the loss of the gunboat Petrel, under my command, at Yazoo City, April 22, 1864. The troops not coming up this morning, I began to feel anxious for my command. I kept up communication with the Prairie Bird by land all this forenoon. At 11 a. m. made out the enemy falling back on the city and passing out of sight, and I could not tell where they had gone. Not hearing or seeing anything of our land forces, I called most of the officers together to obtain their opinions in regard to the intentions of the enemy. I told them that we would keep moving up and down so as to mislead the enemy. At 1 p. m. moved up two miles and a half, (2½,) and sent one watch on shore to get rails to protect the boilers, and run so as not to make any

smoke, the other watch remaining at the guns. I ordered the executive officer (Acting Ensign M. E. Flanigan) to keep the pilot in the pilot-house and engineers on duty at the engine; also that he was to attend to getting the rails on board, so that the officers of the deck could look out with the quartermaster and the sentries for the enemy on the opposite side of the river. At 2.20 p. m. left the deck and went to dinner, with orders to executive officer to get under way as soon as the rails were got on board. I had just got up from the table and went on deck when the enemy opened fire upon us with two rifle twelve-pounders, Parrott, at four hundred yards distance, astern and out of our sight for the undergrowth. I opened fire with my starboard battery, but they could not be trained far enough astern to reach their guns. At the same time I started the vessel ahead so as to get out of range and turn round so that my guns would bear on the enemy's guns, but the pilot did not get the wheel shifted soon enough, so that she made about two hundred yards and stopped. While trying to back her off a shot passed through the stern, cutting off the steam-pipe and disabling the engine. About this time a shot passed through the magazine, cutting off the legs of Charles Seits, (gunner's mate.) This silenced my guns for a few minutes, because I had nobody fit to take his place, as one of the quarter-gunners was already dead. I ordered Acting Master's Mate Lysander C. Ball, (in charge of powder division,) to take his place in the magazine, which he did. Our fire at this time was slow, as the sharpshooters were firing at the loaders; the after gun being dismounted, and none of them could be brought to bear on the enemy's guns. The officers of divisions, Acting Ensign Shepley R. Holmes, in charge of the first division, failed to encourage his men, also Acting Master's Mate Jesse W. Foster, in charge of second division, and the executive officer (Acting Ensign Michael E. Flanigan) behaved very badly, and the men began to fall back from the guns. I told the acting first assistant engineer, Arthur W. Phillips, to be ready with his division to fire the vessel when we could not fight her any longer. I ordered the most of the men to be armed with rifles. At this time a shot came through the stern, raking the gun-deck, and entering the boilers and exploding them; then the officers jumped on the bank, followed by the crew, and made a disgraceful run for the Prairie Bird, leaving with me the pilot, Kimble Ware, (in the pilot-house,) and Quartermaster J. H. Nibbie, who stood his ground when all the officers had deserted their flag. As soon as the steam began to cool a little, (with the assistance of Quartermaster Nibbie,) I got the wounded off the guard on the bank, and got ready to fire the vessel, with the dead still on board. I placed some coals from the furnace among the rails, but could not stand it long for the heat of the steam. At this time the enemy, seeing the officers and men running across the fields, began to cross the river above and below me. Surrounded on all sides, I was then forced to surrender, when they put out the burning rails and took me off at once before I could find out the number of killed and wounded, but I think that ten (10) will cover the number; but you received a true report from the officers, I hope, soon after the action.

To the disgraceful action of some of my officers, and Colonel Schofield not coming to my assistance, as he had promised do, I owe the loss of my vessel. The flag was flying when they boarded the vessel. I hope that you think I did the best I could under the circumstances. I cannot speak in too high terms of the conduct of Mr. Kimble Ware, pilot, and John Nibbie, quartermaster. It will be remembered that I had but ten (10) white men and boys on board; the rest were contrabands, and part of those were sick.

I have the honor to be, very respectfully, your obedient servant,

THOMAS McELROY,
Acting Master, Commanding Petrel.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

SISTANCE RENDERED BY THE UNITED STATES STEAMER NAUMKEAG
TO COLONEL LIVINGSTON'S COMMAND.

Report of Rear-Admiral David D. Porter.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,
Mound City, June 12, 1864.

SIR: I have the honor to enclose herewith a communication from Acting Master John Rogers, commanding the United States steamer Naumkeag, giving an account of the valuable assistance rendered by that vessel to Colonel Livingston's command, at Grand Glaize, whose fleet had grounded at that place, and was in great danger of being lost or captured by the enemy; and also containing the special thanks of Colonel Livingston for the promptness and energy displayed by Captain Rogers on that occasion, and in afterwards convoying his fleet safely to its place of destination.

I have the honor to be, very respectfully, your obedient servant,
DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Report of Acting Master John Rogers.

GUNBOAT NAUMKEAG,
Duval's Bluff, May 31, 1864.

SIR: As I previously informed you, I went up the river as far as Grand Glaize, thirty miles below Jacksonport, before I met the fleet with Colonel Livingston's command on board and all the government stores of that post. Some of the vessels had been aground, and the Fitzhugh had burst one of her steam-pipes and scalded several persons. The steamer Kennett was so large and was so difficult to manage that the colonel commanding (Wood) thought of abandoning her. Grand Glaize is the most dangerous place on the river, from its high lands, and the roads coming in there. The boats had been fired into before they left Jacksonport, from the opposite side of the river, and the probability is, if she had been left she would have been captured. The colonel issued an order upon his arrival at this place which contains the following: "III. To the commanding officer of the gunboat 37, Commander Rogers, his thanks are especially due for the energy and promptness exhibited by him in bringing his gunboat to the assistance of the fleet while aground, and for the valuable aid rendered it during its convoy to its destination." I also destroyed a number of flats, skiffs, and canoes. Captain Hickey, of gunboat Queen City, also started up with two light boats to lighten the others. We met them a few miles above Des Arc, but we had got through all our troubles and were in deep water. We did not need them. We arrived all safe at the Bluff amidst general rejoicing. All of which is most respectfully submitted by

Your obedient servant,

JOHN ROGERS,
Acting Master, Commanding.

Lieut. Com. JAMES M. PRITCHETT,
Commanding White River Station.

Action between United States Steamer Choctaw and Haines's Bluff.

UNITED STATES STEAMER CHOCTAW,
Morganzia Bend, June 13, 1864.

SIR: In obedience to orders, I have the honor to submit the following statement in regard to the action in which this vessel was engaged at Haines's Bluff, Mississippi. The vessel was struck fifty-three times. Three shot struck under water on the starboard side, doing no damage. The turret was struck six times. The lower part of the turret has two inches of iron backed by twenty-four inches of oak, while the crown has but one inch of iron backed by three inches of oak.

A 10-inch solid shot penetrated the crown; a 6-inch shot from a rifled gun struck at the junction of the crown with the lower part of the turret, and buried itself. The others glanced. A round shot struck the casemate under the pilot-house, and glanced. This casemate has one inch of iron backed by twenty inches of oak.

A 6-inch shot from a rifled gun struck the main deck and glanced. The deck has one inch of iron backed by twelve inches of oak. Six shot struck on the curve forward of the starboard wheel. Two from rifled guns penetrated. A 10-inch solid shot penetrated the iron and buried itself in the wood. The others penetrated the iron and glanced.

The side where these shot struck has one inch of iron backed by twenty inches of oak. It is very weak from the curve and inclination it has, and I think a few more heavy shot would have knocked it in.

The remainder of the shot struck in the wood work, wheels, and smoke-stacks.

Very respectfully, your obedient servant,

FRANK M. RAMSAY,
Lieutenant Commander.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

ATTACK ON UNITED STATES STEAMER EXCHANGE, BY A MASKED BATTERY, AT COLUMBIA, ARKANSAS.

Report of Rear-Admiral D. D. Porter.

FLAG SHIP BLACK HAWK, MISSISSIPPI SQUADRON,
Mound City, June 16, 1864.

SIR: I have the honor to enclose herewith a copy of a report of Acting Master J. C. Gipson, commanding the United States steamer Exchange, giving a detailed account of a quite severe attack made upon that vessel by a masked rebel battery, consisting of six 12-pounder shell guns, two 12-pounder rifle, and one 10-pounder rifle, on the 1st instant, while passing Columbia, Arkansas. In the engagement that followed, lasting forty-five minutes, the Exchange was struck thirty-five times, eight shots piercing her hull. One shot went through her pilot-house, wounding Captain Gipson severely in the head and hip, and one striking her port engine rendered the vessel difficult to manage; but by great exertions of the officers and crew she was finally got out of range of the enemy's guns, pretty badly damaged.

It appears from the report that all behaved in a gallant manner during the engagement, though fighting under great disadvantages. I beg leave to enclose the surgeon's list of casualties.

I have the honor to be, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral*

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Report of Acting Master James C. Gipson.

UNITED STATES STEAMER EXCHANGE,
Off Point Chicot, Mississippi River, June 5, 1864.

SIR: I have the honor to report that while passing Columbia, Arkansas, the rebels opened a masked battery, consisting of nine guns, on this vessel. The battery was divided into two sections, planted about two hundred yards apart, behind the levee. The lower section consisted of six guns—three 12-pounder shell, two 12-pounder rifle, and one 10-pounder rifle. The upper section consisted of one 18-pounder rifle, one 12-pounder shell, and one 6-pounder field-piece. They waited until I had passed by the lower battery, when they opened a destructive cross-fire, as I had just rounded a point of a sand-bar. I could not back down; consequently there was no other alternative but run by the upper battery, if possible. I gave the pilot orders to go up the river, and pass by the upper battery, and I opened my port broadside guns, replying to theirs. But unfortunately the port engine was struck and disabled, causing her to work very slow, keeping us under fire about forty-five minutes. I had barely got out of range of their guns when the engine stopped entirely, in consequence of the port hog-chain being shot away. The engineer told me he could not work the engines until he mis-shipped the port pitman. I immediately let go the anchor. The engineers, who worked like horses, were not long in getting the engine fixed so we could work out of reach of the enemy with one engine, expecting every moment that they would move their battery above us and open again; but we succeeded in getting out, although pretty badly damaged.

The vessel was pierced with thirty-five shots; eight of that number entering the hull, just above the water-line; five passing through the casemate, and bursting in the coal-bunkers alongside the boilers. One shot entered the port shell-locker, turning the shell upside down; fortunately not reaching some percussion shell that were stowed there. One shot passed through the pilot-house, wounding myself, knocking me senseless for ten or fifteen minutes, by a severe wound in the head. Several of the crew were slightly wounded; one killed. I can only add that it gives me pleasure to bear testimony to the good conduct of the officers and crew, who worked their guns with unflinching courage under a most galling fire. Enclosed please find reports of engineer, surgeon, and gunner.

I am, sir, respectfully, your obedient servant,

JAMES C. GIPSON,
Acting Master, Commanding.

Lieut. Commander E. K. OWEN,
Commanding 6th District, Mississippi Squadron.

Casualties on board the Exchange.

UNITED STATES STEAMER EXCHANGE, June 5, 1864.

SIR: I have the honor to report the following list of casualties occurring on board this vessel during the engagement below Columbia, June 1, 1864:

Killed.—Patrick Donahue, seaman.

Wounded.—James C. Gipson, acting master, contused wound in the left temple (serious) and in left shoulder and hip; G. T. Miller, acting master's mate, arm and foot, fracturing some of the small bones.

Very respectfully,

ED. M. GOODWIN,
Acting Assistant Surgeon, United States Navy.

Acting Master J. C. GIPSON,
Commanding United States Steamer Exchange.

CAPTURE OF REBEL BATTERY ON THE ATCHAFALAYA.

Report of Rear-Admiral D. D. Porter.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,
Mound City, June 19, 1864.

SIR: I have the honor to enclose a report of an expedition by Lieutenant Commander Ramsay up the Atchafalaya, and the capture of a battery of 30-pounder rifles, which we were very glad to get hold of, as they threatened to prove troublesome along the river.

I have the honor to be, very respectfully, your obedient servant,
DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Report of Lieutenant Commander F. A. Ramsay.

UNITED STATES STEAMER CHOCTAW,
Off Fort Adams, June 8, 1864.

SIR: I have to report that this morning I went on board of the United States steamer Chillicothe and started down the Atchafalaya, taking the United States steamers Neosho and Fort Hindman with me. When about one and a half mile from Simmsport we were opened upon by a battery of two 30-pounder Parrotts at that place. We stood on until in good range, then opened, succeeded in driving the rebels out, and captured their guns and six muskets. One of the guns I brought away with me, and send it to Cairo on the despatch boat General Lyon. Finding that the other had burst I left it. A deserter who came to us states that it burst at the third fire this morning. I regret to report that Charles Lower, seaman, was severely, and I fear mortally, wounded by a rebel sharpshooter while endeavoring to get the gun off. The rebels left one dead on the ground. I am not able to say whether any more of them were killed or wounded. The deserter states that the gun we have was captured by them from General Banks, in the late Red River expedition. The force at Simmsport consisted of the men belonging to Boone's battery, and a few that belonged to the Crescent Artillery. Two regiments were in supporting distance, but we saw nothing of them. While we were getting the gun off the enemy kept up a fire with musketry. The gun was gotten over the levee by the Neosho's crew, and was then taken on board the Fort Hindman.

Very respectfully, your obedient servant,

FRANK M. RAMSAY,

Lieutenant Commander, Commanding 3d and 4th Districts.

Rear-Admiral DAVID D. PORTER,

Commanding Mississippi Squadron.

ENGAGEMENT BETWEEN UNITED STATES STEAMER LOUISVILLE AND
REBEL BATTERY NEAR COLUMBIA, MISSISSIPPI.

Letter from Rear-Admiral Porter, enclosing report of Lieutenant Commander Owens.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,
Mound City, June 26, 1864.

SIR: I have the honor to enclose herewith a report from Lieutenant Commander E. K. Owens, of the United States steamer Louisville, of an engagement between that vessel and a rebel battery at Columbia, Mississippi, resulting in the defeat of the rebels.

I have the honor to be, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral*

Hon. GIDEON WELLES,
Secretary of the Navy.

Report of Lieutenant Commander E. K. Owens.

UNITED STATES STEAMER LOUISVILLE,
Four miles below Columbia, June 2, 1864.

SIR: I have the honor to make the following report: General Ellet informing me that there was a heavy battery near Columbia, and that the Missouri (transport) was to be convoyed past it, I got under way from Island 84 early this morning for that purpose, and to see the condition of affairs in this neighborhood, (though I had been as high as Gaines's landing only a few days since.) Whilst on our way up the W. R. Arthur was overtaking us. I stopped for her and conveyed her, or partially so, by Sunnyside, where rebel sharpshooters are thick. When I reached Greenville I found that General Ellet had sent two of his boats to convoy the Missouri and to return with the Henry Ames, laden with corn and quartermasters' stores. I then had the Arthur only to look out for. I had her to take me in tow and proceed up the river. As we approached the lower outskirts of Columbia I shelled the banks, hoping to get a reply and find their batteries. No response was made to our firing until we got abreast of their middle battery, when they opened on us with nine pieces of different calibre. It was difficult to get our lines loose from the Arthur; consequently kept under fire some time with no advantage to us. As soon as I got clear of her I rounded, and soon made them stop firing at us. I fear the Arthur met with many injuries, as she is a fine boat, and the enemy desired to destroy her. We were struck in the main portion of the vessel but ten times, and had but five men severely hurt. The Arthur in leaving us tore off our starboard nosing and the first shear plank below it. The enemy's six-pounders go through us easily. We picked up a twelve or eighteen pounder Boreman fuze shrapnell, portions of a twelve-pounder rifle and twenty-pounder Parrott, Shenkle fuze, and a solid six-pound shot. We were pretty well cut with minie balls, but no one was injured from them. The strength of the enemy in the neighborhood is undoubtedly great, and nothing but a military expedition can clear the banks. We can convoy boats every day with the usual loss of men and injury to boats as the river is now; but it is falling rapidly, and vessels are of necessity being driven close under the enemy's guns.

I am, sir, very respectfully, your obedient servant,

E. K. OWENS,

Lieutenant Commander, Commanding 6th District.

D. D. PORTER,
Rear-Admiral.

FIGHT WITH REBEL BATTERIES IN TUNICA BEND.

Report of Rear-Admiral D. D. Porter.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,
Mound City, June 26, 1864.

SIR: I have the honor to enclose a report from the General Bragg and Naiad of a fight with rebel batteries.

The Bragg cannot get here to be repaired at this stage of water, and I have ordered her to New Orleans.

These batteries will continue to come in on the river until more effective measures are taken by the military authorities to land troops and chase them up until they are all taken.

Some five or six batteries, mostly captured from our forces, are spread along the river, and fire when they get a good opportunity. This firing is extremely annoying to passenger boats with women and children on board, who are frequently killed by this southern civilized mode of warfare. As long as they fire on the gunboats we don't mind them, though they occasionally do damage and kill men.

These batteries have generally been driven away by the gunboats, and I am in hopes we will soon have proper landing parties of troops prepared to act in concert with gunboats, when there may be a hope of keeping the river free of these marauders.

I have the honor to be, very respectfully, your obedient servant,
DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Report of Acting Volunteer Lieutenant C. Dominey.

UNITED STATES STEAMER GENERAL BRAGG,
Mouth of Red River, June 16, 1864.

SIR: I have the honor to report that the enemy opened fire on me this morning with four guns (at 1.45) while at anchor off Como landing, in Tunica bend. Slipping my cable, I immediately went to quarters and replied to their fire. After being engaged about five minutes one of the enemy's shot struck the working beam, breaking it, and thereby disabling the engine completely. The vessel then drifted down the river, and I continued firing and silenced the enemy before I had drifted out of range. I received, in all, twenty-two shots, several riddling the officers' quarters and cabin, two bursting on the berth deck, &c., but no material damage was done, save by the one that disabled the machinery. I fired, in all, forty-two (42) shots of different descriptions, mentioned in the gunner's report herewith enclosed.

One man slightly wounded in the head was the only casualty.

Enclosed please find report of ordnance expended, engineer's report of damage to his machinery, and surgeon's report of wounded.

I am, respectfully, your obedient servant,

C. DOMINEY,

Acting Volunteer Lieutenant, Commanding.

Lieut. Commander F. M. RAMSAY, U. S. N.,
Com'dg 3d and 4th Districts, Mississippi Squadron.

Report of Acting Master H. T. Keene.

UNITED STATES STEAMER NAIAD,
Head of Tunica Island, June 15, 1864.

SIR: I have the honor to report that at 3.45 o'clock this morning I saw the United States steamer General Bragg engaged with a rebel battery on the left bank. I got up steam immediately and ran up to her assistance. When we had arrived within half a mile of where the General Bragg lay, a rebel battery opened on us, directing the shots at first towards the pilot-house, and in a few shots completely disabling our steering apparatus and severely wounding first-class pilot, James M. Herrington. The wheel being shot away, I was obliged to steer by relieving tackle. I managed, however, to get bows on to the battery, and continued to fire briskly until the batteries were silenced. We were hit nine (9) times; the first shot passed through the smoke-stack; the second and third shots passed through the pilot-house, the third striking the barrel of the wheel, cutting the tiller-rope, and literally tearing the wheel to pieces; the fourth shot passed a few feet abaft the pilot-house, shattering the steerage and skylights, but doing no further damage; the fifth shot passed through the cabin. We also received four shots through the starboard casemates; one striking abreast of the boilers; one abaft of No. 2 gun, tearing up the decks and exploding within a few feet of the shell-room; one abaft of No. 3 gun, killing John J. Crennell, ordinary seaman, and wounding three others; another passed through the port of No. 4 gun, tearing away the shutter and exploding in the dispensary. The officers and men behaved admirably, considering that very few of the officers, and not one of the men, had before been under fire, or seen service of any kind afloat. We received no material injury beyond disabling the steering apparatus.

I expended altogether thirty-seven shell.

For list of casualties please find enclosed surgeon's report.

Very respectfully, your obedient servant,

HENRY T. KEENE,
Acting Master, Commanding.

Lieut. Commander F. M. RAMSAY,
Commanding 3d District, Mississippi Squadron.

REBEL ATTACK ON WHITE RIVER STATION.

Letter from Rear-Admiral Porter, transmitting report of Acting Ensign H. Booby.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,
Mound City, June 27, 1864.

SIR: I have the honor to enclose a report of Acting Ensign Henry Booby, commanding the United States steamer Lexington, giving an account of an attack made on White River station by the 10th Missouri regiment, (rebel,) under command of Colonel Souther, on the morning of the 22d instant.

The rebels were quickly repulsed.

I have the honor to be, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Report of Acting Ensign Henry Booby.

UNITED STATES STEAMER LEXINGTON,
Off White River Station, June 22, 1864.

SIR: I have the honor to report that an attack was made on this place at 4½ o'clock a. m. by the 10th Missouri regiment, (rebel,) under command of Colonel Souther.

The garrison here had just completed the stockade on which they were engaged when you left, and in it they fought bravely, though their pickets had been surprised, and the rebels were close upon them before they were discovered.

The Lexington had steam up, and moved immediately out into the stream, and opened on them a rapid fire. The enemy was quickly repulsed, and retired to the woods. We had no casualties, and of the garrison one (1) was killed and four (4) wounded. One negro was killed and two (2) families of refugees carried off. Two (2) dead and three (3) wounded rebels fell into our hands, but most of their killed and wounded were dragged off the field. The wounded federal and rebels are being cared for on this ship.

Had there been another armed vessel here, I could have cut off their retreat and captured the whole command, but I did not deem it prudent to leave this point with the Lexington

I am, respectfully, your obedient servant,

HENRY BOOBY,
Acting Ensign, Commanding.

Lieut. Commander S. L. PHELPS,
Commanding 6th District, Mississippi Squadron.

OPERATIONS IN ARKANSAS AND WHITE RIVERS.—CAPTURE OF THE
UNITED STATES STEAMER QUEEN CITY.

Letter of Captain Pennock transmitting various reports.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,
Mound City, July 4, 1864.

SIR: I beg leave to enclose herewith reports of Lieutenant Commanding George M. Bache and others, of the operations of the Tyler, Fawn, Naumkeag, and Queen City, since the 20th of June, in the Arkansas and White rivers.

I remain, very respectfully, your obedient servant,

A. M. PENNOCK,
Fleet Captain and Commandant of Station.

Rear-Admiral DAVID D. PORTER,
Commanding Mississippi Squadron.

Report of Lieutenant Commander S. L. Phelps.

UNITED STATES STEAMER HASTINGS,
Off mouth of White River, July 1, 1864.

SIR: I have the honor to enclose herewith the reports of Lieutenant Commanding G. M. Bache and others, of the operations of the Tyler, Fawn, Naumkeag, and Queen City, since the 20th ultimo, in the Arkansas and White rivers.

You will observe that our information in regard to the movements of Marma-

duke's force on the Arkansas was much more accurate than was supposed by those having charge of transportation in this department; and that the fleet of transports which left here on the 19th ultimo for Little Rock, under convoy, was necessarily turned back by Captain Bache, who found the enemy occupying Red Fork landing.

This fleet he convoyed to Duvall's Bluff, and on the 24th again started down White river with the intention of once more attempting to ascend the Arkansas river, having been induced to do so by General Steele, who was incredulous as to the existence of a rebel force on that stream.

When on the way down, and before reaching Clarendon, thirty miles below Duvall's Bluff, he learned of the capture of the Queen City by Shelby's force at that place. The transports were sent back to the bluff, and Captain Bache with the three gunboats proceeded at once to attack and drive the enemy from his capture, and from the river, which he accomplished in the most gallant style, after a sharp engagement, in which the enemy lost heavily. I refer you to the reports for the particulars, but invite your special attention to the excellent judgment and cool bravery which secured this handsome result, with those vulnerable craft, by placing them where shell with $\frac{1}{4}$ and $\frac{1}{2}$ second fuzes told with fearful effect.

I also desire to commend to your notice Acting Master John Rogers, commanding Naumkeag, who is a seaman, has been a good while in service, and particularly attracted the attention of Captain Bache in the fight. It is proper to add that he has uniformly performed his duty with zeal and efficiency.

It is probable that you may deem a court of inquiry necessary to investigate the circumstances attending the loss of the Queen City. Two of her officers (wounded) will go to Cairo with orders to report to you. The statement of one of them is among the enclosed papers.

The Tyler met with an accident which temporarily disabled her, but I have all the carpenters on the vessels here at work on her, and she will be ready for service in three or four days.

I am, very respectfully, your obedient servant,

S. L. PHELPS,
Lieutenant Commander.

Rear-Admiral D. D. PORTER,
Commanding Mississippi Squadron.

Report of Lieutenant-Commander George M. Bache.

UNITED STATES STEAMER TYLER,
Off Clarendon, Arkansas, June 28, 1864.

SIR: I communicated personally with General Steele on the 23d instant; he desired very much to get the transports up the Arkansas river, not believing, as I did, that the enemy were on the river in force. He, however, left everything to me. Not wishing that the army should think us backward in co-operation, I determined to shove them there as far as the gunboats could go, and let them trust to luck afterwards. The fleet of nine transports accordingly left Duvall's Bluff at daylight on the 24th instant, accompanied by the Tyler, Naumkeag, and Fawn. When within about ten miles of Clarendon, we picked up some men on the west bank of the river, belonging to the Queen City, who stated that that vessel had been captured by the enemy (Shelby) at 4 a. m. that morning. I immediately turned back the transports for the last time, and will now dismiss them altogether by referring you to the enclosed copy of a letter I have received to-day from Lieutenant Commander Owen, which confirms the informa-

tion I had previously received, and on which I acted in turning back the fleet on the 21st instant. At 9 o'clock we received our first information of the capture of the Queen City, just five hours after it occurred. I know the enemy had not much time to get anything out of her, but thought they might attempt to fight her in co-operation with the shore batteries.

When within a few miles of Clarendon, however, we heard two successive reports, which proved subsequently to have been the unfortunate Queen City blowing up; Shelby hearing us coming, had destroyed her. At 9.45, the boats being in the following order, viz: Tyler, Naumkeag, and Fawn, and when abreast of Cache river, the enemy opened on this vessel, putting one of his first shots through the pilot-house.

We could only reply occasionally with a bow Parrott until nearly abreast, when steaming slowly past, we gave them broadside after broadside of $\frac{1}{2}$ -second shrapnell and canister. Having passed, the Tyler rounded to, followed by the Naumkeag, and steamed up at them again. (The Fawn's pilot had been mortally wounded, and her bell arrangements carried away, which prevented her from participating again.) I am told that the rebels now exclaimed in despair, "There comes that black devil again." They had thought we intended merely running the blockade. After getting abreast of them, head up stream, (as I intended continuing the fight,) their fire was not so brisk as before, and I soon had the pleasure of seeing them skedaddling from the field, abandoning in their flight nearly everything they had captured within three hundred yards of the bank.

The enemy had six guns of their own, 10-pounder rifles, 12-pounder smooth-bores, and I think one 6-pounder; besides these, they used on us a 12-pounder Dahlgren howitzer, mounted on a field-carriage, which they had taken from the Queen City, and which we recaptured. The guns were in different positions, making four batteries, and, excepting the howitzer, entirely masked. The howitzer was about a hundred feet from the bank, and was fired only a few times before every one was driven from it.

The vessels, by my order, used nothing during the fight but $\frac{1}{2}$ and $\frac{1}{4}$ second shrapnell and canister from their smooth-bore guns. Shells were afterwards used in dislodging the enemy from some houses and the adjacent woods. Our fire was terrific; the trees on shore for the space of a mile are marked by our projectiles, and that *low down*. When an enemy abandons a light gun, which he has just captured, and which two men could haul away, he must have been badly used. The whole affair lasted only forty-five minutes. This vessel was hulled eleven times, doing no damage, however, beyond wounding six men, and carrying away a worthless "coffee-mill" gun. The boiler casemates stopped a 12-pound ball. The iron about the Fawn's boilers also stopped a shot.

The enemy's ammunition was defective, but few of their shells exploding. Besides the howitzer, the following articles were recaptured, viz:

- 5 boxes 12-pounder shrapnell.
- 2 boxes 12-pounder shell.
- 2 boxes 12-pounder canister.
- 2 boxes 24-pounder shell.
- 3 boxes 24-pounder shrapnell.
- 1 box 24-pounder canister.
- 5 boxes 32-pounder shell, (fuzed.)
- 2 boxes 32-pounder sponges and one rammer.
- 1 24-pounder sponge and rammer.
- 3 boarding pikes.
- 2 boats and 1 anchor, with about 30 chains.

The enemy also abandoned some of their wounded prisoners, who made their way to us. I burned a large grist and saw mill, which afforded shelter to the enemy, and a pair of timber-trucks, which might have been useful in transporting heavy pieces of artillery. The Tyler had the following men wounded, viz:

M. Leonard, boatswain's mate, head and hand; J. Dillon, seaman, contused wound of the leg; J. O'Brien, captain afterguard, contused wound of shoulder; T. Gerard, quartermaster, flesh wound of thigh; G. Lochlaum, seaman, contused wound of leg; J. Campbell, cockswain, flesh wound of thigh.

Enclosed are the reports of Captains Grace and Rogers, by whom I was well supported. Captain Rodgers I would especially mention for the beautiful way he handled his vessel, and his coolness in action. I was very much pleased with the behavior of Acting Ensign Ackley and Acting Master's Mate Michael, of this ship.

I also enclose a letter from the doctor of the Queen City, in regard to the loss of that vessel; and also a list of the men whom we have picked up, and what disposition I have made of them.

The wreck of the Queen City lies about a mile below the town, in two fathoms water. She was most completely burnt and blown up, and her casemates have tumbled in on the guns, which we are now endeavoring to raise. They are all there excepting one 24-pound howitzer. The water here is falling rapidly, and the enemy threatening to come in on the bluff about St. Charles.

We want at least six gunboats to keep the river open. The force I have at present is not sufficient.

Very respectfully, your obedient servant,

GEORGE M. BACHE,
Lieutenant Commander.

Lieut. Commander S. L. PHELPS,
Commanding Seventh District, Mississippi River.

Report of Acting Master John Rogers.

UNITED STATES GUNBOAT NAUMKEAG,
Off Clarendon, Arkansas, June 27, 1864.

SIR: I have the honor to report that, in compliance with your order, we got under way from Duvall's Bluff on the morning of June 24, at 4.20 a. m., in company with the United States gunboats Tyler and Fawn, and a fleet of nine transports, bound for the Arkansas river. We proceeded down the river about thirty miles, when we met the Fawn and the headmost transport returning with the intelligence that Clarendon was occupied by a rebel force of 2,700 men, and a battery of four or five guns, under command of General Shelby, and that the gunboat Queen City had been captured. I immediately stopped until you came up for orders, when the transports returned, and we proceeded to Clarendon in line of battle—the Tyler taking the lead, Naumkeag the centre, and Fawn the rear.

At 9 a. m. the enemy opened fire upon the fleet, which was returned by us from our bow guns as soon as they would bear upon them. We followed the Tyler past the battery, giving them our broadside as we passed; after passing we rounded to, head up stream, shelling the enemy from our bow and broadside guns until they were driven from their covers.

Under the protection of the Tyler's guns, we ran into the bank, and recaptured a 12-pounder brass howitzer formerly belonging to the Queen City. We also recaptured five of her crew, two badly wounded, also her cutter and four oars. In the engagement we were struck several times. One 10-pound Parrott passed through the paymaster and executive officer's room; one 12-pound shrapnell exploding in the engineer's room. Our cutter also had two 10-pound Parrotts through her, damaging her badly; also cabin cut up with musketry.

The concussion of the guns has caused the vessel to leak badly. The eye-

bolts through the casemates are broken, (that the loop-pin of the howitzers pass through;) in fact, the whole casemate is too flimsy. The gun platforms are rotten. Our casualties are Acting Master's Mate John Dunlap, shot in the abdomen, who died of the wound the next day. He was a good officer, and respected by all that knew him; he was on the sick list when the fight commenced, but he insisted upon taking command of his division.

During the afternoon we patrolled up and down for a mile or two, and were fired upon by musketry from the woods, which we returned with $\frac{1}{2}$ -second shrapnell. At night we anchored above the mouth of Cash river. On Saturday morning, June 25, this vessel and the Fawn got under way at 10 a. m., and ran down to Clarendon; saw the enemy again in considerable force throwing up breastworks; commenced shelling them, and continued to do so until we drove them out of range of our guns. I forgot to state that Mr. Dunlap and the wounded, and others of the Queen City were put on board of the Tyler to be sent to the hospital at Duvall's Bluff. I have also saved the anchor and chain and buoy of the Queen City.

I cannot close this report without bearing testimony to the zeal and good conduct of both officers and men, for which I return them my thanks. All of which is respectfully submitted by

Your obedient servant,

JOHN ROGERS,
Acting Master, Commanding.

Lieutenant BACHE, U. S. N.,
Commanding Fleet, White River, Arkansas.

Report of Acting Master John R. Grace.

UNITED STATES STEAMER FAWN,
Off Columbus, Ark., June 27, 1864.

SIR: I have the honor to report that on the morning of the 24th of June, while on my way down White river, I met the transport Pike, which reported the capture of the United States steamer Queen City, at four o'clock a. m., by the rebels under command of General Shelby, who was reported as still occupying the place with twenty-seven hundred men and six pieces of artillery.

I received on board from the Pike, Acting Master's Mate William Eakle, Paymaster's Steward William Poor, and first class-boy William Smith; and also the following named contrabands: James Rider, Frank Brown, John Fletcher, Henry Sims, and Willis Willister; and in the afternoon I picked up, opposite Clarendon, John Stepney, all of whom escaped from the captured vessel.

After receiving the news from the Pike, I waited until the United States steamers Tyler and Naumkeag came down, when I communicated to you the intelligence; then by your orders I took my position following the Naumkeag, the Tyler taking the lead, and proceeded down the river to engage the battery. After coming within range of the enemy's guns, a heavy fire was opened upon me by artillery and infantry, which I returned with my bow and broadside guns, and continued the fire until they were driven off. In the early part of the engagement a 12-pound shrapnell entered the port shutter of the pilot-house, mortally wounding the only pilot on board, (Thomas A. Burnett,) and carrying away the bell-wires and ringing the bells, thereby causing the engineers to stop the boat directly under the battery. The paymaster then took the wheel, and after some delay, I had the bells fixed, and the boat again under way. A second shell entered the pilot-house, tearing up the floor, and throwing splinters in every direction. One came across the hurricane deck, striking the

hog-chain brace; another passed forward between the chimneys, tearing the deck, and destroying a harness cask which was standing there filled with water.

Three shells entered the casemate on the port side, disabling the crews of two guns.

A shrapnell entered the hull midships, ranging to the starboard, and then passing forward, exploding under the forecastle deck. Two shells entered the stern, one passing through the blacksmith's forge, and bursting back of the throttle valve; the other exploding over the starboard engine. One shell burst on the outside over the starboard crank, cutting in two the main hog-chain and brace.

The following is a list of casualties: * Thomas A. Burnett, first-class pilot, mortally; * George Brockhagen, quartermaster, severely; * John Bradbach, ordinary seaman, severely; * H. M. Young, seaman, severely; * Seldon Robinson, landsman, severely; * Benjamin F. Beak, landsman, mortally; John Crofford, landsman, slightly; * Vere'g Jackson, ordinary seaman, slightly; George La Valley, landsman, slightly; Ed. D. O'Bryan, acting master's mate, slightly; J. H. Harris, surgeon in charge, slightly.

During the engagement the following ammunition was expended:

Sixteen 24-pounder shell.

Fifty-five 24-pounder shrapnell.

Thirty-two 24-pounder canister.

Ten 12-pounder Hotchkiss shell.

Eleven 12-pounder hollow shot.

Making a total of one hundred and twenty-four (124) rounds.

I cannot close this without bearing testimony to the general good conduct of both officers and men, who zealously performed their duties during the entire engagement.

Very respectfully, your obedient servant,

JOHN R. GRACE,
Acting Master, Commanding.

Lieutenant GEORGE M. BACHE, U. S. N.,
Commanding Squadron.

Additional report of Acting Master John R. Grace.

UNITED STATES STEAMER FAWN,
Off Clarendon, Ark., June 27, 1864.

SIR: I have the honor to report that on the morning of the 25th of June, at 10.30 a. m., being above Clarendon, I started down the river in company with the United States steamer Naumkeag. On rounding the point I saw that the rebels at Clarendon had been throwing up rifle-pits, or breast-works. On arriving within easy range, I opened on them, as did the Naumkeag, which soon drove them out of their works.

The following ammunition was expended, viz:

Twenty-three 24-pounder shell.

Fifteen 24-pounder shrapnell.

Six 12-pounder hollow shot.

Casualties none.

I am, very respectfully, your obedient servant,

JOHN R. GRACE,
Acting Master, Commanding.

Lieutenant G. M. BACHE, *Commanding Squadron.*

* Placed on board the Tyler, and sent to the United States military hospital at Duvall's Bluff.

Report of Acting Assistant Surgeon Lewis Westfall.

UNITED STATES STEAMER TYLER,
June 24, 1864.

SIR: The United States steamer Queen City, lying at anchor off Clarendon, was attacked this morning, between 3 and 4 o'clock, by General Shelby with two regiments of cavalry and four pieces of artillery. We were taken by surprise, no intimation of their approach being given until the firing commenced. At the first or second round the starboard engine was disabled by a shell, and the effectiveness of the port one was much injured by a piece of the same passing through the steam-pipe. After fighting fifteen or twenty minutes, the boat being completely riddled with shell and rifle balls, Captain Hickey decided to surrender her, telling officers and men they could choose between being prisoners or jumping into the water to escape.

The rebels, after robbing us of all our money, and carrying ashore the wearing apparel, removed all the small arms, most of the ammunition, a 12-pounder howitzer, and the paymaster's stores, and then set fire to the boat. They intended to take the 24-pounder and one 32-pounder to make a battery on shore, but fearing other gunboats would come before they could accomplish it, the project was abandoned.

Killed.—George Davis, seaman.

Wounded.—Acting Master M. Hickey, leg; Acting Assistant Surgeon L. Westfall, shoulder; Acting Ensign Frederick Hathaway, hip; Acting Master's Mate E. N. Wild, neck, side, and leg; Michael Ryan, fracture of skull, with hernia cerebri; Charles Blair, scalp; Charles Hunter, arm; Walter Scott, leg; George Sanderson, leg.

Prisoners.—Acting Master M. Hickey; Acting Assistant Paymaster C. S. Simms; Acting Master's Mates E. N. Wild and Joseph Pardee; Pilot Henry Porter, and about twenty seamen and contrabands. One white man and one negro were drowned.

All the rest of the officers and men escaped to the opposite shore. I did not hear General Shelby say what disposition would be made of the contrabands, but one of his officers said, he supposed they would be treated as are the rest they had captured, kill them.

Very respectfully, your obedient servant,

LEWIS WESTFALL,

Acting Assistant Surgeon U. S. Steamer Queen City.

Lieutenant GEO. M. BACHE, U. S. N.,

Commanding U. S. Steamer Tyler.

Additional report of Lieutenant Commander George M. Bache.

UNITED STATES STEAMER TYLER,
Off Clarendon, June 28, 1864.

SIR: I have the honor to inform you that, having driven Shelby from Clarendon beyond the range of our guns, I left the two light-draughts to prevent any further demonstrations by the enemy, and proceeded myself at once to Duvall's Bluff. I then put myself in communication with General Steele, requesting him to send a force to capture the guerillas.

The next day, at 2 p. m., a large force left the bluff under Brigadier General Carr in transports, conveyed by the Tyler. An accident happening to the Tyler that evening, we did not reach Clarendon until 9 a. m. on the next morning, when the troops landed at the town without opposition.

Our troops commenced skirmishing in the woods, and steadily driving the enemy before them on the cotton-plant road.

On the morning of the 25th the light-draughts discovered the enemy had thrown up a couple of breastworks during the night. They were quickly shelled out.

General Carr returned in person this evening, and reports that he pursued Shelby, who has twenty-five hundred men, to Bayou Devieu, thirty miles from this point, where he gave up the chase. He found our 24-pounder howitzer abandoned in the woods about seven miles from here, also a disabled piece of the enemy very near here, and disabled and captured another piece himself, leaving Shelby now but four guns. The piece found near here must have been disabled by the gunboats.

General Carr also captured sixty wounded rebels. His force will leave again for the bluff on the 30th, as the enemy is now threatening Little Rock, and General Steele will require all his force.

While lying here we have succeeded in raising from the Queen City two 32-pounder Parrots and one 32-pounder.

This has been done with a great deal of labor. The remaining guns have fallen into her so as to preclude the possibility of raising them until the water falls more.

Very respectfully, your obedient servant,

GEORGE M. BACHE,
Lieutenant Commanding.

Lieu. Commander S. L. PHELPS,
Commanding 7th District, Mississippi Squadron.

Officers and crew of the Queen City picked up by the U. S. steamer Tyler.

Lewis Westfall, acting assistant surgeon, wounded; F. W. Hathaway, acting ensign and executive officer; Irvin Fox, acting first assistant engineer; G. W. Shallenberger, acting second assistant engineer; William P. Eakle, acting master's mate; William H. Poore, paymaster's steward; George A. Williams, surgeon's steward.

Crew.—John Carey, boatswain's mate; Charles Bowers, carpenter's mate; Wilbur F. Nevins, quarter-gunner; James Smith, quarter-gunner; S. Hilderbrand, first-class fireman; William Davis, second-class fireman; John Barber, officers' cook; Joseph Roberts, seaman; Henry F. Hazzel, seaman; Robert Smith, seaman; Charles Blair, seaman; Walter Scott, seaman; George Sander-son, seaman; T. Mooney, ordinary seaman; William F. Smith, first-class boy.

Colored.—Robert Booker, seaman; Robert Payne, ordinary seaman; Henry Roberts, landsman; John W. Smith, landsman; Frederick Buckingham, landsman; Edward Boler, landsman; Haden Johnson, landsman; A. Thompson, landsman; T. Gazter, landsman.

EXPEDITION TO EASTPORT.

Report of Captain A. M. Pennock.

UNITED STATES FLAG-SHIP BLACK HAWK,
Cairo, Illinois, October 14, 1864.

SIR: I have the honor to enclose you a report of Acting Master J. L. Bryant, commanding United States steamer Undine, received at the moment of my

departure, as announced in my despatch of this morning. The report of the officer commanding the United States steamer Key West, also engaged in the same expedition, has not been received.

I have just returned from a visit to Paducah, where I made such dispositions as will materially assist the force there in repelling any attack which may be made, but which, from the best information I could obtain, I do not anticipate.

It is my impression that the rebel General Forrest will be more likely to make an attack on Memphis, where I understand the garrison is weak. I will, therefore, proceed there without delay to make arrangements for giving it such assistance as the gunboats afford.

I have the honor to be your obedient servant,

A. M. PENNOCK,

Captain, Commanding Mississippi Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Acting Master John L. Bryant.

UNITED STATES STEAMER UNDINE,

Off Paducah, Ky., October 12, 1864.

SIR: I have the honor to forward the following report of an expedition from Clifton to Eastport, under command of Colonel Hoge, consisting of the 113th and 120th infantry, Illinois volunteers, 660 strong; 61st United States colored infantry, 600 strong; and battery G, 2d Missouri light artillery, (four rifled 12-pounders.) These troops embarked on the morning of the 9th instant at Clifton, Tennessee, on board the transports City of Pekin, Aurora, and Kenton, and at 1 p. m. started up the river for Eastport, Mississippi, under convoy of the United States steamer Key West and this vessel. The transports being short of fuel, we stopped for wood at several points on the river.

At 1.30 p. m., the 10th instant, we arrived off Eastport. After passing some islands ten miles below, the Key West made signals to me, "Cannot be too cautious," "And keep in close order."

On approaching Eastport everything seemed quiet; there were no intimations of troops or batteries on the hill commanding the landing, and Captain King waved to the transports to land, and took a position so as to command the roads, and came to anchor. I anchored astern of him; the troops immediately commenced disembarking.

Colonel Hoge, commanding the brigade, went on board the Key West and informed Captain King that he should move immediately for Iuka. As the colonel was returning in the Key West's gig, a masked battery of six rifled guns opened on the boats from the hill at Eastport, and three rifled guns from Chickasaw. The transports were struck several times, exploding a caisson on board the Aurora and Kenton, and setting them on fire, causing great confusion among the troops, burning several of them, and mortally wounding the captain of the Aurora. Many of the troops jumped overboard from the burning steamer. A company that had been sent out as skirmishers immediately returned towards the boat; the other troops that were forming in line on the bank broke and fled in great disorder down the river; the battery of four guns were abandoned; the transports cut their lines and drifted down stream; Aurora and Kenton disabled.

During this time the Key West and Undine were each struck twice with rifled projectiles. One shell passed down through the boiler deck of the Key West and burst in the "bag-rack," near after part of boilers; another passed through the steerage and out on the port side. This vessel had her port wheel-

rope and bell-wires cut by a shell, and also had the after steam escape pipe and hog-chain brace, near the cook's galley, shot away. One shell entered the starboard side of the boiler deck, passing through the cabin, cutting the deck and causing the splinters to fly in every direction. The gunboats returned the fire immediately, and kept it up for thirty minutes in full range of the enemy's batteries, with their shell bursting all around and over us.

On finding it evident that the enemy's force was far superior to ours, and that an effort to silence her batteries with smooth-bored guns would prove fruitless, Captain King gave orders for the gunboats to drop down out of range. The two disabled transports having now drifted out of sight, Captain King ordered me down the river to look after them, while he covered the City of Pekin in taking on board the stragglers. On reaching the vessel I found the troops and crew had succeeded in quenching the fire on the transports, but they were disabled, and I immediately returned and reported the fact to Captain King.

It was now nearly sundown, and the Key West proceeded down stream and made signals, "Follow senior officer's movements," which I did. We found the transports Aurora and Kenton drifting down stream in the Chute or Leni islands. The Kenton had temporarily repaired her steam-pipe and taken the Aurora in tow. The transports landed. The Key West anchored, and I moved alongside of her. Colonel Hoge came on board and requested Captain King to convoy him to Hamburg. The City of Pekin now took the disabled Aurora in tow, and at 6.15 p. m. we all steamed down the river. On approaching Bond's landing we discovered two houses on fire, which illuminated the river for some distance. Captain King, thinking all was not right, ordered the transports to stop, and he would go ahead and shell the woods; if he passed by safe, he would blow a long whistle for them to come on, which he did, and we again proceeded on our way. At 10.20 we passed Savannah, and at 10.35 the fog became too thick to proceed further with safety, therefore came to anchor above Coffee landing, except the Aurora, which tied up to the bank.

At 8 o'clock, in the morning of the 11th, we got under way and proceeded down the river. The Aurora had temporarily repaired her steam-pipe, and was capable of being managed under low steam. We arrived at Jacksonville at 7 p. m., the 11th instant, and I proceeded down the river, in company with the United States steamer Key West, at 9 this morning, and arrived off Paducah at sundown.

I am happy to inform you that during the engagement my officers and crew behaved gallantly and displayed coolness in every instance. Third Assistant Engineer John W. Morton was restored to duty during action, and acted with great coolness and decision. I also take great pleasure in informing you that Volunteer Lieutenant King deserves much credit for the skilful manner in which he conducted this expedition.

Very respectfully, &c.,

JOHN L. BRYANT,

Acting Master U. S. N., Commanding.

Lieut. Commander JAMES W. SHIRK,

Commanding Ninth District, Mississippi Squadron.

Additional report of Captain A. M. Pennock.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,

Mound City, Illinois, October 30, 1864.

SIR: I have the honor to enclose you a copy of Acting Volunteer Lieutenant G. M. King's report of the attack by the rebels on Colonel Hoge's command at Eastport, Mississippi.

He was the senior officer present at the time, in command of the gunboat Key West.

The report of the second in command I forwarded on the 14th instant. These reports have both been forwarded as soon as received.

I also enclose copy of General Washburn's order to Colonel Hoge, explaining the service required of the gunboats.

I have the honor to be, very respectfully, your obedient servant,

A. M. PENNOCK,

Captain, Commanding Mississippi Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Acting Volunteer Lieutenant G. M. King.

UNITED STATES GUNBOAT KEY WEST,

Off Paducah, Ky., October 13, 1864.

SIR: I have the honor to forward the following report of an expedition from Clifton to Eastport, under command of Colonel Hoge, consisting of the 113th and 120th Illinois infantry, (660 strong,) and the 61st United States colored infantry, (600 strong.) These troops embarked on the morning of the 9th instant, at Clifton, on board the transports City of Pekin, Kenton, and Aurora, and at 1 p. m. steamed up river for Eastport, Mississippi, under convoy of this vessel and the United States steamer Undine, Acting Master John L. Bryant, commanding. The transports being short of fuel, we stopped for wood at several points on the river.

At — p. m. of the 10th instant, we arrived off Eastport. After passing Line island, ten miles below, I made signal to Undine, "Cannot be too cautious," and "Keep in close order." On approaching Eastport everything seemed quiet; there were no indications of troops or batteries on the hill commanding the landing, and I waved to the transports to land, and took a position in mid river, so as to command the roads, and anchored with the Undine astern.

The troops commenced disembarking immediately. Colonel Hoge, commanding the brigade, came on board and informed me that he should move immediately for Iuka. As the colonel was returning to the City of Pekin in my gig, a masked battery of six rifled guns opened on the boats from the hill at Eastport, and three rifled guns from Chickasaw. The transports were struck several times, exploding a caisson on board the Aurora and Kenton, and setting them on fire. This caused great confusion among the troops, many of them jumping overboard from the burning steamers. A company that had been sent out as skirmishers immediately returned towards the boats. Other troops that were forming in line on the bank broke and fled pell-mell down the river bank. The battery of four guns was abandoned. The transports cut their lines and drifted down stream—Kenton and Aurora disabled, and City of Pekin with several shots through her. During this time the Key West and Undine were each struck twice with rifled projectiles. One plunging shell passed down through the boiler deck of this vessel, and burst in the bag-rack, near after part of boilers. Another passed through the steerage and out on the port side. The Undine had her port wheel-rope and bell-wires cut by a shell. The gunboats returned the enemy's fire immediately, and kept it up for thirty minutes, in full range of the batteries, with their shell bursting thick and fast around and over us. Seeing that I could effect nothing with smooth-bores against a battery of rifled guns, I dropped the gunboats back just out of range. The two disabled transports having now drifted out of sight around the bend, I sent the Undine down to look after them, while I covered the City of Pekin in taking on board the stragglers. The Undine returned shortly, and Captain Bryant reported that the troops and crews had quenched the fires on the transports, but they were disabled and repairing. It was now nearly sundown, and I suggested to Col-

Colonel Hoge that we had all better go down and look out for our disabled boats. We found them drifting down stream in the chute at Line island. The Kenton had temporarily repaired her steam-pipe, and had the Aurora in tow, and steamed with her to the right bank of the river; the City of Pekin landed also. I anchored this vessel in the chute near them, with the Undine alongside. Colonel Hoge now came on board, and requested me to convoy him to Hamburg. The City of Pekin took the disabled Aurora in tow, and at 6.15 p. m. we all steamed slowly down river. On approaching Boyd landing we discovered two houses on fire, lighting up the whole bend of the river. Fearing the enemy might have a battery planted there, I communicated with Colonel Hoge, and told him that I would move ahead, and if I got through safely would blow a long whistle. In passing down the bend I manned both sides, and kept up a warm fire, but received no response. On approaching Hamburg I again communicated with the colonel, to know if he wished to stop at that point. He answered that he wished me to proceed down river as fast as possible.

At 10.20 we passed Savannah, and at 10.35, the fog being too thick to run with safety, we anchored above Coffee landing, except the disabled Aurora, tied to the bank. At 8 o'clock, on the morning of the 11th, we proceeded down river. The Aurora had temporarily repaired her steam-pipe during the night, and was manageable under slow steam. We stopped at Clifton a short time at noon, and proceeding, arrived at Johnsonville at 7 p. m. of the 11th instant. Proceeded down river with the Undine at 9 this a. m., and arrived at Paducah at sundown.

Under the circumstances attending this affair, I think it providential that the boats escaped with so little damage, and that so few of the troops were killed and captured. With regard to the loss of the battery, I will only say, at present, that the gunboats were ready to assist in any movement the colonel commanding might have suggested for their recovery. I am fully convinced, at the same time, that any attempt in force to retake the guns would have entailed still greater loss, including the temporary or total disabling of the gunboats. I am happy to inform you that my officers and crew acted with great coolness and decision; the guns were fired rapidly and well.

Enclosed I have the honor to forward a copy of General Washburn's order to Colonel Hoge.

I am, respectfully, your obedient servant,

G. M. KING,

Acting Volunteer Lieutenant, Commanding.

Lieut. Commander JAMES W. SHIRK, U. S. N.,

Commanding 9th District, Mississippi Squadron.

Major General Washburn's instructions to Colonel Hoge.

HEADQUARTERS, Ripley, October 8, 1864.

COLONEL: As soon as you receive this, move with your infantry and artillery to Clifton, with the squadron of cavalry that takes you this, and embark at once on transports and move up to Eastport. As soon as you land at Eastport, move rapidly out to the line of railroad near Iuka, and break the road up and destroy bridges, so as to hold any trains that may be east of the break. Their depot of supplies is at Cherokee, east of Iuka. After doing this, hold Eastport until you hear from me. I think I shall reach there in about three days. The second Iuka cavalry order forward as rapidly as possible. In approaching Eastport, do so with care as not to be ambuscaded. Please show this to Captain King, gunboat Key West, and request him to convoy you and stick to you.

Respectfully yours,

C. C. WASHBURN, *Major General.*

Colonel G. B. HOGE, *Commanding Brigade.*

POTOMAC FLOTILLA.

CAPTURE OF REBELS ON ST. GEORGE'S ISLAND.

NAVY YARD, *Washington, December 1, 1863.*

SIR: Acting Volunteer Lieutenant Edward Hooker having learned that a number of rebels had assembled on St. George's island, at the mouth of the St. Mary's river, informed Brigadier General Marston of the circumstances. Eighty-five soldiers were detailed by the general, under the command of Assistant Adjutant General Lawrence, fifty of whom were embarked on board the Jacob Bell, Acting Master Shulze, and the rest in an army tug.

In the afternoon of the 22d, guard-boats being placed at the north of the island to prevent the rebel party from escaping, the soldiers were landed and commenced a search of the island, which lasted until morning, the Jacob Bell being anchored during the night on the south side of the island, to prevent an escape into Virginia.

The next morning by 11 o'clock sixty-three persons were taken, of whom the assistant adjutant general discharged thirty-two. The remaining thirty-one, consisting of rebel deserters and blockade runners, were taken to Point Lookout, and are in the possession of the army authorities.

In this expedition Rudolph Kaiser, a seaman of the Jacob Bell, unfortunately fell out of a boat and was drowned, not being able to swim. He rose to the surface but once, and lost hold of the oar extended for his relief.

I enclose herewith the certificate of his death.

I have the honor to be, with great respect, your obedient servant,

ANDREW A. HARWOOD,

Commodore, Commanding Potomac Flotilla.

Hon. GIDEON WELLES,

Secretary of the Navy.

ENGAGEMENT WITH REBEL CAVALRY.—CAPTURE AND DESTRUCTION OF BOATS.

UNITED STATES STEAMER COMMODORE READ,

Off Piney Point, January 9, 1864.

SIR: It having been discovered that the rebels had concealed at Nomini a large lighter and skiff, capable of containing eighty men, a force was landed there on the 5th instant from the steamers Teaser and Yankee, under the command of Acting Ensign Sheridan, which succeeded in destroying the former and capturing the latter.

While they were engaged in this, a number of rebel soldiers made their appearance on the Nomini heights, but were quickly dispersed by a well-directed fire from the gunboats.

Very respectfully, your obedient servant,

FOXHALL A. PARKER,

Commander, Commanding Potomac Flotilla.

Hon. GIDEON WELLES,

Secretary of the Navy.

MISCELLANEOUS SERVICES OF THE FLOTILLA.

UNITED STATES STEAMER COMMODORE READ,
Off Piney Point, January 19, 1864.

SIR: I have the honor to inform the department that on the 12th instant, under cover of the gunboats Yankee, Currituck, Anacostia, Tulip, and Jacob Bell, which I have assigned to this duty, General Marston landed a force of cavalry and infantry on the peninsula, between the Potomac and Rappahannock rivers, and succeeded in capturing a small body of the enemy and a large number of cavalry horses.

Very respectfully, your obedient servant,

FOXHALL A. PARKER,
Commander, Commanding Potomac Flotilla.

Hon. GIDEON WELLES,
Secretary of the Navy.

UNITED STATES STEAMER ELLA,
Potomac Flotilla, July 6, 1864.

SIR: I have the honor to inform the department that on the 30th ultimo, an expedition sent to Shelton's creek, on the Rappahannock river, Virginia, by Acting Volunteer Lieutenant Hooker, succeeded in destroying a salt work recently established there, with its evaporators and tanks.

A number of buildings connected with the work, with carts, wood, and grain, were burned.

I am, sir, very respectfully, your obedient servant,

FOXHALL A. PARKER,
Commander, Commanding Potomac Flotilla.

Hon. GIDEON WELLES,
Secretary of the Navy.

UNITED STATES STEAMER ELLA,
August 8, 1864.

SIR: I have the honor to enclose herewith a copy of a general order of the general commanding at Alexandria, in which he tenders his thanks to the officers and crew of the guard vessel at that place.

I am, sir, very respectfully, your obedient servant,

FOXHALL A. PARKER,
Commander, Commanding Potomac Flotilla.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

[General Order No. 29.]

HEADQUARTERS MILITARY GOVERNOR,
Alexandria, Va., July 27, 1864.

The general commanding desires to tender his thanks to the troops of his command, the armed employes of the quartermaster's department, and Acting Master Nicherson and the officers and men of the mortar-boat Adolph Hugel, for their co-operation and prompt response to his call for their aid in the defence of Alexandria.

By command of Brigadier General Slough:

Captain and Assistant Adjutant General.

EXPEDITION TO RECAPTURE THE TUG TITAN.

UNITED STATES STEAMER ELLA,
Potomac Flotilla, March 7, 1864—10 p. m.

SIR: Having been informed yesterday at 11 a. m. by Acting Volunteer Lieutenant Hooker, senior officer of the Rappahannock, that in a dense haze the tug Titan had succeeded in getting into the Piankatank, after having been chased by the United States steamer Tulip, I proceeded at once to the mouth of this river, where I arrived a little before sunset.

This morning at daylight, leaving the Yankee, Tulip, and Teaser to guard the Rappahannock, I ascended the Piankatank with the Commodore Read, Jacob Bell, Fuchsia, Freeborn, and Currituck to Freeport, the head of navigation, where I found the Titan burnt to the water's edge, the rebels having set fire to her at an early hour this morning.

After shelling the adjacent woods, I sent in a number of armed boats under Acting Ensign Nelson, who completed the work of destruction by breaking the boiler, &c., of the Titan. A metallic life-boat belonging to her was brought off, and is now on board the Commodore Read.

I was much gratified with the energy displayed by all the commanding officers of the flotilla, and by the admirable manner in which the vessels I took with me up the Piankatank were handled in that narrow and intricate river.

I have the honor to be, very respectfully, your obedient servant,

FOXHALL A. PARKER,
Commander, Commanding Potomac Flotilla.

Hon. GIDEON WELLES,
Secretary of the Navy.

EXPEDITION TO MACHODOCK CREEK.

Report of Commander F. A. Parker.

UNITED STATES STEAMER ELLA,
Potomac Flotilla, April 15, 1864.

SIR: General Hinks, commanding at Point Lookout, having desired my co-operation in an expedition to Machodock creek, Va., on the 13th instant I detailed for this purpose the gunboats Yankee, Fuchsia, Anacostia, and Teaser, under command of Lieutenant Commander Eastman, a copy of whose report I herewith enclose.

I have the honor to be, very respectfully, your obedient servant,

FOXHALL A. PARKER,
Commander, Commanding Potomac Flotilla.

Hon. GIDEON WELLES,
Secretary of the Navy.

Report of Lieutenant Commander T. H. Eastman.

UNITED STATES STEAMER YANKEE,
April 14, 1864.

SIR: In obedience to your order, I went on board of the Resolute, and convoyed the army steamer Long Branch, with General Hinks and a battalion of soldiers on board, leaving St. Mary's at 5 a. m. on the 13th, and arriving at Machodock creek at 8 a. m. After communicating with General Hinks, I led the

way into an anchorage, and covered the landing of the forces. Nothing was seen of the enemy except a few cavalry, thirty or forty in number, on the right side of Machodock, and they retired on the landing of four armed boats' crews from the Teaser and Anacostia, which vessels had joined me, according to orders.

In tow of these boats were two small boats of the Long Branch, carrying twelve soldiers; and as the Long Branch had come unprovided with any means of landing, I transported in our boats at this time twenty soldiers.

A large quantity of tobacco and a man named Maddox were taken in the house near the landing. Mr. Maddox was sent to the Long Branch, and most of the tobacco; five boxes of the tobacco were taken to the Teaser, and I have since delivered them to you.

I also visited Corinon bay and Nomini, but discovered nothing of importance; and on the morning of the 14th I detailed the Anacostia to assist General Hinks in transporting his force to Point Lookout, and then, with the Yankee, Teaser, and Fuchsia in company, got under way for St. Mary's, and on my way down the river I exercised this division in forming line and column, in accordance with the teachings of Parker's Squadron Tactics under steam, and I was struck with the simplicity and ease with which a squadron may be manœuvred, and also am glad to be able to say that I have the honor to be the first officer of the United States navy to record an experience in the use of that work.

I wish here to report to you, that the Yankee, Fuchsia, Teaser, Resolute, and Anacostia did all of their duties well and promptly, and especially with regard to the evolutions, the signals being answered quickly, and not a single mistake being made. I arrived at St. Mary's at 5 p. m. and reported in person to you.

Respectfully,

T. H. EASTMAN,
Lieutenant Commander, U. S. Navy.

Commander F. A. PARKER,
Commanding Potomac Flotilla.

EXPEDITION TO THE RAPPAHANNOCK RIVER.

UNITED STATES STEAMER COMMODORE READ,
Chesapeake Bay, April 22, 1864.

SIR : Having learned from various sources that the rebel government had established a ferry at Circus Point, a few miles below Tappahannock, on the Rappahannock river, and was busily engaged in collecting boats at some point on the river for the purpose of attacking the blockading vessels, I proceeded thither with a portion of this flotilla on the 18th instant, where I remained until this evening, visiting both banks of the river, and all its various creeks, (some of which I was told had not before been entered during the war,) from Circus Point to Windmill Point, with the following result: Two ferries broken up; seven large lighters, each capable of carrying one hundred men; three pontoon boats, twenty-two large skiffs and canoes, two hundred white-oak beams and knees, large enough for the construction of a sloop-of-war; five hundred cords of pine wood, and three hundred barrels of corn destroyed.

Twenty-two fine boats, (one of which is fitted for carrying small arms,) one thousand pounds of bacon, two horses, sixty bushels of wheat, a chest of carpenter's tools, and many other articles (a correct list of which will be sent to the department at an early day) brought off.

Five refugees and forty-five contrabands (men, women, and children) were received on board this vessel and landed in Maryland, with the exception of five stout fellows, whom I shipped.

At Bohler's Rocks, on the south side of the Rappahannock, the landing of

our men was opposed by a large force of cavalry, (said to be 500.) which was kept at bay by the fire of the Eureka, commanded by Acting Ensign Halleck, and a howitzer launch, in charge of Acting Master's Mate Eldridge. Acting Master W. T. Street, who had charge of this expedition, showed good judgment, and proved himself a valuable and efficient officer. He speaks highly of Acting Ensign Roderick and Acting Master's Mate Borden, who accompanied him on shore.

In Parrot's creek eight seamen, led by Acting Ensign Nelson, chased six of the rebel cavalry. Yesterday afternoon, as the Eureka got within thirty yards of the shore, just below Urbanna, where I had sent her to capture two boats hauled up there, a large number of rebels, lying in ambush, most unexpectedly opened on her with rifles and a piece of light artillery. Thus taken by surprise, Acting Ensign Halleck displayed admirable presence of mind, and I think not more than five seconds had elapsed before he returned the fire from his light 12-pounder and with small arms; and although the little Eureka, with officers and men, has but sixteen souls on board, for some ten minutes (during which time the fight lasted) she was one sheet of flame, the 12-pounder being fired as fast as a man would discharge a pocket pistol.

The rebels were well thrashed, and I think must have suffered considerably. They fortunately fired too high, so that their shells and bullets passed over the Eureka without injury to the vessel or crew. It was quite a gallant affair, and reflects a great deal of credit upon the officers and men of the Eureka, a list of whom I herewith enclose.

This morning, observing a party of eighteen men at a distance of about two miles from this ship, with muskets slung over their backs, crawling on their hands and knees to get a shot at some of our men then on shore, I directed a shell to be thrown at them from a 100-pounder Parrott gun, which struck and exploded right in their midst, killing and wounding a large number of them, as only four were seen after the explosion, who were, as might be supposed, running inland at the top of their speed.

Lieutenant Commander Eastman, who had the detailing of the various expeditions, well sustained, in the performance of this duty, the reputation he had already acquired as an officer of marked energy and ability.

I have it from the best authority that the rebels have placed torpedoes in the Rappahannock just above Bohler's Rocks, where this flotilla was anchored, off Fort Lowry, off Brooks's barn, opposite the first house above Leedstown, and at Layton's, somewhat higher up. All these are on the port hand going up; others are said to be placed at various points in the river from Fort Lowry to Fredericksburg. They have also been placed in the Piankatank river and in many of the creeks emptying into the Chesapeake bay.

I have the honor to be, very respectfully, your obedient servant,

FOXHALL A. PARKER,

Commander, Commanding Potomac Flotilla.

Hon. GIDEON WELLES,

Secretary of the Navy.

DESTRUCTION OF TWO THOUSAND BUSHELS OF GRAIN.

UNITED STATES STEAMER ELLA,

Potomac Flotilla, May 3, 1864.

SIR: I have the honor to report to the department that on the 27th ultimo Acting Master Hill, commanding the United States steamer Currituck, succeeded

in destroying two thousand bushels of grain which was in process of transportation to Richmond.

I am, sir, very respectfully, your obedient servant,

FOXHALL A. PARKER,

Commander, Commanding Potomac Flotilla.

Hon. GIDEON WELLES,

Secretary of the Navy.

EXPEDITION TO CARTER'S CREEK.

UNITED STATES STEAMER ELLA,

Potomac Flotilla, May 3, 1864.

SIR : I have the honor to report to the department that on the 29th ultimo an expedition, under the command of Acting Volunteer Lieutenant Hooker, was sent to Carter's creek, and succeeded in destroying eleven boats and canoes, a large quantity of grain, and a number of log-huts, said to have been used as barracks by the rebel soldiers. In approaching these Acting Master Street, who had charge of the landing party, consisting of twenty-five seamen, fell in with a company of rebel cavalry, who, doubtless, mistaking his force for the advance guard of a much larger one, put spurs to their horses and fled. Contrabands report that they had previously destroyed a large number of commissary stores provided for their subsistence.

Lieutenant Hooker seems to have well planned the expedition, and Acting Master Street displayed boldness and decision in carrying it out.

I am, sir, very respectfully, your obedient servant,

FOXHALL A. PARKER,

Commanding Potomac Flotilla.

Hon. GIDEON WELLES,

Secretary of the Navy.

OPERATIONS IN THE RAPPAHANNOCK RIVER.

Rebels planting torpedoes in Butler's Hole, &c.

[Telegram.]

ST. MARY'S, May 11, 1864.

The Freeborn broke her piston-follower last night on her way to the Rappahannock, and had to be towed back to this place. I have just returned from consultation with Lieutenant Hooker; have directed him to proceed to Bohler's Rocks, a few miles below Tappahannock, and thence to communicate to me all the information he can procure about the torpedoes in the Rappahannock. Am quite sure he can get to Bohler's Rocks without injury. I am preparing torpedo-catchers for all the vessels of the flotilla, and shall be ready to go to Fredericksburg whenever necessity may require.

Lieutenant Commander Babcock sent word to me last night from York river that the rebels would endeavor to place torpedoes in Butler's Hole, the rendezvous during the day of the vessels blockading the Rappahannock. I think I know where the men engaged in this business live, and if I can get army co-

operation from Point Lookout, will endeavor to capture them to-night. The peninsula, between the Rappahannock and Piankatank rivers, is a guerilla haunt, which I would effectually break up had I one hundred marines.

FOXHALL A. PARKER,
Commanding Potomac Flotilla.

Hon. GIDEON WELLES,
Secretary of the Navy.

Gunboats sent to Fredericksburg.

[Telegram.]

ST. MARY'S, *May*, 1864.

I have sent the Freeborn, Fuchsia, and Yankee to Fredericksburg, under command of Acting Volunteer Lieutenant Hooker, agreeably to orders of the department. In anticipation of this service, I have been for the last week preparing torpedo-fenders for the Fuchsia and Freeborn, which I trust will protect them from injury. The Yankee is ordered to bring up the rear, and the Fuchsia, which will be in the advance, will drag a grapnel astern of her. Hooker is a very careful officer, but the service is a very hazardous one, as information lately received from the Rappahannock leads me to believe that there are torpedoes off Urbanna, Union Wharf, Bohler's Rocks, Circus Point, Fort Lowry, Tappahannock Leeds, five miles below Port Royal, and at Port Royal. If a body of troops were sent from Fredericksburg, on the south bank of the river, to meet our advancing vessels, I think it would be well.

FOXHALL A. PARKER, *Commander.*

Hon. GIDEON WELLES,
Secretary of the Navy.

Picking up rebel torpedoes.

[Telegram.]

ST. MARY'S, *May* 12, 1864.

The gunboats in the Rappahannock have exploded several torpedoes; picked up four safely near the mouth of the river, and are working on.

F. A. PARKER.

Hon. GIDEON WELLES,
Secretary of the Navy.

EXPEDITION AGAINST REBELS NEAR URBANNA.

UNITED STATES STEAMER ELLA,
Navy Yard, Washington, May 16, 1864.

SIR: Information having reached me on the afternoon of the 11th instant that a party of rebels in the vicinity of Urbanna were engaged in placing torpedoes in the Rappahannock and Piankatank rivers, I determined to attack them without delay, and for this purpose asked army co-operation of Colonel Draper, commanding at Point Lookout who not only furnished three hundred infantry (colored) and fifteen cavalry, but took command of them in person.

This force, with the addition of a howitzer and thirty-five seamen, under the command of Acting Master Street, scoured the peninsula between the Rappahannock and Piankatank, and Mobjack bay, from the morning of the 12th to the night of the 13th instant, while Acting Volunteer Lieutenant Hooker, during this time, with the boats of the Yankee, Currituck, and Fuchsia, swept for torpedoes in the rivers and creeks. The result is, that eleven of the rebels were killed, including their leader, Acting Master Maxwell, ten taken prisoners, and a large number wounded; a grist-mill, with an immense quantity of grain, burned, thirty boats destroyed, many mules and beeves brought off, four torpedoes exploded, and six taken up, and four kegs of powder captured.

Of our soldiers, one was killed and five wounded.

Colonel Draper speaks in high terms of Acting Master Street, and the seamen who accompanied him on shore.

I have the honor to be your obedient servant,

FOXHALL A. PARKER,

Commander, Commanding Potomac Flotilla.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

RAPPAHANNOCK RIVER IS CLEARED AND PATROLLED.

[Telegram.]

FREDERICKSBURG, *May 19, 1864.*

Here all right at 2 p. m. The river is clear and patrolled.

E. HOOKER, U. S. N.,

Commanding 1st Division, Potomac Flotilla.

Hon. GIDEON WELLES,

Secretary of the Navy.

ARRIVAL OF ACTING VOLUNTEER LIEUT. HOOKER AT FREDERICKSBURG.

[Telegram.]

ST. MARY'S, *May 19, 1864.*

Hooker has reached Fredericksburg without injury to vessel or men. I think the river perfectly safe for transports, as it is patrolled by gunboats, and especially if the army guard the south side from Fredericksburg to Port Royal.

F. A. PARKER, *Commander.*

Hon. GIDEON WELLES,

Secretary of the Navy.

CONVOYING ARMY TRANSPORTS UP THE RAPPAHANNOCK.

[Telegram.]

ST. MARY'S, *May 20, 1864.*

Your telegraphic order with regard to convoying transports up the Rappahannock river has been received and obeyed.

F. A. PARKER,

Commanding Potomac Flotilla.

Hon. GIDEON WELLES,

Secretary of the Navy.

DESCRIPTION OF THE REBEL TORPEDOES IN THE RAPPAHANNOCK.

UNITED STATES STEAMER KING PHILIP,
Blakistone Island, May 21, 1864.

SIR : I have the honor to forward herewith a copy of a report of Lieutenant Commander Eastman, in relation to the construction of the torpedoes lately removed from the Rappahannock river, and the manner of using them, as demonstrated by the explosion of one of them in the St. Mary's river, on the 18th instant, by my order.

Very respectfully, your obedient servant,

FOXHALL A. PARKER,

Commander, Commanding Potomac Flotilla.

HON. GIDEON WELLES,
Secretary of the Navy.

UNITED STATES STEAMER MATTHEW BASSER,
May 18, 1864.

SIR : In obedience to your order, I report the following experience in the use of a torpedo, taken from the rebels in the Rappahannock river :

The torpedo is a cylindrical tin vessel, with a second small cylinder at the top, and with three apertures ; one on the side and bottom for the purpose of receiving the powder, which apertures are afterwards closed with a gutta-percha wad, and on the wad outside is a covering of beeswax and tallow.

The other aperture is at the top, and is for the purpose of receiving a friction primer, which is put in first, and the aperture then made water-tight by filling in with beeswax and tallow mixed.

The friction primer is attached to the end of a wire, which extends from the outside to the centre of the vessel, so that the primer lays in the middle of the powder always.

To prevent the primer from having any lateral motion, three wires are soldered on to the sides of the vessel, and join in the middle nearly, so that the primer may pass through their bent ends without danger of catching or moving.

The small cylinder at the top of the torpedo is covered with a tin cap, so as to hold the pulling line and prevent it from being touched until the torpedo is sunk, at which time the cap is removed and the line led out to the shore.

The torpedo holds about fifty pounds of fine priming powder, and I enclose herewith a diagram showing dimensions, &c.

After informing myself thoroughly as to the manner of using this new weapon (by carefully opening one) I exploded another in the following manner :

Having attached a sinking weight to the two handles, which are on the sides, I pulled with a small boat into the channel, and then ran my line ashore, and after this was done I carefully removed the tin cap and lowered the torpedo, in three fathoms water.

The boat was then pulled ashore, and the line pulled from about fifty yards back in the bushes, when, without any noise, a column of water sixty feet high and five feet in diameter was thrown up, and, covering the woods with sprays, fell, sending a circular wave, about one foot high, to the surrounding shores.

The appearance was grand, and if a ship was directly over one of these torpedoes she would in all probability be sunk ; but if alongside (except receiving a quantity of water on deck) I do not believe she would be injured.

With the information gained, I feel confident to use the remaining torpedoes against the rebels, whenever it is required of us.

Respectfully,

T. H. EASTMAN,

Lieutenant Commander, United States Navy.

Commander FOXHALL A. PARKER,

Commanding Potomac Flotilla.

RAPPAHANNOCK RIVER OPENED FROM FREDERICKSBURG TO ITS MOUTH.

UNITED STATES STEAMER ELLA,

Navy Yard, Washington, May 26, 1864.

SIR: I have the honor to report to the department that the Yankee, Fuchsia, and Bell reached Fredericksburg on the 19th instant, since which time the Rappahannock river has been open for transports from its mouth.

As the gunboats were compelled to ascend the river, by my instructions, with their torpedo fenders down, and to send flanking parties ashore, and boats ahead (to sweep for torpedoes) in the narrow and shallow parts of it, their progress was necessarily slow, but they had the satisfaction of reaching Fredericksburg without the loss of a man; the only injury sustained being the breaking of five buckets of the Yankee's starboard wheel by striking a rock.

So impressed were the rebels with our operations on the 12th and 13th instant, as detailed in my report of the 16th instant, (No. 89,) that, according to the statement of refugees, they immediately thereafter, to prevent their falling into our hands, either exploded or removed all the torpedoes which they had placed in the river above Bohler's Rocks.

In Acting Volunteer Lieutenant Hooker, commanding first division, Potomac flotilla, who conducted the advance to Fredericksburg, the government possesses a most valuable officer.

I am, sir, very respectfully, your obedient servant,

FOXHALL A. PARKER,

Commander, Commanding Potomac Flotilla.

Hon. GIDEON WELLES,

Secretary of the Navy.

PORT ROYAL, VIRGINIA, EVACUATED.

[Telegram.]

PORT ROYAL, VIRGINIA, May 30, 1864.

Port Royal has been evacuated by the army. I am about moving down the river with General Abercrombie, protecting the rear of, and convoying, the transports.

F. A. PARKER,

Commanding Potomac Flotilla.

Hon. GIDEON WELLES,

Secretary of the Navy.

[Telegram.]

ST. MARY'S, June 2, 1864.

I have just arrived from Port Royal, which was evacuated last evening. All the transports reached the mouth of the Rappahannock in safety.

FOXHALL A. PARKER,
Commander, Commanding Potomac Flotilla.

Hon. GIDEON WELLES,
Secretary of the Navy.

CONTRABANDS TAKING REFUGE ON VESSELS OF THE FLOTILLA.

UNITED STATES STEAMER COMMODORE READ,
St. Mary's River, June 2, 1864.

SIR: I have the honor to inform the department that in the Rappahannock one hundred and sixteen contrabands (men, women, and children) took refuge on board the vessels of this flotilla, who were landed at Point Lookout, Maryland.

I am, sir, very respectfully, your obedient servant,

FOXHALL A. PARKER,
Commander, Commanding Potomac Flotilla.

Hon. GIDEON WELLES,
Secretary of the Navy.

DESTRUCTION OF THE WRECK OF THE UNITED STATES STEAMER SATELLITE.

Letter of Commander Parker, transmitting report of Lieutenant Commander Eastman.

UNITED STATES STEAMER COMMODORE READ,
Port Royal, Virginia, May 31, 1864.

SIR: I have the honor to enclose herewith a copy of a report just received from Lieutenant Commander Eastman.

I am, sir, &c.,

FOXHALL A. PARKER,
Commander, Commanding Potomac Flotilla.

Hon. GIDEON WELLES,
Secretary of the Navy.

Report of Lieutenant Commander T. H. Eastman.

UNITED STATES STEAMER COMMODORE READ,
Port Royal, Virginia, May 31, 1864.

SIR: In obedience to your orders, I examined the wreck of the United States steamer Satellite, and report her as entirely destroyed, except her boiler, which was in a good condition, and it was evident, from its position on the side of the vessel, that the rebels had been at work getting it ashore, and were prevented from succeeding by your advance division of gunboats.

As it was not practicable to bring it away, I placed in it one of the torpedoes captured from the rebels, containing fifty pounds of powder, and exploded it successfully, tearing the boiler into strips, and breaking up what remained of the wreck.

I also brought off sixty fathoms of a heavy iron cable, and an anchor weighing one thousand pounds, which, I think, the rebels intended to stretch across the channel, as one end of the cable was fast to a heavy spile near the shore.

Respectfully,

T. H. EASTMAN,
Lieutenant Commander.

Commander FOXHALL A. PARKER,
Commanding Potomac Flotilla.

EXPEDITION TO THE NORTHERN NECK OF VIRGINIA.

Letter of Commander Parker, transmitting letter of Colonel A. G. Draper.

UNITED STATES STEAMER ELLA, POTOMAC FLOTILLA,
June 29, 1864.

SIR: I have the honor to enclose to the department a copy of a letter just received from Colonel A. G. Draper, in reference to the co-operation of the flotilla with the forces under his command, in their late expedition to the northern neck of Virginia, and to the south side of the Rappahannock, in the vicinity of Rappahannock. Acting Volunteer Lieutenant Hooker is the "senior officer present" spoken of by Colonel Draper.

I am, sir, very respectfully, your obedient servant,

FOXHALL A. PARKER,
Commander, Commanding Potomac Flotilla.

Hon. GIDEON WELLES,
Secretary of the Navy.

Letter from Colonel A. G. Draper to Commander F. A. Parker.

HEADQUARTERS ST. MARY'S DISTRICT,
Point Lookout, Maryland, June 22, 1864.

SIR: I have the honor to acknowledge the signal services rendered by the flotilla under your command, in the recent expedition to Virginia by the combined naval and army forces, the army portion of which was under my command.

The very important assistance rendered by the flotilla, and the cheerful co-operation of all the officers of the different vessels, require more than an ordinary acknowledgment from me; for, not content with performing the usual service of naval vessels in similar circumstances, they allowed their gunboats to be used for the transportation of captured property which could not be put upon the transports, thereby subjecting themselves to great inconvenience and annoyance. Denying themselves needful rest and sleep, they labored night and day, assisting in the embarkation of captured property, and aiding the army in every possible way.

It would be impossible to overestimate the valuable assistance rendered by the gunboats, in covering our different landings, and in shelling the enemy, who frequently threatened to attack the land forces during the difficult operation of embarking.

My thanks are especially due to the senior naval officer present, for his courtesy, thoughtfulness, and constant co-operation.

Accept, sir, the assurance of my profound regard, and permit me to remain, with much respect, your obedient servant,

ALONZO G. DRAPER,

Colonel U. S. Colored Troops, Commanding District.

Commander FOXHALL A. PARKER,

Commanding Potomac Flotilla.

GUNBOATS SENT UP GUNPOWDER RIVER, &c.—DESTRUCTION OF GUN- POWDER BRIDGE.

[Telegram.]

WASHINGTON NAVY YARD, *July 11, 1864.*

The Currituck has reached Havre de Grace; Teaser, Gunpowder bridge; Fuchsia, Bush bridge.

F. A. PARKER,

Commander, United States Navy.

Hon. GIDEON WELLES,

Secretary of the Navy.

[Telegram.]

WASHINGTON NAVY YARD, *July 11, 1864.*

The Bibb has left for Gunpowder river.

F. A. PARKER, *Commander.*

Hon. GIDEON WELLES,

Secretary of the Navy.

[Telegram.]

WASHINGTON NAVY YARD, *July 16, 1864.*

The commanding officer of the Teaser reports that when he reached Gunpowder river, on Monday last, he found the bridge in flames. Not being able to get to the bridge, he sent two armed boats' crews to it, who landed, but found no enemy.

F. A. PARKER,

Commander, United States Navy

Hon. GIDEON WELLES,

Secretary of the Navy.

ENGAGEMENT AT THE MOUTH OF YEOCOMICO RIVER.

UNITED STATES STEAMER DON, POTOMAC FLOTILLA,

September 24, 1864.

SIR: On the night of the 16th instant one of the boats of the United States steamer Currituck, while in search of blockade runners, at the mouth of Yeocomico river, was fired into from shore. William King, captain of board, was

instantly killed, and George H. McNeil, landsman, severely wounded. The fire was promptly returned from the boats and the Currituck, and Acting Ensign Nelson, who commanded the boat, reports that a shell exploded in the midst of the shore party.

I am, sir, very respectfully, your obedient servant,

FOXHALL A. PARKER,

Commander, Commanding Potomac Flotilla.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

DESTRUCTION OF BOATS OPPOSITE CHARLES COUNTY, MARYLAND.

UNITED STATES STEAMER DON, POTOMAC FLOTILLA,

September 27, 1864.

SIR: I have the honor to report that, in obedience to the order of the department of the 1st instant, I have destroyed seventeen boats on the Virginia shore, opposite Charles county, Maryland. A company of cavalry destroyed all boats on the Maryland side of the river some ten days ago.

I am, sir, very respectfully, your obedient servant,

FOXHALL A. PARKER,

Commanding Potomac Flotilla.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

EXPEDITION TO CAPTURE A COMPANY OF REBEL CAVALRY.

Letter of Commander Parker, transmitting report of Acting Volunteer Lieutenant Hooker.

UNITED STATES STEAMER DON, POTOMAC FLOTILLA,

October 15, 1864.

SIR: I have the honor to enclose herewith a copy of a duplicate report just received from Acting Volunteer Lieutenant Hooker, the original, which he says he forwarded to me in July last, not having reached me.

I am, sir, very respectfully, your obedient servant,

FOXHALL A. PARKER,

Commander, Commanding Potomac Flotilla.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Acting Volunteer Lieutenant Edward Hooker.

UNITED STATES STEAMER COMMODORE READ,

Wicomico River, Virginia, July 4, 1864.

SIR: A day or two ago I received information that a company of guerilla cavalry was about being formed in the lower part of the neck between the Rappahannock and Potomac rivers. Having learned the names of some of the citizens engaged in the movement, I last night sent an expedition of forty-five

men and four officers, under the command of Acting Master Street, to try and capture some of them. This party was taken into Dividing creek by the Freeborn and Bell, with orders to land the men at early daylight, to join me in the Great Wicomico, the distance across being about six miles. The landing was made at 10 p. m. The Freeborn, however, unfortunately disabling her rudder in leaving the creek, and being obliged to anchor off the bar, by which accident the arrival of the Bell was delayed. With the Read and Fuchsia I proceeded to the Wicomico river, where I landed twenty men, under Acting Ensign Shurtleff, to co-operate with the detachment from below, should they need assistance.

The expedition was not as successful in captures as I had hoped it would be. I, however, have Thomas Bell, a captain in the confederate army, and the same man who murdered a cavalry officer when Kilpatrick's forces were in this region, about a year and a half ago; also his young brother, a lieutenant in the guerilla company.

The expedition arrived in safety on the banks of Mill creek, at which place I was to take them off; my boats from below not having arrived, the embarkation was made more difficult. While embarking the men, two of the Fuchsia's men, Dennis Murphy, quartermaster, and John Loyd, seaman, stole away from the party and secreted themselves in some place, taking their arms with them. As soon as missed, a party was sent in search of them, and while searching, three of the party were intercepted by a cavalry force of about twenty men, and two of the number, Simon Tenvillager, coal-heaver, and Joseph Willet, landsman, both from the Fuchsia, were captured, they being completely surprised in doing so.

The cavalry company forming now numbers, I am informed, one hundred men, and as many more (it is said) will be added soon. As yet they have no thorough organization, but are being formed by a Captain Ewbank, of the regular confederate cavalry.

At 10 a. m. the remainder of the party were embarked safely, and soon after, the cavalry coming within range of our guns, I dispersed them with my 100-pounder rifle, throwing several shells into their midst, but with what effect I am unable to say. Subsequently Captain Ewbank, under flag of truce, offered to exchange two of the sailors for the officers in my hands, man for man, an offer which I at once declined.

Very respectfully, your obedient servant,

EDWARD HOOKER,

Acting Volunteer Lieutenant, United States Navy,

Commander F. A. PARKER,

Commanding Potomac Flotilla.

DISPERSION OF REBEL SOLDIERS ON THE WICOMICO AND RAPPAHANNOCK RIVERS.

UNITED STATES STEAMER DON, POTOMAC FLOTILLA,

October 28, 1864.

SIR: The houses on Fleet's Point, in the Great Wicomico river, Virginia, having been frequently used as a shelter by the home guards of Northumberland county, from which to fire upon the boats of the blockading vessels, and two volleys of musketry having come from thence only a week ago at some officers belonging to the Commodore Read, while engaged in fishing, I landed a small force there on the 25th instant and burned the houses, (three in number) to the ground, with their barns and out-buildings.

On the 26th and 27th instant I made a reconnoissance of the Rappahannock to within a few miles of Port Royal. On the 26th a boat belonging to this vessel was fired upon, and on the 27th several bullets from the heights above Rappahannock struck the Yankee. In each instance a few shell put the assailants to flight.

I have the honor to be, very respectfully, your obedient servant,

FOXHALL A. PARKER,

Commander, Commanding Potomac Flotilla.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

SINKING OF THE ALABAMA.---CAPTURE OF THE GEORGIA AND FLORIDA.

DESTRUCTION OF THE ALABAMA BY THE KEARSARGE.

Report of Captain John A. Winslow.

UNITED STATES STEAMER KEARSARGE,
Cherbourg, France, June 19 p. m., 1864.

SIR: I have the honor to inform the department that the day subsequent to the arrival of the Kearsarge off this port, on the 24th instant, I received a note from Captain Semmes, begging that the Kearsarge would not depart, as he intended to fight her, and would delay her but a day or two.

According to this notice, the Alabama left the port of Cherbourg this morning at about 9.30 o'clock. At 10.20 a. m. we discovered her steering towards us. Fearing the question of jurisdiction might arise, we steamed to sea until a distance of six or seven miles was attained from the Cherbourg breakwater, when we rounded to and commenced steaming for the Alabama.

As we approached her, within about twelve hundred yards she opened fire, we receiving two or three broadsides before a shot was returned. The action continued, the respective steamers making a circle round and round at a distance of about nine hundred yards from each other. At the expiration of an hour the Alabama struck, going down in about twenty minutes afterwards, carrying many persons with her.

It affords me great gratification to announce to the department that every officer and man did their duty, exhibiting a degree of coolness and fortitude which gave promise at the outset of certain victory.

I have the honor to be, most respectfully, your obedient servant,
JOHN A. WINSLOW, *Captain.*

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Report of casualties.

UNITED STATES STEAMER KEARSARGE,
Cherbourg, France, June 20, 1864.

SIR: I enclose herewith the surgeon's report of the casualties on board this vessel in the late action with the Alabama.

Although we received some twenty-five or thirty shots, twelve or thirteen taking effect in the hull, by the mercy of God we have been spared the loss of any one life, whereas in the case of the Alabama the carnage, I learn, was dreadful.

The ships were about equal in match, the tonnage being the same. The Alabama carrying one 100-pounder rifle, with one heavy 68-pounder, and six broadside 32-pounders. The Kearsarge carrying four broadside 32-pounders, two 11-inch, and one 28-pounder rifle—one gun less than the Alabama.

The only shot which I fear will give us any trouble is one 100-pound rifle, which entered our stern-post, and remains at present unexploded.

It would seem almost invidious to particularize the conduct of any one man

or officer in which all had done their duty with a fortitude and coolness which cannot be too highly praised, but I feel it due to my executive officer, Lieutenant Commander Thornton, who superintended the working of the battery, to particularly mention him for an example of coolness and encouragement of the men while fighting, which contributed much towards the success of the action.

I have the honor to be, very respectfully, your obedient servant,

JOHN A. WINSLOW, *Captain.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

UNITED STATES STEAMER KEARSARGE,

Cherbourg, France, afternoon, June 19, 1864.

SIR: I report the following casualties resulting from the engagement this morning with the steamer Alabama:

John W. Dempsey, quarter-gunner, compound comminuted fracture of right arm, lower third, and forearm. Arm amputated.

William Gowin, ordinary seaman, compound fracture of left thigh and leg. Seriously wounded.

James Macbeth, ordinary seaman, compound fracture of left leg. Seriously wounded.

I am, very respectfully, your obedient servant,

JOHN M. BROWNE,

Surgeon, United States Navy.

Captain JOHN A. WINSLOW,

Com'dg U. S. Steamer Kearsarge, Cherbourg.

Congratulatory letter from the Secretary of the Navy.

NAVY DEPARTMENT, *July 6, 1864.*

SIR: Your very brief despatches of the 19th and 20th ultimo, informing the department that the piratical craft Alabama, or "290," had been sunk on the 19th of June, near meridian, by the Kearsarge, under your command, were this day received. I congratulate you on your good fortune in meeting this vessel, which had so long avoided the fastest ships, and some of the most vigilant and intelligent officers of the service; and for the ability displayed in this combat you have the thanks of the department.

You will please express to the officers and crew of the Kearsarge the satisfaction of the government at the victory over a vessel superior in tonnage, superior in number of guns, and superior in the number of her crew. The battle was so brief, the victory so decisive, and the comparative results so striking, that the country will be reminded of the brilliant actions of our infant navy, which have been repeated and illustrated in this engagement.

The Alabama represented the best maritime effort of the most skilled English workshops. Her battery was composed of the well-tried 32-pounders of fifty-seven hundred weight, of the famous 68-pounder of the British navy, and of the only successful rifled 100-pounder yet produced in England. The crew were generally recruited in Great Britain, and many of them received superior training on board her Majesty's gunnery ship, the Excellent.

The Kearsarge is one of the first gunboats built at our navy yards at the commencement of the rebellion, and lacks the improvements of vessels now

under construction. The principal guns composing her battery had never been previously tried in an exclusively naval engagement, yet in one hour you succeeded in sinking your antagonist, thus fully ending her predatory career, and killed many of her crew, without injury to the Kearsarge or the loss of a single life on your vessel. Our countrymen have reason to be satisfied that in this, as in every naval action of this unhappy war, neither the ships, the guns, nor the crew have been deteriorated, but that they maintain the abilities, and continue the renown, which ever adorned our naval annals.

The President has signified his intention to recommend that you receive a vote of thanks, in order that you may be advanced to the grade of commodore.

Lieutenant Commander James S. Thornton, the executive officer of the Kearsarge, will be recommended to the Senate for advancement ten numbers in his grade, and you will report to the department the names of any others of the officers or crew whose good conduct on the occasion entitles them to especial mention.

Very respectfully,

GIDEON WELLES,
Secretary of the Navy.

Captain JOHN A. WINSLOW, U. S. N.,
Com'dg U. S. Steamer Kearsarge, Cherbourg, France.

Report of the executive officer and others of the Kearsarge.

UNITED STATES STEAMER KEARSARGE,
Cherbourg, France, June 21, 1864.

SIR: I have the honor to enclose herewith reports of the executive officer, chief engineer, boatswain, and gunner of this vessel, with a copy of log-book containing minutes of the action.

I fully coincide in the recommendations of the executive officer, and such cases as deserve special reference to will be subject of future communication.

I have the honor to be, very respectfully, your obedient servant,

JOHN A. WINSLOW, *Captain.*

Hon. GIDEON WELLES,
Secretary of the Navy, Washington.

UNITED STATES STEAMER KEARSARGE,
Port of Cherbourg, June 21, 1864.

SIR: I have the honor to forward you the reports of the damage sustained in the different departments of this vessel during the recent action with the Alabama.

In connexion with this engagement, I take great pleasure in informing you officially that the conduct of both men and officers equalled in every respect my most sanguine expectations. In the gun divisions the utmost coolness prevailed throughout the action; the details of the manual of exercise being as carefully attended to as if in ordinary exercise, and to this cause may be attributed the excellent condition of the guns and gear after a rapid firing of an hour's duration. The powder division received my particular attention, and important service was promptly and thoroughly rendered. The circumstances under which the battle was fought afforded no opportunity of displaying special acts of individual heroism; but, while every man and boy in the ship displayed the utmost coolness, zeal, and courage, there were some who, by their position and peculiar duties, attracted special attention and deserve special mention.

The marines fought the rifle gun upon the topgallant forecastle, under the charge of Acting Master's Mate Charles H. Danforth. The action on our part was commenced by this gun, and its fire was rapid and effective throughout. The high reputation of their service was nobly sustained by the marine guard of this ship. The boatswain, James C. Walton, was observably active and efficient. Gunner F. A. Graham's duties were all performed efficiently, and merit commendation. The carpenter's mate, Mark G. Ham, is well known to you, sir, as a faithful and competent man. His conduct in the battle was distinguished by the cool and intelligent performance of his duties. It is unnecessary for me to call your attention to the officers commanding the gun or master's divisions, as their duty was performed under your own eye. I am happy to commend Acting Master's Mate Ezra Bartlett, in charge of the shell supply, for his coolness and efficiency.

In the surgeon's department every arrangement that experience or humanity could suggest was made for the comfort of the wounded.

Fortunately we have but three of our own crew in that condition; but after the action, the wounded of the enemy, numbering fifteen persons, were consigned to the care of Surgeon J. M. Browne, who was entirely without professional assistance. The duties of his department were thereby rendered extremely arduous, but were coolly and successfully performed.

William Gowin, ordinary seaman, was severely wounded by the explosion of a shell. He dragged himself to the forward hatch, refusing to allow the men to leave his gun for the purpose of assisting him. His cheerful willingness to sacrifice his life for victory's sake was expressed in terms that animated and encouraged others. John W. Dempsey, quarter-gunner, wounded at the same time, losing an arm, displayed similar heroism. James McBeth, ordinary seaman, another of the wounded men, displayed both courage and patience. All the men on the sick list voluntarily went to their quarters and rendered such service as they were able to perform.

The engineer's division was admirably and efficiently conducted, under the command of Chief Engineer W. H. Cushman. Sidney L. Smith and Henry McConnell, third assistant engineers, were stationed on deck, and their conduct came immediately under my observation. It was distinguished by coolness and vigilance. The other assistants, Mr. W. H. Badlam and Mr. F. L. Miller, were on duty in the engine and fire rooms, and, judging from the prompt manner in which the orders from the deck were executed, I know that their duties were creditably performed. The ship is indebted to Paymaster J. A. Smith for efficient service during the action. His clerk, Mr. D. B. Sargent, performed his duty on deck in the third division. The orderly sergeant, C. T. Young, the master-at-arms, Jason R. Watrous, also deserve special mention for admirable performance of their duty. I will hand to you the names of those men specially mentioned by divisional officers as soon as I receive them.

In conclusion, sir, let me congratulate you on the success of your plan of battle, and compliment you on the skill and judgment displayed in its execution.

I am, sir, very respectfully, your obedient servant,

JAMES S. THORNTON,

Lieutenant Commander and Executive Officer.

JOHN A. WINSLOW, *Captain,*

Commanding U. S. Steamer Kearsarge.

UNITED STATES STEAMER KEARSARGE,
Cherbourg, June 21, 1864.

SIR: I respectfully report that the only injury received in the engine department during our engagement with the Alabama on the 19th instant

was to the smoke-pipe, which was perforated through both sections by a 100-pound rifle shell, which exploded as it was coming through, tearing out a ragged hole of about three feet in diameter, carrying away three of the chain guys; and to the top of engine-room hatch, which was cut completely through and across by a shell. I would further report that all the assistant engineers, and the firemen and coal-heavers, behaved with perfect coolness, and were attentive to their duty through the action; and that, by the self-possession and attention of Second Assistant Engineer Wm. H. Badlam in the management of the engines, Third Assistant Engineer Fred. L. Miller, in charge of the boilers, Third Assistant Engineer Sidney L. Smith, on deck, at the fire and hot-water hose, and Third Assistant Engineer Henry McConnell, at the engine signal-bell, the efficiency of the engine department is to be attributed. I would also mention First-class Fireman Joseph Dugan for his coolness and competency in assisting Mr. Miller in fire-room; First-class Firemen, Jerry Young, Wm. Smith, Benjamin H. Blaisdall, Wm. H. Donnelly, in assisting Mr. Badlam in charge of the engines; and First-class Fireman True W. Priest, for quickness and attention in charge of the after fire-hose during the alarm of fire in the action.

Very respectfully,

WM. H. CUSHMAN,
Chief Engineer.

Captain JOHN A. WINSLOW, U. S. N., *Commanding.*

UNITED STATES STEAMER KEARSARGE,
Cherbourg, June 20, 1864.

SIR: I respectfully submit to you a statement of injuries sustained by the United States steamer Kearsarge in her hull, sails, rigging, &c., during our late engagement with the rebel steamer Alabama on the 19th instant, off this port.

In hull. One shot in starboard gangway; cut chain and bruised plank. One shell under waist gun; cut chain and exploded, cutting outside planking. One shell under starboard main channels; cut off chain-plate, going through and exploding. One 32-pounder solid shot; entered forward of forward pivot port; shot lodged inside, crushing water-ways. One 100-pounder rifle shell; lodged in stern-post. One shell through top of the engine-house. One shell through port netting, abreast main rigging. One shot and two shells through port netting, forward of mizzen rigging. One shell through smoke-stack, exploding inside stack. Two shots through tafrail. One shot through netting, forward of mizzen rigging on starboard side.

In sails. Spanker badly torn by shell.

In rigging. Fore-topmast backstay cut away. One shroud in main rigging cut away. One screw in port main rigging. Starboard main-topmast backstay cut away. After shroud, starboard side of the main-topmast rigging. Starboard swifter of mizzen rigging. One screw in port main rigging. One plate in starboard main channels.

Boats. Third cutter, one shot through bottom; starboard gunwale shot away. Gig, badly shattered.

The spars are all in good order.

Respectfully,

J. C. WALTON, *Boatswain.*

J. S. THORNTON,

Lieutenant Com'dr and Executive Officer.

Number of shots and shells which struck the ship in various places, 28.

UNITED STATES STEAMER KEARSARGE,
Cherbourg, June 20, 1864.

SIR: I respectfully submit the following report of the expenditure of ordnance stores on board of this ship during the engagement with the rebel steamer Alabama on 19th instant:

55 15-pound service charges; 55 11-inch 5-second shell; 60 6-pound service charges; 18 32-pounder 5-second shell; 42 32-pound solid shot; 48 2½-pound service charges, rifle; 48 rifle percussion shell; 100 friction primers; 240 percussion primers.

Fixed ammunition for boat howitzer: 9 shrapnell, Bormann fused; 1 canister.

Recapitulation.

Duration of action, 65 minutes.

No. of rounds 11-inch	55
No. of rounds 32-pounder	60
No. of rounds 30-pounder rifle	48
No. of rounds 12-pounder howitzer	10

Total	173
-------------	-----

Very respectfully,

FRANKLIN A. GRAHAM,
Gunner United States Steamship Kearsarge.

JAS. S. THORNTON,
Lieutenant Com'dr and Executive Officer.

Extract from log-book.

Moderate breeze from the westward. Weather bc. At 10 inspected crew at quarters. At 10.20 discovered the Alabama steaming out from the port of Cherbourg, accompanied by a French iron-clad steamer, and a fore-and-aft rigged steamer, showing the white English ensign and a yacht flag. Beat to general quarters and cleared the ship for action. Steamed ahead, standing off shore. At 10.50, being distant from the land about two leagues, altered our course and approached the Alabama.

At 10.57 the Alabama commenced the action with her starboard broadside at 1,000 yards range. At 11 we returned her fire and came fairly into action, which we continued until meridian, when, observing signs of distress in the enemy, together with a cessation of her fire, our fire was withheld. At 12.10 a boat with an officer from the Alabama came alongside and surrendered his vessel, with the information that she was rapidly sinking, and a request for assistance. Sent the launch and second cutter, the other boats being disabled by the fire of the enemy. The English yacht, before mentioned, coming within hail, was requested by the captain to render assistance in saving the lives of the officers and crew of the surrendered vessel. At 12.24 the Alabama went down in forty fathoms water, leaving most of her crew struggling in the water. Seventy persons were rescued by the boats. Two pilot-boats and the yacht also assisted. One pilot-boat came alongside of us, but the other returned to the port. The English yacht steamed rapidly away to the northward, without reporting the number of our prisoners she had picked up. Hoisted up our boats and three of the enemy's cutters. Repaired the rigging temporarily. Took a French pilot, and steamed away to Cherbourg. At 3.10 let go to the port anchor in seven fathoms water, and veered to thirty fathoms chain.

Additional particulars.—Conduct of the Deerhound.

UNITED STATES STEAMER KEARSARGE,
Cherbourg, France, June 21, 1864.

SIR: I have the honor to report that towards the close of the action between the Alabama and this vessel all available sail was made on the former for the purpose of again reaching Cherbourg. When the object was apparent, the Kearsarge was steered across the bow of the Alabama for a raking fire, but before reaching this point the Alabama struck. Uncertain whether Captain Semmes was not using some ruse, the Kearsarge was stopped. It was seen shortly afterwards that the Alabama was lowering her boats, and an officer came alongside in one of them to say that they had surrendered and were fast sinking, and begging that boats would be despatched immediately for saving of life. The two boats not disabled were at once lowered, and, as it was apparent the Alabama was settling, this officer was permitted to leave in his boat to afford assistance. An English yacht, the Deerhound, had approached near the Kearsarge at this time, when I hailed and begged the commander to run down to the Alabama, as she was fast sinking, and we had but two boats, and assist in picking up the men. He answered affirmatively, and steamed towards the Alabama, but the latter sank almost immediately. The Deerhound, however, sent her boats and was actively engaged, aided by several others, which had come from shore. These boats were busy in bringing the wounded and others to the Kearsarge, whom we were trying to make as comfortable as possible, when it was reported to me that the Deerhound was moving off. I could not believe that the commander of that vessel could be guilty of so disgraceful an act as taking our prisoners off, and therefore took no means to prevent it, but continued to keep our boats at work rescuing the men in the water. I am sorry to say that I was mistaken; the Deerhound made off with Captain Semmes and others, and also the very officer who had come on board to surrender. I learnt subsequently that the Deerhound was a consort of the Alabama, and that she received on board all the valuable personal effects of Captain Semmes the night before the engagement.

I have the honor to be, very respectfully, your obedient servant,

JOHN A. WINSLOW, *Captain.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Prisoners of the Alabama paroled.

UNITED STATES STEAMER KEARSARGE,
Cherbourg, France, June 21, 1864.

SIR: I have the honor to report that the number of prisoners brought on board the Kearsarge belonging to the Alabama was seventy—six officers and sixty-four men. One officer (carpenter) and two men dying and seventeen wounded are included in this number. As we have very contracted accommodations for our own crew without increase, it became indispensable to send these prisoners on shore, and their parole was taken, with exception of the doctor, non-combatant, who was put on parole that he might attend to his wounded. The officers were held as prisoners of war. I learn that these officers with six men were carried on shore at Cherbourg by pilot-boats, but of the number who reached England in the Deerhound I have no reliable accounts.

I have the honor to be, very respectfully, your obedient servant,

JOHN A. WINSLOW, *Captain.*

Hon. GIDEON WELLES,

Secretary of the Navy.

I, J. D. Wilson, late lieutenant on board the Alabama, captured in the action off Cherbourg by the United States steamer Kearsarge, on the 19th of June, 1864, do solemnly affirm my sacred word of honor that I will not bear arms against, or otherwise operate against the interests of the government of the United States in any manner whatsoever until I shall have been regularly exchanged.

Signed and given on board the United States steamer Kearsarge, July 13, 1864.

JOSEPH D. WILSON,

Lieutenant, C. S. Navy.

Witness: S. E. HARTWELL,

Captain's Clerk.

UNITED STATES STEAMER KEARSARGE,

June 19, 1864.

We, the undersigned, officers of the late (so-called) Confederate States steamer Alabama, now prisoners of war on board the United States steamer Kearsarge, do hereby pledge our sacred word of honor not to engage in arms or otherwise employ ourselves against the interests of the government of the United States of America until we shall be regularly exchanged.

FRANCIS L. GALT, *Surgeon, C. S. Navy,*

and late Acting Paymaster of C. S. S. Alabama.

In presence of J. ADAMS SMITH,

Paymaster, U. S. N.

UNITED STATES SHIP KEARSARGE,

Port of Cherbourg, France, June 19, 1864.

We, the seamen and others, lately belonging to the steamer Alabama, and captured in the action between that vessel and the United States steamer Kearsarge, off this port, on the 19th day of June, 1864, now prisoners of war, do hereby solemnly pledge our sacred word of honor not to engage in arms against, or otherwise employ ourselves against the interest of the government of the United States of America until we shall be regularly exchanged:

William Clarke, seaman; William McKenzie, cockswain; James Broderick, cockswain; William Forrestall, quartermaster; John Emery, ordinary seaman; William Wilson, cockswain; Edward Rawes, master-at-arms; Henry Tucker, officers' cook; David Leggett, seaman; Frank Currian, 1st class fireman; Henry Godson, ordinary seaman; Samuel Henry, seaman; John Horrigan, 1st class fireman; Edgar Tripp, ordinary seaman; David Williams, ordinary seaman; Richard Parkinson, officers' steward; William Barnes, quarter-gunner; George Freemantle, quartermaster; John Russell, seaman; Henry Hestake, ordinary seaman; Thomas Watson, ordinary seaman; John Johnson, ordinary seaman; John Smith, seaman; Henry McCoy, seaman; Thomas Parker, boy; James Ochure, seaman; Edwin Burrell, seaman; James Higgs, seaman; Patrick Bradley, fireman; Match Mudick, ordinary seaman; William Miller, ordinary seaman; John Benson, coal-heaver; Joseph Pruson, coal-heaver; James Maguire, coal-heaver; John Casen, seaman; Henry Higgin, seaman; Frank Hamonds, seaman; Nicholas Adams, landsman; Michael Shields, seaman; Peter Laperty, 2d class fireman; George Conroy, ordinary seaman; David Thurston, seaman; Thomas Brandon, ordinary seaman; Richard Evans, ordinary seaman;

Thomas Potter, 2d class fireman; John Wilson, boy; James Clemens, yeoman; George Peasey, seaman; John Riley, fireman; Henry Yates, seaman, James Wilson, boy.

In presence of—

J. ADAMS SMITH,
Paymaster, U. S. N.

JOHN M. BROWNE,
Surgeon, U. S. N.

Petty Officers and Seamen especially mentioned.

UNITED STATES STEAMER KEARSARGE,
Cherbourg, France, June 25, 1864.

SIR: I have the honor to enclose herewith a list of the names of the men who, during the engagement of the Alabama and Kearsarge, exhibited marked coolness and good conduct, and for such have been recommended by the divisional commanders as deserving special reference to.

It affords me pleasure to report that William Smith, quartermaster, was captain of the 11-inch gun, which, according to the rebel accounts, did such execution that a reward was offered by Captain Semmes to silence his gun. Smith is well worthy, both from education and otherwise, to the appointment of a master's mate.

John F. Bickford, who, during the engagement and from long example and good conduct, and also education, is entitled to this reward.

Both of these men are so highly spoken of by the officers, that it is but their due that my report should refer in a special manner to them.

I have the honor to be, very respectfully, your obedient servant,

JOHN A. WINSLOW, *Captain.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

P. S.—I omitted to state that the carpenter's mate of this vessel, Mark G. Ham, of Portsmouth, is most particularly recommended for promotion by the executive officer. He is, in my opinion, fully entitled to it from his conduct in the action, but not more than from his faithful and ever-willing performance of duty during the cruise.

James Haley, captain forecastle; John F. Bickford, captain top; Charles A. Read, cockswain; William Smith, quartermaster; William Bond, boatswain's mate; Charles Moore, seaman; George Harrison, seaman; Thomas Perry, boatswain's mate; John Hayes, cockswain; George E. Read, seaman; Robert Strahan, captain top; James H. Lee, seaman; Joachim Pease, colored, seaman; William B. Poole, quartermaster; Michael Aheam, paymaster's steward; Mark G. Ham, carpenter's mate.

Prisoners landed at Cherbourg under parol.

UNITED STATES STEAMER KEARSARGE,
Cherbourg, France, July 5, 1864.

SIR: I have the honor to enclose herewith a list comprising the names of prisoners from the Alabama, landed at Cherbourg under parol not to serve against the United States.

The Alabama brought into Cherbourg a crew of one hundred and forty-nine in number, all told.

It is supposed that she received an addition, as several officers and others were arrested by the police of Cherbourg endeavoring to evade the laws by joining her.

I have the honor to be, very respectfully,

JOHN A. WINSLOW, *Captain.*

HON. GIDEON WELLES,
Secretary of the Navy.

UNITED STATES STEAMER KEARSARGE,
Port of Cherbourg, France, June 19, 1864.

We, the wounded prisoners of war, late seamen, and others on board the Alabama, captured in the action off Cherbourg by the United States steamer Kearsarge, on the 19th of June, 1864, do solemnly affirm, upon our sacred word of honor, that we will not bear arms against, or otherwise operate against the interest of the government of the United States in any manner whatsoever until we shall have been regularly exchanged.

Names.	Witnesses.
Thomas × Winter, second-class fireman.	{ J. Adams Smith, paymaster.
	{ John M. Browne, surgeon.
Jacob × Vorbor, seaman.	{ J. Adams Smith, paymaster.
	{ John M. Browne, surgeon.
John × Neat, seaman.	{ J. Adams Smith, paymaster.
	{ John M. Browne, surgeon.

Death of William Gowin, Seaman.

UNITED STATES STEAMER KEARSARGE,
Cherbourg, France, July 5, 1864.

SIR: I have the honor to enclose the certificate of death of William Gowin, one of the wounded in the late action of this ship with the Alabama.

He was a brave and gallant sailor, and by his cheerfulness, when suffering under a most excruciating wound, afforded a most encouraging example.

When the cheer was heard on the surrender of the Alabama, he insisted that the doctor should go up and join, saying he would be willing to bear a dozen such wounds to hear that cheer.

I have the honor to be, very respectfully, your obedient servant,

JOHN A. WINSLOW, *Captain.*

Hon. GIDEON WELLES,
Secretary of the Navy,

Letter from the Secretary of the Navy to Captain John A. Winslow.

NAVY DEPARTMENT, *July 8, 1864.*

SIR: The department will recommend to Congress to appropriate for distribution on board the Kearsarge the value of the Alabama, and you will please send a muster-roll of your ship, and all the information you can obtain as to the armament of the Alabama, and her complement of officers and men.

You do not inform the department of the circumstances under which the yacht Deerhound was permitted to act as a tender to the Alabama, and carry off under your guns the pirate captain and his first lieutenant and many of his crew. I notice by the last mail from England that it is reported you have paroled the foreign pirates captured on board the Alabama; I trust you have not committed this error of judgment. They should be held at every sacrifice, and either sent home in the St. Louis or brought here by yourself.

Very respectfully, &c.,

GIDEON WELLES,
Secretary of the Navy.

Captain JOHN A. WINSLOW,
Com'dg United States Steamer Kearsarge, Cherbourg, France.

Letter of the Secretary of the Navy relative to the conduct of the Deerhound and the paroling of the prisoners.

NAVY DEPARTMENT, *July 12, 1864.*

SIR: Your despatch of the 21st ultimo (No. 21) is received, stating your efforts to save the lives of the survivors of the Alabama, after the battle of the 19th of June, and after the formal surrender and destruction of that vessel. Your efforts in the cause of humanity in striving to rescue these men, most of them aliens, who have, under their ignoble leader—himself a deserter from our service and a traitor to our flag—been for nearly two years making piratical war on unarmed merchantmen, are rightly appreciated.

It is to be regretted that the confidence and generous sympathy which you exercised, and which would actuate all honorable minds under similar circumstances, should have been so requited and abused by the persons on board the Deerhound, an English vessel of the royal yacht squadron.

That the wretched commander of the sunken corsair should have resorted to any dishonorable means to escape after his surrender; that he should have thrown overboard the sword that was no longer his; that before encountering an armed antagonist the mercenary rover should have removed the chronometers, and other plunder stolen from peaceful commerce, are not matters of surprise, for each act is characteristic of one who has been false to his country and flag. You could not have expected, however, that gentlemen, or those claiming to be gentlemen, would, on such an occasion, act in bad faith, and that having been called upon or permitted to assist in rescuing persons or property which

had been surrendered to you, would run away with either. It is now evident that your confidence in the *Deerhound*, and the persons connected with her, was misplaced.

The department commends your efforts to save the lives of drowning men, although they had been engaged in robbing and destroying the property of those who had never injured them. In paroling the prisoners, however, you committed a grave error.

The *Alabama* was an English-built vessel, armed and manned by Englishmen; has never had any other than an English register; has never sailed under any recognized national flag since she left the shores of England; has never visited any port of North America, and her career of devastation, since she went forth from England, is one that does not entitle those of her crew who were captured to be paroled. This department expressly disavows that act. Extreme caution must be exercised so that we in no way change the character of this English-built and English-manned, if not English-owned vessel, or relieve those who may be implicated in sending forth this robber upon the seas from any responsibility to which they may be liable for the outrages she has committed.

Very respectfully, your obedient servant,

GIDEON WELLES,
Secretary of the Navy.

Captain JOHN A. WINSLOW, U. S. N.,
Com'dg United States Steamer Kearsarge, Cherbourg, France.

Report of the paroling of Lieutenant Joseph D. Wilson, of the Alabama.

UNITED STATES STEAMER KEARSARGE,
Off Dover, July 15, 1864.

SIR: I have the honor to enclose herewith copies of two communications.

On receipt of the letter of Mr. Adams, and deeming the circumstances warranted it, I paroled Mr. Wilson, handing to him the note, a copy of which is forwarded.

I am, very respectfully, your obedient servant,

JOHN A. WINSLOW, *Captain.*

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

UNITED STATES STEAMER KEARSARGE,
Off Dover, July 14, 1864.

The conduct of Joseph D. Wilson, late lieutenant on board the *Alabama*, has been so honorable, first in presenting himself on board the *Kearsarge* and surrendering himself, when it was in his power to have gone on board the *Deerhound* and gained his liberty in the dishonorable manner which others had taken, and again in his repudiation of the means pursued by those who obtained their liberty in this way, and his deportment while a prisoner having been of the same honorable standard, at the instance of Mr. Adams, minister of the United States at the court of St. James, I have paroled the said Wilson, and, feeling a full confidence and trust in his word and honor, I recommend that all privileges that can be given a prisoner of war should be extended to him, believing fully he will never violate any obligation which he pledges himself to fulfil.

JOHN A. WINSLOW, *Captain.*

LONDON, *July* 13, 1864.

MY DEAR SIR: Mr. Wilson, one of the persons taken at the time of the action with the Alabama, and now a prisoner on parole in your ship, has called to see me to ask a word from me to you in favor of giving him his liberty on parole.

I decline to assume any authority with you in regard to the disposition you think proper to make of your prisoners. At the same time I have reason to suppose that this young gentleman has acted honorably in this business by recognizing his obligations, and therefore I should regret that he should experience no more liberal treatment in return than one who disregarded them would deserve.

Under the circumstances, if in your judgment this case, for any reason of the health of the person, or any other good cause, is one in which you can make an exception, having a reliance on the honor of the individual that he will take no improper advantage of it, I will very cheerfully concur in your opinion, and approve your act.

I am, very truly, yours,

C. F. ADAMS.

Explanatory report of Captain John A. Winslow.

UNITED STATES STEAMER KEARSARGE,
English Channel, July 30, 1864.

SIR: The latter part of the despatch of the department of the 8th instant refers to the parole of the prisoners in these words: "It is reported you have paroled the foreign pirates captured on board the Alabama. I trust you have not committed this error of judgment. They should be held at every sacrifice, and either sent home in the St. Louis or brought here by yourself."

I beg the department will consider the circumstances in which this vessel was placed at the termination of the action with the Alabama. The berth deck, contracted as it is, with insufficient storage for our own men, was covered with bedding of the wounded, the quarter deck was similarly crowded, and the forward part of the ship on the spar deck was filled with prisoners under guard.

The ship was damaged both in rigging and hull. A shot had entered the stern-post, raising the transom frame, and binding the rudder so hard as to require four men at the helm. It was therefore important that an examination should be made of the damages sustained. On our arrival at Cherbourg I received information from our consul at London that the Florida was in the Channel, on the French coast, and at the same time information came that the Yeddo was out, and the Rappahannock was expected to follow; and, in addition to this, that the St. Louis had sailed for Madeira.

The Kearsarge had been acting alone and independently for the last nine months, and I was not aware that any of our cruisers had been ordered in the Channel. It became, therefore, in my mind, of the utmost importance that the Kearsarge should at once be put in a state to meet these vessels and protect our commerce. This could not be done with prisoners on board equalling the half of our crew, and the room occupied by the wounded taken to the exclusion of our own men; to have kept them would have required a quarter watch as guards, and the ship would have been wholly ineffective as a man of war to meet this emergency which threatened.

Under these circumstances, and without an American vessel in port by which any arrangement could be made for transshipping the prisoners outside, I felt it my duty to parole them.

A report appeared in the papers that the prisoners were paroled contrary to Mr. Dayton's instructions; this is erroneous. Communication was had with Mr. Dayton on the subject of the officers, and after these the men were paroled.

I have the honor to be, very respectfully, your obedient servant,

JOHN A. WINSLOW, *Captain.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Captain Winslow's detailed report of the action.

UNITED STATES STEAMER KEARSARGE,

English Channel, July 30, 1864.

SIR: In obedience to instructions of the department, I have the honor to make the following supplementary report of the action between the Kearsarge and Alabama:

On the morning of the 19th ultimo, the day being fine, with a hazy atmosphere, wind moderate from the westward, with little sea, the position of the Kearsarge at 10 o'clock was near the buoy which marks the line of shoals to the eastward of Cherbourg, and distant about three miles from the eastern entrance, which bore to the southward and westward. At twenty minutes after 10 o'clock the Alabama was descried coming out of the western entrance, accompanied by the Couronne (iron-clad.) I had, in an interview with the admiral at Cherbourg, assured him that, in the event of an action occurring with the Alabama, the position of the ships should be so far off shore that no questions could be advanced about the line of jurisdiction. Accordingly, to perfect this object, and with the double purpose of drawing the Alabama so far off shore that, if disabled, she could not return, I directed the ship's head seaward and cleared for action, with the battery pivoted to starboard. Having attained a point about seven miles from the shore, the head of the Kearsarge was turned short around, and the ship steered directly for the Alabama, my purpose being to run her down, or, if circumstances did not warrant it, to close in with her.

Hardly had the Kearsarge come round before the Alabama sheered, presented her starboard battery, and showed her engines. On approaching her at long range of about a mile, she opened her full broadside, the shot cutting some of our rigging and going over and alongside of us.

Immediately I ordered more speed; but in two minutes the Alabama had loaded and again fired another broadside, and following it with a third, without damaging us except in rigging.

We had now arrived within about nine hundred yards of her, and I was apprehensive that another broadside—nearly raking as it was—would prove disastrous. Accordingly I ordered the Kearsarge sheered, and opened on the Alabama. The position of the vessels was now broadside and broadside; but it was soon apparent that Captain Semmes did not seek close action. I became then fearful lest, after some fighting, that he would again make for the shore. To defeat this I determined to keep full speed on, and with a port helm to run under the stern of the Alabama and rake her, if he did not prevent it by sheering and keeping his broadside to us. He adopted this mode as a preventive, and as a consequence the Alabama was forced with a full head of steam into a circular track during the engagement.

The effect of this manœuvre was such that, at the last of the action, when the Alabama would have made off, she was near five miles from the shore; and, had the action continued from the first in parallel lines, with her head in shore,

the line of jurisdiction would no doubt have been reached. The firing of the Alabama from the first was rapid and wild; toward the close of the action her firing became better. Our men, who had been cautioned against rapid firing without direct aim, were much more deliberate; and the instructions given to point the heavy guns below rather than above the water-line, and clear the deck with the lighter ones, was fully observed.

I had endeavored, with a port helm, to close in with the Alabama; but it was not until just before the close of the action that we were in position to use grape. This was avoided, however, by her surrender. The effect of the training of our men was evident; nearly every shot from our guns was telling fearfully on the Alabama, and on the seventh rotation on the circular track she winded, setting foretrysail and two jibs, with head in shore. Her speed was now retarded, and by winding her port broadside was presented to us, with only two guns bearing, not having been able, as I learned afterwards, to shift over but one. I saw now that she was at our mercy, and a few more guns well directed brought down her flag. I was unable to ascertain whether it had been hauled down or shot away; but a white flag having been displayed over the stern, our fire was reserved. Two minutes had not more than elapsed before she again opened on us with the two guns on the port side. This drew our fire again, and the Kearsarge was immediately steamed ahead and laid across her bows for raking. The white flag was still flying, and our fire was again reserved. Shortly after this her boats were seen to be lowering, and an officer in one of them came alongside, and informed us the ship had surrendered and was fast sinking. In twenty minutes from this time the Alabama went down, her mainmast, which had been shot, breaking near the head as she sunk, and her bow rising high out of the water as her stern rapidly settled.

The fire of the Alabama, although it is stated she discharged three hundred and seventy or more shell and shot, was not of serious damage to the Kearsarge.

Some thirteen or fourteen of these had taken effect in and about the hull, and sixteen or seventeen about the masts and rigging. The casualties were small, only three persons having been wounded; yet it is a matter of surprise that so few were injured, considering the number of projectiles that came aboard. Two shot passed through the ports in which the thirty-twos were placed, with men thickly stationed around them, one taking effect in the hammock netting and the other going through the port on the opposite side, yet no one was hit, the captain of one of the guns being only knocked down by the wind of the shot, as supposed.

The fire of the Kearsarge, although only one hundred and seventy-three projectiles had been discharged, according to the prisoners' accounts, was terrific. One shot alone had killed and wounded eighteen men and disabled a gun. Another had entered the coal-bunkers, exploding, and completely blocking up the engine-room; and Captain Semmes states that shot and shell had taken effect in the sides of his vessel, tearing large holes by explosion, and his men were everywhere knocked down.

Of the casualties in the Alabama no correct account can be given. One hundred and fifteen persons reached the shore, either in England or France, after the action. It is known that the Alabama carried a crew, officers and men, of about one hundred and fifty into Cherbourg, and that while in the Southern ocean her complement was about one hundred and seventy; but desertions had reduced this complement. The prisoners state that a number of men came on board at Cherbourg, and the night before the action boats were going to and fro, and in the morning strange men were seen, who were stationed as captains of the guns. Among these there was one lieutenant (Sinclair) who joined her in Cherbourg.

The Alabama had been five days in preparation. She had taken in three hundred and fifty tons of coal, which brought her down in the water. The

Kearsarge had only one hundred and twenty tons in; but as an offset to this, her sheet chains were stowed outside, stopped up and down, as an additional preventive and protection to her more empty bunkers.

The number of the crew of the Kearsarge, including officers and sick men, was one hundred and sixty-three; and her battery numbered seven guns—two 11-inch, one 30-pounder rifle, and four light 32-pounder guns.

The battery of the Alabama numbered eight guns—one heavy 68, of nine thousand pounds; one 110-pounder rifle; and six heavy 32-pounder guns.

In the engagement the Alabama fought seven guns and the Kearsarge five, both exercising the starboard battery, until the Alabama winded, using then her port side with one gun, and another shifted over.

The collateral events connected with this action have already been laid before the department.

I enclose a diagram showing the track which was described during the engagement by the rotary course of the vessels.

I have the honor to be, very respectfully, your obedient servant,

JOHN A. WINSLOW, *Captain.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Armament and complement of the Alabama.

UNITED STATES STEAMER KEARSARGE,

English Channel, July 30, 1864.

SIR: The despatch of the department of the 8th instant, calling for information of the Alabama's armament, and complement of officers and men, and also of the proceedings of the Deerhound, has been received.

I have the honor to inform the department that, according to a memorandum handed to me by American captains who were prisoners in the Alabama, that she carried into Cherbourg a crew, officers and men, of either 147 or 149; but what number joined her there I have no means of ascertaining.

Several persons were prevented by the police at Cherbourg from going on board; but it appears that Mr. Sinclair (lieutenant) was one of those who succeeded in joining her.

The rebel officers state their crew (officers and men) to have been about 150. I have no means of either falsifying or verifying these statements; but the American captains who were prisoners report that 13 men had been left at one port, and 4 at another, before the arrival of the vessel at Cherbourg, and her complement, therefore, when filled, was about 170 all told. The statement of some of the prisoners is, that a number of men came on board at Cherbourg, and the night before the action, that boats were going to and fro from the Alabama to the Deerhound, and in the morning of the action they saw strange men who were made captains of guns, who were supposed to be naval reserve men brought in the Deerhound.

In my despatch of the 19th ultimo I informed the department that the battery of the Alabama consisted of one 100-pounder rifled* pivot, one heavy 68-pounder, (9,000 pounds,) and six 32-pounder guns.

My despatch of the 21st ultimo informed the department of the proceedings of the Deerhound yacht, her gradual edging to the leeward, leading us to suppose she was seeking men who were drifting in the current, and then taking advantage of the hazy weather to make off, while our boats were out busy in rescuing the larger part of the prisoners who were struggling in the water.

* Since found to be 110-pounder.

It was my mistake at the moment that I could not recognize an enemy who, under the garb of a friend, was affording assistance.

I am, sir, very respectfully, your obedient servant,

JOHN A. WINSLOW, *Captain.*

Hon. GIDEON WELLES,

Secretary of Navy, Washington, D. C.

Letter from Surgeon J. M. Browne to the Chief of the Bureau of Medicine and Surgery.

UNITED STATES STEAMER KEARSARGE,

Deal Roads, England, July 23, 1864.

DEAR SIR: I deem it appropriate to acquaint you with certain details appertaining to the engagement and its results between this vessel and the Alabama.

The gun's crews were instructed in the application of tourniquets made for the occasion, and an ample supply furnished each division. Cots for the transportation of the wounded were in convenient positions, yet neither were brought into use. This has explanation from the fact that the wounded refused assistance from their comrades, concealing the severity of injury, and one (Gowin, ordinary seaman,) dragged himself from the after pivot gun to the fore hatch, unwilling to take any one from his station. While I should ever make similar preparations on the eve of contest, the example of the one in question would teach me that, under the excitement of battle, little reliance could be placed upon the fulfilment of my instructions. This vessel is exceedingly deficient in provision of conveniences for wounded men; there is no appropriate place for the performance of operations.

Acting upon my recommendation, Lieutenant Commander Thornton, executive officer, caused the fore hold to be arranged for the accommodation of six wounded, after the application of temporary dressings, that they might have immunity from the exposure subjected to while upon the berth deck.

The action continued for eighteen minutes without casualties. Then a 68-pound Blakeley shell passed through the starboard bulwarks below main rigging, exploded upon the quarter-deck, and wounded three of the crew of the pivot gun. One, William Gowin, ordinary seaman, received a compound fracture of left femur at lower and middle third and tibia, and fibula upper third, complicating the knee joint.

No fragments of shell were found in the wounds. The hemorrhage was profuse, chiefly venous. Suitable dressings and stimulants were employed.

Another, John W. Dempsey, quarter gunner, had compound comminuted fracture of right arm, lower third and elbow, the forearm being completely lacerated—a shapeless mass. Arrangements were made for amputation before the close of the action, but its unexpected cessation caused the performance immediately after. Chloroform was administered with happy results.

The arm was amputated at the middle third, upper border. The third, James McBeath, ordinary seaman, received a compound fracture of left tibia, upper third. No pieces of shell were found in the wound.

The above comprises the total casualties. It is certainly surprising that the percentage should have been so small, considering the exposure and number of shot received. Probably no future similar combat will occasion like results. Shell were bursting over this vessel from the commencement to the termination of the fight, and a few of the ship's company were knocked down by the concussion derived from a passing projectile.

Owing to the system of unshipping bulwarks at pivot guns, a considerable

space is thereby exempt from the danger arising from splinters. The Kearsarge fired one hundred and seventy-three shot; the Alabama, about twice that number, her firing being rapid and nearly incessant up to the period of the striking of colors. The carnage on board the latter is reported terrific; many of her crew were literally torn in pieces by an eleven-inch shell; others were much mutilated by splinters. By a merciful Providence, our ship's company were spared such appalling accidents.

The wounded of the Alabama were brought on board for treatment. Those whose names and nature of injury were noted are borne upon a list appended to the quarterly report. Others, with injuries less severe, were treated and subsequently went on shore with the uninjured paroled crew.

Assistant Surgeon Doctor A. Llewellyn was drowned. The surgeon, F. L. Galt, (acting paymaster,) introduced himself while I was engaged in the amputation and proffered his assistance. I requested he would assist in attending to the wounded of his vessel; but as he was prostrated by excitement and fatigue, and had received certain contusions, he was inadequate for the duty. I sent him to my room, and, without other professional aid, attended to all the injured. Surgeon Galt was paroled the same evening.

Upon the arrival of the Kearsarge at Cherbourg, owing to the number of wounded and the want of proper accommodation on board, all were transferred to the Hospital de la Marine, by permission of the admiral commanding the department. It is extremely fortunate that such facilities were afforded to the injured; every care and attention were bestowed upon the unfortunates. The skill and benevolence displayed by Monsieur Dufam, surgeon-in-chief, and Monsieur Aubin, surgeon of second class, and provost of the hospital, claim especial commendation.

I am pleased to report that his excellency Mr. Dayton has made a proper representation of the valuable services rendered by these gentlemen to the minister of the marine at Paris, and to the Department of State at Washington. I have previously reported the death of the brave Gowin. Hopes were reasonably entertained that his recovery would occur; but, anæmic from hemorrhage and debilitated by previous attacks of malarial fevers, little vital power remained; phlebitis supervened, soon succeeded by death. Gowin was brought with a smile upon his face, although suffering acutely from his injury. He said, "It is all right, and I am satisfied; for we are whipping the Alabama;" adding, "I willingly will lose my leg or life, if it is necessary." During the progress of the action he comforted his suffering comrades by assuring them that "Victory is ours!" whenever the guns' crews cheered at the successful effect of their shot, Gowin waved his hand over his head and joined in the shout. In the hospital he was calmly resigned to his fate, repeating again and again his willingness to die, since his ship had won a glorious victory.

His patience and cheerfulness during intense suffering, and his happy resignation, attracted general notice, enlisted sympathies for his recovery, and occasioned sincere regrets for his decease. To record the gallant conduct of this noble sailor is to me a gratification, and my apology for mentioning these minor incidents. His shipmates will erect a proper monument to his memory at Cherbourg.

I have in my possession a sum of money given by the resident Americans in Paris for a like memorial in his native town in Michigan.

The coolness and fortitude displayed by our crew and the precision of the firing were remarkable. One was almost compelled to regard their conduct as that witnessed at the ordinary target practice. In the hour of victory they were generous, refraining from exultation in the presence of the captives, and bestowing upon them every attention necessary for their comfort. I send by mail a pamphlet descriptive of the engagement, written by Mr. Edge, an

Englishman. It is the best account yet published, being composed from data furnished by the officers of the Kearsarge, although a few inaccuracies exist.

Captain Winslow desires me to present his regards.

I remain, dear sir, very truly yours,

JOHN M. BROWNE.

Surgeon W. WHELAN,

Chief of Bureau of Medicine and Surgery, Washington, D. C.

FOREIGN ACCOUNTS OF THE FIGHT BETWEEN THE KEARSARGE AND ALABAMA.

Letter from Secretary of State, transmitting copy of despatch No. 302 of the United States consul at Liverpool.

DEPARTMENT OF STATE,

Washington, July, 6, 1864.

SIR: I have the honor to transmit, herewith, a despatch, No. 302, of the United States consul at Liverpool, announcing the destruction of the pirate Alabama by the United States steamship Kearsarge, off Cherbourg, and enclosing several accounts of the action clipped from British journals. The department joins in the consul's gratulations at an event which at once illustrates the gallantry and efficiency of the navy, and fitly closes the predatory career of its antagonist.

I have the honor to be, sir, your obedient servant,

WILLIAM H. SEWARD.

Hon. GIDEON WELLES,

Secretary of the Navy.

Despatch of United States consul at Liverpool, enclosing extracts from foreign newspapers.

No. 302.]

UNITED STATES CONSULATE,

Liverpool, June 21, 1864.

SIR: The pirate Alabama has at last met the fate she deserves. She was sunk by the United States steamer Kearsarge, commanded by Captain Winslow, off Cherbourg, on Sunday morning last, after a fight of one hour. We only have, here at Liverpool, the confederate account of the action. I send you slips cut from the London Times, Liverpool Courier, Daily Post, and Mercury of to-day, giving all that is known about it.

* * * * *

I am, sir, your obedient servant,

THOMAS H. DUDLEY.

Hon. WILLIAM H. SEWARD,

Secretary of State.

From the second edition of the London Times, Monday, June 20, 1864.

FIGHT BETWEEN THE KEARSARGE AND ALABAMA.

SOUTHAMPTON, Monday morning.

Captain Semmes, fourteen officers, and twenty-seven men, belonging to the late confederate steamer Alabama, have landed from the privateer steamer Deerhound, which witnessed the action between the Alabama and the Kearsarge.

The Alabama left Cherbourg harbor at nine o'clock yesterday morning, and found the Kearsarge under steam outside. The former steamed up to her and opened fire at about a mile and a half distance. The fire became general from both ships when about a mile off. The action took place about nine miles from Cherbourg, commencing at 11.10, and ending at 12.40.

During the fight the vessels made seven complete circles. The Alabama's rudder became displaced, and she made sail, and the guns were kept ported till the muzzles were completely under water. The vessel's stern was actually under water when Captain Semmes gave orders for every man to save himself; they jumped overboard and swam to the boats, saving themselves as best they could. The Alabama's crew numbered in all 150 when they left Cherbourg; ten or twelve were killed in the action, and a number are known to be drowned. The ship's chronometers, specie, and all the bills of ransomed vessels were saved.

From the London Times, June 21, 1864.

THE NAVAL ACTION BETWEEN THE ALABAMA AND THE KEARSARGE.

(From our own correspondence.)

SOUTHAMPTON, *Monday.*

The English steam-yacht *Deerhound*, belonging to Mr. John Lancaster, of Hindley Hall, Wigan, Lancashire, arrived here last night, and landed Captain Semmes, (commander of the late confederate steamer *Alabama*,) thirteen officers, and twenty-six men, whom she rescued from drowning after the action off Cherbourg yesterday, which resulted in the destruction of the world-renowned *Alabama*. From interviews held this morning with Mr. Lancaster, with Captain Jones, (master of the *Deerhound*,) and with some of the *Alabama*'s officers, and from information gleaned in other quarters, I am enabled to furnish you with some interesting particulars connected with the fight between the *Alabama* and the *Kearsarge*.

The *Deerhound* is a yacht of 190 tons and 70-horse power, and her owner is a member of the Royal yacht squadron, at Cowes, and of the Royal Mersey yacht club. By a somewhat singular coincidence she was built by Messrs. Laird & Son, of Birkenhead, and proof of her fleetness is furnished by the fact that she steamed home from the scene of action yesterday at the rate of thirteen knots an hour. On arriving at Cherbourg, at ten o'clock on Saturday night, by railway from Caen, Mr. Lancaster was informed by the captain of his yacht, which was lying in harbor awaiting his arrival, that it was reported that the *Alabama* and the *Kearsarge* were going out to fight each other in the morning. Mr. Lancaster, whose wife, niece, and family were also on board his yacht, at once determined to go out in the morning and see the combat.

The *Alabama* left Cherbourg harbor about ten o'clock on Sunday morning, and the *Kearsarge* was then several miles out to seaward, with her steam up ready for action. The French plated ship-of-war *Conronne* followed the *Alabama* out of harbor, and stopped when the vessels were a league off the coast, her object being to see that there was no violation of the law of nations by any fight taking place within the legal distance from land. The combat took place about nine miles from Cherbourg, and as there are some slight differences (as might naturally be expected under the circumstances) in relation to the period over which it lasted, and other matters, it may be well here to reproduce from Mr. Lancaster's letter in *The Times* of this morning the subjoined extract from the log kept on board the *Deerhound*:

"Sunday, June 19, 9 a.m.—Got up steam and proceeded out of Cherbourg harbor. 10.30.—Observed the *Alabama* steaming out of the harbor towards the federal steamer *Kearsarge*. 11.10.—The *Alabama* commenced firing with her starboard battery, the distance between the contending vessels being about one mile. The *Kearsarge* immediately replied with her starboard guns. A very sharp, spirited firing was then kept up, shot sometimes being varied by shells. In manœuvring both vessels made seven complete circles, at a distance of from a quarter to half a mile. At 12 a slight intermission was observed in the *Alabama*'s firing, the *Alabama* making head sail, and shaping her course for the land, distant about nine miles. At 12.30 observed the *Alabama* to be disabled, and in a sinking state. We immediately made towards her, and on passing the *Kearsarge* were requested to assist in saving the *Alabama*'s crew. At 12.50, when within a distance of 200 yards, the *Alabama* sunk. We then lowered our two boats, and, with the assistance of the *Alabama*'s whale-boat and dingey, succeeded in saving about forty men, including Captain Semmes and thirteen officers. At 1 p.m. we steered for Southampton."

One of the officers of the *Alabama* names the same hour, viz., 11.10, as the commencement of the action, and 12.40 as the period of its cessation, making its duration an hour and a half, while the time observed on board the *Deerhound*, which is most likely to be accurate, (that vessel being free from the excitement and confusion necessarily existing on board the *Alabama*,) limited the action to an hour, the last shot being fired at 12.10. The distance between the two contending vessels, when the *Alabama* opened fire, was estimated on board

the Deerhound at about a mile, while the Alabama's officer tells me that she was a mile and a half away from the Kearsarge when she fired the first shot. Be this as it may, it is certain that the Alabama commenced the firing, and as it is known that her guns were pointed for a range of 2,000 yards, and that the second shot she fired, in about half a minute after the first, went right into the Kearsarge, that may be taken as the real distance between the two ships. The firing became general from both vessels at the distance of a little under a mile, and was well sustained on both sides, Mr. Lancaster's impression being that at no time during the action were they less than a quarter of a mile from each other. Seven complete circles were made in the period over which the fight lasted. It was estimated on board the Deerhound that the Alabama fired in all about 150 rounds, some single guns, and some in broadsides of three or four, and the Kearsarge about 100, the majority of which were 11-inch shells; the Alabama's were principally Blakeley's pivot guns. In the early part of the action the relative firing was about three from the Alabama to one from the Kearsarge, but as it progressed the latter gained the advantage, having apparently a much greater power of steam. She appeared to have an advantage over the Alabama of about three knots an hour, and steam was seen rushing out of her blow-pipe all through the action, while the Alabama seemed to have very little steam on.

At length the Alabama's rudder was disabled by one of her opponent's heavy shells, and they hoisted sails, but it was soon reported to Captain Semmes by one of his officers that his ship was sinking. With great bravery the guns were kept ported till the muzzles were actually under water, and the last shot from the doomed ship was fired as she was settling down. When her stern was completely under water Captain Semmes gave orders for the men to save themselves as best they could, and every one jumped into the sea and swam to the boats which had put off to their rescue. Those of them who were wounded were ordered by Captain Semmes to be placed in the Alabama's boats and taken on board the Kearsarge, which was, as far as possible, obeyed.

Captain Semmes, and those above mentioned, were saved in the Deerhound's boats; and when it was ascertained that the water was clear of every one that had life left, and that no more help could be rendered, the yacht steamed away for Cowes, and thence to this port.

The Kearsarge, it is known, has for some time past been in hot pursuit of the Alabama, which vessel Captain Winslow was determined to follow everywhere till he overtook his enemy. Very recently she chased and came up with one of the vessels of the Chinese expeditionary force returning to England, and ran alongside with her guns pointed and crew at quarters, before she could be convinced of her mistake, for the expeditionary vessel was very like the celebrated confederate cruiser. The Kearsarge was then described as likely to prove a formidable overmatch for the Alabama, having higher steam power and rate of speed, a crew "nearly double" that under Captain Semmes, and, unlike her sister ship, the Tuscarora, carrying ten, instead of eight, very heavy 11-inch shell guns, the so-called columbiads of the American navy. The Alabama, on the contrary, is stated to have had only two heavy rifled guns and six broadside 32-pounders. The confederate, too, after her long cruise, was sorely in need of a refit. Part of her copper, it is said, was off, and her bottom was covered with long weeds.

The crew of the Alabama comprised in all about 150, when she left Cherbourg; of these ten or twelve were killed during the action, and a number were known to be drowned, the difference between these and the number brought home by the Deerhound being, it is hoped, saved by the boats of the Kearsarge, or some French pilot-boats which were in the vicinity. The French war-vessel Couronne did not come out beyond three miles. The surgeon of the Alabama was an Englishman, and as nothing has been heard of him since he went below to dress the wounds of some of the sufferers, it is feared that he went down with the ship.

The wounded men on board the Deerhound were carefully attended to until her arrival here, when they were taken to the Sailor's Home, in the Canute road. Several of the men are more or less scarred, but they are all out about the town to-day, and the only noticeable case is that of a man who was wounded in the groin, and that but slightly.

Captain Semmes and his first lieutenant, Mr. J. M. Kill, are staying at Kelway's hotel, in Queen's terrace, where the gallant commander is under the care of Dr. Ware, a medical gentleman of this town, his right hand being slightly splintered by a shell.

When the men came on board the Deerhound they had nothing on but their drawers and shirts, having been stripped to fight, and one of the men, with a sailor's devotedness, insisted on seeing his captain, who was then lying in Mr. Lancaster's cabin in a very exhausted state, as he had been intrusted by Captain Semmes with the ship's papers, and to no one else would he give them up. The men were all very anxious about their captain, and were rejoiced to find that he had been saved. They appeared to be a set of first-rate fellows, and to act well together in perfect union under the most trying circumstances.

The captain of the forecastle on board the Alabama, a Norwegian, says that when he was in the water he was hailed by a boat from the Kearsarge, "Come here, old man, and we'll save you," to which he replied, "Never mind me, I can keep up half an hour yet; look after some who are nearer drowning than I am." He then made away for the Deerhound, thanking God that he was under English colors.

Throughout the action the Deerhound kept about a mile to windward of the combatants, and was enabled to witness the whole of it. The Kearsarge was burning Newcastle coals,

and the Alabama Welsh coals, the difference in the smoke (the north country coal yielding so much more) enabling the movements of each ship to be distinctly traced. Mr. Lancaster is clearly of opinion that it was the Kearsarge's 11-inch shells which gave her the advantage, and that, after what he has witnessed on this occasion, wooden ships stand no chance whatever against shells. Both vessels fired well into each other's hull, and the yards and masts were not much damaged. The mainmast of the Alabama had been struck by shot, and, as the vessel was sinking, broke off and fell into the sea, throwing some men who were in the maintop into the water. Some tremendous gaps were visible in the bulwarks of the Kearsarge, and it was believed that some of her boats were disabled; she appeared to be temporarily plated with iron chains, &c. As far as could be seen, everything appeared to be well-planned and ready on board the Kearsarge for the action. It was apparent that Captain Semmes intended to fight at a long range, and the fact that the Kearsarge did not reply till the two vessels got nearer together showed that they preferred the short range, and the superior steaming power of the latter enabled this to be accomplished. It is remarkable that no attempt was made by the Kearsarge to close and board the Alabama, and when the Alabama hoisted sails and made as if for the shore, the Kearsarge moved away in another direction, as though her rudder or screw was damaged and out of control. Great pluck was shown on both sides during the action. On board the Alabama all the hammocks were let loose, and arrangements had been made for sinking her rather than that she should be captured.

As far as is known, not a relic of the Alabama is in the possession of her successful rival. When she was sinking Captain Semmes dropped his own sword into the sea, to prevent the possibility of its getting into their hands, and the gunner made a hole in one of the Alabama's boats, and sank her, for the same reason.

Before leaving the Deerhound Captain Semmes presented to Mr. Lancaster's son one of his officer's swords and a pistol, in remembrance of the occurrence, and the kind treatment he and his men had received on board the yacht. The men stated that the best practice generally on board the Alabama during the action was shown by the gunners who had been trained on board the Excellent, in Portsmouth harbor.

The spectacle presented during the combat is described by those who witnessed it from the Deerhound as magnificent, and thus the extraordinary career of the Alabama has come to a grand and appropriate termination.

The presence of the Deerhound on the scene was a providential circumstance, as in all probability the men saved by her would otherwise have been drowned, and a lamentable addition would thus have been made to the number of lives lost on the occasion.

Nothing is known here respecting the Kearsarge, or her subsequent movements. She was in command of Captain John Winslow, and had about the same number of officers and crew as the Alabama. The last official American navy list describes her as 1,031 tons register, and carrying eight guns, being two guns less than the Tuscarora mounts, to which, in all other respects, the Kearsarge is a sister ship. The Tuscarora will be remembered as the federal ship-of-war that some two years and a half ago lay at this port watching the Nashville; several of the Alabama's officers now here were attached to the Nashville on that occasion.

The Alabama's chronometers, specie, and all the bills of ransomed vessels are saved, having been handed over to a gentleman at Cherbourg before she left that port.

Mr. Mason, the confederate agent, Captain Bullock, and the Rev. Mr. Tremlett arrived by the 4 o'clock train this afternoon, from London, and proceeded to Kelway's hotel, to meet Captain Semmes.

Captain Semmes and all the men are now placed under the care of Mr. J. Wiblin, for such medical attendance as may be required.

From the London Times, June 21, 1864.

[EDITORIAL.]

On Sunday morning, just as all good people were coming down to breakfast, an awful Sunday morning's work was preparing within sight of the British isles, if among these isles we may include the barren rock upon which a million has been spent to make it a sentry-box to watch the port of Cherbourg. From the latter port, just about 9 o'clock, there issued the Alabama, the ship that for two years has struck terror into the heart of the most confident and almost the strongest naval power in the world. More than a hundred times over the very name of the Alabama, thundered through a speaking trumpet, has brought down the rival flag as if by magic, and compelled the luckless crew to submit to the inglorious process of examination, surrender, spoliation, and imprisonment, to see their ship plundered and sent to the bottom. In the shape of chronometers and other valuables, the Alabama carried the *spolia opima* of a whole mercantile fleet. This time, however, it was not to order a merchantman to lie-to while his papers were examined that this scourge of the federal navy came out of Cherbourg. It is not in our power to say why Captain Semmes, who has gained so much glory and so unquestionable a reputation for courage that he could afford to be prudent, came

out with a ship just returned from a long voyage, and much in want of repair, to encounter a foe larger, better manned, better armed, provided, as it turned out, with some special contrivances for protection, and quite as likely to be as well handled as his own ship. For many months we have heard of the Kearsarge as a foe worthy of the Alabama, should she have the luck to catch her; indeed, the captain of the Kearsarge had assumed that if they met there could be only one possible result. Why, then, did not Captain Semmes see that this was an occasion for the exercise of that discretion or that ingenuity which the greatest generals have thought rather an addition to their fame? Did his prudence give way, as they say a brave man's courage will sometimes? Was he wearied with a warfare upon the defenceless? Did conscience or self-respect suggest that the destroyer of a hundred unarmed merchantmen had need to prove his courage and to redeem his name from piracy? It is simply said he had been challenged, and that he had accepted the challenge, not without some forecasts of the result. As an ordinary duellist hands his watch and his pocket-book to a friend, Captain Semmes sent on shore his sixty chronometers—the mementoes of so many easier conflicts—his money, and the bills of ransomed vessels. He then steamed nine miles out to sea, and entered into mortal combat with the enemy, first exchanging shots at the distance of little more than a mile—out of all distance our fathers would have called it; not so now.

As it happened, and as it frequently happens on such occasions, an English yacht was in the harbor, and its owner, Mr. Lancaster, thought the view of one of the most important naval engagements likely to occur in his time was worth the risk of a stray shot. His wife, niece, and family were on board; but, no doubt, they shared his interest in the spectacle. The firing began just as we Londoners had got to the first lesson in the morning service. As the guns of the Alabama had been pointed for 2,000 yards, and the second shot went right through the Kearsarge, that was probably the distance at first; and we are told the ships were never nearer than a quarter of a mile. The Alabama fired quicker, in all about 150 rounds; the Kearsarge fired about 100, chiefly 11-inch shells. One of these shells broke the Alabama's rudder and compelled her to hoist sail. By this time, however, after about an hour's work, the Alabama was sinking, and could only make the best of her way in the direction of Cherbourg. Pursuing our comparative chronology, this brings us to the beginning of the sermon; and it was at the very time that our congregations were listening, as well as they could, to the arguments or the eloquence of our preachers, that the very moving incidents of death and of rescue took place off Cherbourg—the gradual sinking of the Alabama, the picking up of the drowning seamen, and the final departure of the Deerhound, with Captain Semmes, his surviving officers, and some of the crew. The men were all true to the last; they only ceased firing when the water came into the muzzles of their guns; and as they swam for life, all they cared for was that their commander should not fall into federal hands. He reports that he owes his best men to the training they received on board the Excellent. To all appearance the superiority of the Kearsarge lay partly in her guns, and of course somewhat in her more numerous crew, but not less in her more powerful machinery, which enabled her to move quicker and manœuvre more easily.

We are becoming accustomed to scenes that only four years ago would have been thought appalling, horrible, and portentous. Think of a quiet gentleman, with wife, niece, and family, perhaps governess and maid-servants, having witnessed at their ease, on Sunday morning, a fight, not between two cocks or two dogs, but two men-of-war, a few hours' sail from Southampton. In fact, they and the survivors of the ship destroyed were walking about Southampton and shopping on Monday morning. There appears to have been a very respectable allowance of killed, wounded, and missing; and among the latter is an English surgeon, who is supposed to have gone to the bottom in the midst of his bleeding patients. We shall know very shortly whether the chains hung outside the Kearsarge saved her men. To all appearance they did not; and but for the melancholy fact that some of the Alabama's wounded must have gone down with her, the loss would probably have been nearly the same on both sides. Is there not something ominous in such an encounter within our own seas? Such a contest, so brief, so hard fought, and so decisive, is even more terrible than the hand-to-hand tussle, and the mere game of fisticuffs that our old fleets used to indulge in with a thousand popguns on either side. True, there was damage done at last, but sometimes very little damage to speak of; and a big ship might receive many hundred shots only to have the glory of showing the shot-holes to the populace of Portsmouth. It is not so now. At the distance of a mile, never less than a quarter of a mile, a formidable ship, the terror of American commerce, well armed, well manned, well handled, is sent to the bottom in an hour. Exactly an hour elapsed from the first shot to the moment when it became obvious that the vessel was sinking, when, indeed, the rudder was broken, and the fires were put out. That is the pace at which our naval engagements will be fought for the future. In this instance the pace was all the quicker because the guns had start of the ships, the guns being the new artillery, the ships wooden, excepting the chains of the Kearsarge, if they constitute an exception. The next duel in the British channel will probably be between two vessels of the Warrior class; and he must be a bold man who can be sure that it will last as long as a Sunday morning service, or be less decisive than the last Sunday's.

From the Liverpool Courier, June 21, 1864.

GALLANT SEA FIGHT BETWEEN THE ALABAMA AND THE KEARSARGE.—
THE ALABAMA SUNK.—HEROIC RESISTANCE OF CAPTAIN SEMMES.

When the meagre telegrams from Cherbourg were received on Sunday night, stating that an engagement was reported to have taken place between the Alabama and the Kearsarge, and that the confederate vessel had been sunk, the statement was regarded as an idle rumor without the slightest foundation in fact. Indeed, Liverpool people were very reluctant to give credence to the report, and the baldness of the telegrams almost justified their rejection. The first impulse, therefore, was to regard the alleged fight as altogether mythical. But as people began to arrive in town for business yesterday morning, the second edition of the Daily Courier informed them that the Alabama and the Kearsarge had really met in stubborn conflict, that the confederate cruiser had proved unequal to her adversary in strength of hull and weight of armament, and that gallantly fighting until their vessel was half engulfed, Captain Semmes and the remnant of his crew were at length constrained to jump into the sea to avoid being carried to the bottom in their sinking craft.

The naval duel between the Alabama and the Kearsarge is not one of the least brilliant incidents in the American war. Even prejudiced federalists will not deny Captain Semmes credit for almost romantic gallantry in the struggle. He accepted a challenge from a far more powerful adversary; he knew his antagonist was in good repair and better armed, and he also knew that his own vessel was in a wretched state of dilapidation, the inevitable result of a world-wide cruise. Under such circumstances, it is no disgrace to Captain Semmes that he was worsted. Preponderance of force, not superior bravery or skill, was the cause of failure, and this was beyond his control. All persons may not be disposed to concur in the propriety of the mission in which Captain Semmes was employed, but after reading the account of Sunday's encounter, they must feel convinced that he is a chivalrous officer, on whose fame the term "pirate" is a foul aspersion.

The accounts of the fight are still somewhat meagre, but we must wait until some of those on board the vessels have had an opportunity of supplying the details. These will be looked forward to with considerable interest, and in the mean time the particulars which we are able to publish will, no doubt, be eagerly read. The following telegrams were received at the Liverpool underwriters' rooms from Lloyd's agent at Cherbourg:

Cherbourg, Sunday, 12. 10 p. m.—The Alabama left this morning, and is now engaged with the Kearsarge. A brisk cannonade is heard.

1.40 p. m.—The Kearsarge has just sunk the Alabama. An English yacht has saved the crew.

The telegraph company's express from Southampton was to the following effect. It contains the account furnished to the newspapers by Mr. John Lancaster, of the steam-yacht Deerhound, which, by the way, is one of the Royal Mersey Yacht Club vessels:

Southampton, June 20.—The steam-yacht Deerhound has arrived off Cowes with Captain Semmes and the crew of the confederate steamer Alabama. The following are the details of the engagement, which took place yesterday:

"At 10.30 the Alabama was observed steaming out of Cherbourg harbor towards the federal steamer Kearsarge. At 11.10 the Alabama commenced the action by firing with her starboard battery at a distance of about one mile. The Kearsarge also opened fire immediately with her starboard guns, and a sharp engagement, with rapid firing from both ships, was kept up, both shot and shell being discharged. In the manœuvring, both vessels made seven complete circles at a distance of from a quarter to half a mile. At twelve o'clock the firing from the Alabama was observed to slacken, and she appeared to be making head sail and shaping her course for land, which was distant about nine miles. At half past twelve the confederate vessel was in a disabled and sinking state. The Deerhound immediately made towards her, and on passing the Kearsarge was requested to assist in saving the crew of the Alabama. When the Deerhound was still at a distance of 200 yards the Alabama sank, and the Deerhound then lowered her boats, and, with the assistance of those from the sinking vessel, succeeded in saving about forty men, including Captain Semmes and thirteen officers.

"The Kearsarge was apparently very much disabled.

"The Alabama's loss in killed and wounded is as follows: Drowned, one officer and one man; killed, six men; wounded, one officer and sixteen men. Captain Semmes is slightly wounded in the hand.

"The Kearsarge's boats were lowered, and, with the assistance of the French pilot, succeeded in picking up the remainder of the crew."

Southampton, June 20.—From further particulars received here of yesterday's engagement it appears that Captain Semmes accepted the challenge of the Kearsarge to fight, although aware that his adversary carried fifty more men than his own vessel, and was a larger ship with heavier guns. Captain Semmes was not, however, aware that the Kearsarge was chain-plated under her outside planking. Shortly after the action commenced, a shot from the Kearsarge

Sarge killed three men on board the Alabama, cutting them to pieces, and a second shot wounded three more men and killed another, while a third shot carried away the blade of the Alabama's fan and part of the rudder, on her deck disabling a gun, and causing much damage below and forward. Her compartments were all carried away, and the fire-room was filled with water.

The Alabama fought under sail, first using her starboard battery, and afterwards her port battery; she continued the engagement with the muzzles of her guns under water, and one part of her deck covered with dead and wounded. When found in a sinking state, the Alabama ceased fighting and lowered her boats, in which the dead and wounded were placed. Shortly afterwards the Alabama sank, the officers and crew jumping into the sea, when the Kearsarge's boats came up to assist in saving the crew. The officer in command of the boats inquired for Semmes, and was told that he was drowned, whereas he had already been picked up by the yacht Deerhound and stowed away, the yacht having then steamed off with all speed, expecting the Kearsarge would attempt to capture those on board. Before the Alabama left Cherbourg to engage the Kearsarge, Captain Semmes sent on shore an iron chest containing specie, 60 chronometers, and other valuables.

The engagement is described by the owner of the yacht Deerhound as a most brilliant affair, the fighting being severe and at short distance. The Alabama's guns were served rapidly but doing less execution. The Kearsarge, however, is said to have sustained much damage, her sides being torn open, showing the chain plating.

The officers of the Alabama estimate their loss in killed and wounded at from 30 to 40 men. Captain Semmes is very unwell, from being in the water a considerable time, and in consequence of the wound in his hand.

Captain Semmes visited several shops in Southampton this morning to procure a personal outfit.

Another account from Southampton says the Kearsarge had a chain-cable triced along her sides to break the force of the Alabama's shot. The Alabama was almost 1,000 yards from the Kearsarge when she fired the first shot at 10.30; being the fastest ship she was able to steam round her antagonist in continually narrowing circles, but when within 500 yards of the Kearsarge the rudder and screw of the Alabama were shot away and she was rendered helpless. Her colors were shot away.

A word for the Kearsarge.

A despatch from Cherbourg in the Evening Star says the Kearsarge has suffered no damage of importance; none of her officers were killed or wounded, and only three of her seamen wounded. The Kearsarge captured sixty-eight officers and crew of the Alabama.

The Morning Herald says the Alabama was terribly in want of repairs; her copper was strained to such an extent as to deprive her of her only advantage—superiority of speed, while the Kearsarge was fresh from port, and kept purposely in order for the contingency of an encounter with the Alabama. The Alabama was, however, from the first, overmatched. The crew of the Kearsarge consisted of 150 to her 120, and the Kearsarge carried two 100-pounders, the Alabama carrying no guns of that calibre. Captain Semmes, notwithstanding the bad condition of his ship, and the superior weight of metal of the United States cruiser, determined to leave port and at once engage the Kearsarge; before going out to fight he left all his journals ashore. The Herald adds, "Naval men, who know what a ship is after two years' knocking about in all latitudes, will readily understand how unequal were her chances against the Kearsarge, fresh from port, and kept purposely in order for the contingency of an encounter with the Alabama or one of her sister ships. The Alabama is gone, but there is no confederate flag to commemorate the defeat. Seven fathoms deep, and colors still flying, lies the noble vessel that for so many months was the terror of Yankee skippers. It will be long before her memory is lost, and if the next ship that bears her name does her work as well, even if she shares her fate, she will have played an important and a glorious part in the cause of the confederacy. We (Times) are informed by a gentleman connected with the firm of Messrs. Saunders & Otley, who saw Captain Semmes at Cherbourg on Sunday, that the Alabama was to go out to fight the Kearsarge, and with this intention Captain Semmes confided to this gentleman his journals and other documents connected with the cruises of the Alabama.

Captain Semmes at Southampton.

SOUTHAMPTON, Monday evening.

The excitement prevailing here to-day has in no way diminished. This afternoon Captain Semmes, on proceeding up to town, was completely besieged by crowds of people, who collected around the carriage, and vociferously cheered him along the streets. A great banquet to Captain Semmes and his officers, in honor of their bravery, is already spoken of by some of the leading citizens.

*Captain Semmes's wound.*SOUTHAMPTON, *Monday evening.*

Captain Semmes has found it necessary to call in surgical advice for a wound in his left hand, which is injured by a splinter from a shell. A great number of visitors have called and left their cards, but the captain politely declines seeing any one at present.

Further particulars.

The correspondent at Southampton of the Express telegraphs to that paper of last night the following statement, which he gathered from one of the petty officers of the Alabama: "The Alabama arrived at Cherbourg on the 12th instant, seventy days from Cape Town. The Kearsarge arrived off Cherbourg on the 13th instant. Challenges to fight were reciprocated by the commanders of the Alabama and Kearsarge. The former, having taken in coal and undergone some refitting, steered out of Cherbourg at 9 a. m. on Sunday. She was escorted by the French iron-clad Couronne, which was appointed to see the Alabama clear of the limits of the port of Cherbourg. The engagement took place about twelve miles from the port. The first shot was fired by the Alabama at the Kearsarge at 10.30 a. m. The latter had a chain-cable triced along her sides, to break the force of the shot from the Alabama. The Alabama was about one thousand yards from the Kearsarge when she fired the first shot; being the fastest ship she was enabled to steam round her antagonist in continually narrowing circles. When within five hundred yards of the Kearsarge the rudder and screw of the Alabama were shot away, and she was rendered helpless; her colors were shot away. The action lasted from 10.30 a. m. until noon. At the conclusion of the action nine badly-wounded men of the Alabama were sent on board of the Kearsarge. The crew of the Alabama, when she went into action, were one hundred and forty men, all told. After the action the Kearsarge appeared in a disabled condition. Four men were killed and ten wounded on board the Alabama."

With reference to Captain Semmes, the same authority says: "Captain Semmes is at Ketway's hotel here, and the other officers and men are about here, getting clothes and necessities; they are taken charge of at the Sailors' Home here. Captain Semmes and chief officer Lee are now at Emmanuel's, the tailor, on High street, making purchases. His hand is bandaged over, owing to a wound he received in action. The shop is crowded with people, endeavoring to catch a glimpse of the confederate commander."

The Moniteur's account.

The Moniteur of yesterday (Monday) morning gave the following account of the destruction of the Alabama: "The Alabama left the port of Cherbourg at 11.30 a. m. The engagement with the Kearsarge commenced at noon, when a violent cannonade was heard. The Alabama, being pursued by the Kearsarge, made all her speed to reach Cherbourg, but shortly after one o'clock she sank."

The victor and the vanquished.

Under this title the Evening Star supplies some information regarding the two vessels. In reading it the public should bear in mind that the Star is a violently northern paper, and that a strong federal bias is betokened in the tenor of the article.

The following description of the Alabama, which yesterday succumbed to the United States war-sloop Kearsarge, will be read with interest. It is from the private journal of one of her officers: "The 'No. 290,' or Alabama, was launched from the building-yard of Messrs. Laird, of Birkenhead. She was a bark-rigged wooden propeller of 1,040 tons register. Length of keel, 210; length over all, 220 feet; beam, 32; depth, 17. Her engines, built by the same firm, were two horizontal ones, each of 300 horse-power, with stowage for 300 tons of coal. Her sails, carried at all times, were as follows: Fore, foretopmast-staysail, and jib; two large trysails; the usual square sails on fore and main, with the exception of the mainsail, which was a flying one; spanker and gaff-topsails; all standing rigging wire. Double wheel, with motto engraved thereon, "*Aide toi, et Dieu t'aidera*," placed just before the mizzenmast. Bridge in the centre, just before the funnel. She carried five boats viz: cutter and launch amidships, gig and whaleboat between the main and mizzenmasts, and dingey astern. The main deck was pierced for 12 guns, elliptic stern, billet head, high bulwarks; cabin accommodation, first class; wardroom furnished with a handsome suit of state-rooms; steerage starboard for midshipmen; port for engineers. Next came engine-room, coal-bunkers, &c.

Then the berth deck, capable of accommodating 120 men; under the wardroom were store-rooms, and under the steerage were shell-rooms; just forward of the fire-arms came the hold; next the magazines; and forward of all the boatswains' and sailmakers' storerooms; the hold, &c., being all under the berth deck." At the time the Alabama left Cherbourg her crew numbered rather more than 150 persons.

The Alabama sailed from Liverpool on the 29th of July, 1862. Of her notorious career it is hardly necessary to speak, so often have her doings been the subject of comment in the press. During a career of nearly two years she has visited almost every quarter of the world, burning and destroying the peaceable vessels of the United States mercantile marine wherever found, and dexterously evading the repeated efforts of the United States navy to effect her capture.

We believe her solitary encounter before the one which has now terminated her career of mischief took place off Galveston, when she decoyed the gunboat Hatteras within range of her guns by hailing as her Majesty's steamer Petrel, the Hatteras being sunk by the Alabama's broadside. The latest achievement of Captain Semmes, her commander, was in the form of a legal argument, addressed to a contemporary, in justification of the practice of destroying vessels without adjudication by a court of law. We believe that there is no doubt as to the fight with the Kearsarge having been sought by Captain Semmes, and that it was eagerly accepted by the gallant officer in command of that vessel.

The Kearsarge (not Kearsage as given in the telegrams) is one of the new vessels of the United States navy, built since the commencement of the war, and the twin ship of the Tuscarora, whose presence in the Solent during the visit of the confederate cruiser Nashville (since destroyed) occasioned considerable excitement some time since. She is a sloop of 1,031 tons, carrying eight guns. Her broadside guns are 32-pounders, six in number; but she is also furnished with two 11-inch smooth-bore Dahlgrens; and it is to these tremendous weapons the sinking of the Alabama is probably due. Her crew consists of about 100 men, her captain being John A. Winslow, a loyal North Carolinian, and her first officer, Lieutenant James S. Thornton, who, in the same capacity, assisted at the capture of the iron-clad Atlanta, at Savannah, some months ago. Lieutenant Thornton has a high reputation in the service as an artillery officer. The names of the two hostile ships are curiously enough indicative of their respective origin. The Alabama is named after the proudest of the slave States, and the Kearsarge after a range of mountains in free New England. We believe the latter vessel was one of the nine gunboats furnished to the United States government in ninety days from the date of the order being given.

The above sketch will show that in point of size, men, and armament, the two vessels were not unequally matched. And Anglo-Saxon courage and seamanship no doubt aided both; for the crew of the Alabama, it will be remembered, consisted almost entirely of Englishmen, many of whom had belonged to the naval reserve.

The crew were paid regularly every three months by orders on Liverpool.

From the Liverpool Daily Post, June 21, 1864.

DAILY POST OFFICE, Tuesday, 9 a. m.

THE ALABAMA AND THE KEARSARGE.—The Times is puzzled to know why Captain Semmes, who has gained so unquestionable a reputation for courage, came out with a ship just returned from a long voyage, much in want of repair, to encounter a foe larger, better manned, better armed, provided, as it turned out, with some special contrivance for protection, and quite as likely to be as well handled as his own ship.

The Times, in its account of the action, states that as the guns of the Alabama had been pointed for two thousand yards, and the second shot went right through the Kearsarge, that was probably the distance at first. The ships were never nearer than a quarter of a mile.

The Alabama fired quicker—in all, about one hundred and fifty rounds. The Kearsarge fired about one hundred rounds, chiefly 11-inch shells. One of these shells broke the Alabama's rudder, and compelled her to hoist sail. By this time, however, after about an hour's work, the Alabama was sinking, and could only make the best of her way in the direction of Cherbourg.

To all appearance the superiority of the Kearsarge lay partly in her guns, and, of course, somewhat in her more numerous crew, but not less in her more powerful machinery, which enabled her to move quicker and manœuvre more easily.

There appears to have been a very respectable allowance of killed, wounded, and missing, and among the latter is an English surgeon, who is supposed to have gone to the bottom in the midst of his bleeding patients.

Exactly an hour elapsed from the first shot to the moment when it became obvious that the vessel was sinking, when, indeed, the rudder was broken, and the fires were put out. That is the pace at which our naval engagements will be fought for the future. In this instance the pace was all the quicker because the guns had start of the ships, the guns being the new artillery, the ships wooden.

On board the Alabama all the hammocks were let loose, and arrangements had been made for sinking rather than that she should be captured.

As far as is known, not a relic of the Alabama is in the possession of her successful rival. When she was sinking Captain Semmes dropped his sword into the sea, to prevent the possibility of its getting into their hands.

The men were all true to the last. They only ceased firing when the water came into the muzzles of their guns; and as they swam for life, all they cared for was that their commander should not fall into federal hands. He reports that he owes his best men to the training they received on board the Excellent.

The Kearsarge carries ten very heavy 11-inch shell guns, the so-called columbiads of the American navy. The Alabama, on the contrary, is stated to have had only two heavy rifled guns and six broadsiders, (32-pounders.)

Proposed demonstration to Captain Semmes.

To the Editor of the Daily Post :

SIR: It has been currently reported on change to-day that Captain Semmes, of the late steamer Alabama, is expected in Liverpool most probably to-morrow, and that the gentlemen forming the Southern Club in Brown's buildings purpose giving him a public ovation upon his appearance upon change, such as Englishmen only give to great public men of this country, or to illustrious strangers. As Captain Semmes cannot, I think, fairly lay claim to either of these designations, but appears merely as a combatant in a struggle in which Great Britain has, by the voice of her Majesty the Queen, proclaimed a strict neutrality, may I beg of you to publish this protest against such a proceeding, a protest which, I am sure, is but the expression of the reflecting mercantile community of Liverpool? I trust the merchants of Liverpool will not, by tacitly acquiescing in such a demonstration, add still further to the irritation of feeling already existing in the United States respecting the Alabama; for whether she may be considered as having been a duly recognized vessel-of-war of the southern confederacy or not, she sailed from this country by stealth, and in doing so violated our municipal laws. Surely our merchants and ship-owners, who have so much to lose by the precedent of the Alabama being established, viz: cruising on the high seas, plundering, burning, and destroying, but not legally and according to international laws condemning her prizes, will not only hesitate before they permit such a demonstration to take place, but will take such steps as will prevent its occurrence, and thereby discountenance and prevent such a proceeding on the part of those southern gentlemen resident here and their friends, who would be too glad of any opportunity to embroil this country in a war with the United States of America, regardless of the consequences to our honor or to the material interests of our country. Such a demonstration, if attempted, is sure to be met by one of an opposite character; and I trust both may be avoided by a little reflection on the part of those gentlemen who, as strangers, find themselves received here with kindness and courtesy even by those who differ with them, and who consequently ought to be the last to act in any way which would prejudice the interests or the honor of this country.

Yours, truly,

A BRITISH SHIP-OWNER.

LIVERPOOL, June 20, 1864.

Mr. Lancaster's account of the fight.

Mr. Lancaster wrote as follows to the *Times* :

SIR: Herewith I send you a copy of my log respecting the engagement between the confederate steamer Alabama and the federal steamer Kearsarge :

"Sunday, June 19, 9 a. m.—Got up steam, and proceeded out of Cherbourg harbor.

"10.30.—Observed the Alabama steaming out of the harbor towards the federal steamer Kearsarge.

"11.10.—The Alabama commenced firing with her starboard battery, the distance between the contending vessels being about one mile. The Kearsarge immediately replied with her starboard guns. A very sharp, spirited firing was kept up, shot sometimes being varied by shells. In manœuvring both vessels made seven complete circles at a distance of from a quarter to half a mile.

"At 12 a slight intermission was observed in the Alabama's firing, the Alabama making head sail, and shaping her course for the land, distant about nine miles.

"At 12.30 observed the Alabama to be disabled and in a sinking state. We immediately made towards her, and on passing the Kearsarge were requested to assist in saving the Alabama's crew.

"At 12.50, when within a distance of two hundred yards, the Alabama sunk. We then lowered our two boats, and, with the assistance of the Alabama's whale-boat and dingey, succeeded in saving about forty men, including Captain Semmes and thirteen officers. At one p. m. we steered for Southampton."

I may state that before leaving the Kearsarge was apparently much disabled. The Alabama's loss, so far as at present ascertained, in killed and wounded, &c., was as follows, viz: one officer and one man drowned, six men killed, and one officer and sixteen men wounded. Captain Semmes received a slight wound in the right hand.

The Kearsarge's boats were, after some delay, lowered, and, with the assistance of a French pilot-boat, succeeded in picking up the remaining survivors.

JOHN LANCASTER.

STEAM-YACHT DEERHOUND, off Cowes, June 19.

It is somewhat remarkable that the steam-yacht Deerhound, from whose deck was witnessed the fight between the Alabama and Kearsarge, was built at the same time and in the same yard with the Alabama. The builders were the Messrs. Laird, and the Deerhound was the first steel-clad vessel built. The plates were manufactured at the Mersey Steel and Iron Works. She was built for the Duke of Leeds, and subsequently sold to Mr. Lancaster, of the iron works, Wigan.

The Kearsarge is commanded by Captain John A. Winslow, a native of North Carolina. The Kearsarge carries seven guns, two of which are 100-pounders each.—*Liverpool Post*.

The English steam-yacht Deerhound, belonging to Mr. John Lancaster, of Hindley Hall, Wigan, when she steamed out of Cherbourg on Sunday morning, had on board Mrs. Lancaster, her family, and niece. After the fight was over the yacht steamed to Southampton at the rate of thirteen knots an hour.—*Liverpool Post*.

Letter from the Secretary of State, transmitting copy of despatch No. 305 of the United States consul at Liverpool.

DEPARTMENT OF STATE,
Washington, July 9, 1864.

SIR: I have the honor to transmit herewith, for your further information in regard to the destruction of the Alabama and the movements of blockade runners, a despatch (No. 305) received from the United States consul at Liverpool.

I have the honor to be, sir, your obedient servant,

WILLIAM H. SEWARD.

Hon. GIDEON WELLES,
Secretary of the Navy.

Despatch of the United States consul at Liverpool, enclosing additional extracts from foreign newspapers.

No. 305.]

UNITED STATES CONSULATE,
Liverpool, June 24, 1864.

SIR: A vessel from Bermuda reports the pirate steamer Florida off that island on the 6th instant.

Enclosure No. 1 contains Captain Semmes's statement of the fight between the Alabama and Kearsarge, cut from the London Times of yesterday; also an editorial and communication from the Liverpool Courier. * * * *

I am, sir, very respectfully, your obedient servant,

THOMAS H. DUDLEY.

Hon. WILLIAM H. SEWARD,
Secretary of State.

From the London Times, June 23, 1864.

THE ALABAMA AND THE KEARSARGE.

To the Editor of the Times :

SIR : I send herewith a copy of the official report of Captain Semmes of his late engagement with the United States ship Kearsarge, which you may, perhaps, think worthy a place in your columns.

I avail myself of the occasion to note one or two inaccuracies in the letter of your correspondent, dated at Southampton on Monday, and published in The Times of Tuesday. The crew of the Alabama is there stated at 150 men ; she had, in fact, but 120, all told.

Again, as to her armament ; that of the Kearsarge may be correctly given by your correspondent. I do not know what it was. The Alabama had one 7-inch Blakely rifled gun, one 8-inch smooth-bore pivot gun, and six 32-pounders, smooth-bore, in broadside.

I am, sir, very respectfully, your obedient servant,

J. M. MASON.

24 UPPER SEYMOUR STREET, June 22.

—
“SOUTHAMPTON, June 21, 1864.

“SIR : I have the honor to inform you that, in accordance with my intention, as previously announced to you, I steamed out of the harbor of Cherbourg between 9 and 10 o'clock on the morning of the 19th of June for the purpose of engaging the enemy's steamer Kearsarge, which had been lying off and on the port for several days previously. After clearing the harbor we descried the enemy, with his head off shore, at a distance of about seven miles. We were three-quarters of an hour in coming up with him. I had previously pivoted my guns to starboard, and made all my preparations for engaging the enemy on that side. When within about a mile and a quarter of the enemy he suddenly wheeled, and bringing his head in shore, presented his starboard battery to me. By this time we were distant about one mile from each other, when I opened on him with solid shot, to which he replied in a few minutes, and the engagement became active on both sides.

“The enemy now pressed his ship under a full head of steam, and to prevent our passing each other too speedily, and keep our respective broadsides bearing, it became necessary to fight in a circle, the two ships steaming around a common centre, and preserving a distance from each other of from a quarter to half a mile. When we got within good shell range we opened upon him with shell. Some 10 or 15 minutes after the commencement of the action our spanker gaff was shot away, and our ensign came down by the run. This was immediately replaced by another at the mizzenmast-head. The firing now became very hot, and the enemy's shot and shell soon began to tell upon our hull, knocking down, killing, and disabling a number of men in different parts of the ship.

“Perceiving that our shell, though apparently exploding against the enemy's sides, were doing him but little damage, I returned to solid shot firing, and from this time onward attended [alternated?] with shot and shell.

“After the lapse of about one hour and ten minutes our ship was ascertained to be in a sinking condition, the enemy's shell having exploded within our sides and between decks, opening large apertures, through which the water rushed with great rapidity.

“For some few minutes I had hopes of being able to reach the French coast, for which purpose I gave the ship all steam, and set such of the fore and aft sails as were available. The ship filled so rapidly, however, that before we had made much progress the fires were extinguished in the furnaces, and we were evidently on the point of sinking. I now hauled down my colors to prevent the further destruction of life, and despatched a boat to inform the enemy of our condition.

“Although we were now but 400 yards from each other, the enemy fired upon me five times after my colors had been struck. It is charitable to suppose that a ship-of-war of a Christian nation could not have done this intentionally.

“We now turned all our exertions towards saving the wounded and such of the boys of the ship who were unable to swim. These were despatched in my quarter-boats, the only boats remaining to me—the waist-boats having been torn to pieces.

“Some twenty minutes after my furnace fires had been extinguished, and the ship being on the point of settling, every man, in obedience to a previous order which had been given the crew, jumped overboard and endeavored to save himself.

“There was no appearance of any boat coming to me from the enemy after my ship went down. Fortunately, however, the steam yacht *Deerhound*, owned by a gentleman of Lancashire, England, Mr. John Lancaster, who was himself on board, steamed up in the midst of my drowning men, and rescued a number of both officers and men from the water. I was fortunate enough myself thus to escape to the shelter of the neutral flag, together with about 40 others, all told.

“About this time the Kearsarge sent one, and then, tardily, another boat.

"Accompanying you will find lists of the killed and wounded, and of those who were picked up by the *Deerhound*; the remainder, there is reason to hope, were picked up by the enemy and by a couple of French pilot-boats, which were also fortunately near the scene of action.

"At the end of the engagement it was discovered by those of our officers who went alongside the enemy's ship with the wounded that her midship section on both sides was thoroughly iron-coated; this having been done with chain constructed for the purpose, placed perpendicularly from the rail to the water's edge, the whole covered over by a thin outer planking, which gave no indication of the armor beneath.

"This planking had been ripped off in every direction by our shot and shell, the chain broken and indented in many places, and forced partly into the ship's side. She was most effectually guarded, however, in this section from penetration. The enemy was much damaged in other parts, but to what extent it is now impossible to tell; it is believed he was badly crippled.

"My officers and men behaved steadily and gallantly, and though they have lost their ship they have not lost honor.

"Where all behaved so well it would be invidious to particularize, but I cannot deny myself the pleasure of saying that Mr. Kell, my first lieutenant, deserves great credit for the fine condition in which the ship went into action with regard to her battery, magazine, and shell-rooms, and that he rendered me great assistance by his coolness and judgment as the fight proceeded.

"The enemy was heavier than myself, both in ship, battery, and crew; but I did not know until the action was over that she was also iron-clad.

"Our total loss in killed and wounded is 30, to wit: 9 killed, 21 wounded.

"I have the honor to be, very respectfully, your obedient servant,

"R. SEMMES, *Captain.*"

From the Liverpool Courier, June 23, 1864.

THE LAST FIGHT OF THE ALABAMA.

Down under the French waters, resting on the bed of the ocean, lies the gallant *Alabama*, with all her guns aboard, and some of her brave crew waiting until the sea yields up its dead. Her career cannot be said to have been shortlived, for she has made her name and the character of the young navy of the south famous through all the world. No need to blush have the builders of the *Alabama*. Of good old English oak were her timbers, fashioned by English shipwrights. Active hands and stout hearts were those of her seamen. Over the waters she passed triumphantly for nearly three years as an angel of destruction, and she has been at once the emblem of the power and of the waste of war. On the dark ocean, when the mariner beheld a sheet of flame rising in the distance, and saw the long dark hull of the victor emerging from the smoke, he knew the *Alabama* had been at work. She has driven northern shipping from the seas, for none knew when or where the *Alabama* might be met, and to meet her was ruin. She has cost the federals a thousand times more than her price. She has been worth an army of 100,000 men to the confederacy, for the vigor and skill with which she was commanded impressed all with respect for the people who, at a moment's warning, could send forth such a ship and such a crew. She was the allegory of the confederacy itself in all but her closing scene. Her crew exhibited the same daring, the same self-sacrifice, the same fortitude, the same fertility in expedients, the same indomitable courage which the whole confederacy manifests to the world. At the last she went forth gallantly, and sank amidst the cheers of her crew, with her pennon fluttering upwards before it met the waters, leaving not a rope or spar for the enemy to triumph over. Down with her hissed to the bottom her captain's sword. The emblem of authority lies beside the ship, never to be seen by man again. Had fortune favored the gigantic invasion of Grant, had it been written that Richmond could resist no more, we believe that Lee and his soldiers would have gone forth to battle as boldly as Semmes and his crew, and at the last Richmond would have disappeared, like the *Alabama*, amidst fire and smoke, the roar of artillery and the cheers of her defenders exulting in the hour of defeat.

The *Kearsarge*, whose glory it is to have slain the dragon which devastated the American mercantile marine, was built not for speed but for war. She was armed with the favorite columbiads of the American navy, and threw 11-inch shells. She had but recently received a thorough repair in an English dockyard, and her machinery was in the nicest order. The *Alabama* had been knocking about the world almost incessantly; constant service had stripped off her copper, strained her timbers, and loosened her joints. She was no longer the swift messenger of ruin that she had been, and when her commander accepted the challenge of the *Kearsarge*, she was preparing to undergo repairs absolutely necessary to keep her afloat. Her end was as romantic as her career. She went out to do or die. All her books and papers, all the tokens of remembrance of past successes, were deliberately landed before

she went forth to meet her antagonist. Before the fight began every preparation had been made to sink her at the worst. The Alabama should never enter Brooklyn navy yard in tow of a federal war ship. We do not agree with those who censure Captain Semmes, and think him to have been guilty of rashness in encountering a ship which he knew well was fresh from port and stored with the most effective means for his destruction. An examination of the Alabama may have proved that thorough repair was hopeless; he may have determined that his noble ship should never be known as a quiet trader creeping along the coasts; that her last act should be like her whole career, one of daring defiance of her enemies, and that as men walk the earth and rest in earth, so she should sink into the waters which had been her home. Captain Semmes might have declined the contest had he known that the Kearsarge wore armor. When the federal fleets stormed the castles which defended New Orleans, they were hung round with looped cables, and to these they owed their safety. The Kearsarge entered the fight like a duellist with chain armour under his shirt. Had Captain Semmes been aware of the fact, he would probably have refused to fight his ship against an enemy so defended.

But we prefer to think that Captain Semmes believed the sinking of the Alabama in fair downright fight would reflect more credit on his country than her preservation at the time. A brave seaman does not coldly calculate the chances that are against him, and well is it for England that it is so. It would sully the brilliant glory of the Alabama were she to skulk in port, and owe her safety to French guns, while a challenging enemy waited outside for the moments of her appearance. The northern press would have charged the crew of the Alabama with cowardice; it would have been said that her commander was bold against unarmed merchantmen, but avoided a contest with an armed antagonist. From our own bitter experience at the present moment, we know that there are some things more precious than the preservation of what is under our command. The honor of England is far more precious than the six weeks' abeyance of war we have purchased by dishonorable truckling. The career of the Alabama is the first bright page in the history of the southern navy, and the finis should be brilliant too. The honor of the confederacy might seem to require that the Alabama should shrink from no encounter, no matter what the issue might be. So Captain Semmes called his "sea dogs" together, and told them what he designed to do. The crew were worthy of him, and to a man demanded to be led against the enemy. The fortune of the day does not always depend upon strength. Who knew whether some lucky shot might not make the Kearsarge a prize? At the worst, the Alabama should end her career gloriously, and her funeral dirge should be the thunder of artillery as she sank grandly in the waters which embraced her.

The Alabama taught us that vessels of her class and build are likely to possess an extraordinary influence on all future maritime wars. We have been building immense iron castles at the cost of half a million each, yet these are useful only in deep waters, and against stone forts, or ships which can move less rapidly than they. Alabamas can dash up creeks and rivers, can bound over shallows where a warrior would be grounded, and can always, from their greater speed, avoid collision with a more powerful antagonist. An Alabama, armed with two or three of the most powerful guns, could pepper a larger ship of slower motion from a distance. A few vessels of her class would soon clear the seas of an enemy's commerce. Happily such ships can only be built in England and at Liverpool, else our friend and ally might teach us what an Alabama could do.

The Alabama fought gloriously to the end; her guns still played while the water entered their muzzles, and when her engine fires were drowned; but she was disabled and rendered almost unmanageable by a single shot. An eleven-inch shell tore away one fan of her propeller and destroyed her rudder. After that she was but a battery capable of being propelled only by sails. Now, here is a fact from which we should derive a lesson. In all future engagements the first object of the enemy will be to render his antagonist incapable of rapid motion or manœuvring. We sink the engines of our vessels-of-war under the water-line, but as yet no means have been adopted to secure the propeller and the steering apparatus from the efforts of an enemy. This is a matter which should be looked to. As long as the Alabama was able to move in a war-dance of circles, so long she was triumphant; when her propeller was injured, she was almost at the mercy of the foe.

So ends the story of the Alabama, whose journal would be the most interesting volume of ocean literature; whose ubiquity scared the commerce of America from the seas; whose destructive powers have ruined property belonging to the northerners valued at upwards of three millions of money; whose actions very nearly involved these countries in war with the United States. The Americans are indignant that the ship was built by British hands, of British oak, armed with British guns, and manned by British sailors. We cannot contradict the fact, if it be so, but we can gather comfort from it against all coming storms. We have the oak, the skill, the iron, the guns, and above all, the men, still; and it is the fault of government, and government alone, if, when war breaks out, England does not possess at sea a fleet of a score of Alabamas, ready for any contest that may offer.

The Kearsarge and the Alabama's wounded.

The present whereabouts of the Kearsarge, whether she had remained at Cherbourg or gone to Ostend, was a mystery at the United States consulate here yesterday. The only particulars known of the fight beyond those published were that the Kearsarge had only three men wounded, no officers wounded, and no one killed, and that the ship was "ready to fight that day if required." Of the Alabama's wounded put on board three died, and fifteen were landed at Cherbourg. Captain Semmes is not likely to be in Liverpool for some days; indeed, it is not certain that he will come here at all. It is rumored that guns for the armament of the Rappahannock have been sent to France, and that she will shortly be put in commission as a confederate cruiser.—*Liverpool Courier*.

THE KEARSARGE AND THE ALABAMA.—A LESSON FOR THE ADMIRALTY.

To the Editor of the Daily Courier:

SIR: The federal Americans in this town are jubilant over the very decided victory obtained by the Kearsarge in last Sunday's sea fight. They say, "Here is a British-built, British equipped, and British-manned, though American commanded, vessel-of-war, the Alabama, sunk in an hour's fair fight by an American vessel of the same size, same power, (of engines,) and same number of guns."

So far they are quite correct. The Alabama was built in an English private yard, of the best materials, without stint of cost.

She measured 1,044 tons, had engines of nominally 300-horse power, and carried eight guns, six 32-pounder broadsides, smooth bores, and two pivot guns, on Captain Blakely's principle, called 70-pounders, rifled, and firing elongated shells one hundred pounds weight. The Kearsarge was built in an American private yard in ninety days, it is said, measures 1,031 tons, engine power not stated, and has also eight guns, six 32-pounders on the broadside, and two pivot guns, Dahlgren's 11-inch bore, called 100-pounder columbiads, but regularly served with shells weighing two hundred pounds.

Five hundred of these terrible weapons are stated to be distributed amongst the various vessels of the federal navy. Have we a single gun of equal calibre on any British ship-of-war?

There are several conflicting statements regarding the recent fight which require to be cleared up by the official accounts of the respective commanders. For instance, it was at first stated that the superior speed of the Alabama on Sunday enabled her to steam round and round her adversary. Later accounts in the Times state that the Kearsarge had an advantage in this respect of three knots an hour, and that she had such a command of steam that it was continually blowing off during the action. This latter part of the statement is no proof of the former, but rather an indication that the furnaces of the Kearsarge were kept well plied, to maintain a full head of steam for an emergency, (such as running down, or ramming, a favorite American manœuvre,) and that her engines being worked at reduced speed allowed the surplus steam to escape and show itself. The Alabama's machinery, it is known, must have been somewhat out of order, as the natural consequence of her long cruise, but she had, indeed, fallen off greatly from her usual speed (twelve to thirteen knots under steam) if the Kearsarge had an advantage over her of three knots. Captain Semmes evidently had full confidence in the speed and strength of his vessel, judging by the eagerness with which he opened the fight, and attempted to run alongside of and board his adversary, an attempt which the commander of the Kearsarge cleverly evaded.

The comparative advantages and disadvantages of the vessels did not lie in their English or American build, but would appear, so far as may be judged without perfect information, to be contained in their respective trim, calibre of heaviest guns, and the ingenious contrivance of tricing heavy chain-cables longitudinally outside the planking of the federal vessel, an elastic buffer against shots most effectually used by the wooden vessels of the federal fleet in forcing the passage of the lower Mississippi and subsequent capture of New Orleans.

The Kearsarge was well down in the water. One account states the heads of the men standing in the boats after the action was over were on a level with her upper deck. The greater part of the whole length of her sides was protected by her ingeniously contrived chain armor, and the 100-pound shells of the Alabama are described as rebounding from this buffer and exploding harmlessly in the water. On the other hand, the Alabama was "flying light," and her high, unprotected wooden hull was, therefore, an admirable mark for those terrible missiles which were hurled at her with such fatal effect, until, with gaping sides, with disabled guns and machinery, with blood-stained decks, she plunged, stern foremost, into her glorious wave, where, "full fifty fathoms deep," she lies a warning to our British admiralty.

I say nothing about the bravery with which the battle was fought on both sides; of those unvanquished tars sternly refusing to acknowledge that they were wounded, and sternly working at their guns, or trimming their ship's tackle, until they fell dead from the hurt they proudly would not own to; of the brave English surgeon—son of a may-be quiet country

rector—refusing to escape with the wounded, and going nobly down with the shattered ship; of the conflicting stories about the confederate ensign floating at the mast-head as the mast itself sunk beneath the waves; and the other version, highly dramatic in its way, about the crew rushing aft to prevent the flag being lowered, while Captain Semmes insisted, revolver in hand, upon its being done, and a white flag hoisted in its stead, a most unusual proceeding, by the way, in a naval surrender, the hauling down or “striking” of the national flag being considered sufficient acknowledgment of defeat. All these are mere episodes, stirring enough, I admit; but what we have to do with principally is the grand result of one vessel being hopelessly battered and sunk in less than one hour by another which never came within a quarter of a mile of her.

The 11-inch guns and their 200-pound shells achieved this, and might, I venture to think, achieve it with equal certainty, and even possibly in less time, against any vessel, iron-plated, or old-fashioned wood, in the British navy.

I come, then, again to the question, Have we a gun *in service* in the British navy that can do likewise? Vain question! It is notorious that we have not, though we have a 600-pounder Armstrong, (“Big Will,”) two 300-pounder Armstrongs, a Somerset 100-pounder, and an Admiral Frederic 100-pounder, which are related to have done wonders at Shoeburyness, but, alas! are not known on shipboard, nor likely to be for a generation to come, or so long as the House of Commons consents to find money for costly and never-ending experiments, professedly made for the discovery of that “philosopher’s stone,” a perfect gun.

Let the country urge members of Parliament to speak out upon this question before the session closes, and we are drifted, unprepared, into a Titanic war during the recess. If the admiralty and the ordnance authorities cannot light upon a better gun of their own pattern, let them adopt the Dahlgren, or the Parrott, which penetrated, at such extraordinary distances, the walls of Fort Sumter, or the great cast-iron Rodman gun, claimed to be an improvement on both its American rivals, and the latest specimen of which throws an eighteen hundred-pound (1,800-pound) shot two miles with extraordinary accuracy. Or let them take the Mackay gun in hand, and by fair trial ascertain its capabilities.

Yours, &c.,

VULCAN.

LIVERPOOL, *June 22, 1864.*

P. S.—It is whispered that when the Kearsarge was at Cork the commanding officer of the guardship Hawke made (per instructions) a report about her fittings and equipment, with special reference to her armaments and powers of offence; that the gist of his report was that the Kearsarge had no guns more effective than the ordinary 68-pounder, that old-fashioned favorite of the British admiralty. The Yankees are said to have some special contrivances for raising and lowering their great guns, so that they may have them mounted on deck or snugly stowed below, as weather or other circumstances may require. Did the commander of the Hawke make a gross professional blunder, or is it possible that a “smart” trick was played upon him for an obvious purpose, and that he was only shown the more harmless portion of the Kearsarge’s formidable armament?

ADDITIONAL FOREIGN ACCOUNTS OF THE FIGHT.

Letter from Secretary of the State, transmitting copy of despatch No. 306 of the United States consul at Liverpool.

DEPARTMENT OF STATE,
Washington, July 14, 1864.

SIR: I have the honor to transmit herewith a despatch, No. 306, received from the United States consul at Liverpool, relative to the destruction of the Alabama. I will thank you to return the despatch.

I have the honor to be, sir, your obedient servant,

WILLIAM H. SEWARD.

Hon. GIDEON WELLES,
Secretary of the Navy.

Despatch of the United States consul at Liverpool, enclosing further extracts from foreign newspapers.

No. 306.]

UNITED STATES CONSULATE, LIVERPOOL,

June 29, 1864.

SIR: We are beginning to get at the truth about the fight between the Kearsarge and Alabama. I enclose you, marked No. 1, two slips, one cut from yesterday's, the other from to-day's Daily Post of Liverpool, containing a letter from Captain Winslow and Mr. Stoddard, the master of the Kearsarge. * * * *

I am, sir, your obedient servant,

THO'S H. DUDLEY.

HON. WILLIAM H. SEWARD,
Secretary of State.

Copied from the Liverpool Daily Post, June 25, 1864.

CAPTAIN SEMMES'S REPORT.

[From the Star.]

The commander of the Alabama has made an official report to Mr. Mason of the engagement with the Kearsarge. The confederate commissioner, it seems, is still in London, and though he has withdrawn from communication with our government, is still recognized by rebellious southerners as the representative of their president. It is to Mr. Mason, therefore, the English public owe the publication of this unusual document—unusual because the production of a vanquished commander who is at liberty to write and publish only by taking advantage of the clemency of the victors. When Captain Semmes pulled down the confederate ensign and hoisted a white flag he surrendered himself a prisoner of war. He jumped overboard with eighty or a hundred of his crew rather than go down with the ship, and was rescued from drowning by the boats of a neutral, invited by the Kearsarge to assist in saving the lives that were in imminent danger. The owner of the neutral vessel seems to have been conscious that the forty men he had taken on board were liable to be reclaimed of him, for he steamed off as fast as he could to English waters without waiting for such surgical assistance as the Kearsarge might have rendered. No great blame can attach to a private gentleman, the owner of a yacht, for preferring the quickest and surest means of preventing his right of hospitality being called in question. That is but natural, and we doubt not the same alacrity would have been shown in securing the safety of federal survivors if the battle had gone the other way. But if the white flag be the emblem of surrender, every man on board the defeated vessel must be bound to regard himself as a prisoner of war. And though Captain Semmes says nothing about having hoisted such a flag, he accuses the federal commander of having fired on the Alabama five times after the confederate ensign had been hauled down. According to this showing, then, he had surrendered, and his life belonged to the victors. There is, however, distinct independent evidence that a white flag was made by cutting off the plain portion of the confederate ensign. Until it was hoisted the federal commander was under no obligation to cease from firing, for the ensign had twice or thrice before been shot down and replaced. Captain Semmes admits "it is charitable to suppose that a ship-of-war of a Christian nation" would not intentionally have fired upon a sinking and surrendered ship. He might have said that justice required the acknowledgment that the surrender was incomplete, and the ship in the act of making for land under steam and sail. If, without any indication of surrender, with his battle flag still flying defiant and his guns firing until choked with water, he and his men had leaped overboard, those who reached a neutral deck might justly congratulate themselves on having saved their liberty and their honor at the hazard of their lives. And this was the story that was first put forth by the confederate organs. We were told that the Alabama had gone down gloriously, vanquished but not surrendered, her colors nailed to the mast, the gunners still at their posts, and that nothing appertained to the victors but the questionable glory of having triumphed by superior weight of metal and the mean device of hidden armor. No one will begrudge to the vanquished the credit of having bravely and obstinately fought their ship until she could no longer fight or even float. Neither will any one scan too narrowly such excuses for defeat as may abate the bitterness of its humiliation. But there would be more true chivalry, and less of that spurious counterfeit which the south has so long palmed off upon the credulity of Europe, in the candid admission that the Kearsarge was better equipped and better handled than the Alabama; that the swift screw steamer, which has for two years been the terror of innocent and peaceful merchantmen, found more than her match in the first federal corvette fortunate enough to engage her in battle. There is nothing but the

empty boast of invincibility on equal terms in the pretence that the Kearsarge was heavier than the Alabama in ship, battery, and crew, and was also iron-plated. In tonnage, in men, and in armament, there was but a very slight inequality. The Alabama was 1,040 tons register, the Kearsarge is 1,031 tons. The Alabama carried six 32-pounders, one 7-inch Blakely rifled gun, and one 8-inch smooth-bore pivot gun; in all, eight guns. The Kearsarge has exactly the same number and quality of broadside guns, six 34-pounders, and on deck two 11-inch smooth-bore guns. Thus much was known before the engagement took place. The facts were accessible to any one who chose to inquire after them; and Captain Semmes had, of course, well informed himself of the armament of the vessel he was about to fight. But was the Kearsarge under-plated? That was the first statement which came to hand. It was brought by the confederate fugitives who landed on Monday morning at Southampton, and was accepted as the explanation of the Kearsarge's easy victory. But it is now denied by the federal officers. Captain Semmes said he did not know when he went into action that his antagonist was iron-plated, but that he found his shells, though apparently exploding against her sides, did little damage, and that at the end of the engagement it was discovered by officers who went alongside the enemy's ship with the wounded that her midship section on both sides was "thoroughly iron-coated." This was done, he adds, by "chains constructed for the purpose, placed perpendicularly from the rail to the water's edge, the whole covered over with a thin outer planking, which gave no indication of the armor beneath." It was the ripping off this planking, he further says, that disclosed the plating, and the fact of the chain having been in some places broken and driven into the ship's side. On the other hand, it is denied by the officers of the Kearsarge that she was iron-plated. They say that they simply resorted to the ordinary precaution of trailing anchor chains over the ships sides on going into action; that there was no wooden covering of the chains; and that they were uninjured by the two out of the seven shots which struck the ship. We must conclude, then, that the victory was achieved by the superiority of artillery practice, and not by any peculiarity of means of defence. And if, as Englishmen, we are a little reluctant to acknowledge the easy destruction of an English-built ship, manned chiefly by English seamen, we must remember that she was built in defiance of our laws, that her best gunners were disobedient to their sovereign's proclamation, and that her cause could never be associated with our flag but with deep dishonor.

From the Daily News.

It will hardly be denied by the most fervid admirers of the Alabama's "daring and brilliant career" that her surviving commander is more fortunate not only than the brave captains who lived before Agamemnon, but than many who had lived and fought in modern times. If many gallant soldiers and sailors in the mythical age died unwept for want of a "reporter," your modern hero of a hundred escapes and of half an hour's ducking after his first and last fair fight seems likely to be drowned after all in torrents of sympathetic ink. There was, perhaps, a little difficulty in making anything very heroic out of the Alabama's career while she lived. Running away from men-of-war and burning unarmed and defenceless merchantmen may be a profitable and useful business, but courage is not precisely the quality one admires in the hawk or the hound when the victory is a partridge or a hare. No doubt there is something romantic and interesting in the mere ubiquity of a sea rover; no romances are more irresistible than those of "Rovers" and "Waterwitches;" and even a "Pirate" who combines speed and seamanship with something of the personal charm of a destroying angel, is the favorite ideal of all young boys and girls, and even of maturer women with well-regulated imaginations. It was commonly supposed that paddle-wheels and screws and funnels (not to speak of diplomacy) had put an end to all the romance and picturesqueness of sea life; the celebrity of the Alabama proves the fallacy of that apprehension. For in what has that celebrity consisted, if not in being heard of here, there, and everywhere, and sometimes in half a dozen latitudes at once; in the Channel, in the Mediterranean, in the Atlantic, in the Pacific, in the Indian ocean, in the China seas, at the Cape, in the Channel again? What a wonderful vessel! The Flying Dutchman was a galliot compared with her! What a wonderful captain to be always pursuing and never caught! And certainly the simple feat of keeping at sea in all weathers for two years without intermission, or breaking down, or repairs, may well strike with admiring wonder a public accustomed to read in their "naval intelligence" of powerful squadrons docking and repairing after six weeks' cruise in the Bay of Biscay or the North sea. Let the captain of the Alabama have his due by all means. Without reference to federals or confederates, let us, as Englishmen, do justice to smart and skilful seamanship wherever we find it. But let not the nation that once owned a Nelson sink to paying equal homage to a sunk Alabama and a surviving victor. To worship success is bad enough; to worship the remains of a runaway smuggler and a nimble-heeled buccaneer because he has come to a legitimate end is something very different from an honest sympathy with defeat. There are British naval officers performing at the hour splendid but unrecorded services who will never receive the honors paid to the captain of the Alabama for having accepted the challenge of the captain of the Kearsarge but not its consequences. Probably the Alabama

was not a classical school of Roman virtue in which the heart of a Regulus could be trained to self-conquest; if the poet were to write of a Semmes *Atqui sciebat*, it would not be to celebrate the prisoner of war who disdained to sacrifice his honor to his safety. *Atqui sciebat* should be interpreted, "though he knew that an English yacht was ready to pick him up and carry him away to a neutral shore where he could forget the English surgeon who perished with his sinking ship rather than abandon the wounded sailors, but where he could fight the battle over again in safety and defeat at leisure the fair fame of a brother sailor and an honorable enemy."

The sceptic who called history a matter-of-fact romance should have lived in our day, when a naval action is fought off Cherbourg on Sunday, and reported to the London and Paris newspapers on the Monday following, no two reports agreeing in any single fact except in the result. Mr. John Lancaster, the owner of the Deerhound yacht, who, in more than the French sense of the words, "assisted at" the engagement, published on the following morning an account which materially differs in the most important points from the official report furnished to Mr. Mason by Captain Semmes and published yesterday.

At 12.30 (we quote Mr. Lancaster's extract from the log of the Deerhound) observed the Alabama to be disabled, and in a sinking state. We immediately made towards her, and on passing the Kearsarge, were requested to assist in saving the Alabama's crew. At 12.50, when within a distance of 200 yards, the Alabama sank. We then lowered our two boats, and, with the assistance of the Alabama's whale-boat and dingy, succeeded in saving about forty men, including Captain Semmes and thirteen officers.

Now what says Captain Semmes?

"There was no appearance of any boat coming to me from the enemy after my ship went down. Ultimately, however, the steam-yacht Deerhound, owned by a gentleman of Lancashire, England, Mr. John Lancaster, who was himself on board, steamed up in the midst of my drowning men, and rescued a number of both officers and men from the water. About this time the Kearsarge sent one, and then tardily another boat. Accompanying you will find lists of the killed and wounded and of those who were picked up by the Deerhound. The remainder, there is reason to hope, were picked up by the enemy and by a couple of French pilot-boats which were also fortunately near the scene of action."

The odious imputation of inhumanity contained in this passage is not only altogether wanting in Mr. Lancaster's account, it is implicitly and explicitly contradicted by Mr. Lancaster's assertion that he was requested by the captain of the Kearsarge to assist in "saving" the Alabama's crew. Then, again, as to the relative tonnage and armament of the two ships, Captain Semmes writes to Mr. Mason:

"The enemy was heavier than myself, both in ship, battery, and crew, but I did not know until the action was over that she was also iron-clad. Her midship section on both sides was thoroughly iron-coated; this having been done with chain constructed for the purpose, placed perpendicularly from the rail to the water's edge, the whole covered over by a thin outer planking, which gave no indication of the armor beneath."

A letter which we publish this morning from a gentleman just returned from a visit to the Kearsarge, at Cherbourg, states that the "Alabama had eight guns, the Kearsarge only seven;" and that "the Kearsarge was no more iron-clad than the Alabama might have been, had they taken the precaution. She simply had a double row of chains hanging over her sides to protect her machinery. Two shots from the Alabama struck these chains and fell harmlessly into the water." Again, as to the number of the respective crews, Mr. Mason writes: "She (the Alabama) had, in fact, but 120 all told." Yet Captain Semmes reports: "Our total loss in killed and wounded is 30, to wit, nine killed, 21 wounded. I was fortunate enough myself thus to escape to the shelter of a neutral flag, together with about 40 others, all told." A correspondent who had just visited the Kearsarge, at Cherbourg, reports: "The Kearsarge picked up 63 men, one dead body, and two who died afterwards on board. She also took five officers. So that 130 (officers and men) are actually accounted for as belonging to the Alabama, instead of Mr. Mason's 120 "all told."

Captain Semmes accuses the Kearsarge of having fired upon the Alabama five times after her colors had been struck. No mention of this prodigious inhumanity is made by Mr. Lancaster, the owner of the Deerhound, who was within 300 yards at the close of the action.

The following is the account referred to: "I returned late last night from Cherbourg, where I had been a witness to the fight between the Kearsarge and Alabama. I regret to see that some of the London papers are perverting and falsifying the facts, so as to do great injustice to the gallant officers and men of the Kearsarge.

"The fight began about 11 a. m., and ended a few minutes after 12, lasting a little more than an hour. The Alabama fired about 17 shots at the Kearsarge before the latter fired a gun.

"The Kearsarge fired 173 shots. She was struck in the hull seven or eight times, but has sustained no important damage at all, and is perfectly ready for active service. She has a crew of about 165 men, that of the Alabama being about 147. The Alabama had eight guns, the Kearsarge only seven. The firing of the Alabama was very inaccurate; that of the Kearsarge was excellent. A large pivot gun was particularly effective. The Kearsarge is spoken of as being iron-clad; she was no more iron-clad than the Alabama might have been, had they taken the precaution. She simply had a double row of chains hanging over her

sides to protect her machinery. Two shots from the Alabama struck these chains, and fell harmlessly into the water.

"The Kearsarge picked up 63 men, one dead body, and two men who have since died on board. She also took five officers. Captain Winslow would now have all the officers and men of the Alabama as prisoners, had he not placed too much confidence in the honor of an Englishman, who carried the flag of the royal yacht squadron. The club will be indelibly disgraced unless they take measures to repudiate and condemn the conduct of Mr. John Lancaster, owner of the yacht *Deerhound*. I have no doubt that this yacht was in the harbor of Cherbourg to assist the Alabama by every means in her power; that she did so I know; her movements before the action prove it. When the Alabama went down the yacht, being near, was hailed by Captain Winslow, and requested to aid in picking up the men in the water. The request was complied with, and the *Deerhound*, after having rescued, as supposed, about 20 persons, including Captain Semmes and First Lieutenant Kell, immediately left, running towards England. Captain Winslow says the reason he did not pursue her or fire into her was that he could not believe any one carrying the flag of the royal yacht squadron could act so dishonorable a part as to carry off his prisoners whom he had requested him to save, from feelings of humanity.

"Captain Winslow considers Semmes and his officers bound upon their honor to give themselves up as his prisoners of war. About five minutes before the Alabama went down a boat from her came to the Kearsarge with an officer, who surrendered the vessel, and then asked permission to return with his boat, to assist in picking up the men. This was granted, when the officer left, and after rescuing a number, principally officers, I understand, he went on board the English yacht and escaped. Please excuse the hurried style of this letter, but I was anxious that while Captain Semmes and his party are being fêted for their glorious conduct, you might be apprised of these positive facts.

"P. S.—The Alabama hauled down her colors and ran up a white flag, at least ten minutes, I should think, before she went down. Prisoners taken from the Alabama state that at about three o'clock in the morning before the engagement took place, the chronometers in the Alabama were transferred to the English yacht *Deerhound*, then lying in the harbor, not far from the Alabama. The *Deerhound* was, in fact, acting as tender to the Alabama before the action."

The "Index" on the Alabama.

The story of the Alabama is told, and the gallant little vessel, which has almost alone flaunted the confederate flag in every ocean, to the terror of Yankee skippers, now lies a wreck, some fathoms deep, midway between the coast of Brittany and the island of Alderney. Only a few days ago the Alabama put into Cherbourg to refit. She was terribly in need of repairs; her boilers were worn out, her machinery faulty, her copper started in some places a foot from her frame, her hull terribly foul with weeds. And with his ship in this condition, her captain came to the one neutral power which had the courage to stand by its neutrality, and requested permission to thoroughly overhaul and refit her. The federal cruisers were soon informed of her arrival, and the Kearsarge, which had been fitting out at Ostend, steamed off at once for Cherbourg. Arrived off the port she found the Alabama still afloat. There are no private docks at Cherbourg. There was some delay in the compliance with Captain Semmes's request on the part of the local authorities, and the commander of the Kearsarge, it is said, at once sent in a challenge; whether a verbal challenge passed, or not, we do not know, but the defiance to combat was not the less openly given. Steaming slowly outside the breakwater, hoisting his colors, firing guns to invite attention, Captain Winslow left no doubt about his wish for a fight, and Captain Semmes was not the man to baulk him. It may be said with some show of justice that the latter was not bound to accept the challenge; that the Alabama had other services to render, and that to risk her in her then condition against an adversary so far superior in all the conditions of success was rashness in the extreme. But there were many reasons to make it almost imperative to fight. The confederate cruisers had been represented by their enemies as bold only by evasion, and safe only by their steaming powers; it was denied that they were fighting ships, and insinuated that they would never risk a fair combat. What would have been said had the Alabama declined the challenge, had she remained securely at anchor between the breakwater, with the Kearsarge, nominally her equal in strength, daring her to come out, and announcing to all the world that, ship for ship, the confederate navy was afraid to face its adversaries? In this war, on sea or on land, the confederates have never counted odds; it could hardly have been expected that Captain Semmes would be the first to calculate them. Circumstances justified, nay, required, his acceptance of the challenge; no naval officer in any service would have dared to refuse it. The sinking of the *Hatteras*, herself a larger ship than the Alabama, shows that there was reasonable ground for Captain Semmes's confidence in his brave little craft and her gallant crew. Her loss is a misfortune, but better far that she had gone down with honor than that the captain of the Kearsarge should have had it in his power to boast that he had challenged the Alabama, and the Alabama prudently declined to fight.

It was on Sunday morning, the 19th instant, that the Alabama steamed slowly out to the encounter. It was known in Paris the day previously that Semmes would go out, and men came from Paris by train to witness the sea-fight between the famous rover of the seas and the Kearsarge. As she passed the end of the mole a great shout of "God speed" rent the air, and as it died away the drums were heard beating to quarters. The iron-plated frigate La Couronne accompanied her to the limit of the French waters, a small English steam-yacht, the Deerhound, followed in her wake, and at about eight miles from Cherbourg the action began. The first shot was fired by the Alabama, at the distance of about a mile, and was immediately responded to by the Kearsarge; and so for one hour, in lessening circles, the combat was sustained. It was the object of Captain Semmes to board his adversary; his inferiority in the weight of metal made "long bowls" a dangerous game for him to play, and he sought from the first to close. The captain of the Kearsarge, however, knew his advantage, and, relying on his longer range and larger calibre, avoided any attempt to grapple. And the disadvantage under which the Alabama labored was soon apparent. The Kearsarge beat her in speed, her rate of steaming during the action being estimated at three knots an hour above that of her opponent, so that Captain Winslow chose his own position, and easily frustrated the Alabama's manœuvres. Throughout the action the starboard batteries were principally used. It was noticed on board the Deerhound that the Alabama fired far more rapidly, and with greater accuracy, but that the shells of the Kearsarge did the more damage. And so for nearly one hour the two antagonists exchanged their deadly missiles, the Alabama to the last trying to close, and her opponent as constantly keeping her at her own distance, and pouring in her 11-inch shells with fatal precision. Towards the end of the action Semmes made a last effort to reach the Kearsarge, but it failed; a shell carried away one of the fans of the screw, and a part of the rudder, another went through her boilers, and put out her fires. It was all over. Sail was hoisted, but to no purpose. Slowly the sea gained upon her, and still more fiercely the Kearsarge concentrated her fire upon her. Finally her flag was struck; the sea crept over her stern and upper deck. Her crew jumped into the sea, supporting themselves by portions of the wreck, spars, &c. And then came the end: her bows lifting from the waves, her bowsprit perpendicular, the Alabama went down to her last resting-place. The Deerhound, whose owner with great pluck had stood by throughout the action, at once bore rapidly down to pick up the crew, and succeeded in saving the captain, thirteen officers, and twenty-seven seamen. Between sixty and eighty were subsequently rescued by the boats of La Couronne, the Kearsarge, and some French pilot-boats, leaving a balance of some twenty-five or thirty to be accounted for by the known casualties of the action and the depths of the sea.

The Kearsarge possessed every single advantage in this unequal fight—speed, strength, numbers, and weight of metal; her boilers were in perfect order, her hull clean, and the most exposed portions of her frame had been strengthened by heavy chain-cables, constituting a very efficient sort of armor plating. Her crew consisted of 200 men, to 120 on board the Alabama. Her armament, compared to that of her adversary, was as 204 to 84, or 5 to 2; for she carried ten heavy 11-inch Dahlgren guns, whilst the Alabama had only one Blakely 100-pounder, one smooth-bore pivot gun, and six broadside ordinary 32-pounders. Under these circumstances we are justified in calling the fight an unequal one, but as the combat might have been declined, it is too late to urge this as an explanation of defeat. The federals have gained no glory by their success, the confederate flag has sustained no dishonor; it is, at the worst, ship for ship, the Alabama for the Hatteras.

We could have wished to see her once more roving the seas, but it was not to be. As it was her fate to end her career so soon, it is well she met it so bravely, gaining, in that last hour of mortal conflict, just that element of fame which will make her memory imperishable, and lay a splendid foundation for the future glories of the confederate navy. Peace to the gallant little Alabama! Peace to the brave who went down in her! Honor to the captain, and officers, and crew who, undaunted by odds, careless of life, resolute in defence of the honor of the flag they had so long carried triumphantly over every sea, fought their vessel to the last, and have lived, we trust, to refight their battles under more favorable conditions, and with a very different result!

From the Liverpool Mercury, June 25, 1864.

THE FIGHT BETWEEN THE ALABAMA AND KEARSARGE.—OFFICERS AND MEN SAVED BY THE DEERHOUND.

List of officers and men of the Confederate States steamer Alabama landed at Southampton.

Captain Semmes, Lieutenant Kell, Lieutenant Sinclair, Lieutenant Howell, (marines;) Sailing-master Bulloch, Midshipman Maffitt, Midshipman Anderson. Master's assistants: G. F. Fullum, James Evans, Mulliner, Schroeder. Engineer: O'Brien. Gunners: Cuddy, W. Crawford, C. Seymour. Captain's clerk, Smith; boatswain's mate, Broesman; sailmaker,

W. Purdy ; quartermaster, J. Dent ; quartermaster, Johnston ; captain of forecastle, Steeson. Seamen : G. Bowman, W. McClellan, L. Depoys, F. Lennan, Thos. Kehoe, R. Longshaw. Captain of afterguard, J. Connor ; first-class fireman, Duffy. Seamen : J. McMillan, F. Townsend, A. Masters, W. Angel, W. Hearn, A. Pfiffer, J. Mahaan, L. Wharton. Firemen : J. Foxton, M. McFarlane, W. Levin, J. Mason.

List of the crew of the Confederate States steamer Alabama.

Killed.—George Applebie, seaman ; John Roberts, seaman ; James King, ordinary seaman ; Christian Olson, ordinary seaman ; Peter Duncan, fireman ; James Mair, fireman ; Christian Pust, fireman ; Carl Payava, ordinary seaman ; James Hart, ordinary seaman ; Dr. D. H. Llewellyn, assistant surgeon, (drowned ;) William Robinson, carpenter, (died of wounds.)

Reported drowned.—A. G. Bartellie, captain's steward, (steward ;) Mouter Van As, seaman ; John Welliam, ordinary seaman.

Wounded.—R. Semmes, captain, slightly ; W. F. Armstrong, second lieutenant, slightly ; Jos. D. Wilson, second lieutenant, slightly ; Arthur Sinclair, jun., second lieutenant, contusions ; B. W. Howell, first lieutenant marine corps, contusions ; John Punat, third assistant engineer, contusions ; M. O'Brien, third assistant engineer, contusions.

Wounded and at Southampton.—James Brosman, boatswain's mate, slightly ; James Mason, fireman, slightly ; Brent Johnston, second master, slightly ; George Yeoman, ordinary seaman, slightly ; Frank Townshend, ordinary seaman, slightly ; — McFarlane, fireman, slightly.

Wounded and in the Hospital de la Marine, Cherbourg.—Robt. Wright, captain of maintop, slightly ; Martin King, fireman, seriously ; Peter Hughes, boatswain's mate, seriously ; Robt. De Vine, ordinary seaman, slightly ; William McGinley, cockswain, slightly ; John Caren, seaman, slightly ; Samuel Williams, first fireman, slightly ; Thomas Winter, first fireman, severely ; William Morgan, captain of top, seriously ; David Williams, ordinary seaman, slightly ; John Neill, seaman, seriously ; Jacob Viebot, seaman, severely. All doing very well.

Taken by the Kearsarge and kept as prisoners of war.—Jos. D. Wilson, second lieutenant ; M. G. Freeman, first assistant engineer ; B. P. McCaskey, boatswain ; John M. Punat, third assistant engineer.

Taken by the Kearsarge and paroled.—Francis L. Galt, surgeon ; Juan Ochoa, seaman ; John Russell, ordinary seaman ; James Baroderick, cockswain ; Joseph Pearson, coal-passer ; John Johnson, ordinary seaman ; Richard Evans, ordinary seaman, Nicholas Adams, leadsman ; James McGuire coal-passer ; John Watson, ordinary seaman ; George Percy, ordinary seaman ; Henry Godson, ordinary seaman, Richard Parkinson, waiting-room steward ; William Forestall, quartermaster ; Frank Curran, first-class fireman ; Frederick Columbia, C. H. ; Thomas L. Parker, boy ; Edgar Tripp, ordinary seaman ; James Higgs, seaman ; Wm. Clark, seaman ; John Emery, ordinary seaman ; John Reilly, coal-passer ; John Smith, ordinary seaman ; Peter Laverty, fireman ; Thomas Potter, fireman ; Edward Burrel, seaman ; David Thurston, seaman ; John Benson, coal-passer ; Geo. Conroy, ordinary seaman ; Martin Middict, ordinary seaman ; George Freemantle, quartermaster ; Edward Rawes, master-at-arms ; Henry Higgins, leadsman ; John Wilson, boy ; David Leggett, seaman ; James Clement, yeoman ; James Wilson, boy ; Henry Tucker, W. R. cook ; Michael Shields, seaman ; Henry McCoy, ordinary seaman ; Patrick Bradley, fireman ; John Horrigan, fireman ; Wm. Burns, second gunner ; Wm. Miller, seaman ; Henry Ustaker, ordinary seaman ; Thomas Brandon, ordinary seaman ; Wm. Wilson, cockswain ; Samuel Henry, seaman ; R. B. Hobbs, seaman ; Henry Yates, seaman.

Officers and men who escaped in a French pilot boat to Cherbourg.—R. F. Armstrong, second lieutenant ; W. P. Brooks, second assistant engineer ; Henry Alcott, sailmaker ; Charles Godwin, C. A. guard ; James Welsh, coal-passer ; George Eggerson, ordinary seaman ; Thomas Murphy, fireman ; Wm. Robinson, seaman ; Maurice Brett, boy ; Michael Mars, seaman.

No mention is made of the men saved by the Deerhound.

From the London Times, June, 29, 1864.

THE ALABAMA AND THE DEERHOUND.

The following correspondence between Mr. Mason and Mr. Lancaster, the owner of the Deerhound, has been forwarded to us for publication :

“ 24 UPPER SEYMOUR STREET, PORTMAN SQUARE,
London, June 21.

“ DEAR SIR : I received from Captain Semmes at Southampton, where I had the pleasure to see you yesterday, a full report of the efficient service rendered under your orders by the officers and crew of your yacht, the Deerhound, in rescuing him with thirteen of his officers and twenty-seven of his crew from their impending fate, after the loss of his ship.

“ Captain Semmes reports that, finding the Alabama actually sinking, he had barely time to despatch his wounded in his own boats to the enemy's ship, when the Alabama went down, and that nothing was left to those who remained on board but to throw themselves into the sea. Their own boats absent, there seemed no prospect of relief, when your yacht arrived in their midst, and your boats were launched ; and he impressively told me that to this timely and generous succor he, with most of his officers and a portion of his crew, were indebted for their safety. He further told me that on their arrival on board the yacht every care and kindness were extended to them which their exhausted condition required, even to supplying all with dry clothing.

“ I am fully aware of the noble and disinterested spirit which prompted you to go to the rescue of the gallant crew of the Alabama, and that I can add nothing to the recompense already received by you and those acting under you in the consciousness of having done as you would be done by ; yet you will permit me to thank you, and, through you, the captain, officers, and crew of the Deerhound, for this signal service, and to say that, in doing so, I but anticipate the grateful sentiment of my country and of the government of the Confederate States.

“ I have the honor to be, dear sir, most respectfully and truly, your obedient servant,
“ J. M. MASON.

“ JOHN LANCASTER, Esq.,
Hindley Hall, Wigan.”

HINDLEY HALL, NEAR WIGAN, June 24.

“ DEAR SIR : I am in due receipt of your esteemed favor of the 21st instant, and am gratified to find that the timely aid we rendered with the yacht Deerhound to the gallant captain and officers and crew of the Alabama has met with your approval. I shall always look back to that event with satisfaction, however much we may regret the result which necessitated my interference.

“ Yours, very respectfully,

“ JOHN LANCASTER.

“ Hon. J. M. MASON.”

Letter from Captain Winslow to the Editor of the Daily News.

FACTS ABOUT THE ALABAMA AND THE KEARSARGE.

SIR : There have been so many nonsensical publications on the engagement which took place between the Alabama and Kearsarge, that it is my wish that a correction should be made.

In the first place, no challenge was sent by Captain Winslow ; to have done so would have been to violate the order of the Navy Department. On the contrary, Captain Winslow received a request from Captain Semmes not to leave, as he would fight the Kearsarge, and would only occupy a day or two in his preparations. Five days, however, elapsed before they were completed.

The Kearsarge's battery consists of seven guns—two 11-inch Dahlgrens, four 32-pounders, one light rifled 28-pounder. The battery of the Alabama consisted of one 100-pounder, rifled ; one heavy 68-pounder, rifled ; six 32-pounders, that is, one more gun than the Kearsarge. In the wake of the engines on the outside the Kearsarge had stopped up and down

W. Purdy ; quartermaster, J. Dent ; quartermaster, Johnston ; captain of forecastle, Steeson. Seamen : G. Bowman, W. McClellan, L. Depoys, F. Lennan, Thos. Kehoe, R. Longshaw. Captain of afterguard, J. Connor ; first-class fireman, Duffy. Seamen : J. McMillan, F. Townsend, A. Masters, W. Angel, W. Hearn, A. Pfiffer, J. Mahaan, L. Wharton. Firemen : J. Foxton, M. McFarlane, W. Levin, J. Mason.

Letter from Captain Winslow to the Editor of the Daily News.

FACTS ABOUT THE ALABAMA AND THE KEARSARGE.

SIR : There have been so many nonsensical publications on the engagement which took place between the Alabama and Kearsarge, that it is my wish that a correction should be made.

In the first place, no challenge was sent by Captain Winslow ; to have done so would have been to violate the order of the Navy Department. On the contrary, Captain Winslow received a request from Captain Semmes not to leave, as he would fight the Kearsarge, and would only occupy a day or two in his preparations. Five days, however, elapsed before they were completed.

The Kearsarge's battery consists of seven guns—two 11-inch Dahlgrens, four 32-pounders, one light rifled 28-pounder. The battery of the Alabama consisted of one 100-pounder, rifled ; one heavy 68-pounder, rifled ; six 32-pounders, that is, one more gun than the Kearsarge. In the wake of the engines on the outside the Kearsarge had stopped up and down

her sheet chains. These were stopped by marline to eyebolts, which extended some twenty feet, and this was done by the hands of the Kearsarge; the whole was covered by light plank to prevent dirt collecting. It was for the purpose of protecting the engines when there was no coal in the upper part of the bunkers, as was the case when the action took place. The Alabama had her bunkers full, and was equally protected. The Kearsarge went into action with a crew of one hundred and sixty-two officers and men. The Alabama, by report of the Deerhound's officers, had one hundred and fifty.

The Kearsarge steamed to sea in order that no question of neutrality jurisdiction should be raised. When far enough she turned round and steered immediately for the Alabama for close action. The Alabama fired, as she was coming down on her, two broadsides and a part of another. No one shot came on board the Kearsarge. The Kearsarge then sheered and opened on the Alabama, trying to get nearer. The action lasted one hour and two minutes from the first to the last shot. The Kearsarge received twenty-eight shots above and below, thirteen about her hull; the best shots were abaft the mainmast, two shots which cut the chain stops, the shell of which broke the casing of wood covering; they were two high to have damaged the boilers had they penetrated. The Kearsarge was only slightly damaged, and I supposed the action for hot work had just commenced when it ended.

Such stuff as the Alabama firing when she was going down, and all such talk is twaddle. The Alabama towards the last hoisted sail to get away, when the Kearsarge was laid across her bows, and would have raked her had she not surrendered, which she had done, and was trying to get her flags down, and showing a white flag over the stern. The officers of the Alabama on board the Kearsarge say that she was a complete slaughter-house, and was completely torn to pieces. This is all I know of the Alabama.

Yours, &c.,

JOHN A. WINSLOW, *Captain*.

To the EDITOR OF THE DAILY NEWS.

THE KEARSARGE AND THE BRITISH ADMIRALTY.

An important "wrinkle" has been supplied to the British Admiralty by the recent engagement between the Kearsarge and the Alabama. It appears that the "chain armor" used by the federal corvette in this encounter can be slipped over the sides of a ship immediately before she goes into action, and that when on a cruise it can be stowed away in the hold, answering all the purposes of ballast. Every wooden vessel in the federal navy is supplied with suits of these chain plates, which, from their forming elastic iron buffers, were most effectively used by the wooden gunboats when forcing the passage of the Mississippi, and in the subsequent capture of New Orleans. In guns, too, the federal war ships are more powerful than the British. It is notorious that there is not an 11-inch gun on board any vessel in the British navy, while on board the Kearsarge there are two of these tremendous weapons, each capable of throwing 200-lb. shell or shot. When the Kearsarge was recently at Cork, the commander of her Majesty's ship Hawke was instructed by the admiralty to report as to the construction and fitting of the American cruiser, and more particularly with respect to her armament. He replied, that the Kearsarge had no more effective guns than the ordinary 68-pounder of the British navy. The Kearsarge is fitted up with a special contrivance for raising and lowering her great guns, so that they may be mounted on deck or kept snugly below as occasion requires. It is a curious speculation whether, when the commander of the Hawke visited the vessel, a smart "Yankee" trick was played upon him by this contrivance, or whether he made an actual blunder as to the armament. It is confidently stated that the Kearsarge would be a most dangerous if not invincible antagonist at long range, while she can beat any opponent in point of speed.—*Correspondent*.

From the London Times, June 25, 1864.

FRANCE.

[FROM OUR OWN CORRESPONDENT.]

PARIS, *Friday, June 24, 7 a. m.*

The *Phare de la Manche* publishes some additional particulars respecting the engagement between the Alabama and the Kearsarge. The crew of the Alabama was composed of twenty-two officers and one hundred and twenty-two seamen. The name of the commander of the Kearsarge is Winslow. He is a southern, but he took service with the north. He and Captain Semmes served in the same ship. Three of the crew of the Alabama who were wounded during the engagement died on board the Kearsarge after amputation. There are eleven wounded in the hospital with fractured limbs and burns. The surgeons expect to save them. Dr. Llewellyn, the surgeon of the Alabama, is the only officer supposed to have perished in the Alabama. Another officer, who was wounded and was picked up by a boat sent out by the port admiral of Cherbourg, died on board the boat. Five officers were saved by a French pilot named Mauger. These officers were landed in the afternoon at Cherbourg; one of them, named Armstrong, received a slight bruise in the left side from the fragment of a shell. Mauger likewise landed seven seamen picked up by him. During the afternoon fifty-two of the crew of the Alabama who were received on board the Kearsarge were landed at Cherbourg. The number of wounded on board the Kearsarge is not known, nor is it known whether the commander of the Kearsarge, during the long stay he made at Brest, did not enlist some experienced gunners. It appears, according to the statement published by the *Phare*, that some doubt existed at Cherbourg as to whether any action would take place. It says, further, that the report of a challenge having been given and accepted is not true. All doubt, however, ceased at seven on Sunday morning. The Alabama got up her steam at that hour, and the commander of the French iron-plated frigate Couronne sent an officer to inform Captain Semmes that his ship would escort him to the limit of the French waters; that she would not weigh anchor until after him, and that he would not in any way interfere with her movements.

The preceding day Captain Semmes, whom several persons had earnestly advised not to engage the Kearsarge, had shown himself inflexible on that head, replying that he would prove to the most incredulous that his ship was not a privateer, intended for the attack solely of merchant vessels; that he was in a warlike port; and that he had consulted different French officers, who all declared that, in his situation, they would fight. Who could blame him for regarding military honor in a higher point of view than any political feeling?

At ten o'clock on Saturday evening Captain Semmes told M. Bonfils, the agent of the confederate government, that he was a Roman Catholic, and, as he could not assist at divine service the following day, he asked M. Bonfils to promise him to attend mass, and to have it offered up for him. This request was religiously executed. Everybody aware of these facts was convinced of Captain Semmes's inflexible resolution when they saw the Alabama sail out of the western entrance at ten o'clock, and, when out of the harbor, change her course towards the Kearsarge, which was coming from the east. The first shot was fired at eleven o'clock, the federal and confederate vessels being at the time eight naval miles from the Cherbourg breakwater. The Kearsarge was a heavier vessel than her antagonist, and her machinery was better protected by chains. The Alabama carried eight guns, six of which were thirty-pounders, one on her stern of fifty-eight, and a pivot gun on her poop of one hundred-pounds. The Kearsarge carried one gun less; four were thirty-pounders, two of one hundred and fifty, and one on her fore deck. The two ships from the commencement of the action presented their right sides to each other. They sailed round five or six times, the Alabama always endeavoring to approach her adversary. Shots were exchanged during an hour, but not so well aimed by the confederate as by the federal, who fired patiently and accurately, having the advantage of skilled gunners. Nevertheless, the Kearsarge received a shot at the beginning of the action which would probably have sunk her were it not for the chains with which she was protected. She received several other shots which damaged the plating, and one ball struck her stern-post six inches from her rudder. The Alabama received a shot in her machinery at the commencement of the action, and from that moment the crew fought the ship with water up to the knee, some say up to the waist. A second shot, which shattered her screw, caused her to sink stern foremost. Even before the decisive shot the Alabama had diminished her fire and let off her steam. The Kearsarge continued her fire at a long distance; the confederate hoisted sail while the federal continued firing.

From the Liverpool Post, June 28, 1864.

A gentleman residing in Liverpool has received a letter from a well-informed person in Paris about the fight between the Kearsarge and the Alabama, from which we have been permitted to make the following extract:

"About ten o'clock on Sunday morning the Alabama left Cherbourg and stood out to sea. A little before twelve o'clock, the two vessels being about nine miles from shore, the engagement began by the Alabama firing. Eighteen shot were fired by the Alabama before the Kearsarge answered, as the guns of the latter had not the exact range. When about eight hundred yards from the Alabama the Kearsarge gave her a broadside. From that moment the fight continued without ceasing until the white flag was run up by the Alabama. The vessels manœuvred on the same circle. As seen from the shore, they appeared to pass each other about five or six times. The Alabama was then seen to make sail, and presently she left the circle and seemed to be making for French waters. The Kearsarge pursued, keeping on a line nearer the shore. For about ten minutes the firing of both vessels continued. A white flag was then seen floating from the Alabama, in which position both vessels remained apparently motionless. A small boat containing an officer of the Alabama, master's mate, (I was informed,) then went alongside the Kearsarge. Captain Winslow asked him if the vessel had surrendered. He answered that she had, and that she was in a sinking condition, and requested Captain Winslow to send out his boats to rescue the men on board. He immediately ordered all the boats fit for service, being two, to go to the rescue, but, before they were able to reach the Alabama, she went down. The officer who had gone on board the Kearsarge from the Alabama asked permission to assist them in rescuing the men. The permission was granted, when he left, and, after picking up a number, he went on board the Deerhound and escaped. As soon as Captain Winslow saw the Alabama sink, he hailed the Deerhound and asked them to help to pick up the men, and after having rescued Semmes, the first lieutenant, and a number of officers, they ran away with them, and, I afterwards heard, landed them in England. Captain Winslow gives as his reason for not pursuing or firing into the yacht, that he could not believe that any man carrying the flag of the Royal Yacht Club of England could be so dishonorable as to carry off lawful prisoners whom they had been requested, from feelings of humanity, to save from drowning. Sixty-three men were picked up by the Kearsarge, one already dead, and two who died of their wounds on board. The Kearsarge received no important injury, and is now ready for active service. Eight shots struck the Kearsarge in her hull, and five others about the hull; two were turned by chains, which had been hung over the sides of the vessel for a few yards, in order to protect the machinery; an idea which has been frequently adopted by many in the United States, and by our vessels before going into action. From the time of the first shot of the Kearsarge to the last shot was sixty-two minutes. The Kearsarge fired one hundred and seventy-three shots. The Kearsarge and the Alabama are of about the same tonnage, each being about eleven hundred tons; the latter being a little the larger in measurement. The Kearsarge had seven guns, two being 11-inch Dahlgren, one light 28-pounder, rifled, and four 32-pounders. The Alabama had eight guns, one being a fine 100-pounder Whitworth rifled gun, one 68-pounder, and six 32-pounders. The crew of the Kearsarge was one hundred and sixty; that of the Alabama one hundred and forty-seven. Prisoners taken from the Alabama state that, about three o'clock on the morning of the fight, Captain Semmes caused his chronometers to be placed on board the Deerhound. The whole conduct of this yacht induces the belief that her presence on the scene of action was preconcerted, in order that she might aid the Alabama in every way in her power. With a knowledge of these facts, you will at once see what great injustice has been done to the gallant officers and crew of the Kearsarge by the false representations which have so generally been made by the French press."

Seven more of the crew of the Alabama saved.

Yesterday information was received in Liverpool that a pilot boat had arrived at Southampton with nine of the crew of the Alabama on board. A gentleman, whose son was an officer on board the celebrated confederate cruiser, at once telegraphed to Southampton, and it was ascertained that seven men were picked up after the engagement with the Kearsarge by a French fishing boat and landed at Havre, from whence they were forwarded, by the London and Southwestern Railway Company's steamship Havre, to Southampton, arriving at that port at six o'clock yesterday morning, but the names of the parties are not yet known.

Letter from Acting Master Stoddard, of the Kearsarge, to the editor of the Daily News.

KEARSARGE AND ALABAMA.

UNITED STATES STEAMER KEARSARGE,
Cherbourg, France, June 23.

To the Editor of the Daily News:

SIR: I desire to bring to the notice of the yacht clubs of England the conduct of the commander of the *Deerhound*, which followed the engagement of the *Alabama* and *Kearsarge*. After the *Alabama* had struck, and her condition was unknown, her boats were observed to be lowering, one of which pulled directly to the *Kearsarge*, with an officer and several wounded men. The officer stated that the ship had surrendered some time before the *Kearsarge* slackened firing, and the remaining parts of the flag had been hauled down, and at last a white flag shown, and requesting that the boats might be sent to rescue life, as the *Alabama* was fast sinking.

Immediately the two boats remaining undamaged were called away, and the emergency was so great that the officer in command of the *Alabama's* boat was permitted to shove off to assist in this humane duty. It was now seen that the *Alabama* was settling fast. The captain of the *Kearsarge* immediately hailed the *Deerhound* to windward, and stated her condition, requesting he would run down and assist to pick up the men. The *Alabama* went down in two minutes afterwards. The *Deerhound* lowered her boats, and was active in picking up the struggling crew, and it was seen that the officer who had come on board the *Kearsarge* at first to surrender had gone with others to the *Deerhound*, and had shoved off the boat, leaving a large number of the *Alabama's* wounded and men struggling in the water. Shortly afterwards the *Deerhound* was seen moving off, and I reported it to Captain Winslow. The answer I received from him was, it was impossible, the yacht was simply coming round; no commander could be guilty of such dastardly conduct, when he had been requested and permitted in the cause of humanity to save the lives of prisoners, to run off with them. But it was true, and Captain Winslow had to regret that he had not opened his guns on the *Deerhound*.

It was afterwards discovered that the *Deerhound* was a consort of the *Alabama*, and the night before had received many valuable articles for safe-keeping from the *Alabama*. Captain Winslow maintains that all persons that the *Deerhound* took are prisoners; and his opinion, from his knowledge of Captain Semmes, is, that he is too honorable, whatever the cost, to seek exemption by an act so dishonorable, and which would forever exclude all clemency. Now, sir, I have not the same opinion of Captain Semmes's honor. We shall see.

I am, &c.,

E. M. STODDARD,
Acting Master.

A REVIEW OF THE FIGHT.

The London Daily News, taking as a text the letter of Mason and the report of Semmes, says:

"It will hardly be denied by the most fervid admirers of the late *Alabama's* 'daring and brilliant career' that her surviving commander is more fortunate than the brave captains who lived before Agamemnon, but than many who have lived and fought in modern times. If many gallant soldiers and sailors in the mythical age died unwept for want of a 'reporter,' your modern hero of a hundred escapes and of half an hour's ducking after his first and last fair fight, seems likely to be drowned after all in torrents of sympathetic ink.

"There was, perhaps, a little difficulty in making anything very heroic out of the *Alabama's* career while she lived. Running away from men-of-war and burning unarmed and defenceless merchantmen may be a profitable and useful business, but courage is not precisely the quality one admires in the hawk or the hound when the victory is a partridge or a hare. No doubt there is something romantic and interesting in the mere ubiquity of a sea rover; no romances are more irresistible than those of 'Rovers' and 'Water-witches;' and even a 'Pirate' who combines speed and seamanship with something of the personal charm of a destroying angel, is the favorite ideal of all young boys and girls, and even of maturer women with well-regulated imaginations.

"It was commonly supposed that paddle-wheels and screws and funnels (not to speak of diplomacy) had put an end to all the romance and picturesqueness of sea life; the celebrity of the *Alabama* proves the fallacy of that apprehension. For in what has that

celebrity consisted if not in being heard of here, there, and everywhere, and sometimes in a half a dozen latitudes at once; in the channel, in the Mediterranean, in the Atlantic, in the Pacific, in the Indian ocean, in the China seas, at the Cape, in the channel again? What a wonderful vessel! The Flying Dutchman was a galliot compared with her! What a wonderful captain to be always pursuing and never caught! And certainly the simple feat of keeping at sea in all weathers for two years without intermission, or breaking down, or repairs, may well strike with admiring wonder a public accustomed to read in their 'naval intelligence' of powerful squadrons docking and repairing after a six weeks' cruise in the Bay of Biscay or the North sea. Let the captain of the Alabama have his due by all means. Without reference to federals or confederates, let us as Englishmen do justice to smart and skilful seamanship wherever we find it. But let not the nation that once owned a Nelson sink to paying equal homage to a sunk Alabama and a surviving victory. To worship success is bad enough; to worship the remains of a runaway smuggler and a nimble-heeled buccaneer, because he has come to a legitimate end, is something very different from an honest sympathy with defeat. There are British naval officers performing at the hour splendid, but unrecorded, services, who will never receive the honors paid to the captain of the Alabama for having accepted the challenge of the captain of the Kearsarge, but not its consequences. Probably the Alabama was not a classical school of Roman virtue, in which the heart of a Regulus could be trained to self-conquest; if the poet were to write of a Semmes *atqui sciebat*, it would not be to celebrate the prisoner of war who disdained to sacrifice his honor to his safety. *Atqui sciebat* should be interpreted, 'though he knew that an English yacht was ready to pick him up and carry him away to a neutral shore, where he could forget the English surgeon who perished with his sinking ship rather than abandon the wounded sailors, but where he could fight the battle over again in safety, and defeat at leisure the fair fame of a brother sailor and an honorable enemy.'

"The sceptic who called history a matter-of-fact romance should have lived in our day, when a naval action is fought off Cherbourg on a Sunday, and reported to the London and Paris newspapers on the Monday morning, no two reports agreeing in any single fact, except in the result. In our enlightened epoch of incessant, instantaneous and universal intercommunication, the difficulty of getting at the simple facts of any passing incident, in which conflicting sympathies are concerned, increases in proportion to the increasing celerity and certainty with which the materials of history are gathered. Some allowance, no doubt, may be made for eye-witnesses on shore of a naval engagement seven miles out at sea. Their 'powerful glasses' are liable to that peculiar inaccuracy of sight which distance, excitement and smoke produce. A French gentleman, for instance, who from Cherbourg breakwater looked on at the American duel on Sunday last, wrote a graphic letter to the Debats, with a postscript to the effect that he had just discovered that the account in his letter was entirely wrong. Mr. John Lancaster, the owner of the Deerhound yacht, who, in more than the French sense of the words, "assisted at" the engagement, published on the following morning an account, which materially differs in the most important points from the official report furnished to Mr. Mason by Captain Semmes, and published yesterday.

"At 12.30 (we quote Mr. Lancaster's extract from the log of the Deerhound) observed the Alabama to be disabled and in a sinking state. We immediately made towards her, and on passing the Kearsarge were requested to assist in saving the Alabama's crew. At 12.50, when within a distance of two hundred yards, the Alabama sank. We then lowered our two boats, and, with the assistance of the Alabama's whaleboat and dingey, succeeded in saving about forty men, including Captain Semmes and thirteen officers.'

"Now, what says Captain Semmes?

"There was no appearance of any boat coming to me from the enemy after my ship went down. Ultimately, however, the steam yacht Deerhound, owned by a gentleman of Lancashire, England, Mr. John Lancaster, who was himself on board, steamed up in the midst of my drowning men, and rescued a number of both officers and men from the water. About this time the Kearsarge sent one and then, tardily, another boat. Accompanying you will find lists of the killed and wounded and of those who were picked up by the Deerhound; the remainder, there is reason to hope, were picked up by the enemy and by a couple of French pilot-boats, which were also fortunately near the scene of action.'

"The odious imputation of inhumanity contained in this passage is not only altogether wanting in Mr. Lancaster's account, it is implicitly and explicitly contradicted by Mr. Lancaster's assertion that he was requested by the captain of the Kearsarge to assist in 'saving' the Alabama's crew. Then, again, as to the relative tonnage and armament of the two ships, Captain Semmes writes to Mr. Mason:

"The enemy was heavier than myself, both in ship, battery, and crew; but I did not know until the action was over that she was also iron-clad. Her midship section on both sides was thoroughly iron-coated; this having been done with

* chain constructed for the purpose placed perpendicularly from the rail to the water's edge, the whole covered over by a thin outer planking, which gave no indication of the armor beneath.

"A letter which we publish this morning, from a gentleman just returned from a visit to the Kearsarge, at Cherbourg, states that 'the Alabama had eight guns, the Kearsarge only seven;' and that 'the Kearsarge was no more iron-clad than the Alabama might have been had they taken the precaution. She simply had a double row of chains hanging over her sides to protect her machinery. Two shots from the Alabama struck these chains and fell harmlessly into the water.' Again, as to the number of the respective crews, Mr. Mason writes: 'She (the Alabama) had, in fact, but one hundred and twenty all told.' Yet Captain Semmes reports: 'Our total loss in killed and wounded is thirty, to wit, nine killed, twenty-one wounded. * * * I was fortunate enough myself thus to escape to the shelter of a neutral flag, together with about forty others, all told.' A correspondent who had just visited the Kearsarge at Cherbourg reports: 'The Kearsarge picked up sixty-three men, one dead body, and two who died afterwards on board. She also took five officers.' So that one hundred and thirty (officers and men) are actually accounted for as belonging to the Alabama, instead of Mr. Mason's one hundred and twenty 'all told.'

"Captain Semmes accuses the Kearsarge of having fired upon the Alabama five times after her colors had been struck. No mention of this prodigious inhumanity is made by Mr. Lancaster, the owner of the Deerhound, who was within 300 yards at the close of the action.

"Unfortunately it is not discrepancies of statement only that challenges attention to this naval engagement. There are two facts undisputed and patent to all the world, which we fear are susceptible of far graver notice. There is the fact of a member of the royal yacht squadron flying the white ensign of her Majesty's fleet, and privileged to carry a warrant from the Admiralty, escaping with prisoners of war under shelter of a neutral flag, in violation of that honor of a neutral to which the captain of the Kearsarge had confided them. There is Captain Semmes boasting that he had been fortunate enough (after, by his own account, hauling down his flag) to escape to the shelter of the neutral flag; and in the same breath congratulating his officers and men 'that though they have lost their ship they have not lost their honor.' The best friends of Captain Semmes and of his cause should lament when that gallant officer dropped his sword into the sea he did not also sink his trumpet."

NEW POINTS DEVELOPED.

An eye-witness of the naval fight communicates to the London Daily News the following narrative:

"I returned late last night from Cherbourg, where I had been a witness to the fight between the Kearsarge and the Alabama. I regret to see that some of the London papers are perverting and falsifying the facts, so as to do great injustice to the gallant officers and men of the Kearsarge.

"The fight began at 11 a. m., and ended a few minutes after 12, lasting a little more than an hour. The Alabama fired seventeen shots at the Kearsarge before the latter fired a gun. The Kearsarge fired one hundred and seventy-three shots. She was struck in the hull seven or eight times, but has sustained no important damage, and is perfectly ready for active service. She has a crew of about one hundred and sixty-five men, that of the Alabama being about one hundred and forty-seven. The Alabama had eight guns, the Kearsarge only seven. The firing of the Alabama was very inaccurate, that of the Kearsarge was excellent. A large pivot-gun was particularly effective. The Kearsarge is spoken of as being iron-clad; she was no more iron-clad than the Alabama might have been had they taken the precaution. She simply had a double row of chains hanging over her sides to protect her machinery. Two shots from the Alabama struck these chains and fell harmless into the water.

"The Kearsarge picked up sixty-three men, one dead body, and two men who have since died on board. She also took five officers. *Captain Winslow would now have all the officers and men of the Alabama as prisoners had he not placed too much confidence in the honor of an Englishman who carried the flag of the royal yacht squadron.* The club will be indelibly disgraced unless they take measures to repudiate and condemn the conduct of Mr. John Lancaster, owner of the yacht Deerhound. *I have no doubt that this yacht was in the harbor of Cherbourg to assist the Alabama by every means in her power; that she did so, I know; her movements before the action prove it.* When the Alabama went down, the yacht, being near, was hailed by Captain Winslow and requested to aid in picking up the men in the water. The request was complied with, and the Deerhound, after having rescued, as supposed, about twenty persons, including Captain Semmes and First Lieutenant Kell, immediately left, running towards England. *Captain Winslow says the reason he did not pursue her or fire into her was that he*

could not believe any one carrying the flag of the royal yacht squadron could act so dishonorable a part as to carry off his prisoners whom he had requested him to save from feelings of humanity.

Captain Winslow considers Semmes and his officers bound upon their honor to give themselves up as his prisoners of war. About five minutes before the Alabama went down a boat from her came to the Kearsarge with an officer, *who surrendered the vessel*, and then asked permission to return with his boat to assist in picking up the men. This was granted, when the officer left, and after rescuing a number—principally officers, I understand—he went on board the English yacht and escaped. Please excuse the hurried style of this letter, but I was anxious that while Captain Semmes and his party were being fêted for their glorious conduct, you might be apprised of these positive facts.

P. S.—The Alabama hauled down her colors and ran up a white flag at least ten minutes, I should think, before she went down. Prisoners taken from the Alabama state that about three o'clock in the morning, before the engagement took place, the chronometers in the Alabama were transferred to the English yacht Deerhound, then lying in the harbor, not far from the Alabama. The Deerhound was, in fact, *acting as tender to the Alabama before the action.*

HOW SEMMES ESCAPED.

The Daily News gives the following account of the manner in which Captain Semmes was rescued :

When the battle was at an end the Deerhound steamed over to the Kearsarge, and Mr. Lancaster was asked by the officers of the federal ship to try and pick up the scores of the Alabama's crew and officers who were floating and swimming about. He lowered his yacht boats, and one of them, commanded by a man named Adams, was steering his boat into a group of a dozen struggling persons, when he passed a drowning man at some short distance with an officer's cap on. One of the men in the boat cried out, "That's Semmes," and the drowning man called out, "I am the captain, save me ; I cannot keep up any longer."

Adams dragged him into the boat. Captain Semmes then said: "For God's sake don't put me on board the Kearsarge, but put me on board your yacht." Adams promised to do so, and laid Captain Semmes down in the bottom, and covered him with a sail to conceal him from the Kearsarge's boats, which were evidently anxiously searching for him. When Adams had saved a boat-load he took them on board the yacht, and Captain Semmes was at once placed below. As soon as all that were seen in the water were picked up, Mr. Lancaster was anxious to get away, and began to steam out to sea. He expected that he should have been brought to by a shot from the Kearsarge ; but she was too disabled, it appears, to go after the Deerhound to overhaul her, and thus Captain Semmes escaped being made prisoner.

The Globe says :

When found in a sinking state the Alabama ceased fighting and lowered her boats, in which the dead and wounded were placed. Shortly afterward the Alabama sank, the officers and crew jumping into the sea, when the Kearsarge's boats came up to assist in saving the crew. The officer in command of the boats inquired for "Semmes," and was told that he was drowned, whereas he had already been picked up by the yacht Deerhound and stowed away ; the yacht having then steamed off with all speed, expecting the Kearsarge would attempt to capture those on board.

THE LATE NAVAL ENGAGEMENT.

Letter from Mr. Lancaster.

To the Editor of the Daily News.

SIR: As two correspondents of your journal, in giving their versions of the fight between the Alabama and the Kearsarge, have designated my share in the escape of Captain Semmes and a portion of the crew of the sunken ship as "dishonorable," and have moreover affirmed that my yacht, the Deerhound, was in the harbor of Cherbourg before the engagement, and proceeded thence on the morning of the engagement in order to assist the Alabama, I presume I may trespass upon your kindness so far as to ask for an opportunity to repudiate the imputation and deny the assertion.

They admit that when the Alabama went down the yacht, being near the Kearsarge, was hailed by Captain Winslow, and requested to aid in picking up the men who were in the water ; but they intimate that my services were expected to be merely ministerial ; or, in other words, that I was to put myself under the command of Captain Winslow, and

place my yacht at his disposal, for the capture of the poor fellows who were struggling in the water for their lives. The fact is, that when we passed the Kearsarge the captain cried out, "For God's sake do what you can to save them," and that was my warrant for interfering in any way for the aid and succor of his enemies.

It may be a question with some whether, without that warrant, I should have been justified in endeavoring to rescue any of the crew of the Alabama; but my own opinion is, that a man drowning in the open sea cannot be regarded as an enemy at the time to anybody, and is therefore entitled to the assistance of any passer-by. Be this as it may, I had the earnest request of Captain Winslow to rescue as many of the men who were in the water as I could lay hold of, but that request was not coupled with any stipulation to the effect that I should deliver up the rescued men to him as his prisoners. If it had been, I should have declined the task, because I should have deemed it dishonorable—that is, inconsistent with my notions of honor—to lend my yacht and crew for the purpose of rescuing those brave men from drowning only to hand them over to their enemies for imprisonment, ill treatment, and perhaps execution.

One of your correspondents opens his letter by expressing a desire to bring to the notice of the yacht clubs of England the conduct of the commander of the Deerhound, which followed the engagement of the Alabama and Kearsarge. Now that my conduct has been impugned, I am equally wishful that it should come under the notice of the yacht clubs of England, and I am quite willing to leave the point of "honor" to be decided by my brother yachtmen, and, indeed, by any tribunal of gentlemen. As to my legal right to take away Captain Semmes and his friends, I have been educated in the belief that an English ship is English territory, and I am, therefore, unable even now to discover why I was more bound to surrender the people of the Alabama whom I had on board my yacht than the owner of a garden on the south coast of England would have been if they had swam to such a place and landed there, or than the mayor of Southampton was when they were lodging in that city, or than the British government is now that it is known that they are somewhere in England.

Your other correspondent says that Captain Winslow declares that "the reason he did not pursue the Deerhound, or fire into her, was that he could not believe at the time that any one carrying the flag of the royal yacht squadron could act so dishonorable a part as to carry off the prisoners whom he had requested him to save from feelings of humanity." I was not aware then, and I am not aware now, that the men whom I saved were, or ever had been, his prisoners. Whether any of the circumstances which had preceded the sinking of the Alabama constituted them prisoners was a question that never came under my consideration, and one which I am not disposed to discuss even now. I can only say that it is a new doctrine to me, that when one ship sinks another in warfare the crew of the sunken ship are debarred from swimming for their lives and seeking refuge wherever they can find it, and it is a doctrine which I shall not accept unless it is backed by better authority than that of the master of the Kearsarge. What Captain Winslow's notion of humanity may be is a point beyond my knowledge, but I have good reason for believing that not many members of the royal yacht squadron would, from "motives of humanity," have taken Captain Semmes from the water in order to give him up to the tender mercies of Captain Winslow and his compatriots.

Another reason than that assigned by your correspondent for that hero's forbearance may be imagined in the reflection that such a performance as that of Captain Wilkes, who dragged two "enemies," or "rebels," from an English ship, would not bear repetition. Your anonymous correspondent further says that "Captain Winslow would now have all the officers and men of the Alabama as prisoners had he not placed too much confidence in the honor of an Englishman who carried the flag of the royal yacht squadron." This is a very questionable assertion, for why did Captain Winslow confide in that Englishman? Why did he implore his interference, calling out: "For God's sake do what you can to save them?" I presume it was because he could not or would not save them himself. The fact is, that if the captain and crew of the Alabama had depended for safety altogether upon Captain Winslow, not one-half of them would have been saved. He got quite as many of them as he could lay hold of time enough to deliver them from drowning.

I come now to the more definite charges advanced by your correspondents, and these I will soon dispose of. They maintain that my yacht was in the harbor of Cherbourg for the purpose of assisting the Alabama, and that her movements before the action prove that she attended her for the same object. My impression is, that the yacht was in Cherbourg to suit my convenience and pleasure, and I am quite sure that when there I neither did, nor intended to do, anything to serve the Alabama. We steamed out on Sunday morning to see the engagement, and the resolution to do so was the result of a family council, whereat the question "to go out," or "not to go out," was duly discussed, and the decision in the affirmative was carried by the juveniles rather against the wish of both myself and my wife. Had I contemplated taking any part in the movements of the Alabama I do not think

I should have been accompanied with my wife and several young children. One of your correspondents, however, says that he knows that the Deerhound did assist the Alabama, and if he does know this he knows more than I do. As to the movements of the Deerhound before the action, all the movements with which I was acquainted were for the objects of enjoying the summer morning, and getting a good and safe place from which to watch the engagement.

Another of your correspondents declares that since the affair it has been discovered that the Deerhound was a consort of the Alabama, and on the night before had received many valuable articles for safe-keeping from that vessel. This is simply untrue. Before the engagement neither I nor any of my family had any knowledge of or communication with either Captain Semmes, any of his officers, or any of his crew. Since the fight I have inquired of my captain whether he or any of my crew had had any communication with the captain or crew of the Alabama prior to meeting them on the Deerhound after the engagement, and his answer, given in the most emphatic manner, has been "None whatever." As to the deposit of chronometers and other valuable articles, the whole story is a myth. Nothing was brought from the Alabama to the Deerhound, and I never heard of the tale until I saw it in an extract from your own columns. After the fight was over, the drowning men picked up, and the Deerhound steaming away to Southampton, some of the officers who had been saved began to express the acknowledgments for my services, and my reply to them, which was addressed also to all that were around, was: "Gentlemen, you have no need to give me any special thanks. I should have done exactly the same for the other people if they had needed it." This speech would have been a needless, and indeed an absurd piece of hypocrisy, if there had been any league or alliance between the Alabama and the Deerhound.

Both your correspondents agree in maintaining that Captain Semmes and such of his crew as were taken away by the Deerhound are bound in honor to consider themselves still as prisoners, and to render themselves to their lawful captors as soon as practicable. This is a point which I have nothing to do with, and therefore I shall not discuss it. My object in this letter is merely to vindicate my conduct from misrepresentation; and I trust that in aiming at this I have not transgressed any of your rules of correspondence, and shall therefore be entitled to a place in your columns.

I am, &c.,

JOHN LANCASTER.

HINDLEY HALL, Wigan, June 27.

THE ALABAMA AND THE KEARSARGE.

An account of the naval engagement in the British channel, on Sunday, June 19, 1864, from information furnished to the writer by the wounded and paroled prisoners of the confederate privateer Alabama, the officers of the United States sloop-of-war Kearsarge, and citizens of Cherbourg. By Frederick Milnes Edge. London: William Ridgway. 1864.

The importance of the engagement between the United States sloop-of-war Kearsarge and the confederate privateer Alabama cannot be estimated by the size of the two vessels. The conflict off Cherbourg on Sunday, the 19th of June, was the first decisive engagement between shipping propelled by steam, and the first test of the merits of modern naval artillery. It was, moreover, a contest for superiority between the ordnance of Europe and America, whilst the result furnishes us with data wherefrom to estimate the relative advantages of rifled and smooth-bore cannon at short range.

Perhaps no greater or more numerous misrepresentations were ever made in regard to an engagement than in reference to the one in question. The first news of the conflict came to us enveloped in a mass of statements, the greater part of which, not to use an unparliamentary expression, was diametrically opposed to the truth; and, although several weeks have now elapsed since the Alabama followed her many defenceless victims to their watery grave, these misrepresentations obtain as much credence as ever. The victory of the Kearsarge was accounted for, and the defeat of the Alabama excused or palliated, upon the following principal reasons:

1. The superior size and speed of the Kearsarge.
2. The superiority of her armament.
3. The chain-plating of her sides.
4. The greater number of her crew.
5. The unpreparedness of the Alabama.
6. The assumed necessity of Captain Semmes's accepting the challenge sent him (as represented) by the commander of the Kearsarge.

Besides these misstatements there have been others put forth, either in ignorance of the real facts of the case, or with a purposed intention of diminishing the merits of the victory by casting odium upon the federals on the score of inhumanity. In the former category must be placed the remarks of the Times, (June 21;) but it is just to state that the observations in question were made on receipt of the first news, and from information furnished probably by parties unconnected with the paper, and desirous of palliating the Alabama's defeat by any means in their power. We are informed in the article above referred to that the guns of the latter vessel "had been pointed for two thousand yards, and the second shot went right through the Kearsarge," whereas no shot whatever went through as stated. Again, "the Kearsarge fired about one hundred (shot,) chiefly 11-inch shell," the fact being that not one-third of her projectiles were of that calibre. Further on we find, "The men (of the Alabama) were all true to the last; they only ceased firing when the water came to the muzzles of their guns." Such a declaration as this is laughable in the extreme; the Alabama's guns were all on the spar deck, like those of the Kearsarge, and, to achieve what the Times represents, her men must have fought on until the hull of their vessel was two feet under water. The truth is, if the evidence of the prisoners saved by the Kearsarge may be taken, Captain Semmes hauled down his flag immediately after being informed by his chief engineer that the water was putting out the fires; and, within a few minutes, the water gained so rapidly on the vessel that her bow rose slowly in the air, and half her guns obtained a greater elevation than they had ever known previously. It is unfortunate to find such cheap novel style of writing in a paper which, at some future period, may be referred to as an authoritative chronicler of events now transpiring.

It would be too long a task to notice all the numerous misstatements of private individuals, and of the English and French press in reference to this action. The best mode is to give the facts as they occurred, leaving the public to judge by internal evidence on which side the truth exists.

Within a few days of the fight the writer of these pages crossed from London to Cherbourg for the purpose of obtaining by personal examination full and precise information in reference to the engagement. It would seem as though misrepresentation, if not positive falsehood, were inseparable from everything connected with the Alabama, for on reaching the French naval station he was positively assured by the people on shore that nobody was permitted to board the Kearsarge. Preferring, however, to substantiate the truth of these allegations from the officers of the vessel themselves, he hired a boat and sailed out to the sloop, receiving on his arrival an immediate and polite reception from Captain Winslow and his gallant subordinates. During the six days he remained at Cherbourg he found the Kearsarge open to the inspection, above and below, of any and everybody who chose to visit her; and he frequently heard surprise expressed by English and French visitors alike that representations on shore were so inconsonant with the truth of the case.

I found the Kearsarge lying under the guns of the French ship-of-the-line "Napoleon," two cables' length from that vessel, and about a mile and a half from the harbor; she had not moved from that anchorage since entering the port of Cherbourg, and no repairs whatever had been effected in her hull since the fight. I had thus full opportunity to examine the extent of her damage, and she certainly did not look at all like a vessel which had just been engaged in one of the hottest conflicts of modern times.

Size of the two vessels.

The Kearsarge, in size, is by no means the terrible craft represented by those who, for some reason or other, seek to detract from the honor of her victory; she appeared to me a mere yacht in comparison with the shipping around her, and disappointed many of the visitors who came to see her. The relative proportions of the two antagonists were as follows:

	Alabama.	Kearsarge.
Length over all.....	220 feet	214½ feet.
Length on water-line.....	210 "	198½ "
Beam.....	32 "	33 "
Depth.....	17 "	16 "
Horse-power, two engines of.....	300 each.	400 h. p.
Tonnage.....	1,150	1,031*

The Alabama was a bark-rigged screw propeller, and the heaviness of her rig, and, above all, the greater size and height of her masts, would give her the appearance of a much larger vessel than her antagonist. The masts of the latter are disproportionately low and small; she has never carried more than topsail yards, and depends for her speed

* The Kearsarge has a four-bladed screw, diameter 12 feet 9 inches, with a pitch of 20 feet.

upon her machinery alone. It is to be questioned whether the Alabama, with all her reputation for velocity, could, in her best trim, outsteam her rival. The log-book of the Kearsarge, which I was courteously permitted to examine, frequently shows a speed of upwards of fourteen knots the hour, and her engineer states that her machinery was never in better working order than at the present time. I have not seen engines more compact in form, nor apparently in finer condition—looking in every part as though they were fresh from the workshop, instead of being, as they are, half through the third year of the cruise.

Ships-of-war, however, whatever may be their tonnage, are nothing more than platforms for carrying artillery. The only mode by which to judge of the strength of two vessels is in comparing their armaments; and herein we find the equality of the antagonists as fully exemplified as in the respective proportions of their hulls and steam-power. The armaments of the Alabama and Kearsarge were as follows:

Armament of the Alabama.—One 7-inch Blakely rifle; one 8-inch smooth-bore 68-pounder; six 32-pounders.

Armament of the Kearsarge.—Two 11-inch smooth-bore guns; one 30-pounder rifle; four 32-pounders.

It will, therefore, be seen that the Alabama had the advantage of the Kearsarge—at all events in the number of her guns—whilst the weight of the latter's broadside was only some 20 per cent. greater than her own. This disparity, however, was more than made up by the greater rapidity of the Alabama's firing, and, above all, by the superiority of her artillerymen. The Times informs us that Captain Semmes asserts, "he owes his best men to the training they received on board the 'Excellent:'" and trained gunners must naturally be superior to the volunteer gunners on board the Kearsarge. Each vessel fought all her guns, with the exception in either case of one 32-pounder on the starboard side; but the struggle was really decided by the two 11-inch Dahlgren smooth-bores of the Kearsarge against the 7-inch Blakely rifle and the heavy 68-pounder pivot of the Alabama. The Kearsarge certainly carried a small 30-pounder rifled Dahlgren in pivot on her forecastle, and this gun was fired several times before the rest were brought into play; but the gun in question was never regarded as aught than a failure, and the ordnance department of the United States navy has given up its manufacture.

The chain-plating of the Kearsarge.

Great stress has been laid upon the chain-plating of the Kearsarge, and it is assumed by interested parties that but for this armor the contest would have resulted differently. A pamphlet lately published in this city, entitled "*The Career of the Alabama*,"* makes the following statements:

"The federal government has fitted out the Kearsarge, a new vessel of great speed, iron-coated," &c. (P. 23.)

"She," the Kearsarge, "appeared to be temporarily plated with iron chains." (P. 38.) (In the previous quotation it would appear she had so been plated by the federal government. Both statements are absolutely incorrect, as will shortly be seen.)

"It was frequently observed that shot and shell struck against the Kearsarge's side, and harmlessly rebounded, bursting outside, and doing no damage to the federal crew."

"Another advantage accruing from this was that it sunk her very low in the water, so low, in fact, that the heads of the men who were in the boats were on the level of the Kearsarge's deck." (P. 39.)

"As before observed, the sides of the Kearsarge were trailed all over with chain-cables." (P. 41.)

The author of the pamphlet in question has judiciously refrained from giving his name. A greater number of more unblushing misrepresentations never were contained in an equal space.

In his official report to the confederate envoy, Mr. Mason, Captain Semmes makes the following statement:

"At the end of the engagement it was discovered, by those of our officers who went alongside the enemy's ship with the wounded, that her midship section on both sides was thoroughly iron-coated, this having been done with chain constructed for the purpose, (!) placed perpendicularly from the rail to the water's edge, the whole covered over by a thin outer planking, which gave no indication of the armor beneath. This planking had been ripped off in every direction (!) by our shot and shell, the chain broken and indented in many places, and forced partly into the ship's side. She was most effectually guarded, however, in this section from penetration."

* *The Career of the Alabama*, "No. 290," from July 29, 1862, to June 19, 1864. London: Dorrell & Son.

"The enemy was heavier than myself, both in ship, battery, and crew, (!) but I did not know until the action was over that she was also iron-clad."

"Those of our officers who went alongside the enemy's ship with our wounded." As soon as Captain Semmes reached the *Deerhound* the yacht steamed off at full speed towards Southampton, and Semmes wrote his report of the fight either in England or on board the English vessel. Probably the former, for he dates his communication to Mr. Mason, "Southampton, June 21, 1864." How did he obtain intelligence from those of his officers "who went alongside the enemy's ship," and who would naturally be detained as prisoners of war? It was impossible for anybody to reach Southampton in the time specified; nevertheless he did obtain such information. One of his officers, George T. Fullam, an Englishman, unfortunately, came to the *Kearsarge* in a boat at the close of the action, representing the *Alabama* to be sinking, and that if the *Kearsarge* did not hasten to get out boats to save life the crew must go down with her. Not a moment was to be lost, and he offered to go back to his own vessel to bring off prisoners, pledging his honor to return when the object was accomplished. After picking up several men struggling in the water he steered directly for the *Deerhound*, and on reaching her actually cast his boat adrift. It was subsequently picked up by the *Kearsarge*. Fullam's name appears amongst the list of "saved" by the *Deerhound*; and he, with others of the *Alabama*'s officers who had received a similar permission from their captors, and had similarly broken their troth, of course gave the above information to their veracious captain.

The chain-plating of the *Kearsarge* was decided upon in this wise. The vessel lay off Fayal towards the latter part of April, 1863, on the look-out for a notorious blockade-runner named the *Juno*. The *Kearsarge* being short of coal, and fearing some attempts at opposition on the part of her prey, the first officer of the sloop, Lieutenant Commander James S. Thornton, suggested to Captain Winslow the advisability of hanging her spare anchor cable over her side, so as to protect her midship section. Mr. Thornton had served on board the flag-ship of Admiral Farragut, the *Hartford*, when she and the rest of the federal fleet ran the forts of the Mississippi to reach New Orleans, and he made the suggestion at Fayal through having seen the advantage gained by it on that occasion. I now copy the following extract from the log-book of the *Kearsarge*:

"HORTA BAY, FAYAL, *May* 1, 1863.

"From 8 to merid. Wind E.NE. (F. 2) Weather b. c. Strapped, loaded, and fuze (5-sec. fuze) 13 XI-inch shell. Commenced armor-plating ship, using sheet-chain. Weighed kedge-anchor.

"E. M. STODDARD, *Acting Master*."

This operation of chain-arming took three days, and was effected without assistance from the shore, and at an expense of material of seventy-five dollars, (£15.) In order to make the addition less unsightly, the chains were boxed over with inch deal boards, forming a case or box, which stood out at right angles from the vessel's sides. This box would naturally excite curiosity in every port where the *Kearsarge* touched, and no mystery was made as to what the boarding covered. Captain Semmes was perfectly cognizant of the entire affair, notwithstanding his shameless assertion of ignorance, for he spoke about it to his officers and crew several days prior to the 19th of June, declaring that the chains were only attached together with rope-yarns, and would drop into the water when struck with the first shot. I was so informed by his own wounded men lying in the naval hospital at Cherbourg. Whatever might be the value for defence of this chain-plating, it was only struck once during the engagement, so far as I could discover by a long and close inspection. Some of the officers of the *Kearsarge* asserted to me that it was struck twice, whilst others deny that declaration; in one spot, however, a 32-pounder shot broke in the deal-covering and smashed a single link, two-thirds of which fell into the water. The remainder is in my possession, and proves to be of the ordinary 5½-inch chain. Had the cable been struck by a rifled 120-pounder instead of by a 32 the result might have been different; but in any case the damage would have amounted to nothing serious, for the vessel's side was hit five feet above the water-line, and nowhere in the vicinity of the boilers or machinery. Captain Semmes evidently regarded this protection of the chains as little worth, for he might have adopted the same plan before engaging the *Kearsarge*; but he confined himself to taking on board one hundred and fifty tons of coal as a protection to his boilers, which, in addition to the two hundred tons already in his bunkers, would bring him pretty low in the water. The *Kearsarge*, on the contrary, was deficient in her coal, and she took what was necessary on board during my stay at Cherbourg.

The quantity of chain used on each side of the vessel in this much-talked-of armoring is only one hundred and twenty fathoms, and it covers a space amidships of forty-nine feet six inches in length, by six feet two inches in depth. The chain, which is single, not

double, was and is stopped to eyebolts with rope-yarn and by iron dogs.* Is it reasonable to suppose that this plating of 1 7-10 inch iron (the thickness of the links of the chain) could offer any serious resistance to the heavy 68-pounder and the 7-inch Blakely rifle of the Alabama at the comparatively close range of seven hundred yards? What, then, becomes of the mistaken remark of the Times that the Kearsarge was "provided, as it turned out, with some special contrivances for protection," or Semmes's declaration that she was "iron-clad?" "The Career of the Alabama," in referring to this chain-plating, says: "Another advantage accruing from this was, that it sunk her very low in the water, so low, in fact, that the heads of the men who were in the boats were on the level of the Kearsarge's deck." It is simply ridiculous to suppose that the weight of two hundred and forty fathoms of chain could have any such effect upon a vessel of one thousand tons burden; whilst, in addition, the cable itself was part of the ordinary gear of the ship. Further, the Kearsarge was deficient in seventy tons of coal of her proper supply at the time of the action, while the Alabama had three hundred and fifty tons on board.

The objection that the Alabama was short-handed does not appear to be borne out by the facts of the case; while, on the other hand, a greater number of men than were necessary to work the guns and ship would be more of a detriment than a benefit to the Kearsarge. The latter vessel had twenty-two officers on board and one hundred and forty men; the Alabama is represented to have had only one hundred and twenty in her crew. (Mr. Mason's statement;) but if her officers be included in this number the assertion is obviously incorrect, for the Kearsarge saved sixty-seven,† the Deerhound forty-one, and the French pilot-boats twelve, and this without mentioning the thirteen accounted for as killed and wounded,‡ and others who went down in the ship. If Captain Semmes's representations were correct in regard to his being short-handed, he certainly ought not to be trusted with the command of a vessel again, however much he may be esteemed by some parties for his Quixotism in challenging an antagonist, to use his own words, "heavier than myself, both in ship, battery, and crew."

The asserted unpreparedness of the Alabama is about as truthful as the other representations, if we may take Captain Semmes's report and certain facts in rebutting evidence. The captain writes to Mr. Mason, "I cannot deny myself the pleasure of saying that Mr. Kell, my first lieutenant, deserves great credit for the fine condition the ship went into action;" but if Captain Semmes were right in the alleged want of preparation, he himself is alone to blame. He had ample time for protecting his vessel and crew in all possible manner; he, not the Kearsarge, was the aggressor, and but for his forcing the fight the Alabama might still be riding inside Cherbourg breakwater. Notwithstanding the horrible cause for which he is struggling, and the atrocious depredations he has committed upon helpless merchantmen, we can still admire the daring he evinced in sallying forth from a secure haven and gallantly attacking his opponent; but when he professes ignorance of the character of his antagonist, and unworthily attempts to disparage the victory of his foe, we forget all our first sympathies and condemn the moral nature of the man, as he has forced us to do his judgment.

Nor must it be forgotten that the Kearsarge has had fewer opportunities for repairs than the Alabama, and that she had been cruising around in all seas *for a much longer period than her antagonist.*§ The Alabama, on the contrary, had lain for many days in Cherbourg, and she only steamed forth when her captain supposed her to be in, at all events, as good a condition as the enemy.

The challenge.

Finally, the challenge to fight was given by the Alabama to the Kearsarge, not the Kearsarge to the Alabama. "The Career of the Alabama," above referred to, makes the following romantic statement:

"When he (Semmes) was challenged by the commander of the Kearsarge, everybody in Cherbourg, it appears, said it would be disgraceful if he refused the challenge, and this, coupled with his belief that the Kearsarge was not so strong as she really proved to be, made him agree to fight." (P. 41.)

On Tuesday, after the battle, and before leaving London for Cherbourg, I was shown a telegram by a member of the House of Commons, forwarded to him that morning. The telegram was addressed to one of the gentleman's constituents by his son, a sailor on board the Alabama, and was dated "Confederate States steamer Alabama, Cherbourg, June 14," the sender stating that they were about to engage the Kearsarge on the morrow, or next

* There was nothing whatever between the chain and the ship's sides.

† Including three dead.

‡ See page 41.

§ The Kearsarge started on her present cruise the 4th of February, 1862; the Alabama left the Mersey at the end of July following.

day I have not a copy of this telegram, but "The Career of the Alabama" gives a letter to the like effect from the surgeon of the privateer, addressed to a gentleman in this city. The letter reads as follows :

"CHERBOURG, June 14, 1864.

"DEAR TRAVERS: Here we are. I send this by a gentleman coming to London. An enemy is outside. If she only stays long enough, we go out and fight her. If I live, expect to see me in London shortly. If I die, give my best love to all who know me. If Monsieur A. de Caillet should call on you please show him every attention.

"I remain, dear Travers, ever yours,

"D. H. LLEWELLYN."

There were two brave gentlemen on board the Alabama, poor Llewellyn, who nobly refused to save his own life by leaving his wounded,* and a young lieutenant, Mr. Joseph Wilson, who honorably delivered up his sword on the deck of the Kearsarge when the other officers threw theirs into the water.

The most unanswerable proof of Captain Semmes having challenged the commander of the Kearsarge is to be found in the following letter addressed by him to the confederate consul or agent at Cherbourg. After the publication of this document it is to be hoped we shall hear no more of Captain Winslow's having committed such a breach of discipline and etiquette as that of challenging a rebel against his government.

Captain Semmes's challenge to the Kearsarge.

"CONFEDERATE STATES STEAMER ALABAMA,

"Cherbourg, June 14, 1864.

"SIR: I hear that you were informed by the U. S. consul that the Kearsarge was to come to this port solely for the prisoners landed by me,† and that she was to depart in twenty-four hours. I desire you to say to the U. S. consul that my intention is to fight the Kearsarge as soon as I can make the necessary arrangements. I hope these will not detain me more than until to-morrow evening, or after to-morrow morning at furthest. I beg she will not depart before I am ready to go out.

"I have the honor to be, very respectfully, your obedient servant,

"R. SEMMES, Captain."

"To Ad. BONFILS, Esq., Cherbourg."

Numerous facts serve to prove that Captain Semmes had made every preparation to engage the Kearsarge, and that wide-spread publicity had been given to his intention. As soon as the arrival of the federal vessel was known at Paris, an American gentleman of high position came down to Cherbourg with instructions for Captain Winslow; but, so desirous were the French authorities to preserve a really honest neutrality that permission was only granted to him to sail to her after his promising to return to shore immediately on the delivery of his message. Once back in Cherbourg, and about to return to Paris, he was advised to remain over night, as the Alabama intended to fight the Kearsarge next day, (Sunday.) On Sunday morning an excursion train arrived from the capital, and the visitors were received at the terminus of the railway by the boatmen of the port, who offered them boats for the purpose of seeing a genuine naval battle which was to take place during the day. Turning such a memorable occurrence to practical uses, Monsieur Rondin, a celebrated photographic artist on the Place d'Armes at Cherbourg, prepared the necessary chemicals, plates, and camera, and placed himself on the summit of the old church tower, which the whilome denizens of Cherbourg had very properly built in happy juxtaposition with his establishment. I was only able to see the negative, but that was quite sufficient to show that the artist had obtained a very fine view indeed of the exciting contest. Five days, however, had elapsed since Captain Semmes sent his challenge to Captain Winslow through the confederate agent, Monsieur Bonfils; surely time sufficient for him to make all the preparations which he considered necessary. Meanwhile the Kearsarge was cruising to and fro at sea, outside the breakwater.

The Kearsarge reached Cherbourg on the 14th, and her captain only heard of Captain Semmes's intention to fight him on the following day. Five days, however, elapsed before the Alabama put in an appearance, and her exit from the harbor was heralded by the English-yacht Deerhound. The officer on watch aboard the Kearsarge made out a three-masted vessel steaming from the harbor, the movements of which were somewhat mysterious; after

* The author's tribute to Surgeon Llewellyn was founded on imperfect information. It is now known that he ran away in the first boat which left the "Alabama."—Eds. Nat. Int.

† This information was incorrect. No such statement was ever made by the consul of the United States at Cherbourg. F. M. E.

remaining a short time only, this steamer, which subsequently proved to be the *Deerhound*, went back into port; only returning to sea a few minutes in advance of the *Alabama* and the French iron-clad *La Couronne*. Mr. Lancaster, her owner, sends a copy of his log to the *Times*, the first two entries being as follows:

"*Sunday, June 19, 9 a. m.*—Got up steam and proceeded out of Cherbourg harbor.

"10.30—Observed the *Alabama* steaming out of the harbor towards the federal steamer *Kearsarge*."*

Mr. Lancaster does not inform us why an English gentleman should choose a Sunday morning, of all days in the week, to cruise about at an early hour with ladies on board, nor does he supply the public with information as to the movements of the *Deerhound* during the hour and a half which elapsed between his exit from the harbor and the appearance of the *Alabama*. The preceding paragraph, however, supplies the omission.

The engagement.

At length the *Alabama* made her appearance in company with the *Couronne*, the latter vessel convoying her outside the limit of French waters. Here let me pay a tribute to the careful neutrality of the French authorities. No sooner was the limit of jurisdiction reached than the *Couronne* put down her helm, and without any delay steamed back into port, not even lingering outside the breakwater to witness the fight. Curiosity, if not worse, anchored the English vessel in handy vicinity to the combatants. Her presence proved to be of much utility, for she picked up no less than fourteen of the *Alabama*'s officers, and among them the redoubtable Semmes himself.

So soon as the *Alabama* was made out, the *Kearsarge* immediately headed seaward and steamed off the coast, the object being to get a sufficient distance from the land so as to obviate any possible infringement of French jurisdiction; and, secondly, that in case of the battle going against the *Alabama*, the latter could not retreat into port. When this was accomplished the *Kearsarge* was turned shortly around and steered immediately for the *Alabama*, Captain Winslow desiring to get within close range, as his guns were shotted with five-second shell. The interval between the two vessels being reduced to a mile or thereabouts, the *Alabama* sheered and discharged a broadside, nearly a raking fire, at the *Kearsarge*. More speed was given to the latter to shorten the distance, and a slight sheer to prevent raking. The *Alabama* fired a second broadside and a part of a third while her antagonist was closing; and at the expiration of ten or twelve minutes from the *Alabama*'s opening shot, the *Kearsarge* discharged her first broadside. The action henceforward continued in a circle, the distance between the two vessels being about seven hundred yards; this, at all events, is the opinion of the federal commander and his officers, for their guns were sighted at that range, and their shell burst in and over the privateer. The speed of the two vessels during the engagement did not exceed eight knots the hour.

At the expiration of one hour and two minutes from the first gun the *Alabama* hauled down her colors and fired a lee gun (according to the statements of her officers) in token of surrender. Captain Winslow could not, however, believe that the enemy had struck, as his own vessel had received so little damage, and he could not regard his antagonist as much more injured than himself; and it was only when a boat came off from the *Alabama* that her true condition was known. The 11-inch shell from the *Kearsarge*, thrown with fifteen pounds of powder at seven hundred yards range, had gone clean through the starboard side of the privateer, bursting in the port side and tearing great gaps in her timber and planking. This was plainly obvious when the *Alabama* settled by the stern and raised the forepart of her hull high out of water.

* The following is the copy of the log of the *Kearsarge* on the day in question:

"June 19, 1864.

"From 8 to meridian.

"Moderate breeze from the westward, weather b. c. At 10 inspected crew at quarters. At 10.20 discovered the *Alabama* steaming out from the port of Cherbourg, accompanied by a French iron-clad steamer, and a fore-and-aft rigged steamer showing the white English ensign and a yacht flag. Beat to general quarters and cleared the ship for action. Steamed ahead, standing off shore. At 10.50, being distant from the land about two leagues, altered our course, and approached the *Alabama*. At 10.57 the *Alabama* commenced the action with her starboard broadside at 1,000 yards range. At 11 we returned her fire, and came fairly into action, which we continued until meridian, when, observing signs of distress in the enemy, together with a cessation of her fire, our fire was withheld. At 12.10 a boat with an officer from the *Alabama* came alongside and surrendered his vessel, with the information that she was rapidly sinking, and a request for assistance. Sent the launch and second cutter, the other boats being disabled by the fire of the enemy. The English yacht before mentioned, coming within hail, was requested by the captain (W.) to render assistance in saving the lives of the officers and crew of the surrendered vessel. At 2.24 the *Alabama* went down in forty fathoms of water, leaving most of the crew struggling in the water. Seventy persons were rescued by the boats; two pilot-boats and the yacht also assisted. One pilot-boat came alongside us, but the other returned to the port. The yacht steamed rapidly away to the northward without reporting the number of our prisoners she had picked up.

"JAMES S. WHEELER, *Acting Master.*"

The Kearsarge was struck twenty-seven times during the conflict, and fired in all one hundred and seventy-three (173) shots; these were as follows:

Shots fired by the Kearsarge.

Two 11-inch guns.....	55 shots.
Rifle in forecastle.....	48 "
Broadside 32-pounders.....	60 "
12-pounder boat howitzer.....	10 "
Total.....	173

The last-named gun performed no part whatever in sinking the Alabama, and was only used in the action to create laughter among the sailors. Two old quartermasters, the two Dromios of the Kearsarge, were put in charge of this gun, with instructions to fire when they received the order. But the two old salts, little relishing the idea of having nothing to do while their messmates were so actively engaged, commenced peppering away with their pea-shooter of a piece, alternating their discharges with vituperation of each other. This low comedy by-play amused the ship's company, and the officers good-humoredly allowed the farce to continue until the single box of ammunition was exhausted.

Damage to the Kearsarge.

The Kearsarge was struck as follows:

One shot through starboard quarter, taking a slanting direction aft, and lodging in the rudder post. This shot was from the Blakely rifle.

One shot, carrying away starboard life-buoy.

Three 32-pounder shots through port bulwarks, forward of mizzenmast.

A shell, exploding after end of pivot-port.

A shell, exploding after end of chain-plating.

A 68-pounder shell, passing through starboard bulwarks below main rigging, wounding three men; the only casualty among the crew during the engagement.

A Blakely rifle shell, passing through the engine-room sky-light and dropping harmlessly in the water beyond the vessel.

Two shots below plank-sheer; abreast of boiler hatch.

One forward pivot port plank-sheer.

One forward foremast rigging.

A shot striking launch's topping lift.

A rifle shell, passing through funnel, bursting without damage inside.

One starboard, forward main-shroud.

One starboard, after-shroud main-topmast rigging.

One main-topsail tie.

One main-topsail outhaul.

One main-topsail runner.

Two through port-quarter boat.

One through spanker, (furled.)

One starboard, forward shroud, mizzen rigging.

One starboard, mizzen-topmast backstays.

One through mizzen-peak signal halliards, which cut the stops, when the battle was nearly over, and for the first time let loose to the breeze.

This list of damages received by the Kearsarge proves the exceedingly bad fire of the Alabama, notwithstanding the number of men on board the latter belonging to our "Naval Reserve," and the trained hands from the gunnery ship Excellent. I was informed by some of the paroled prisoners on shore at Cherbourg that Captain Semmes fired rapidly at the commencement of the action "in order to frighten the Yankees," nearly all the officers and crew being, as he was well aware, merely volunteers from the merchant service. At the expiration of twenty minutes after the Kearsarge discharged the first broadside, continuing the battle in a leisurely, cool manner, Semmes remarked, "Confound them; they've been fighting twenty minutes, and they're as cool as posts." The probabilities are that the crew of the federal vessel had learned not to regard as dangerous the rapid and hap-hazard practice of the Alabama.

From the time of her first reaching Cherbourg until she finally quitted the port, the Kearsarge never received the slightest assistance from shore, with the exception of that rendered by a boiler-maker in patching up her funnel. Every other repair was completed by her own hands, and she might have crossed the Atlantic immediately after the action without difficulty. So much for Mr. Lancaster's statement that "the Kearsarge was apparently much disabled."

Semmes's design to board the Kearsarge.

The first accounts received of the action led us to suppose that Captain Semmes's intention was to lay his vessel alongside the enemy, and to carry her by boarding. Whether this information came from the captain himself, or was made out of "whole cloth" by some of his admirers, the idea of boarding a vessel under steam, unless her engine, or screw, or rudder be disabled, is manifestly ridiculous. The days of boarding are gone by, except under the contingencies above stated, and any such attempt on the part of the Alabama would have been attended with disastrous results to herself and crew. To have boarded the Kearsarge Semmes must have possessed greater speed, to enable him to run alongside her, and the moment the pursuer came near her victim the latter would shut off steam, drop astern in a second of time, sheer off, discharge her whole broadside of grape and canister, and rake her antagonist from stern to stem. Our pro-southern sympathizers really ought not to make their *protegé* appear ridiculous by ascribing to him such an egregious intention.

Nationality of the crew of the Kearsarge.

It has frequently been asserted, that the major portion of the northern armies is composed of foreigners, and the same statement is made in reference to the crews of the American navy. The report got abroad in Cherbourg that the victory of the Kearsarge was due to her having taken on board a number of French gunners at Brest, and an admiral of the French navy asked me in perfectly good faith whether it were not the fact. It will not, therefore, be out of place to give the names and nationalities of the officers and crew on board the Kearsarge during her action with the Alabama.

Officers of the United States steamer Kearsarge, June 19, 1864.

John A. Winslow, captain, North Carolina; * James S. Thornton, lieutenant commander, New Hampshire; John M. Browne, surgeon, New Hampshire; J. Adams Smith, paymaster, Maine; William H. Cushman, chief engineer, Pennsylvania; James R. Wheeler, acting master, Massachusetts; Eben M. Stoddard, acting master, Connecticut; David H. Sumner, acting master, Maine; William H. Badlam, second assistant engineer, Massachusetts; Fred. L. Miller, third assistant engineer, Massachusetts; Sidney L. Smith, third assistant engineer, Massachusetts; Henry McConnell, third assistant engineer, Pennsylvania; Edward E. Preble, midshipman, Maine; Daniel B. Sargent, paymaster's clerk, Maine; S. E. Hartwell, captain's clerk, Massachusetts; Frank A. Graham, gunner, Pennsylvania; James C. Walton, boatswain, Pennsylvania; William H. Yeston, acting master's mate, United States; Charles H. Danforth, acting master's mate, Massachusetts; Ezra Bartlett, acting master's mate, New Hampshire; George A. Tittle, surgeon's steward, United States; Carsten B. De Witt, yeoman, United States.

Crew of the United States steamer Kearsarge, June 19, 1864.

Natives of the United States.—Jason N. Watrus, master-at-arms; Charles Jones, seaman; Daniel Charter, landsman; Edward Williams, officers' steward; George Williams, landsman; Charles Butts, quartermaster; Charles Redding, landsman; James Wilson, cockswain; William Gowan, (died,) ordinary seaman; James Saunders, quartermaster; John W. Dempsey, quarter-gunner; William D. Chapel, landsman; Thomas Perry, boatswain's mate; John Barrow, ordinary seaman; William Bond, boatswain's mate; James Haley, captain of fore-castle; Robert Strahn, captain of top; James O. Stone, first-class boy; Jacob Barth, John H. McCarthy, James F. Hayes, landsmen; John Hayes, cockswain; James Devine, landsman; George H. Russell, armorer; Patrick McKeever, Nathan Ives, Dennis McCarty, landsmen; John Boyle, John C. Woodberry, ordinary seamen; George E. Reed, seaman; James Morey, ordinary seaman; Benedict Drury, William Giles, seamen; Timothy Hurley, ship's cook; Michael Conroy, ordinary seaman; Levi W. Nye, James H. Lee, seamen; John E. Brady, ordinary seaman; Andrew J. Rowley, quarter-gunner; James Bradley, seaman; William Ellis, captain of hold; Henry Cook, captain of after-guard; Charles A. Reed, William S. Morgan, seamen; Joshua E. Carey, sailmaker's mate; James Magee, ordinary seaman; Benjamin S. Davis, officer's cook; John F. Bickford, cockswain; William Gurney, seaman; William Smith, quartermaster; Lawrence T. Crowley, ordinary seaman; Hugh McPherson, gunner's mate; Taran Phillips, ordinary seaman; Joachim Pease, seaman; Benjamin H. Blaisdell, first-class fireman; Joel B. Blaisdell, first-class fireman; Charles Fisher, officer's cook; James Henson, landsman; William M. Smith, landsman; William Fisher, landsman; George Bailey, landsman; Martin Hoyt, landsman; Mark

* Captain Winslow has long been a citizen of Massachusetts.

G. Ham, carpenter's mate; William H. Bastine, landsman; Leyman P. Spinney, coal-heaver; George E. Smart, second-class fireman; Charles A. Poole, coal-heaver; Timothy Lynch, coal-heaver; Will. H. Donnally, first-class fireman; Sylvanus P. Brackett, coal-heaver; John W. Sanborn, coal-heaver; Adoniram Littlefield, coal-heaver; John W. Young, coal-heaver; Will. Wainright, coal-heaver; Jno. E. Orchon, second-class fireman; George W. Remick, first-class fireman; Joel L. Sanborn, first-class fireman; Jere Young, first-class fireman; William Smith, first-class fireman; Stephen Smith, second-class fireman; John F. Stackpole, second-class fireman; William Stanley, second-class fireman; Lyman H. Hartford, second-class fireman; True W. Priest, first-class fireman; Joseph Dugan, first-class fireman; John F. Dugan, coal-heaver; James W. Sheffield, second-class fireman; Charles T. Young, orderly sergeant; Austin Quimley, corporal of marines; Roscoe G. Dolley, private of marines; Patrick Flood, private of marines; Henry Hobson, corporal of marines; James Kerrigan, private of marines; John McAleen, private of marines; Geo. A. Raymond, private of marines; James Tucker, private of marines; Isaac Thornton, private of marines; William Y. Evans, nurse; William B. Poole, quartermaster; F. J. Veannoh, captain of after-guard; Charles Hill, landsman; Henry Jameson, first-class fireman; Jno. G. Batchelder, private of marines; John Dwyer, first-class fireman; Thomas Salmon, second-class fireman; Patrick O'Connor, second-class fireman; Geo. H. Harrison, ordinary seaman; George Andrew, ordinary seaman; Charles Moore, seaman; Geo. A. Whipple, ordinary seaman; Edward Wallace, seaman; Thomas Marsh, coal-heaver; Thomas Buckley, ordinary seaman; Edward Wilt, captain of top; George H. Kinnie, ordinary seaman; Augustus Johnson, seaman; Jeremiah Horrigan, seaman; Wm. O'Halloran, seaman; Wm. Turner, seaman; Joshua Collins, ordinary seaman; James McBeath, ordinary seaman; John Pope, coal-heaver; Charles Mattison, ordinary seaman; George Baker, seaman; Timothy G. Cauty, seaman; John Shields, seaman; Thomas Alloway, seaman; Phillip Weeks, seaman; William Barnes, landsman.

Native of Holland.—Wm. Alsdorf, coal-heaver.

Natives of Western islands.—Clement Antoine, coal-heaver; José Dabney, landsman.

Malay.—Benjamin Button, coal-heaver.

Native of France.—Jean Briset, coal-heaver.

Natives of Holland.—Vanburn François, landsman; Peter Ludy, seaman.

Natives of England.—George English, seaman; Jonathan Brien, landsman.

Native of Spain.—Manual J. Gallardo, second-class boy.

Native of Holland.—John M. Sonius, first-class boy.

It thus appears that out of one hundred and sixty-three officers and crew of the sloop-of-war Kearsage, there are only eleven persons foreign born.

Casualties on the Kearsarge.

The following is the surgeon's report of casualties among the crew of the Kearsarge during the action:

“UNITED STATES STEAMSHIP KEARSARGE,

“Cherbourg, France, afternoon, June 19, 1864.

“SIR: I report the following casualties resulting from the engagement this morning with the steamer Alabama.

“John W. Dempsey, quarter-gunner, compound comminuted fracture of right arm, lower third, and forearm; arm amputated.

“William Gowan, ordinary seaman, compound fracture of left thigh and leg, seriously.

“James McBeath, ordinary seaman, compound fracture of left leg, severely wounded.

“I am, very respectfully, your obedient servant,

“JOHN M. BROWNE,

“Surgeon United States Navy.

“Captain JOHN A. WINSLOW,

“Commanding United States Steamship Kearsarge, Cherbourg.”

All these men were wounded by the same shot, a 68-pounder, which passed through the starboard bulwarks below main-rigging, narrowly escaping the after 11-inch pivot gun. The fuzes employed by the Alabama were villanously bad, several shell having lodged in the Kearsarge without taking effect. Had the 7-inch rifle shot exploded, which entered the vessel at the starboard quarter, raising the deck by its concussion several inches, and lodging in the rudder post, the action might have lasted some time longer. It would not, however, have altered the result, for the casualty occurred towards the close of the conflict. During my visit I witnessed the operation of cutting out a 32-pounder shell (time fuze) from the rail close forward of the fore pivot 11-inch port; the officer in charge of the piece informed me that the concussion actually raised the gun and carriage;

and had it exploded many of the crew would have been injured by the fragments and splinters.

Among the incidents of the fight, some of our papers relate that an 11-inch shell from the Kearsarge fell upon the deck of the Alabama, and was immediately taken up and thrown overboard. Probably no fight ever occurred in modern times in which somebody didn't pick up a live shell and throw it out of harm's way; but we may be permitted to doubt in this case; 5-second fuzes take effect somewhat rapidly; the shot weighs considerably more than a hundred weight, and is uncomfortably difficult to lay hold of. Worse than all for the probabilities of the story, fifteen pounds of powder, never more nor less, were used to every shot fired from the 11-inch pivots, the Kearsarge only opening fire from them when within eight hundred yards of the Alabama. With fifteen pounds of powder and fifteen degrees of elevation, I have myself seen these 11-inch Dahlgrens throw three and a half miles; and yet we are asked to credit that, with the same charge at less than half a mile, one of the shells fell upon the deck of the privateer. There are eleven marines in the crew of the Kearsarge; probably the story was made for them.

The reported firing upon the Alabama after her surrender.

Captain Semmes makes the following statement in his official report:

"Although we were now but four hundred yards from each other, the enemy fired upon me five times after my colors had been struck. It is charitable to suppose that a ship-of-war of a Christian nation could not have done this intentionally."

A very nice appeal after the massacre of Fort Pillow, especially when coming from a man who has spent the previous two years of his life in destroying unresisting merchantmen.

The captain of the Kearsarge was never aware of the Alabama having struck until a boat put off from her to his own vessel. Prisoners subsequently stated that she had fired a lee gun, but the fact was not known on board the federal ship, nor that the colors were hauled down in token of surrender. A single fact will prove the humanity with which Captain Winslow conducted the fight. At the close of the action his deck was found to be literally covered with grape and canister, ready for close quarters; but he had never used a single charge of all this during the contest, although within capital range for employing it.

The feeling after the battle.

The wounded of the two vessels were transferred shortly after the action to the naval hospital at Cherbourg. I paid a visit to that establishment on the Sunday following the engagement, and found the sufferers lying in comfortable beds alongside each other in a long and admirably ventilated ward on the first floor. Poor Gowan, who died the following Tuesday, was in great pain, and already had the seal of death upon his face. James McBeath, a young fellow of apparently twenty years, with a compound fracture of the leg, chatted with much animation, while Dempsey, the stump of his right arm laid on the pillow, was comfortably smoking a cigar, and laughing and talking with one of the Alabama's crew in the bed alongside him. The wounded men of the sunken privateer were unmistakably English in physiognomy, and I failed to discover any who were not countrymen of ours. I conversed with all of them, stating at the outset that I was an Englishman like themselves, and the information seemed to open their hearts to me. They represented themselves as very comfortable at the hospital, that everything they asked for was given them, and that they were surprised at the kindness of the Kearsarge's men who came to visit the establishment, when they were assured by their own officers before the action that foul treatment would only be shown them in the event of their capture. Condoling with one poor fellow, who had his leg carried away by a shell, he remarked to me, "Ah, it serves me right; they won't catch me fighting again without knowing what I am fighting for." "That's me, too," said another poor Englishman alongside him.

The paroled prisoners (four officers) on shore at Cherbourg evinced no hostility whatever to their captors, but were always on the friendliest of terms with them. All alike frequented the same hotel in the town, (curiously enough, "The Eagle,") played billiards at the same café, and bought their pipes, cigars, and tobacco from the same pretty little brunette on the *quai du port*.

The following are the names of the officers and crew of the Alabama saved by the Kearsarge:

Francis L. Galt, of Virginia, assistant surgeon; Joseph Wilson, third lieutenant; Miles J. Freeman, engineer, Englishman; Jon. W. Pundt, third assistant engineer; Benjamin L. McClaskey, boatswain; William Forrestall, quartermaster, Englishman; Thomas Potter, fireman, Englishman; Samuel Williams, fireman, Welshman; Patrick Bradley, fireman, Englishman; John Orrigin, fireman, Irishman; George Freemantle, seaman, Englishman;

Edgar Tripp, seaman, Englishman; John Neil, seaman, Englishman; Thomas Winter, fireman, Englishman; Martin King, seaman; Joseph Pearson, seaman, Englishman; James Hicks, captain of hold, Englishman; R. Parkinson, wardroom steward, Englishman; John Emory, seaman, Englishman; Thomas L. Parker, boy, Englishman; Peter Hughes, captain of top, Englishman.

(All the above belonged to the Alabama when she first sailed from the Mersey, and John Neil, John Emory, and Peter Hughes belong to the "Royal Naval Reserve.")

William Clark, David Leggett, Samuel Henry, John Russell, John Smith, Henry McCoy, Edward Bussell, James Ochure, John Casen, Henry Higgin, Frank Hammond, Michael Shields, David Thurston, George Peasey, Henry Yates, seamen; Henry Gødsen, David Williams, Henry Hestlake, Thomas Watson, John Johnson, Match Maddock, Richard Evans, William Miller, George Cousey, Thomas Brandon, ordinary seamen; William McKenzie, James Broderick, William Wilson, cockswains; Edward Rawes, master-at-arms; Henry Tucker, officers' cook; William Barnes, quarter-gunner; Jacob Verbor, seaman; Robert Wright, captain of maintop; William McGuire, captain of foretop; William McGinle, cockswain; John Benson, James McGuire, coal-heavers; Frank Currian, Peter Laperty, John Riley, firemen; Nicholas Adams, landsman; James Clemens, yeoman; James Wilson, boy.

These men, almost without exception, are subjects of her Majesty the Queen. There were also three others, who died in the boats, names not known.

The following are those reported to have been killed or drowned:

David Herbert Llewellyn, surgeon, Welshman; William Robinson, carpenter; James King, master-at-arms, Savannah pilot; Peter Duncan, fireman, Englishman; Andrew Shillings, Scotchman; Charles Puist, coal-passer, German; Frederick Johns, purser's steward, Englishman; Samuel Henry, seaman, Englishman; John Roberts, seaman, Welshman; Peter Henry, seaman, Irishman; George Appleby, yeoman, Englishman; A. G. Bartelli, seaman, Portuguese; Henry Fisher, seaman, Englishman.

The above all belonged to the original crew of the Alabama.

The Deerhound carried off, according to her own account, forty-one; the names of the following are known:

Raphael Semmes, captain; John M. Kell, first lieutenant; Arthur Sinclair, jr., second lieutenant; R. K. Howell, lieutenant of marines. (This person is brother-in-law of Mr. Jefferson Davis.) W. H. Sinclair, midshipman; J. S. Bullock, acting master; E. A. Maffit, E. M. Anderson, midshipmen; M. O'Brien, third assistant surgeon; George T. Fullam, master's mate, Englishman; James Evans, Max Meulnier, J. Schraeder, master's mates; W. B. Smith, captain's clerk; J. O. Cuddy, gunner; J. G. Dent, quartermaster; James McFadgen, fireman, Englishman; Orran Duffy, fireman, Irishman; W. Crawford, Englishman; Brent Johnson, second boatswain's mate, Englishman; William Nevins, Englishman; William Hearn, seaman, Englishman. The last four belong to the "Royal Naval Reserve."

Movements of the English yacht Deerhound.

That an English yacht, one belonging to the royal yacht squadron, and flying the white ensign, too, during the conflict, should have assisted the confederate prisoners to escape after they had formally surrendered themselves, according to their own statement, by firing a lee gun, striking their colors, hoisting a white flag, and sending a boat to the Kearsarge—some of which signals must have been witnessed from the deck of the Deerhound—is most humiliating to the national honor. The movements of the yacht early on Sunday morning were, as before shown, most suspicious, and had Captain Winslow followed the advice and reiterated requests of his officers, when she steamed off, the Deerhound might now have been lying not far distant from the Alabama. Captain Winslow, however, could not believe that a gentleman who was asked by himself "to save life" would use the opportunity to decamp with the officers and men who, according to their own act, were prisoners of war. There is high presumptive evidence that the Deerhound was at Cherbourg for the express purpose of rendering every assistance possible to the corsair; and we may be permitted to doubt whether Mr. Lancaster, the friend of Mr. Laird, and a member of the Mersey Yacht Club, would have carried Captain Winslow and his officers to Southampton if the result of the struggle had been reversed, and the Alabama had sent the Kearsarge to the bottom.

The Deerhound reached Cherbourg on the 17th of June, and between that time and the night of the 18th boats were observed from the shore passing frequently between her and the Alabama. It is reported that English gunners came over from England purposely to assist the privateer in the fight. This I heard before leaving London, and the assertion

* Wounded.

† A mistake. See preceding note.

was repeated to me again at Havre, Honfleur, Cherbourg, and Paris. If this be the fact, how did the men reach Cherbourg? On the 14th of June Captain Semmes sends his challenge to the Kearsarge through Monsieur Bonfils, stating it to be his intention to fight her "as soon as I can make the necessary arrangements." Two full days elapse, during which he takes on board one hundred and fifty tons additional of coal, and places for security in the custom-house the following valuables: 38 kilo. 700 gr. of gold coin, 6 gr. of jewelry and set-diamonds, 2 gold watches. What, then, became of the pillage of a hundred merchantmen, the chronometers, &c., which the Times described as the "*spolia opima* of a whole mercantile fleet?" Those could not be landed on French soil, and were not. Did they go to the bottom with the ship herself, or are they saved?

Captain Semmes's preparations are apparently completed on the 16th, but still he lingers behind the famous breakwater, much to the surprise of his men. The Deerhound arrives at length, and the preparations are rapidly completed. How unfortunate that Mr. Lancaster did not favor the Times with a copy of his log-book from the 12th to the 19th June, inclusive!

The record of the Deerhound is suggestive on the morning of that memorable Sunday. She steams out from behind the Cherbourg breakwater at an early hour; scouts hither and thither, apparently purposeless; runs back to her anchorage; precedes the Alabama to sea; is the solitary and close spectator of the fight, whilst the Couronne has the delicacy to return to port; and, finally, having picked up Semmes, thirteen of his officers, and a few of his men, steams off at fullest speed to Southampton, leaving the "*apparently much disabled*" Kearsarge (Mr. Lancaster's own words) to save two-thirds of the Alabama's drowning crew struggling in the water.

An English gentleman's yacht playing tender to a corsair! No one will ever believe that Deerhound to be thorough-bred.

Conclusion.

Such are the facts relating to the memorable action off Cherbourg on the 19th of June, 1864. The Alabama went down riddled through and through with shot, and as she sank beneath the green waves of the channel not a single cheer arose from the victors. The order was given, "Silence, boys!" and in perfect silence this terror of American commerce plunged to her last resting place.

There is but one key to the victory. The two vessels were, as nearly as possible, equal in size, speed, armament, and crew, and the contest was decided by the superiority of the 11-inch Dahlgren guns of the Kearsarge over the Blakely rifle and the vaunted 68-pounder of the Alabama, in conjunction with the greater coolness and surer aim of the former's crew. The Kearsarge was not, as represented, specially armed and manned for destroying her foe, but is in every respect similar to all the vessels of her class (third rate) in the United States navy. Moreover, the large majority of her officers are from the merchant service.

The French at Cherbourg were by no means dilatory in recognizing the value of these Dahlgren guns. Officers of all grades, naval and military alike, crowded the vessel during her stay at their port, and they were all eyes for the massive pivots, and for nothing else. Guns, carriages, even rammers and sponges, were carefully measured; and if the pieces can be made in France, many months will not elapse before their muzzles will be grinning through the port-holes of French ships-of-war.

We have no such gun in Europe as this 11-inch Dahlgren; but it is considered behind the age in America. The 68-pounder is regarded by us as a heavy piece; in the United States it is the minimum for large vessels, where some ships (the new Ironsides, Niagara, Vanderbilt, &c.,) carry the 11-inch *in broadside*. It is considered far too light, however, for the sea-going iron-clads, although throwing a solid shot of 160 pounds; yet it has made a wonderful stir on both sides of the channel. What, then, will be thought of the 15-inch gun, throwing a shot of 480 pounds, or of the 200-pound Parrott, with its range of five miles?

We are arming our iron-clads with 9-inch smooth bores and 100-pounder rifles, while the Americans are constructing their armor-ships to resist the impact of 11 and 15-inch shot. By June next the United States will have in commission the following iron-clads:

	Tons.	Guns.
Dunderberg.....	5,090	10
Dictator.....	3,033	2
Kalamazoo.....	3,200	4
Passaconaway.....	3,200	4
Puritan.....	3,265	4
Quinsigamond.....	3,200	4
Roanoke.....	3,435	6
Shakamaxon.....	3,290	4

These, too, without counting six others of "second class," all alike armed with the tremendous 15-inch, and built to cross the Atlantic in any season. But it is not in iron-clads alone that America is proving her energy; first, second, and third rates, wooden-built, are issuing constantly from trans-Atlantic yards, and the navy of the United States now numbers no less than six hundred vessels and upwards, seventy-three of which are iron-clads.

This is, indeed, an immense fleet for one nation, but we may, at all events, rejoice that it will be used to defend—in the words of the wisest and noblest of English statesmen—"the democratic principle, or, if that term is offensive, popular sovereignty."

CAPTURE OF THE REBEL STEAMER GEORGIA.

Preliminary letter of Commodore T. T. Craven.

UNITED STATES SHIP NIAGARA,
Off Start Point, English Channel, August 1, 1864.

SIR: On the 16th ultimo I had the honor to inform you of my return to Antwerp, after an unsuccessful cruise in search of the pirate Florida. In consequence of information received on the 28th ultimo from our minister at London, I am now on my way to Liverpool to intercept, if possible, and send to the United States, the steamer heretofore known as the Japan or the Georgia, purporting to have been sold or transferred to British subjects.

In taking leave of the Scheldt, it seems proper that I should bring particularly to your notice the very kind manner in which the arrival of the Niagara was welcomed there by the good citizens of Antwerp.

I immediately, on my first arrival there, called upon the two governors, civil and military, and the burgomaster, and exchanged salutes with their flag. From that time until our final departure there was one constant interchange of civilities between us.

After visiting the authorities of the city, I went to Brussels, and accompanied by our minister, Mr. Sandford, called upon the ministers of foreign affairs of war and marine, and a few days before leaving was presented to the Duke of Brabant.

These visits were all promptly returned, when I availed myself of the many opportunities of firing the proper salutes, and to show to them the Niagara, the first American vessel-of-war and the largest ship which had ever visited the waters of Belgium.

On the evening of the 22d ultimo General Desert, the military governor, paid us the high compliment of heading a large party of serenaders, which, putting off upon two pontoons, anchored near the ship and regaled us with their music for nearly two hours. Besides the kindly feeling, and the deep sympathy in our trouble, expressed towards us by those in high office, we had every evidence of the same sentiments wherever we were thrown in contact with their people; and in acknowledgement of these civilities, excepting at times of exercise, our ship was thrown open to all visitors; and it is an inside estimate when I say that no less than thirty thousand persons availed themselves of the opportunity.

Very respectfully, your obedient servant,

THO'S T. CRAVEN,
Commodore U. S. Navy.

HON. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Report of the capture.

UNITED STATES SHIP NIAGARA,
*From 8 to 10 miles south west of the Berlings,
 Coast of Portugal, August 15, 1864.*

SIR: I have the honor to inform you that, in compliance with the instructions contained in a letter from Mr. Adams, our minister at London, a copy of which is herewith enclosed, I sailed with the Niagara from Antwerp on the 29th of July for Liverpool, where I arrived on the 3d of August, and ascertained that the Georgia would soon sail for Lisbon.

Supposing my best chances for falling in with her would be on this coast, I left Liverpool on the 5th instant, arrived at Lisbon on the 11th; coaled ship and sailed again yesterday morning, and this morning at about 9.30 discovered the Georgia on our port bow, standing to the southward; at 9.45 brought her to; and at noon put a prize crew on board, under charge of Acting Master Kimball, with orders to proceed to Boston, Massachusetts.

Very respectfully, your obedient servant,

THO'S T. CRAVEN,
Commodore U. S. Navy.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Letter from Charles F. Adams, to Commodore T. T. Craven.

LEGATION OF THE UNITED STATES,
London, July 27, 1864.

SIR: I learn from the vice-consul of the United States at Liverpool that the steamer heretofore known as the Japan or the Georgia, purporting to have been sold or transferred to British subjects, is about to sail from Liverpool for some destination unknown, but believed to be with unfriendly intentions to the United States.

The validity of a sale of a belligerent vessel in a neutral port in time of war has ever been denied by Great Britain when a party to the war, and is now denied by the United States. This vessel is therefore open to capture and condemnation as lawful prize of war, wherever she may be found upon the high seas, no matter what may be the national character she assumes.

I have the honor to be, sir, your obedient servant,

CHARLES FRANCIS ADAMS,
 Commodore THO'S T. CRAVEN, U. S. N.,
United States Steamer Niagara.

Additional report of Commodore T. T. Craven.

UNITED STATES SHIP NIAGARA,
Off Dover, England, August 24, 1864.

SIR: On the 15th instant, in lat. $39^{\circ} 16' N.$, long. $9^{\circ} 38' W.$, I fell in with the steamer Georgia, formerly the pirate of that name, and sent her as a good and lawful prize to the United States, under charge of Acting Master Jacob Kimball. I now have the honor to enclose a duplicate of my letter addressed to

you on that occasion, (No. 35,) also a duplicate copy of a letter addressed to me by Mr. Adams, respectively, Nos. 1 and 2.

As the Georgia was sailing under the English flag, and was chartered to the Portuguese government, and as her officers and crew were evidently engaged in good faith to sail on a lawful voyage and could not be treated as blockade runners, nor as belligerents, it seemed to me to be improper to send them to the United States, excepting the chief mate and engineer. I have brought the master, (Captain Witbycombe,) his officers and crew here to be landed.

There is no doubt as to the Georgia being a good and lawful prize, but it seems that some more positive evidence than we now have, to identify her as the Japan, is necessary, and I have written to Mr. Adams for information as to how that evidence is to be obtained.

Trusting that what I have done in this matter will meet your approval,

I am, respectfully, your obedient servant,

THO'S T. CRAVEN,
Commodore U. S. Navy.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

CAPTURE OF THE REBEL STEAMER FLORIDA.

[Telegram from Captain Winslow.]

BOSTON, *November 7, 1864.*

SIR: I have the honor to report the arrival of the Kearsarge off Scituate from the Rocas. Left the Wachusett and Florida at St. Thomas. The Florida was captured at the harbor of Bahia by the Wachusett, October 7. We bring sixteen prisoners and one officer from the Florida.

JNO. A. WINSLOW, *Captain.*

Hon. GIDEON WELLES,
Secretary of the Navy.

Report of the Captain of the Wachusett.

ST. THOMAS, WEST INDIA ISLANDS,
October 31, 1864, via Boston, November 7.

SIR: I have the honor to report the arrival here of this ship, with the rebel steamer Florida in company. The Florida, with fifty-eight men and twelve officers, was captured about 3 o'clock on the morning of the 7th October, instant, in the bay of San Salvador, Brazil, by the officers and crew of this vessel, without loss of life.

Five of her officers, including her commander and the remainder of her crew, were on shore.

The Florida had her mizzenmast and main yard carried away, and her bulwarks cut down. This vessel sustained no injury.

A detailed report will be handed to you by Paymaster W. W. Williams.

Very respectfully, your obedient servant,

N. COLLINS,
Commander U. S. Steam-Sloop Wachusett.

Hon. GIDEON WELLES,
Secretary of the Navy.

TREATMENT IN REBEL PRISONS.

Letter from Lieutenant Commander Pendergrast relative to ill treatment of prisoners at Charleston, South Carolina.

WASHINGTON, D. C., October 24, 1864.

SIR: I have the honor to enclose a copy of a letter which I deemed it proper, on account of the ill treatment we received while prisoners of war in Charleston jail-yard, to address to the rebel authorities at that place, to which I received no answer.

Very respectfully, your obedient servant,

AUSTIN PENDERGRAST,

Lieutenant Commander, United States Navy.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

CHARLESTON JAIL, August 8, 1864.

SIR: In behalf of the naval officers confined in this place, and in respect to the government which we have the honor to represent, I bring to your notice the following statement, viz: That we surrendered to the confederate forces as prisoners of war, and that we have always expected to be treated as such. This treatment has not been accorded us in any of the many prisons in which we have been confined, and we are at this moment occupying a prison designed for the safe-keeping of criminals and felons, a part of whom are let loose upon us every day. For the last two days rations of such a kind have been issued to us which are better calculated to incur starvation than support life; and even if the ration of your government had been issued to us, the want of proper utensils would have rendered it impossible to have eaten them.

The dirt and piles of filth which surround us on all sides in such a confined place, without any system of police, and with only the scanty shelter afforded us after being exposed to rain and the almost tropical rays of the sun for 50 hours even before this slight shelter was given us, will necessarily generate disease, and soon commence the work which the conduct of your government evidently indicates and secretly desires, but are restrained from doing by the fact that such an act must sooner or later become public to the world. The taking by force of our clothing and money by your government officials whilst prisoners in their custody has become so common as to leave us to expect nothing else at their hands.

I hope I need not say to you that I have approached this subject with feelings of great delicacy and regret, believing that the fine sense of gallantry and honor which the confederate soldier has appropriated to himself alone would be a sufficient safeguard to the unfortunate prisoner of war in his hands. Such, however, has not been the case, and as yet, I regret to say, we have met with the treatment which would more readily become that of a barbarous people than one who is now desirous of emulating the greatness of the most civilized nations. The confinement of 600 officers in such a place as we now occupy, with such shelter and food as indicated above, is not only cruel and opposed to the instinct of a civilized people, but may well be characterized as inhuman and brutal in the

extreme; and although we have been treated in the manner set forth, yet we cannot believe that your government has lost all of its feelings of self-respect so much as to indulge in the persecution of prisoners of war.

I need not remind you that the officers and crew of the Atlanta and others of your navy who have been unfortunate enough to fall into our hands have met with far different treatment than we have experienced at the hands of the Confederate States officers.

Hoping this communication will meet your early consideration, and induce you to remove us from the vile association connected with this building,

I am, very respectfully, your obedient servant,

AUSTIN PENDERGRAST,

Lieutenant Commander, United States Navy.

Major General SAM. JONES,

Com'dg Department of Ga., S. C. and Fla., Charleston, S. C.

Statement of Lieutenant S. W. Preston relative to treatment of colored seamen.

NEW YORK, November 21, 1864.

SIR: In reply to the department's inquiry respecting the colored seamen captured on board the Isaac Smith, I have to state that when I was confined in Charleston jail, in September, 1863, they were imprisoned there and employed as scullions about the jail.

I have no later positive information about them, but believe they are still confined there, and subjected to similar treatment.

I have the honor to be your obedient servant,

S. W. PRESTON,

Lieutenant, United States Navy.

Hon. GIDEON WELLES,

Secretary of the Navy.

Acting Ensign George M. Smith reports that four men attached to the Aries died at Andersonville, Georgia, from an insufficiency of food.

BROOKLYN, N. Y., October 24, 1864.

SIR: I have the honor to report that on the 7th of January, 1864, while attached to the United States steamer Aries, I was ordered by Acting Volunteer Lieutenant E. F. Devens commanding, to board the blockade runner Virginia Dare, she having been chased ashore on North island, South Carolina, by the United States steamers Aries and Montgomery, and endeavor to get her afloat; in case I failed in so doing, to destroy her.

I boarded her in obedience to the above orders, and finding it impossible to get her afloat, set her on fire. During the time I was engaged in getting the steamer afloat, the sea and wind had increased to such an extent that, in shoving off from the steamer, my boat was struck by a heavy sea, filled, and swamped from under us, injuring myself and a number of my crew. We succeeded in gaining the beach, and endeavored to launch our boat, which was cast ashore by the surf, but owing to the exhausted condition of the men the attempt failed.

A boat from the United States steamer Montgomery, in charge of Acting Master and Executive Officer George H. Pendleton, came to our assistance, and succeeded in rescuing three officers and five men, the remainder, including Mr.

J. E. Parkman, captain's clerk, and myself, being too weak to swim to the boat. After placing the above officers and men in another boat, Mr. Pendleton again came to our assistance; but while endeavoring to get his boat as near to the beach as possible, it was struck by a sea, capsized, and thrown upon the beach. While endeavoring to launch the Montgomery's boat, the enemy's cavalry appeared from an adjacent woods, in which they had been watching our movements, unseen by us, and demanded our surrender. A consultation was held by the officers, and taking into consideration the condition of our men and arms, surrendered to Major White, commanding battalion of 21st Georgia cavalry, and were taken to their camp, from thence sent to Charleston, South Carolina, remaining there for a period of seven (7) months, since which time we were confined in different parts of the so-called confederacy.

I am happy to say that Mr. Pendleton did all in his power to save us, and succeeded in a measure, but, unfortunately, in his desire to rescue all, was himself captured.

I am very much grieved to inform you that four of the seven men captured with me, and belonging to the United States steamer Aries, died at Andersonville, Georgia, and, from the testimony of those who were fortunate enough to leave that place alive, I am confident that they died from an insufficiency of food.

I have written to the honorable S. J. W. Tabor, informing him of their names and the residence of their families, as far as I know.

I was paroled, together with a number of United States naval officers, the 3d of October, 1864, and sent through the lines the 17th instant, and ordered by the honorable G. V. Fox, Assistant Secretary of United States Navy, to report by letter.

I remain, very respectfully, your obedient servant,

GEO. M. SMITH,
Acting Ensign U. S. N.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Capture of Acting Master Edward L. Haines, and his treatment by the rebels.

PHILADELPHIA, October 29, 1864.

SIR: I have the honor to report that on the 5th of August, 1863, the United States steam-sloop Powhatan, Lieutenant Commander E. P. Williams commanding, left her station off Charleston, South Carolina, and proceeded to Port Royal, South Carolina, leaving me with the fleet, in charge of her first launch and a crew of twenty-four men, armed with small arms, the launch having a 12-pounder howitzer. I was assisted by Master's Mate Charles Howland, of same ship. My orders were to proceed on board of United States steamer Canandaigua and remain until dark, then to take my station inside the bar as a picket boat. At 5 o'clock p. m. I left the Canandaigua and was taken in tow by United States steam-tug Rescue, as was also one of the launches of United States steamer Housatonic. We went alongside of United States steamer Wabash and took in tow her first and second launches, they being armed similar to my own launch. The Wabash's launches were commanded by an acting master's mate, and he remained in her second launch. I, being senior officer, took command of the Wabash's first launch, leaving Acting Master's Mate Howland in command of the Powhatan's launch.

Before taking my station, I reported to Rear-Admiral J. H. Dahlgren; he ordered me to report to the officer commanding the United States monitor Cat-skill—she being the guard-ship for that night. The admiral informed me that

two or three of the enemy's steamers were in the habit of coming down to Cummings's Point every night, and if they came within range, to fire upon and sink them if possible, and that Ensign B. F. Porter would be out in a small boat, and to be careful not to fire at him.

On reporting to the commander of United States steamer Catskill, (monitor,) he ordered me to pull a short distance above her, towards Fort Sumter, and anchor the launches under my command in line and in sight of each other, and signalize by firing and displaying lights, in any danger that might occur. I took the lead of the line towards the fort as my station. About 11 o'clock p. m. Ensign Porter came alongside and reported "that a steamer had come down to Cummings's Point" and was now lying close in, and that he thought "she was a blockade runner." Leaving me, he pulled for the Catskill. I immediately got my anchor and let my launch drop up towards Cummings's Point, in order to get a view of the reported steamer. Soon after getting under way, I made out a steamer standing down the channel close to Morris island. I immediately opened fire on her from my howitzer, and made signals, as agreed upon, to the fleet, at the same time pulled my boat towards shoal water, to avoid colliding with her. Finding I could not escape, I determined to board and try to take her, at the same time expecting answers from the other launches or Catskill, they being in sight. I succeeded in boarding her, under a heavy fire of musketry. After a short resistance we were compelled, by the superior numbers of the enemy, to surrender. She proved to be the Confederate States steamer Juno, manned by a crew of fifty men, and protected outside and in by cotton bales. She also had a torpedo projecting from her bow, for the purpose of blowing up any vessel she might strike. She immediately returned to Charleston harbor, with my launch in tow, much injured from the collision, and transferred us to Confederate States iron-clad Chicora, Captain Tucker commanding. On the following afternoon we were sent to Charleston jail, where I found two of my boat's crew who were knocked overboard from the Juno, and swam to Sullivan's island, where they were taken prisoners. In Charleston jail we were confined with criminals of the worst kind, and remained for twenty-four hours without food or water. When rations were issued to us, they consisted of half a pound of beef and one quart of unsifted corn meal, without salt, per day. On the 10th of August, 1863, from Charleston we were sent to Columbia, South Carolina, (excepting seaman Amos A. Kaunne, who was retained in Charleston by the confederate authorities.) In Columbia we were confined in a common jail, our rations were half a pound of beef, one quart of unsifted corn meal, and about half an ounce of salt per day. On the 15th of August we were sent to Richmond; my men were confined on Belle island, near Richmond, Virginia, and I was sent to Libby prison. (The man Kaunne arrived in Richmond, Virginia, about the 15th of September, 1863.) About the 30th of September, I learned that my men were all exchanged, excepting seaman E. R. Clark, who died while a prisoner on Belle island, near Richmond, Virginia. During my confinement in Libby prison, for forty-seven days, we were issued nothing but a half pound of corn-bread, and about half a gill of cow peas per day, and when meat was issued it was not more than four ounces per day.

On the 7th of May, 1864, I was sent to Macon, Georgia, where we were confined in an open stockade, without shelter, until we built sheds ourselves, after several applications for the materials. Our ration in Macon was one pint of unsifted corn meal, four ounces of bacon of worst kind, half a gill of cow peas, one table-spoonful of rice, and the same of salt, per day. On the 28th of July I was sent from Macon to Charleston, South Carolina, with first 600 officers, for the purpose of placing us under fire; on arriving in Charleston we were confined in the jail yard; part of the officers were without shelter of any kind; from the jail yard we were sent to a dirty, filthy workhouse, infested with all manner of vermin, and the only means whereby we could escape these torments

was to give our parole, which resulted in a change of quarters to the Roper hospital, a very comfortable building. Our rations in Charleston were four ounces of meat, some days bacon and others beef, and some days would issue one ounce of lard in lieu of meat, half a pound of corn meal, half a gill of rice, one table-spoonful of salt per day, also half a pint of molasses per week. On the 30th of September, 1864, was sent from Charleston to Richmond for the purpose of exchange. While confined in Richmond for the purpose of exchange, our rations were about four ounces of meat, half a pint of cow peas soup, and half a pound of corn-bread per day. On the 18th of October, 1864, was sent from Richmond, by flag of truce, to Annapolis.

During all of my imprisonment I have been treated more like a criminal than a prisoner of war.

The following is a list of the men captured with me : Charles Feliz, cockswain ; Henry Hockslan, ordinary seaman ; Alexander Manning, seaman ; Latham A. Bailey, ordinary seaman ; Robert Armstrong, seaman ; Charles Saulsbury, landsman ; John Kolcbue, seaman ; Amos A. Kaunne, landsman ; John Hammon, seaman ; Edward R. Clark, seaman ; George Boardois, seaman ; and one man whose name I have forgotten, having lost the list during my imprisonment.

I am happy to report that I was promptly obeyed and bravely supported by all of my crew.

I have the honor to be your most obedient servant,

EDWARD L. HAINES,

Acting Master U. S. N.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Statement of Acting Master's Mate Thomas Brown, relative to rebel treatment.

PHILADELPHIA, October 31, 1864.

SIR: In obedience to your orders, I make the following statement of my capture, treatment as a prisoner, and release from the Confederate States, viz:

On the 23d of August, 1863, I was captured on the United States steamer Reliance, transferred to Richmond, and placed in Libby prison in confinement. Ration then issued to us was about twelve ounces of bread and five ounces of beef a day ; shelter was pretty fair, but clothing very scarce. About the month of January there was scarcely any meat issued, and the bread was changed into corn-bread. On the 7th of May, 1864, we were transferred to Danville, Virginia, and stopped there three days, when we were taken to Macon, Georgia. On the 15th of May arrived in Macon, and were placed in a stockade of about three acres of ground. There were two old houses, but not large enough to shelter one-half of us. I slept on the bare ground for about two weeks. About the 1st of June there was a number of pine boards furnished, and we made shelter for ourselves. Rations, one pound of corn meal a day, four ounces bacon, one ounce rice, one ounce beans. In the month of August left Macon for Savannah, Georgia, and were placed in a stockade. Rations, one pound of beef a day, corn meal and rice as much as I could use, though the water was very bad. September 13, 1864, all prisoners of war in Savannah were sent to Charleston, South Carolina, and placed in the jail yard ; some of us were furnished with tents, others not ; rations about one-half pound corn meal, one-quarter pound of flour and meal, bacon very little. The treatment was very hard in Charleston. On October 5, 1864, transferred to Columbia, South Carolina. Rations, corn meal, rice and molasses ; no shelter.

The above is written from memory, and is as near the true history of our treatment as it is possible for me to furnish, never having kept any record or memorandum of our residence among the rebels. God knows I shall never forget it.

I have the honor to be, sir, very respectfully, your obedient servant,

THOMAS BROWN,

Acting Master's Mate, U. S. N., No. 606 South Front street.

Hon. GIDEON WELLES,

Secretary of the Navy.

Statement of Acting Third Assistant Engineer Samuel B. Ellis, relative to rebel treatment.

WASHINGTON, D. C., November 1, 1864.

SIR: In obedience to your order of October 28, I beg leave to submit the following report of my treatment whilst a prisoner of war.

Owing to sickness during my imprisonment, I kept no memoranda, and therefore shall have to trust to my memory for the following statement:

I was captured February 2, 1864, off Newbern, North Carolina, and marched to Kingston, a distance of forty miles, and thence was conveyed by rail to Richmond, *via* Goldsboro', Weldon, and Petersburg. Our guard from Newbern to Kingston consisted of cavalry, and during the march we were allowed occasionally to ride a short distance, while the guard, who were tired of riding, walked.

The rations consisted of corn-bread and bacon; of this I had no cause of complaint.

On arriving at Richmond we were taken to Libby prison, and kept there three and a half ($3\frac{1}{2}$) months. The rations during this time were very poor, and consisted of a piece of corn-bread about (3) three inches square once a day, one half ($\frac{1}{2}$) gill of peas and rice, alternately every other day, and fresh meat four times a week. The ration of meat was withdrawn for six (6) weeks, on account of the most of the officers receiving provisions from the north, and it actually became necessary for myself and others, who received no boxes, to beg food from our more fortunate comrades, to sustain life. Complaint having been made to the rebel secretary of war, two rations of corn-bread were served out to us during the remainder of our confinement, but the meat ration was still withheld. The quality of the meat was very poor. In some instances the prisoners refused to eat it, owing to its character. The peas were full of worms and unfit to eat, but hunger compelled us to eat them.

The rice was of tolerable good quality. Cabbage and potatoes were served out three or four times during my stay in this prison, and this is the only place that I received vegetables during my imprisonment; the other rations, with the exception of corn-bread, was withheld these days. The money sent us at Richmond by our friends from the north was withheld until we returned to Richmond for exchange, and therefore was of little benefit. Libby prison afforded us good shelter overhead; the windows, however, had no sash and were entirely open, with the exception of iron bars. No one was allowed to look out of the windows under penalty of being shot. One person was killed by the guard while sitting at least six feet from the window reading. Two others were slightly wounded in the head while looking out of the window.

About the middle of May all prisoners at Libby prison, about nine hundred, (900,) were removed to Danville. We left Richmond so suddenly that, by order of the rebel officer in charge of us, we were compelled to leave our blankets,

&c., behind, which was a great source of inconvenience. We remained at Danville two weeks. During this time our rations consisted of corn-bread, bacon, and rice soup twice a day. The shelter here was good.

From Danville we were sent to Macon, Georgia. During this transportation I suffered a great deal for food and water, no rations being issued to us for two days. I also suffered much from sickness, which I had contracted at Libby prison, and was crowded into a box-car containing sixty-five (65) persons.

We arrived at Macon about the last of May. Here I was placed under medical treatment in a building for three or four days, and at the end of this time, although I was still sick, I was turned out into a pen, containing about four or five acres of ground, in which there were about one thousand officers confined. The building was used partly as a hospital and partly as quarters for our army officers of rank—senior to captain. It was situated in the centre of the pen, and was formerly used as a fair building. In this pen there was no shelter at all, and I was compelled to dig a hole under the house and burrow myself for protection from the rain and intolerable rays of the sun. In this situation I remained, until driven out by the rain, when I again took refuge in the building and determined at all hazards not to leave it until some shelter was erected. About the middle of July lumber was furnished the prisoners, and they built quarters for themselves in the pen. The rations here consisted of bacon, (about half an ounce per day,) corn meal, which we had to cook ourselves, peas, rice, molasses, salt, and vinegar; all of these articles, however, were not furnished regularly. Neither fresh meat nor vegetables were to be had at Macon, and, as a consequence, I suffered very much with the scurvy. I was completely covered with sores, and some still remain on my person. I was sent to the hospital, but as my rations there were the same as when in the pen, I continued to grow worse and became weaker until removed to Charleston. My general treatment at Macon was worse than at any other place; medicines were very scarce, and not served out regularly to the patients.

On my arrival at Charleston, about the middle of August, I was sent to the "Prisoners' Hospital." The treatment here was much better than at Macon. Vegetable soup was issued to the patients every day. Being under good care, and allowed to receive money from my brother, in the fleet off Charleston, I gradually got better. We were also allowed to purchase any necessities of life from the sutler attached to the prison. While in Charleston I was confined in the workhouse and in tents in the jail yard. Rations were issued for ten days, and consisted of fresh meat six days, bacon three days, lard one day, flour five days, meal five days, peas, rice, grist, salt, vinegar, and molasses. These rations, however, were gradually reduced until they amounted to less than half of the original quantity. The quality was much better than I received anywhere else. The "Workhouse prison" and "jail yard" were both under fire of our guns on Morris island. The projectiles sometimes could be heard passing close to the prisons, but fortunately none struck them, though pieces of shell have fallen on the buildings and in the yards.

On the 1st of October I left Charleston with other naval prisoners, and arrived in Richmond on the night of the 4th. On the 5th I was paroled and sent to Libby prison, and remained there until the 18th, when I was sent to Varina for exchange. On the same day I was transferred to the flag-of-truce steamer City of New York, and arrived at Annapolis October 20, 1864.

My general treatment during the time I was a prisoner was such as a convict might expect to receive in a felon's cell. I would state that I have not had a knife or fork in my hand, nor have I slept on a bed, for nine consecutive months; and when suffering with scurvy was treated with as little consideration as if I had been robust and healthy. I would also state that the sores on my

legs are still unhealed, and will require probably a few weeks to recruit, when I respectfully ask to be sent to a duty where I may be useful to my country.

I am, very respectfully, your obedient servant,

SAMUEL B. ELLIS,

Acting Third Assistant Engineer, U. S. Navy.

Hon. GIDEON WELLES,

Secretary of the Navy.

Statement of fifteen petty officers and seamen concerning their treatment in rebel prisons.

NAVY YARD, WASHINGTON,

Commandant's Office, November 1, 1864.

SIR: I forward herewith the general statement of the returned petty officers and seamen who have been imprisoned in the south, of the manner in which they were treated whilst prisoners, as ordered by your letter of the 28th ultimo.

One enclosure.

I have the honor to be, with great respect, your obedient servant,

J. B. MONTGOMERY,

Commandant.

Hon. GIDEON WELLES,

Secretary of the Navy.

Statement of fifteen petty officers and seamen—paroled men—who were captured at Fort Sumter, September 9, 1863, in the night attack.

UNITED STATES NAVY YARD,

Washington, October 31, 1864.

After our capture we were put in the Charleston city prison, where we remained four days, our food while there was one table-spoonful of mush each day, and at night we had nothing to lie on. From Charleston we were sent to Columbus, S. C.; during our journey we received nothing to eat, and here we were placed in the city barracks, wooden sheds. We were kept here two months; our treatment was tolerably good, plenty to eat; our food was corn meal, rice and beef. After we left Columbia we were sent to Pemberton prison, Richmond. Here we received a ration of one-half loaf of corn-bread (one-half pound weight) and three ounces fresh meat; we were here from the 17th of November, 1863, until the 22d of February, 1864. We were then sent to Andersonville, Georgia, seventy-five or eighty being placed in each cattle car, some of us were in open cars; and the weather was very cold during the time; when we arrived there we were placed in the stockade or cattle pen, with a fence eighteen feet high; we were here without any covering. The stockade comprised about sixteen acres, nearly one-half of which was a swamp; we had to use the swamp water for drink. Our ration was one pint corn meal and one-third of a pound of meat each day. We had no means of cooking our food, most of the time; when we had no other means we would make a kind of gruel with the meal and eat our meat raw. On the inside of the stockade we had what was called a dead line, twenty feet wide, and we were shot at if we offered to pass said line. In the month of August there was from one hundred to one hundred and fifty that died daily. We remained here about seven months, at the end of which time part of us were sent to Savannah and part to Richmond

again. In Savannah we were again placed in an open pen; our rations here were the same as at Andersonville with the addition of two spoonful of molasses.

The Richmond party were nine days on the road, and had but one ration to eat during the whole of the time. We were placed in the Libby prison. There were about one hundred and twenty-six of us together. On the road to Richmond two or three died from starvation. From Richmond we were sent down the river to be exchanged.

We forgot to mention about the dead, when in the stockade at Andersonville, during the latter part of our stay; when a man would die we would bury him just where he fell. Stripped of all clothing, without coffins, boxes or anything, sometimes hundreds were placed in the same ditch.

We were chained and made to drag heavy balls, sometimes for two or three weeks at a time, for the slightest offences, and if we attempted to desert were hunted with blood-hounds; some of our men were brought back, torn in pieces by these hounds.

ALEXANDER CLARK,
Carpenter's Mate.
WILLIAM SIMMS,
Boatswain's Mate.
CHARLES HILYARD,
Boatswain's Mate.

FRANCIS GARLIN,
Seaman.

Statement of twelve petty officers and seamen who were captured on the United States steamer Water Witch on the 3d of June, 1864.

We were sent to Andersonville, Georgia, and placed in the stockades; we were four days on the road; our ration was two rice biscuits and about a quarter pound of meat for the whole trip. We were in irons, a white man and a black man chained together. When we were marched through the cities we were hissed and cursed at with cries of "Kill the damn negroes," &c.

The stockade comprised fifteen acres or more, which was about one-half swamp; we were made to drink this swamp water. Our ration was about one pint of corn meal, with about two or three ounces of pork. We were the most of the time in the new stockade, and managed to get a little wood occasionally to cook our rations with. We had a dead line on the inside of the pen, and the

order was to shoot all prisoners who passed said line. We have known instances where parties would go inside the line and beg the guard to shoot them. When a Yankee was shot by the guard, the said guard was granted twenty day's leave of absence. We came through from this prison to Richmond, where we were exchanged.

WILLIAM FENNAR,
Master-at-arms.
FRANCIS JOHNSON,
Boatswain's Mate.
JOHN PARKER,
Gunner's Mate.
WILLIAM PRICE,
Sailing-master's Mate.
HENRY HILL,
Quartermaster.
JOHN HARRIS
Quarter-gunner.
HENRY THORNTON,
Captain of Forecastle.
JOSEPH MASON,
Captain of After Guard.
JOHN WILLIAMS,
Captain of After Guard.
JARVIS HAZELTON,
Cockswain.
CHARLES FARMER,
Wardroom Steward.
JAMES MURRAY,
Seaman.

Statement of one man from the United States steamer Southfield, captured at Plymouth, North Carolina, April 20, 1864.

Fully corroborates all that has been stated in the foregoing testimony as to the treatment received by him.

WILLIAM ELLINGSWORTH, *Ordinary Seaman.*

Three men from the Columbine, captured on St. Joseph's river, also corroborate the foregoing.

JOHN SMITH, *Quartermaster.*
PATRICK KELLY, *Coal-heaver.*
N. TIERNAY, *Second-class Fireman.*

One man from the gunboat Little Rebel, captured at the mouth of Red river, May 11, 1864.

He was sent first to Mobile, Alabama, and from thence to Andersonville, Georgia, and placed in the pens. Treatment the same as in the foregoing testimony. This man had to walk barefooted from Mobile to Andersonville; some days he walked thirty-five miles.

CHARLES GORDON, *Quartermaster.*

Another batch of men from different vessels, captured at various times, were examined, whose testimony was all about the same as the foregoing.

It would fill a large volume if we should mention all the hardships and privations these men had to undergo. Speaking of obtaining fuel, the most of the time it was bought by taking out a dead man. For every man that was carried out the rebels would give one stick of wood. By these means fuel was mostly obtained to do what little cooking there was done.

Very respectfully, your obedient servant,

C. V. MORRIS,
Master and Executive Officer.

SAMUEL CROSS,
Chief Clerk of Yard.

Commodore JOHN B. MONTGOMERY, *Commandant.*

Acting Engineer J. P. Cooper's treatment in rebel prisons.

MOORESTOWN, BURLINGTON CO., N. J.,
November 2, 1864.

SIR: Your letter of October 28 is received.

I was confined first in the barracks at Savannah, in the cells. The rations consisted of two small pieces of corn-bread a day. From there I was taken to Macon, and confined in the stockade, without shelter, for two weeks. The rations consisted of three pints of Indian meal, one-half pound bacon, one-half pint beans, four table-spoonsful of rice, two table-spoonsful of salt, one-half pint molasses every four days. From there I was taken to Savannah stockade. There we were furnished with a tent for every six officers. Rations consisted of meal, rice, fresh meat, and salt in abundance.

We left Savannah, September 13, for Charleston, and was confined in the city prison yard seventeen days, without shelter. Rations consisted of one pint flour, four pints meal, one-half pint molasses, two pints rice, for ten days, a small piece of meat each day. They never gave us anything to cook our bread or meat in during our confinement in Charleston. From there we were sent to Richmond, a journey of four days, and was furnished with one ration. In Libby prison we were furnished a small piece of corn-bread and meat for breakfast, and the same amount of bread for supper, with one-half pint bean soup; no meat. I was sick in Libby with chills, from exposure. I had no blanket, the prison being open; no windows being to the prison, and no fires. The doctor prescribed for me several days, but never furnished me with any medicine, saying that he had not time to send any medicine up to me. So I came home with the chills and fever for the want of medicine.

Your obedient servant,

J. P. COOPER,
Acting Engineer, U. S. N.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Treatment of Third Assistant Engineer George A. Dean.

FREDERICK CITY, MD., November 3, 1864.

SIR: Your order of the 29th ultimo has just been handed me, and I would respectfully make the following statement:

My treatment during my imprisonment was varied, having been confined at a

number of places. I was allowed to remain at Plymouth twenty-eight days after my capture, having received a severe shell wound through the foot, as also a flesh wound on the hip. About the first thing they did was to appropriate my trunk and its contents to their own use, leaving me what I had on my back. The shelter was comfortable. My wounds were attended to by our army surgeons and stewards. My rations were corn-bread and bacon, of very small amount and inferior quality, scarcely enough to keep the soul and body together. On the 19th of May I arrived in Raleigh, where I received good shelter, but rations very short. On the 28th I was sent to Salisbury, N. C. There I received good shelter, but only one pound flour, one-fourth pound bacon, per day's ration, with the privilege of purchasing. On the 6th of August I was started for Macon, Ga., arriving on the 10th. My rations on the voyage were very short. At Columbia I received a few mouldy crackers, made of wheat and pea flour, and raw bacon. The shelter was shedding, constructed by the hands of our officers. The rations were meal of the roughest kind, with bacon, beans, and salt, all of small amount. I was sent from Macon on the 13th, arriving in Charleston on the 14th. There I was quartered in the jail yard, having as a shelter the ordinary small wedge tent, which was capsized several times by rain-storms, subjecting us to drenching rains. My rations were one-half flour and meal, rice, beef, salt, peas, and grits. As at other places, they were of small amount. On one occasion, they issued nothing but rice for six days. On the 30th September we were started for Richmond, arriving on the evening of 3d of October, receiving one day's rations in all that time, and that composed of mouldy crackers and raw bacon, received at Columbia, South Carolina. At Richmond, I was confined in Libby prison. At nine a. m. they would issue a small piece of corn-bread and a piece of beef to correspond. At three p. m. a like piece of bread and two-thirds pint wormey pea soup was issued. I was treated, generally, with respect by their soldiers. In conclusion, I would state that I do not think I could have existed without private means.

I am, very respectfully, your obedient servant,

GEORGE A. DEAN,

Third Assistant Engineer, U. S. N.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Treatment of Acting Ensign Robert M. Clark in southern prisons.

MIDDLETOWN, CONNECTICUT, November 4, 1864.

SIR: I have the honor to furnish the following statement of my treatment while incarcerated in southern prisons:

On the 8th of October, 1863, while on duty ashore at Pensacola, Florida, I was captured by General Clanton, Confederate States army, and was made to march about sixty miles to Pollard, Alabama. While in charge of General Clanton my treatment was very kind. My rations the same as the soldiers.

On the 12th of October I was put on the cars, under a strong guard, for Mobile. While on my way there a number of officers of the Confederate States army threatened to hang me, and the man (colored) captured with me, they supposing me to belong to a colored regiment. Arriving in Mobile, I was thrust in the provost prison for safe-keeping, the inmates consisted of deserters from our army, conscripts, thieves, burglars, &c. I was obliged to sleep on the floor without any covering. Our rations consisted of three-fourths of a pound of corn-bread, and one-half pound of meat per day.

On the 20th I was started for Atlanta, Georgia, arriving there on the 22d,

and put in a common stockade, without shelter of any kind. The rations were the same as at Mobile.

On the 26th I was sent to Richmond, in company with two hundred United States soldiers. While on my way there I was without food for two days, and crowded into freight and cattle cars, some of the time there was not room to sit down.

On the 29th I arrived at Richmond, and was sent to Libby prison; the treatment there was of the worst kind, the officials of the prison doing all they could to make us miserable. Our rations were of the poorest kind, and scarcely sufficient to sustain life. Some of the time we had about two ounces of meat, eight ounces of corn-bread, and a small spoonful of rice per day, and very often nothing but the eight ounces of corn-bread. There were no blankets or covering furnished us by the rebels. Most of the windows were without glass, and the prison was very cold. We were obliged to cook our rations of meat and rice when we could get wood, the supply of which was very short; if we approached the windows to look out, we were liable to be shot by the guard stationed around the prison.

On the 7th of May, 1864, I was sent, in company with the officers confined in Libby prison, to Danville, Virginia, arriving there on the 9th. Our rations there consisted of corn-bread, meat, and rice in sufficient quantity. We were crowded into a small building. I had the curiosity to measure the room where two hundred and twenty-one of our officers were confined, which was seventy-two feet long, and thirty-eight feet wide.

On the 9th we were sent to Macon, Georgia, and put in a stockade without shelter, with the exception of two small buildings. After remaining without shelter for a few days, the rebels furnished us with materials to build barracks, which were only roofed; the space allotted to each officer was two feet wide and six long. Our rations there were of the poorest kind; they issued us five days' rations at a time; it consisted of seven pints of corn meal, one pound of bacon, one-half pint of molasses, beans and rice.

About the 2d of August, 1864, I was sent to Charleston, South Carolina, and confined in the jail yard, and without any shelter from the heat and storms. Our rations were very small—some days we would have only a half pint of cracked rice, other days a small piece of bacon. After remaining in the jail yard for seventeen days, I was removed to Roper's hospital, which afforded us shelter. All the time I was confined in Charleston I was under fire from our batteries on Morris island.

On the 30th of September I was sent to Richmond, and arrived inside our lines on the 18th of October, 1864.

Very respectfully, your obedient servant,

ROBERT M. CLARK,

Acting Ensign, United States Navy.

Hon. GIDEON WELLES,

Secretary of the Navy.

Treatment of Acting Master's Mate Wm. B. Spencer.

SOUTH READING, MASSACHUSETTS,

November 14, 1864.

SIR: In obedience to an order from the Navy Department, dated October 29, (only received this day,) to furnish the department with a statement of my treatment while prisoner of war, also as regards shelter and food, I have the honor to report that from my capture to release—five months—I had favorable

treatment while in the enemy's hands, excepting in the short time I was at Richmond previous to exchange. While there I, as well as my companions, were far worse treated than in either Macon, Savannah, or Charleston. As regards food, at no time was a sufficient ration served out to me, and I was, with others, several times short of cooking utensils, especially after having been moved from one place to another. Shelter I was always provided with, excepting the first fortnight at Macon; after that time, materials were provided for us to erect sheds. At Savannah, all had tents; at Charleston, about three hundred, myself included, were forced to sleep in the open jail yard, exposed to the foulest smells day and night, and in daytime in a breeze were completely covered with sand. In Richmond I was confined in the Libby prison.

In conclusion, I would say that I believe as much food was given to us as the enemy could spare, and as much as was given to their own men; their treatment of me was favorable, on the whole; and that shelter was furnished when it could be had to give.

Hoping that this report may meet your approval, I remain, sir, very respectfully, your obedient servant,

WILLIAM B. SPENCER,
Acting Master's Mate, United States Navy.

HON. GIDEON WELLES,
Secretary of the Navy.

Treatment of Second Assistant Engineer Isaac Johnson.

BROOKLYN NAVY YARD,
November 17, 1864.

SIR: In conformity with your order of the 29th ultimo, I have the honor to transmit the following statement relative to the treatment I received while prisoner of war:

On my arrival in Richmond, Virginia, after being captured, I was lodged in Libby prison, and there confined for nine months, after which transferred to Macon, Georgia, and placed into stockade without shelter of any kind for two weeks; then we were furnished with lumber, out of which the prisoners built their own barracks, where we were kept for three months. From Macon we were taken to Savannah, and again placed into a stockade, and with a few exceptions all were supplied with tents. In this condition we remained six weeks. From there we were taken to Charleston, South Carolina, and confined in the prison yard, under guard, and without shelter of any kind for seventeen days; at this place we were paroled and returned to Richmond, Virginia, where we remained two weeks before we were allowed to pass through the lines. In regard to our treatment by the rebel officers, Savannah is the only place they extended the slightest degree of courtesy, and in fact the only place we were used anything like prisoners of war. At all other places they treated us in a most shameful and cowardly manner, especially in Richmond. I was one hundred and forty-five consecutive days without a ration of fresh meat, and forty-five without a meat ration of any kind.

The following is a table of the daily rations which they were supposed or pretended to issue, but we never at any time received it, and sometimes not half of it: At Richmond they pretended to issue daily, one-half pound corn-bread, one-half pound fresh beef, one-half pint bean soup; at Macon, one and a half pound corn-bread, one-fourth pound bacon, one-half ounce rice, three-tenths ounce salt, one ounce beans, one-half gill of molasses; at Savannah we did receive daily one and three-fourths pound corn meal, one pound fresh beef, one

ounce salt, one-fourth gill vinegar; at Charleston, one-half pound breadstuff, one-half pound fresh beef, one-fourth pound beans, one-half gill molasses, one-fourth ounce salt.

The above statement is respectfully submitted.

I am, sir, very respectfully, your obedient servant,

ISAAC JOHNSON,

Acting Second Assistant Engineer, U. S. N.

Hon. GIDEON WELLES,

Secretary of the Navy.

Treatment of Acting Ensign George W. Smith.

BROOKLYN NAVY YARD,

November 19, 1864.

SIR: In obedience to your orders of the 28th of October, (they being just received,) I make the following statement:

Myself, including three officers and twenty-two men, were captured on the 7th of January last while on duty, partially stripped of our clothing and valuables, and marched five miles to their camp and placed in a deserted negro hut overnight, without food or fire. The next day (8th) we were sent to Georgetown, S. C. There we received our first confederate rations, consisting of two hard biscuits. We remained there for two days, and then started on a march for Kingstree, S. C., distant forty-eight miles, arriving there on the 12th of January.

We then took the cars for Charleston, S. C., arriving there at 1 a. m. on the 13th of January. We were then placed in the jail designed for murderers and felons—said jail being under fire from our batteries on Morris island. There I was separated from my men, they being confined in a portion of the jail called the tower; myself and other officers were placed in a cell 20 by 15 feet, without blanket and necessary clothing. Our ration consisted of one-half pound of corn-mush and two ounces of bacon per day. We remained in that cell, without once leaving it, from January 13, 1864, up to May 16, 1864, and were occasionally visited by rebel officers and subjected to the most insulting language. Our men, though daily insulted, kept up their spirits, but starvation soon commenced its work, and the first victim from our party to their ruthless barbarity died the 16th of March.

On the 10th of May, 1864, we were removed to Macon, Ga., there parting with our men, they going to Andersonville, Ga.

We were placed in the stockade, an enclosure of four acres, in company with nine hundred army officers. We had no shelter from the weather; some few who had money were fortunate in getting a blanket, and with that constructed rude tents. In about three weeks, after constant importuning, they furnished each officer with ten feet of board, and with it we constructed sheds.

The ration claimed to have been issued, but never came up to the amount, was as follows, viz: Corn meal, one and one-eighth of a pound; bacon, one-fourth of a pound; rice, one-half of an ounce; salt, three-tenths of an ounce; soft soap, one-twentieth of an ounce; beans, one ounce; molasses, one-half of a gill, in lieu of meat.

We remained there up to the 29th of July, and myself, in company with six hundred officers, were removed to Charleston, and on the way seven of us naval officers made our escape from the cars, and after travelling for four days we were run down by bloodhounds within four miles of our lines at Hilton Head. We were taken to Charleston jail and confined in the yard without shelter, our ration for three days consisting of one tea-spoonful of lard and one ounce of rice.

On giving our parole of honor not to escape we were placed in a fine building called the Roper hospital, and received the same ration as at Macon.

On the 27th of September all the naval prisoners, including myself, were moved to Richmond, Va. On our way to that point I learned that all of our men, excepting five, had died at Andersonville, and that they died from starvation. We arrived in Richmond on the 4th of October, and were confined in the Libby prison—quite a large and clean building.

Our ration consisted of one-half pound of corn-bread, one-fourth pound of meat, and one-half pint of soup per diem. On the 7th of October, 1864, we were paroled and sent through the lines.

I have the honor to remain, very respectfully, your most obedient servant,

GEORGE W. SMITH,

Acting Ensign, U. S. N.

Hon. GIDEON WELLES,

Secretary of the Navy.

MISCELLANEOUS.

PLOT TO RELEASE REBEL PRISONERS ON JOHNSON'S ISLAND, &c.

UNITED STATES STEAMER MICHIGAN,
Off Johnson's Island, September 26, 1864.

SIR: I have the honor to report that at 12 o'clock on the night of the 18th September I received by telegram from Lieutenant Colonel Hill, commanding military post at Detroit, Michigan, information that a plot was about consummated to seize certain vessels on the lakes, capture this ship, and release the prisoners on Johnson's island. A second despatch, dated September 19, from the same source, informed me of the party being about to embark from different points from Canada by rail and boat to co-operate with ringleaders at Sandusky, Ohio.

I accordingly lost no time in sending Ensign James Hunter to arrest and bring on board a man by the name of Cole, who had been known in and about Sandusky for some weeks, and who on reaching the ship, by investigation, implicated one Robinson, whom I also caused to be arrested the same night; and doubtless by whose united action and previously arranged signals with the captured vessels, Phil. Parsons and Island Queen, (as they approached Sandusky,) the plot was to have been developed. The failure of the signals, by reason of these arrests, prevented the pirates from making their appearance during the night that I was anxiously expecting them, and at daylight I started in pursuit as far as the mouth of Detroit river, when I returned, cruising along the Canada shore, touching at Kelly's and Boss islands, receiving the passengers left there by the captured vessels. Daily developments here show a complicity with certain rebel commissioners in Canada. The Michigan came to her anchorage off Johnson's island the afternoon of the same day of her departure, and it is with pride and pleasure I call the attention of the department to the promptness and vigilance of the officers and men under my command.

I would inform the department that on the night following this raid, the 22d instant, this point was visited by a severe hurricane, sweeping in its violence the roofs off the long prison buildings, levelling picket-fences on each side of the prison yard, and felling over a hundred trees, yet inflicting no serious injury to any one.

This combined agency of Providence and man gave the prisoners the idea that their deliverers had come, and with fright, and this impression, they took to the openings occasioned by the falling fences, and confusion might have prevailed but for the promptness and vigilance of the forces here. This ship rode the gale with slight damage. I would here inform the department that there is at all times danger of getting aground on the bar obstructing the passage of this bay. I have turned the prisoners over, as directed, to Colonel Hill.

I have the honor to be, very respectfully, your obedient servant,

J. C. CARTER,

Commander, United States Navy.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

CAPTURE OF THE TOWN OF PLYMOUTH, N. C.

[Received too late for insertion in its proper place.]

Report of Rear-Admiral D. D. Porter.

UNITED STATES FLAG-SHIP MALVERN, N. A. SQUADRON,
Hampton Roads, Va., November 11, 1864.

SIR: I have the honor to enclose you the report of Commander W. H. Macomb in relation to the capture of the batteries and town of Plymouth, North Carolina, which place, with all its defences, was captured from our land forces some time last spring.

This was a very gallant affair, and reflects great credit on the commander of the expedition and all concerned. It is a handsome finishing stroke, after the blowing up of the ram.

The fruits of this capture are twenty-two cannon, thirty-seven prisoners, two hundred stand of arms, and more being picked up daily.

The flags of the fort and of the Albemarle, and a large amount of ammunition, were also taken. * * * * *

I am, sir, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Commander W. H. Macomb.

UNITED STATES STEAMER SHAMROCK,
Off Plymouth, N. C., November 1, 1864.

SIR: I have the honor to report that on the 31st ultimo I captured the enemy's batteries at Plymouth, North Carolina, and the ordnance and ordnance stores at that place, and some prisoners, besides a quantity of provisions. The following is a report of the action:

After the return of Lieutenant W. B. Cushing from his expedition to blow up the Albemarle at Plymouth, I determined on making an attack on the batteries defending that town. Accordingly, on the 29th ultimo, the vessels under my command at that time in Albemarle sound got under way at about 11.15 a. m., and proceeded up the Roanoke river in the following order: Commodore Hull, Shamrock, Chicopee, Otsego, Wyalusing, and Tacony, the Valley City being sent at the same time up the Middle river (which joined the Roanoke, above Plymouth) in order to cut off any vessels or supplies the rebels might attempt to carry out in that direction.

At about 12 o'clock m. we came within range of the lower batteries protecting the town, upon which we opened fire, which was returned. We continued to advance until within a mile of the works, when we discovered that the channel was obstructed at a point opposite the batteries by two schooners sunk, one on each side of the wreck of the Southfield, which together formed a barrier that could only have been passed with great danger, if at all. I therefore made signal to return, which was accordingly done, and the vessels ran out of the river at 2 p. m., with the exception of the Valley City, which vessel having heard the firing commence and cease, and concluding that we had won the day, ran down the Roanoke river to within a short distance of Plymouth, where she was fired on, and then returned, reaching the sound at about 10 p. m. On the morning of the 30th ultimo, having been informed that there was sufficient

water in the Middle river, I determined to blockade the enemy at Plymouth, by going up that river and gaining the Roanoke above the town, knowing that the rebels had no more vessels to sink in the channel, and therefore that I should have only the batteries to contend against, should I advance from that direction. I got under way in the Shamrock, following the tug Bazley, Acting Ensign M. D. Ames, commanding, having Alfred Everett, the pilot of the Wyalusing, on board, and followed by the Otsego, Wyalusing, Tacony, and Commodore Hull, in the order in which their names are mentioned. The Chicopee and Valley were not present, the former having been sent by me the night before to Newbern for repairs, and the latter being on her way to Hampton Roads, Va., with Lieutenant W. B. Cushing and his despatches; both having started before I had decided on ascending the Middle river. By the good piloting of Mr. Everett, the vessels got safely through into the Roanoke river, at about 4 o'clock p. m. I left the Commodore Hull in the Middle river, to prevent the enemy from laying torpedoes there. On our way through Middle river we fired, by compass courses, over the woods at Plymouth, at distances varying from 2,640 to 1,700 yards, and I have since learned that our fire at that time was very effective. It was late in the afternoon when we arrived in the Roanoke, on account of the extreme narrowness and short curves of the Middle river, but, to prevent the enemy from blockading the river, or putting torpedoes in the channel, I dropped to within short range of the 100-pounder Parrotts and shelled him for an hour or so. Early on the morning of the 31st ultimo, having determined on attacking the batteries, I sent a tug down the Middle river for the Commodore Hull and commenced preparations for the action.

At about 8 a. m. the Commodore Hull arrived, and I stationed her at the head of the line as before, on account of her ability to fire directly ahead. At about 9 a. m. the United States steamer Whitehead came up the Middle river, having on board stores for the vessels in Albemarle sound, from the naval depot at Newbern. As her 100-pounder Parrott had been taken out, I had her lashed alongside the Tacony, the tug Bazley being lashed to the Shamrock and the Belle to the Otsego (all on the port side) to keep the vessels in motion in case their engines should be damaged. We also had the steam blown off the starboard boilers of all the double-enders, the fires banked very low beneath them, and the stop-valve between the two boilers of each ship closed; so that there was no steam in the starboard boilers, but the water in them being warm, it could be got up in a short time.

At 9.30 a. m., the ships being in line, I signalled to the Commodore Hull to run down and reconnoitre, and ascertain if the channel was clear. She reported "all right," and I got under way, signalling the other vessels to follow in close order. The enemy opened on us as soon as we came in range, and kept up a constant and very heavy fire, directed principally at the Commodore Hull and the Shamrock. As I neared the batteries I gave the order, "Go ahead fast," and we were soon directly opposite the enemy's guns, when he was driven from the rifle-pits and field-pieces by grape and canister from the ships which, we poured in very heavily. The batteries still held out, though their fire began to be wild; but as the Shamrock passed them, one of her shells exploded in their magazine, which blew up with great force, some of the fragments falling on our decks. This evidently caused a panic among the rebels, for from that time their fire slackened, and at length ceased altogether.

I then made signal to cease firing and to land and take possession of the batteries, which was done without resistance. A party from this ship under Lieutenant Duer marched into the lower works, (we having by this time passed by the town and arrived opposite them,) took about a dozen prisoners, and spiked the guns to prevent the enemy from firing on the vessels, should they return to their batteries.

It gives me great gratification to have the honor to bring to the notice of the

department the gallant and intelligent conduct of all of the commanding officers engaged, viz : Lieutenant Commander H. N. T. Arnold, Otsego; Lieutenant Commander Earl English, Wyalusing; Lieutenant Commander W. T. Truxtun, Tacony; Acting Master Francis Josselyn, Commodore Hull; Acting Master James G. Green, tug Belle; Acting Master G. W. Barrett, Whitehead; and Acting Ensign Mark D. Ames, tug Bazley, who worked and fought their vessels admirably, preserving the order of battle under a very severe fire, and pouring into the rebel batteries and rifle-pits, and the town, a tremendous fire of all kinds of projectiles.

I think promotion would be but justice to these gallant officers, who certainly deserve the honorable notice of the government. I wish particularly to bring before the department the conduct of Acting Master Francis Josselyn, of the Commodore Hull, who worked his ship and battery to the admiration of all who saw him; and also Acting Master G. W. Barrett, of the Whitehead, whom I sent on board of the Commodore Hull to pilot us through the obstructions, on account of his knowledge of the river, and who acquitted himself in his usual fine style. These two deserve particular notice, from the fact that the Commodore Hull was the leading ship, and at her the first and heaviest fire of the enemy was directed. I would also respectfully recommend for promotion the pilots of the ships engaged, especially Mr. Alfred Everett. We captured thirty-seven prisoners, twenty-two cannon, and a large quantity of ammunition, (the exact amount I am unable to give at present,) nearly two hundred stand of arms, (more are being picked up all the time,) the ram Albemarle, sunk at the wharf, with everything on board, and the colors of the batteries and iron-clad. For the part which each vessel took in the fight I must refer you to the reports of the respective commanding officers, which I will forward as they are received. As commanding officer of the Shamrock, it becomes my duty to testify to the gallant behavior of the officers, crew, and marines of this vessel.

The engineers' department, under Second Assistant Engineer W. H. Harrison, was very efficient. The different divisions were worked remarkably well, and in the most spirited and effective manner, for which I am in a great measure, indebted to Lieutenant Duer, executive officer, and the officers of the different divisions. Acting Assistant Paymaster Louis Sands and H. A. Macomb, captain's clerk, were with me on the hurricane deck during the engagement, and rendered good service as aids, the latter acting as signal officer. I am much indebted to Colonel D. W. Wardrop, commanding sub-division of Albemarle, who, anticipating our requirements, arrived here with 160 men from Roanoke island to assist in garrisoning the works which we had captured.

I am, sir, respectfully, your obedient servant,

W. H. MACOMB,

Commander, Com'dg District of the Sounds, N. A. B. S.

Rear-Admiral D. D. PORTER,

Commanding N. A. Squadron.

ADDITIONAL REPORT OF THE CAPTURE OF PLYMOUTH.

Letter of Rear-Admiral D. D. Porter, transmitting reports of various officers.

UNITED STATES FLAG-SHIP MALVERN, U. S. A.,

Hampton Roads, November 14, 1864.

SIR: I have the honor to enclose herewith the reports of the commanding officers of the vessels engaged (showing the number of killed, &c.) in the fight

water in the Middle river, I determined to blockade the enemy at Plymouth, by going up that river and gaining the Roanoke above the town, knowing that the rebels had no more vessels to sink in the channel, and therefore that I should have only the batteries to contend against, should I advance from that direction. I got under way in the Shamrock, following the tug Bazley, Acting Ensign M. D. Ames, commanding, having Alfred Everett, the pilot of the Wyalusing, on board, and followed by the Otsego, Wyalusing, Tacony, and Commodore Hull, in the order in which their names are mentioned. The Chicopee and Valley were not present, the former having been sent by me the night before to Newbern for repairs, and the latter being on her way to Hampton Roads, Va., with Lieutenant W. B. Cushing and his despatches; both having started before I had decided on ascending the Middle river. By the good piloting of Mr. Everett, the vessels got safely through into the Roanoke river, at about 4 o'clock p. m. I left the Commodore Hull in the Middle river, to prevent the enemy from laying torpedoes there. On our way through Middle river we fired, by compass courses, over the woods at Plymouth, at distances varying from 2,640 to 1,700 yards, and I have since learned that our fire at that time was very effective. It was late in the afternoon when we arrived in the Roanoke, on account of the extreme narrowness and short curves of the Middle river, but, to prevent the enemy from blockading the river, or putting torpedoes in the channel, I dropped to within short range of the 100-pounder Parrotts and shelled him for an hour or so. Early on the morning of the 31st ultimo, having determined on attacking the batteries, I sent a tug down the Middle river for the Commodore Hull and commenced preparations for the action.

At about 8 a. m. the Commodore Hull arrived, and I stationed her at the head of the line as before, on account of her ability to fire directly ahead. At about 9 a. m. the United States steamer Whitehead came up the Middle river, having on board stores for the vessels in Albemarle sound, from the naval depot at Newbern. As her 100-pounder Parrott had been taken out, I had her lashed alongside the Tacony, the tug Bazley being lashed to the Shamrock and the Belle to the Otsego (all on the port side) to keep the vessels in motion in case their engines should be damaged. We also had the steam blown off the starboard boilers of all the double-enders, the fires banked very low beneath them, and the stop-valve between the two boilers of each ship closed; so that there was no steam in the starboard boilers, but the water in them being warm, it could be got up in a short time.

At 9.30 a. m., the ships being in line, I signalled to the Commodore Hull to run down and reconnoitre, and ascertain if the channel was clear. She reported "all right," and I got under way, signalling the other vessels to follow in close order. The enemy opened on us as soon as we came in range, and kept up a constant and very heavy fire, directed principally at the Commodore Hull and the Shamrock. As I neared the batteries I gave the order, "Go ahead fast," and we were soon directly opposite the enemy's guns, when he was driven from the rifle-pits and field-pieces by grape and canister from the ships which, we poured in very heavily. The batteries still held out, though their fire began to be wild; but as the Shamrock passed them, one of her shells exploded in their magazine, which blew up with great force, some of the fragments falling on our decks. This evidently caused a panic among the rebels, for from that time their fire slackened, and at length ceased altogether.

I then made signal to cease firing and to land and take possession of the batteries, which was done without resistance. A party from this ship under Lieutenant Duer marched into the lower works, (we having by this time passed by the town and arrived opposite them,) took about a dozen prisoners, and spiked the guns to prevent the enemy from firing on the vessels, should they return to their batteries.

It gives me great gratification to have the honor to bring to the notice of the

department the gallant and intelligent conduct of all of the commanding officers engaged, viz : Lieutenant Commander H. N. T. Arnold, Otsego; Lieutenant Commander Earl English, Wyalusing; Lieutenant Commander W. T. Truxtun, Tacony; Acting Master Francis Josselyn, Commodore Hull; Acting Master James G. Green, tug Belle; Acting Master G. W. Barrett, Whitehead; and Acting Ensign Mark D. Ames, tug Bazley, who worked and fought their vessels admirably, preserving the order of battle under a very severe fire, and pouring into the rebel batteries and rifle-pits, and the town, a tremendous fire of all kinds of projectiles.

I think promotion would be but justice to these gallant officers, who certainly deserve the honorable notice of the government. I wish particularly to bring before the department the conduct of Acting Master Francis Josselyn, of the Commodore Hull, who worked his ship and battery to the admiration of all who saw him; and also Acting Master G. W. Barrett, of the Whitehead, whom I sent on board of the Commodore Hull to pilot us through the obstructions, on account of his knowledge of the river, and who acquitted himself in his usual fine style. These two deserve particular notice, from the fact that the Commodore Hull was the leading ship, and at her the first and heaviest fire of the enemy was directed. I would also respectfully recommend for promotion the pilots of the ships engaged, especially Mr. Alfred Everett. We captured thirty-seven prisoners, twenty-two cannon, and a large quantity of ammunition, (the exact amount I am unable to give at present,) nearly two hundred stand of arms, (more are being picked up all the time,) the ram Albemarle, sunk at the wharf, with everything on board, and the colors of the batteries and iron-clad. For the part which each vessel took in the fight I must refer you to the reports of the respective commanding officers, which I will forward as they are received. As commanding officer of the Shamrock, it becomes my duty to testify to the gallant behavior of the officers, crew, and marines of this vessel.

The engineers' department, under Second Assistant Engineer W. H. Harrison, was very efficient. The different divisions were worked remarkably well, and in the most spirited and effective manner, for which I am in a great measure, indebted to Lieutenant Duer, executive officer, and the officers of the different divisions. Acting Assistant Paymaster Louis Sands and H. A. Macomb, captain's clerk, were with me on the hurricane deck during the engagement, and rendered good service as aids, the latter acting as signal officer. I am much indebted to Colonel D. W. Wardrop, commanding sub-division of Albemarle, who, anticipating our requirements, arrived here with 160 men from Roanoke island to assist in garrisoning the works which we had captured.

I am, sir, respectfully, your obedient servant,

W. H. MACOMB,

Commander, Com'dg District of the Sounds, N. A. B. S.

Rear-Admiral D. D. PORTER,

Commanding N. A. Squadron.

ADDITIONAL REPORT OF THE CAPTURE OF PLYMOUTH.

Letter of Rear-Admiral D. D. Porter, transmitting reports of various officers.

UNITED STATES FLAG-SHIP MALVERN, U. S. A.,

Hampton Roads, November 14, 1864.

SIR: I have the honor to enclose herewith the reports of the commanding officers of the vessels engaged (showing the number of killed, &c.) in the fight

at Plymouth, North Carolina, which resulted in the capture of that place and its defences on the 31st of October, 1864.

I am, sir, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Lieutenant Commander H. N. T. Arnold.

UNITED STATES STEAMER OTSEGO,
Off Plymouth, N. C., November 2, 1864.

SIR: I respectfully submit the following report of the part taken by this vessel in the capture of Plymouth from the 29th to the 31st instant, inclusive:

At 11 a. m. on the 29th instant got under way by signals, and took position in line of battle, and, following the Shamrock and Chicopee, proceeded up the Roanoke river towards Plymouth, to assist in the attack upon that place. About 11.30 a. m. the enemy's lower battery opened fire on the division, which we returned as well as the position of the leading vessels would permit, but with what effect I am unable to say.

Obstructions being discovered in the river, and torpedoes suspected, signal was made to retire, which I did, in company with the other vessels of the division, and anchored at the mouth of the Roanoke river about 2.15 a. m.

On Sunday, 30th instant, got under way by signal, in company with the other vessels of the division, and took position in line of battle, following the Shamrock up Middle river, to assist again in the attack upon Plymouth, and, on reaching a point about 2,600 yards distant from that place, commenced firing shot and shell, by cross-bearings over the land, into the town, but with what effect I cannot state, continuing it, as we ascended the river, at intervals until 3 p. m., when we ceased firing, and at 4.30 anchored in Roanoke river, about two miles distant from Plymouth. At 6.20 got under way, in company with the division, and took position about a mile and a quarter from Plymouth, and bombarded the town, continuing to do so, with no reply from the enemy, until 7.30, when, by your order, we fell back out of range of the enemy's guns, and anchored for the night.

On Monday, 31st instant, at 7 a. m., got under way, in company with the other vessels of the division, having the tug Belle lashed to our port quarter, and proceeded down the Roanoke river to the attack, and at 11.30 opened fire, at the distance of about a mile, on the enemy's works, which consisted of forts, rifle-pits, &c., and continued firing rapidly and effectively until 12.25 p. m., when, by signal, we ceased firing, the enemy having abandoned his works and retreated with the greatest precipitancy, after which we anchored off the town.

I am happy to say that this vessel and crew escaped uninjured, the enemy's projectiles either passing over us or falling short.

At the fourth discharge I lost the services of a 100-pounder rifle in consequence of the elevating screw bending, and of a 20-pounder rifle on account of the bed breaking. Another screw was substituted for the former, which was broken at the fifth discharge, thereby rendering the gun incapable of further service during the action.

I take great pleasure in testifying to the cool and gallant conduct displayed by the officers, sailors, and marines during the fight.

Acting Master T. J. Hargous, of the Shamrock, who volunteered to act as my executive officer, was of the greatest service to me during the engagement. I would recommend him to your especial notice.

The precaution taken by Acting First Assistant Engineer Samuel C. Midlam

(in charge of this vessel's engines) to meet any mishap that might have occurred to her boilers or engine merits my approbation, and the prompt manner in which the whole engine corps performed its duty during the engagement was most satisfactory and creditable to it.

The following is a list of the officers of this vessel, all of whom performed their several duties with zeal and gallantry :

Acting Ensign T. G. Hale, commanding 1st division; Acting Ensign J. P. Gallagher, commanding 2d division; Acting Ensign William H. McLean, commanding 3d division; Master's Mate L. A. Kent, commanding 4th division; Master's Mate Stephen C. Abbott, commanding 5th division; Master's Mate F. C. Stedman, Pay Clerk Robert T. Houston, First Assistant Engineer Samuel C. Midlam, Second Assistant Engineer William Otley, Third Assistant Engineers John Riley, Albert Beyse, and Levi Lord, Acting Assistant Surgeon G. C. Reynolds, and Pilot John Lewis.

The following is a list of the ammunition expended during the engagement, viz :

100-pounder Parrott: 1 solid shot, 26 percussion shell, 11 15-second fuze, (naval time,) 10 10-second fuze, (naval time,) 14 5-second fuze, (naval time,) and 2 5-second shrapnell.

Dahlgren 9-inch: 1 10-second fuze shell, 6 5-second fuze shell, 22 rounds of grape, 5 rounds of canister, and 2 5-second shrapnell.

24-pounder Dahlgren, smooth-bore: 10 5-second fuze shell and 10 5-second fuze shrapnell.

24-pounder rifle, Dahlgren: 39 percussion shell.

300 Plymouth rifle charges, 230 carbine charges, 248 revolver charges, 10 boxes primers, and 260 revolver caps.

I am, very respectfully, your obedient servant,

H. N. T. ARNOLD,

Lieutenant Commander, Com'dg U. S. Steamer Otsego.

Commander Wm. H. MACOMB,

Commanding Division of Sounds, N. A. B. Squadron.

Report of Lieutenant R. K. Duer.

UNITED STATES STEAMER SHAMROCK,

Off Plymouth, N. C., November 2, 1864.

SIR: The damage to this ship in the engagement of October 31 is as follows :

One grape-shot, starboard bow, six feet from water-line, struck and glanced, slightly denting wood.

One shot, starboard bow, four feet from water-line, struck and glanced, crushing and splintering the wood through—36 inches long, 6 inches wide.

One shell exploded over the ship, abreast of foremast, a piece striking the fore topmast on port side, cutting out a piece about 24 inches long.

One shell exploded forward of starboard wheel, several pieces entering upper part of guard and wheel-house, and cutting hurricane-deck awning, used as a barricade.

One shot (32-pounder) struck forward knee of hurricane deck, starboard side, passing through starboard bulkhead of crank-room, carrying away hand-rail, through forward and after bulkheads of galley-room, through coppers, out port bulkhead of valve-room, carrying away half the bulkhead. Struck spirketing of after pivot port, port side, crushing the wood, bending and breaking the braces and hinges of two after ports, glanced, splintered forward end of port hammock netting, and went overboard.

One shot struck under guard, crushing the wood, (15 by 4 inches,) glanced, passed through iron knee of outboard bearing, cutting iron rim off wheel and injuring some of the paddle-boards.

One shot struck inside on port quarter, passed through side, tearing off and bending iron plate on outside.

Total number of hits, six.

Respectfully submitted.

RUFUS K. DUER,

Lieutenant and Executive Officer.

Commander WM. H. MACOMB, U. S. N.,

Commanding District of the Sounds.

Report of Lieutenant Commander Earl English.

UNITED STATES STEAMER WYALUSING,

Off Plymouth, N. C., October 31, 1864.

SIR: I have the honor to make the following report of the part taken by this vessel in the attack on, and subsequent capture of, Plymouth. I got under way on the morning of the 29th instant; took the position assigned this vessel in line of battle, and proceeded up the Roanoke, in company with the fleet, to within a short distance of obstructions across the river abreast of the Southfield. Finding it impossible to pass them, or to injure the enemy at that distance, after throwing a few shell, I retired, in obedience to general signal, and anchored off the mouth of the river. At 12.10 p. m., on the 30th, I again got under way in company with the fleet; stood up the Middle river, and when abreast of the town commenced to throw shell into it, over the woods, which I continued so doing as long as the battery could be brought to bear.

At 5.20 p. m. anchored in line in the Roanoke, about two miles above the town. At 11 a. m. of the 31st, in obedience to general signal from the flagship, I got under way; took the position assigned this vessel in line, and proceeded down towards the enemy's forts defending the town. We opened on the batteries as they came within range, and for a few minutes the action was most spirited. It was evident, however, that nothing could long stand the perfect shower that was being poured into their works.

The position this vessel occupied when the enemy deserted the forts commanded the main road leading to Washington; and as they took this road I continued to shell them, in hopes, if possible, to more thoroughly disorganize, and force them to throw away their arms, which I think had the desired effect, from the number that have been picked up since.

I am happy to state that there were no casualties of any kind on board. The vessel is not injured in any manner, and is in as good fighting condition as when she entered the engagement. The boats are more or less injured from the concussion of our own guns.

The conduct of the officers and crew was most praiseworthy; and where all did their duty I cannot specify any individually, except it may be Acting Master Hathaway and Acting Ensign Forret, who were the first to enter Fort Williams, one of their strongest works, where they captured three prisoners and planted the flag.

In conclusion, I cannot refrain from mentioning the handsome manner in which the engine was worked, under the supervision of Chief Engineer H. H. Stewart, through the whole engagement, and likewise on the day previous, while passing the narrow bends in Middle river.

Enclosed I send the gunner's report of the amount of ammunition expended on the 30th and 31st of October.

I am, very respectfully, your obedient servant.

EARL ENGLISH,

Lieutenant Commander.

Commander W. H. MACOMB,

Commanding District of Sounds of North Carolina.

UNITED STATES STEAMER WYALUSING,

Off Plymouth, N. C., October 31, 1864.

SIR: I have the honor to report the following as the amount of ammunition expended by this vessel on the 30th and 31st of October, during the shelling of Plymouth:

Expended on October 30.—100-pounder rifle: forty-one 10-pound charges, twenty shell, (percussion,) twenty-one shell, (time fuze.) 12-pounder rifle: ten shell, (percussion,) ten 1-pound charges; 100 primers, (percussion.)

Expended on October 31.—100-pounder rifle: fifty-nine 10-pound charges, twenty-one shell, (percussion,) thirty-nine shell, (time fuze.) 9-inch guns: one hundred and eighteen 10-pound charges, forty-eight shell, twenty-two shrapnell, twenty-eight grape, (stands,) twenty canister. 24-pound howitzer: twenty-seven shrapnell, twenty shell, nine canister. 12-pound howitzer: twenty-seven shrapnell, nine shell, nine canister. 12-pounder rifle: thirty shell, (time fuze,) twenty shell, (percussion;) 400 primers, (percussion,) 100 primers, (friction.)

Respectfully submitted.

THOMAS CARPENTER, *Acting Gunner.*

Lieut. Commander EARL ENGLISH,

Com'dg U. S. Steamer Wyalusing, off Plymouth, N. C.

Report of Lieutenant Commanding W. T. Truxtun.

UNITED STATES STEAMER TACONY,

Plymouth, N. C., November 1, 1864.

SIR: I have to report that, in obedience to signal made from the flag-ship at 10.35 a. m. on the 31st ultimo, I got under way and took position with this vessel in line of battle astern of the Otsego, (with the United States steamer Whitehead lashed to our port quarter,) being the fourth vessel in line.

Stood slowly down the Roanoke river till 11.30 a. m., when we opened on the batteries and rifle-pits surrounding the town of Plymouth, N. C., with our starboard battery, which consisted of two 11-inch, three 9-inch guns, two 12-pounders, and one 24-pounder howitzer; continued heavily engaged till 12.40 p. m., when we ceased firing by your order.

During the engagement the officers manifested the most commendable zeal, while the crew distinguished themselves by a display of coolness which, considering the fact that it was the first time the greater proportion of them had ever been under fire, was truly astonishing.

I am happy in having to report no casualties—not a man scratched. I beg leave to make particular mention of Acting Master's Mate F. W. Worstell, who, with Martin Howard, landsman, James Tallentine, quarter-gunner, Robert Graham, landsman, Henry Brutsche, landsman, landed and spiked a loaded 9-inch gun, under quite a sharp fire of musketry.

After anchoring abreast the wreck of the rebel ram Albemarle, Acting Ensign

Randolph Sommers raised and destroyed two torpedoes. I also have on board one brass field-piece, and three copper percussion torpedoes.

One shell cut away the port fore topmast backstay, just above the rail; and a second, a 20-pounder Parrott, passed through the foremast, about twenty-five feet above the deck; this, with some shattering of the starboard boats, caused by the explosion of one of our guns, constitutes all the damage done to the ship.

I herewith report her, in all respects, ready for immediate service.

The engineer's department, under its very efficient chief, First Assistant Engineer Thomas M. Dukehart, performed its duties in the most satisfactory manner.

In conclusion, I deem it proper to commend to your favorable notice Acting Master Nathaniel S. Morgan, the executive officer of this vessel, who has at all times so ably seconded me in the duties of my command.

I enclose herewith the gunner's report of ammunition expended.

Very respectfully, your obedient servant,

W. T. TRUXTUN,
Lieutenant, Commanding.

Commander W. H. MACOMB,

Commanding Division of the Sounds, Plymouth, N. C.

UNITED STATES STEAMER TACONY,
Plymouth, N. C., November 1, 1864.

SIR: I beg leave herewith to submit a statement of shot, shell, &c., expended on the 31st ultimo, during the engagement before Plymouth, N. C., viz:

Nineteen 5 second 11-inch shell, twelve 10-second 11-inch shell, three 15-second 11-inch shell, eleven shrapnell, 11-inch, eight canister, 11-inch, fourteen grape, 11-inch, twenty-four 5-second 11-inch shell, twelve 10-second 11-inch shell, five shrapnell, 9-inch, thirteen grape, 9-inch, twelve canister, 9-inch, eight 24-pounder howitzer, canister, twenty-two 24-pounder howitzer shrapnell, twenty-five 12-pound howitzer canister, forty-nine 12-pounder howitzer shrapnell.

Very respectfully, your obedient servant,

ROBERT CAMPBELL, *Act'g Gunner.*

Lieut. Commander W. T. TRUXTUN,

Com'dg United States Steamer Tacony, Plymouth, N. C.

Report of Acting Master Francis Josselyn.

UNITED STATES STEAMER COMMODORE HULL,
Plymouth, N. C., November 1, 1864.

SIR: I have the honor to report the part taken by this vessel in the operations against Plymouth, from the 29th to the 31st of October, 1864.

On Saturday, the 29th ultimo, I got under way at 11.30 a. m. and proceeded slowly up the Roanoke river in advance of the fleet. I came in sight of the batteries on Bateman's hill, and at 12.45 p. m. opened fire on them at a distance of about one mile. The enemy replied from four guns of heavy calibre, and kept up a rapid fire. I continued advancing and firing from my after pivot-gun, the only one that could be brought to bear on the battery, until I discovered obstructions in the river, just below the battery, which were impassable by the fleet. I immediately signalled this fact to you, and received orders to return and assist the Shamrock in turning, the enemy firing until out of range. During

the time I was abreast of Stewart's hill I discovered a body of cavalry and infantry in the woods at a distance of about six hundred yards, which I dislodged by opening on them from my forward pivot-gun and broadside howitzers. This vessel was not struck nor injured in any manner by the enemy on this day, though many shot and shell passed over and very near her. I retired in company with the fleet, and came to anchor at my old position off the mouth of the river at 2.45 p. m.

On Sunday, the 30th ultimo, at noon, I got under way, in obedience to your order, following the Tacony in the rear of the fleet up the Middle river to a point opposite Plymouth. Commenced firing on the town from my two pivot guns at 2 o'clock p. m. at an elevation of twenty-six hundred and forty yards, and continued my fire at short intervals until I arrived at the upper bend in the river, when I was ordered by you to return to the Thoroughfare, between the Middle and Roanoke rivers, and guard that point, which I did during the night.

On Monday, the 31st ultimo, the tug Belle came down the river, with orders for me to proceed to the Roanoke river and report to you, which I did, and was then ordered to go down the river and reconnoitre the obstructions.

At this time Acting Master G. W. Barrett of the Whitehead came on board to assist in finding the passage, which duty he performed by going ahead of the ship in a small boat, and dragging for torpedoes. No torpedoes being found, and the passage between the piles being open, I reported the same to the flagship by signal, and then advanced, followed by the fleet. As soon as we sighted the batteries above the town, the enemy opened fire from two nine-inch guns and some light artillery, which was replied to spiritedly by my guns, as soon as they could be brought to bear. I then went ahead at full speed, receiving and returning the enemy's fire with shell, grape, and canister. When within three hundred yards of the enemy's works, a heavy musketry fire was poured on my men by infantry in rifle-pits and houses, which I answered in the same manner. This fire, though severe, did no damage, as the vessel is well protected by iron plating. Before passing the upper battery, a shell from a nine-inch gun came in over the starboard bow, killing one man and wounding another at the forward gun, passed through the berth deck and wardroom, cut away the railing around the after hatch and killing one man, mortally wounding two, and three slightly, struck the after pivot gun-carriage, where it lodged, disabling it for a time. This shell fortunately did not explode. Another shell passed through the vessel, raking her fore and aft, but without doing any damage except to the officer's rooms. A third, in passing over the hurricane deck, cut away the guard brace from the forward king post on the port side, and knocked out the bows of the second cutter and the stern of the dingey. I received no injury from the lower fort, although obliged to anchor for a time, when in range, owing to a derangement of the rudder-chains, which, however, was soon remedied.

Ceased firing at 12 o'clock m. The upper works of this vessel are considerably shattered by shot, and her frame much racked by the constant firing, and by the explosion of a magazine on shore, which blew up just after she passed it. The decks need calking badly. I have already forwarded you the engineer's report of the condition of the boiler and machinery.

The carriage of the after pivot gun needs to be replaced, as it cannot be used to any great extent as it is.

The officers and crew did their whole duty, and the guns were served with great rapidity and precision.

I am very much indebted to Acting Master G. W. Barrett, of the Whitehead, for services rendered; he was on board during the whole engagement.

I would particularly mention Acting Master John O. Johnson, my executive officer, for his bravery and coolness under fire. The powder division was in

charge of Acting Assistant Paymaster Jonathan Chapman, and was prompt and efficient.

Among the crew I respectfully call to your notice Patrick Colbert, cockswain, captain of the forward pivot gun. His conduct was admirable, and though painfully wounded by a shell, which killed a man at his side, he did not leave his post until the end of the action, and appeared as cool as if at mere target practice.

No surgeon being on board the ship, I enclose the report of Acting Assistant Surgeon George Hopkins, of the Tacony, of the killed and wounded; also report of ammunition expended.

I am, very respectfully, &c.,

FRANCIS JOSSELYN,
Acting Master, Commanding.

Commander W. H. MACOMB,
Commanding District of Sounds of North Carolina.

Casualties on the Commodore Hull.

SIR: The following is a list of the killed and wounded on board the United States gunboat Commodore Hull during the engagement at Plymouth, North Carolina, October 31, 1864:

Killed.—Henry Schroder, landsman, right arm shot off; Turner Latham, landsman, head shot off; Hugh McMarony, cockswain, shot in the head; John Swaddle, landsman, extensive wound of thorax and right arm.

Wounded.—Patrick Colbert, cockswain, slightly; John Meadows, seaman, slight; James Laterwaite, landsman, left knee, serious.

I am, respectfully, &c.,

GEORGE HOPKINS,
Acting Assistant Surgeon.

Commander W. H. MACOMB, U. S. N.,
Senior officer in District of Sounds, North Carolina.

Report of Acting Master G. W. Barrett.

UNITED STATES STEAMER WHITEHEAD,
Off Plymouth, N. C., November 2, 1864.

SIR: I have the honor to report that on the morning of the 29th of October I left Newbern with master's and engineer's stores on board for the naval vessels in Albemarle sound.

I arrived on the 30th instant, at 6.30 p. m. off the mouth of Roanoke river, and there learned that the fleet had proceeded up Middle river. It being then too dark to find the channel, I came to anchor for the night. I got under way the following morning, (31st,) and proceeded up the Middle river, entering the Roanoke above War Neck at 9.30 a. m., where I found the fleet under your command formed in line of battle.

After reporting, I proceeded, by your request, on board the United States steamer Commodore Hull, for the purpose of piloting the fleet through the obstructions to Plymouth, and remained on board of her during the engagement with the enemy at this place.

For the part taken by this vessel during the engagement I will refer you to the report of the executive officer, herewith enclosed.

I remain, very respectfully, your obedient servant,

G. W. BARRETT,
Acting Master, Commanding.

Commander Wm. H. MACOMB,
Commanding District of the Sounds.

Report of Acting Master's Mate Thomas E. Quayle.

UNITED STATES STEAMER WHITEHEAD,
Off Plymouth, N. C., November 2, 1864.

SIR: I have the honor to make the following report of the part taken by this vessel in the engagement of the 31st October at this place during the time which you were absent from this vessel on special duty:

In obedience to your orders, I proceeded alongside the United States steamer Tacony, and made fast to her port quarter, she being the fourth vessel in the line, and in that position remained during the passage through the obstructions at War Neck, and until nearly abreast of the town. At 11.50 a. m. we cut adrift from the United States steamer Tacony, steamed ahead of her, and opened fire with the starboard howitzer, using shrapnell and canister. Ceased firing at 1 p. m., the enemy being completely routed, and driven from his forts and intrenchments, and in full retreat in the rear of the town.

Being unable, under the circumstances, to take any prominent part in the action, no particular merit can be ascribed to any person on board, though I take pleasure in stating that all the officers and crew behaved with their customary gallantry and coolness.

Expended eighteen rounds of shrapnell and fifteen rounds of canister.

Very respectfully, your obedient servant,

THOMAS E. QUAYLE,
Acting Master's Mate and Executive Officer.

Acting Master G. W. BARRETT,
Commanding U. S. Steamer Whitehead.

Casualties on the Shamrock.

UNITED STATES STEAMER SHAMROCK,
Off Plymouth, N. C., November 2, 1864.

SIR: I herewith transmit an account of the casualties on board this vessel during the engagement with the rebel batteries at Plymouth, North Carolina, on the 31st of October, 1864.

Killed.—Samuel Champs, seaman, by grape-shot through right lung; John Williams, seaman, by minie ball through right side, coming out left hip.

Wounded.—Wm. H. Harrison, contusion left arm, head, and neck, slightly. Wm. Bowles, landsman, left eye lost by shell, wound in left thigh by shell, right wrist by minie ball, slightly; right middle finger, by splinter, slightly. John Potter, seaman, contusion on right shoulder, slightly. George W. Williams, landsman, contusion on right breast by splinter, and left thigh and leg, slightly. Towdeon Doty, landsman, shell wound through calf of right leg, severely; forehead, left eye, and nose lacerated by splinters, severely; right wrist by shell, slightly. James B. Sparks, landsman, had left eye knocked out entirely (accidentally)

by an oar in the hands of another man, immediately after the surrender of the rebel batteries; he is doing well. Total wounded, 6.

I am, very respectfully, your obedient servant,

PHILIP H. BARTON,
Acting Assistant Surgeon, U. S. N.

Commander WM. H. MACOMB,
Commanding U. S. Steamer Shamrock.

Complimentary letter to Commander W. H. Macomb.

NAVY DEPARTMENT, November 20, 1864.

SIR: I have received your gratifying report of the 1st instant, announcing the capture, on the day previous, of the town of Plymouth, North Carolina, with its batteries, ordnance, ordnance stores, &c., by a portion of the naval force under your command.

The department is pleased at the promptness with which you availed yourself of the advantages offered by the destruction of the ram Albemarle, and at the gallantry displayed by all in the assault and capture of the batteries at Plymouth. The affair appears to have been executed in a most creditable manner, and the department improves the occasion to express its thanks to yourself and the officers and men under your command for the important services rendered on the occasion. You will be recommended to the President for an advancement of ten numbers in your grade.

Very respectfully, &c.,

GIDEON WELLES,
Secretary of the Navy.

Commander W. H. MACOMB,
Senior Officer in the Sounds of North Carolina.

ADDITIONAL REPORTS CONCERNING THE DESTRUCTION OF THE RAM ALBEMARLE.

[Received too late for insertion in their proper place.]

Letter of Rear-Admiral D. D. Porter, transmitting various reports.

U. S. FLAG-SHIP MALVERN, NORTH ATLANTIC SQUADRON,
Hampton Roads, November 11, 1864.

SIR: I have just received, and have the honor to forward to you, the following papers from Commander Macomb, commanding the district of the sounds:

A. Commander W. H. Macomb, November 1, 1864, reporting the sinking of the ram Albemarle, and enclosing—

B. Copy of a paper, apparently official, addressed "Hon. S. R. Mallory, Secretary of the Navy," which is evidently the report of the commander of the ram to his chief;

C. Copy of a letter found in the post office at Plymouth on its occupation by the federal naval forces;

D. Report of a survey on the ram Albemarle, made by order of Commander Macomb, and

E. A drawing of the ram, showing her casemate and mode of plating.

The attack of Lieutenant Cushing was evidently a surprise, and the destruction of the ram complete and immediate.

I have the honor to be, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,
Secretary of the Navy.

A.

Report of Commander W. H. Macomb.

UNITED STATES STEAMER SHAMROCK,
Off Plymouth, N. C., November 1, 1864.

SIR : I have the honor to report that on the night of the 27th ultimo Lieutenant W. B. Cushing went up the Roanoke river in his torpedo boat, having the second cutter of this vessel in tow, with a crew of eleven men under Acting Gunner William Peterkin and Acting Master's Mate W. D. Burlingame, both of this vessel.

He arrived at a short distance from the ram before he was perceived, when he cast loose the cutter, and, going at full speed, he struck the logs with which the ram was surrounded with such force as to run his boat over them. He then exploded his torpedo; but a gun which was fired from the Albemarle at that instant preventing him from seeing what damage he had done, and his boat being full of water, he jumped overboard, and swam down the river. He will himself, I suppose, give you the account of his escape, and I shall therefore merely state that he was picked up by the United States steamer Valley City on the night of the 28th October.

I enclose a copy of a letter which I found in the post office at Plymouth, on taking possession of that town, as I report in my No. 8, and also a copy of a paper found in the town which seems to be official, both of which give accounts of the affair. On my arrival, I found the ram sunk at the wharf as far as her ports, and the top plating of her casemates entirely off. I have ordered a survey, and herewith enclose the report.

Lieutenant Cushing's intention in taking the cutter with him was to land at the wharf, in case he was not discovered, and, casting loose the fastenings of the ram, to take her out of the river. This he was prevented from doing, but the cutter captured four rebel pickets on duty on the Southfield, which they brought off.

As far as I know at this time, Lieutenant Cushing and E. J. Horton, ordinary seaman of the Chicopee, were the only persons belonging to the party that escaped; the rest were either captured or drowned. I have a private letter, picked up in Plymouth, which states that eleven were captured. The names of the missing ones, belonging to ships under my command, are as follows :

F. H. Swan, acting assistant paymaster, Otsego; Charles L. Steever, acting third assistant engineer, Otsego; Thomas S. Gay, acting master's mate, Otsego; John Woodman, acting master's mate, Commodore Hull; Bernard Hailey, ordinary seaman, Chicopee; William Smith, ordinary seaman, Chicopee; Richard Hamilton, coal-heaver, Shamrock.

I am, sir, respectfully, your obedient servant,

W. H. MACOMB,

Commander, Commanding District of the Sounds, N. A. S.

Rear-Admiral D. D. PORTER,

Commanding North Atlantic Squadron.

NOTE.—Lieutenant Cushing unofficially reports the following persons as composing the party that destroyed the Albemarle: Lieutenant W. B. Cushing, commanding expedition, escaped; Acting Master's Mate W. L. Howarth, picket boat, missing; Acting Third Assistant Engineer William Stokesbury, picket boat, missing; Acting Master's Mate John Woodman, Commodore Hull, drowned; Acting Master's Mate Thomas S. Gay, Otsego, missing; Acting Third Assistant Engineer Charles S. Heever, Otsego, missing; Acting Assistant Paymaster F. H. Swan, Otsego, missing; Edward J. Horton, ordinary seaman, Chickopee, escaped; Bernard Harley, ordinary seaman, Chickopee, missing; Wm. Smith, ordinary seaman, Chickopee, missing; Richard Hamilton, coal-heaver, Shamrock, missing; R. H. King, landsman, picket boat, missing; — Wilkes, landsman, picket boat, missing; — Demming, landsman, picket boat, missing; Samuel Higgins, first class fireman, picket boat, drowned. Rebel accounts mention eleven prisoners, which would leave two as having been drowned or killed. The bodies of Acting Master's Mate John Woodman, and Samuel Higgins, first class fireman, have floated ashore at Plymouth.

B.

*Captured rebel correspondence.*PLYMOUTH, NORTH CAROLINA, *October 28, 1864.*

SIR: The night of the 27th instant, a dark and rainy night, I had the watch on board doubled, and took extra precaution. At or about 3 o'clock a. m. on the 28th the officers of the deck discovered a small boat in the river, hailed her, received an unsatisfactory answer, rang the alarm-bell, and opened fire on her with the watch. The officers and men were at their quarters in as quick time as was possible, under the circumstances, but the vessel was so close that we could not bring our guns to bear, and the shot fired from the after gun loaded with grape, failed to take effect. The boat running obliquely struck us under the port bow, (running over the boom,) exploded a torpedo, and smashed a large hole just under the water-line; under a heavy fire of musketry the boat surrendered, and I sent Lieutenant Roberts to take charge of her. Manned the pumps, and ordered to fire up to use the donkey pumps; the water gained on us so fast that all our exertions were fruitless, and the vessel went down in a few minutes, merely leaving her shield and smoke-stack out of water.

In justice to myself, I must say that the pickets below gave no notice of her approach, and the artillery which was stationed by the vessel for a protection gave no assistance, manning only one piece at too late a time to be of any service. Having condensed this report as much as possible, I respectfully request a court, to establish on whose shoulders rests the loss of the Albemarle.

N. B.—This letter was not signed, but appears to be official; probably the draught of the report of Captain Warley, Confederate States navy.

Hon. S. R. MALLORY,
Secretary of the Navy.

C.

Copy of a letter found in the post office at Plymouth, N. C., November 1, 1864.

UNITED STATES STEAMER ALBEMARLE,
Plymouth. N. C., October 29, 1864.

ESTEEMED FRIEND: I received your kind, interesting epistle of the 20th instant, finding me lingering under a severe attack of the fever. I am now up and about again, nearly as well as ever. They are sending out expeditions every now and then. We captured a Yankee yawl-boat. It is said we killed nearly all her crew, consisting of about eight men. But the most awful thing of all (perhaps you will hear it before this reaches you) is, that a Yankee torpedo boat steamed up the river Thursday night, and about 3 o'clock Friday morning she run into the Albemarle, the torpedo bursting, blowed a hole in her some six feet long, sinking her immediately. She is now lying at the bottom of the Roanoke river. The crew lost everything they had, bed clothing, everything; some lost their hats, shoes, even some came out in their shirt sleeves and drawers, barefooted. We are in an awful condition. I believe they are going to hold the place to the bitter end. Captain Warley says he intends to fight as long as a man is left, (this is all gas.) I never did witness such an uproar before in my life; troops were hurrying to and fro, expecting every minute to meet in battle dread. But fortunately yet there has been no attack, though there is no telling how soon we may see a man-of-war steaming up the river, belching forth fury in her mad career, carrying in her front the token of devastation and

ruin. We are going to take command of one of the forts in the river. You ask me when did I hear from her; I can but inform you that I have not received a word from her since I have been in service. Is this not provoking? I have nothing more to write. Excuse the bad writing, as *I am very nervous*.

Write me all the news. Direct your letter to Plymouth, N. C., care of Captain Warley.

I remain, as ever, your sincere friend,

E. K. L.

Report of survey on the rebel ram Albemarle.

UNITED STATES STEAMER WYALUSING,
Off Plymouth, November 1, 1864.

SIR: In obedience to your order of this date, we have examined the late rebel iron-clad ram Albemarle, and respectfully submit the following report:

She is sunken at the wharf and heading down stream, heeling off shore at about an angle of 10°, the flat part of the casemate on the port side is twenty-two inches out of water. We find the entire top of the casemate blown off; the angles marked a, b, c, and d in the drawing are completely disconnected, the angle marked d, quite ten inches. As it is reported that she was again blown up by the rebel authorities, after she was sunk by Lieutenant Cushing, it is impossible to say how much of the damage was done by him. Her armament consists of two (2) eight-inch rifle guns, worked on pivots, so as to fire either from the side or ahead; one of these guns is partly out of water, the other entirely immersed.

Her machinery is entirely submerged, so that is impossible to examine it. The dimensions of the hull and casemates we enclose with this report.

We are respectfully,

H. H. STEWART, *Chief Engineer.*

THOS. M. DUKEHART, *First Assistant Engineer.*

WM. H. HARRISON, *Second Assistant Engineer.*

Commander W. H. MACOMB, U. S. N.,

Commanding District of the Sounds, N. C.

CAPTURE AND DESTRUCTION OF THE SHAWSHEEN.

Report of Acting Master's Mate Wm. Rushmore.

NEW YORK, November 19, 1864.

SIR: The commanding officer of the United States steamer Shawsheen having been killed, it devolves upon me to report the loss of that vessel.

On the 7th of May, 1864, the Shawsheen, under command of Acting Ensign Charles Knight, left the flag-ship Malvern at 10.30 a. m., two miles above Chaffin's Bluff, on the James river, under orders from Acting Rear-Admiral S. P. Lee, to proceed to Chaffin's farm to search for and destroy torpedoes supposed to be in that locality. At 11.20 a. m. anchored off the farm in six feet of water, we drawing five feet six inches; sent all hands to dinner preparatory to going on shore to search for torpedoes. At 11.40 a. m. a field battery of four Napoleon guns and two 24-pounder howitzers, with four companies of infantry, suddenly opened fire on us from the woods on the cliff. All hands were called to quarters and the guns trained on the enemy, but they drove us from them. We succeeded in unshackling the chain twenty fathoms, when the captain jumped overboard and swam for the south bank. I then backed the vessel

until nearly out of range of the enemy's guns, when a 24-pounder shot penetrated the steam-drum and another one struck the walking-beam; most of the crew then jumped overboard to escape the scalding steam.

The captain was now seen swimming toward the vessel, wounded in the head. He hailed, and ordered me to haul down the ensign and to hoist a white flag on the walking-beam, the flagstaff having been shot away. I sent a boat for him, but he sank before it could arrive.

The enemy fired seven shots through the white flag before they ceased. The vessel was now aground, completely riddled with shot. Eight or ten of the crew now jumped overboard and attempted to escape by swimming to the south bank; many were killed in the water, the remainder, including four officers and twenty-one men, were made prisoners.

The rebels now came on board and set fire to the vessel. The officers and crew made every exertion possible to save the vessel, but the close and heavy firing and the shallowness of the water rendered all our attempts fruitless.

I remain, very respectfully,

WILLIAM RUSHMORE,
Acting Master's Mate, United States Navy.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington.

Encounter with rebel iron-clad Albemarle.—Complimentary letter of the Secretary of the Navy.

[Omitted in its proper place.]

NAVY DEPARTMENT, *May 25, 1864.*

SIR: I have had great satisfaction in receiving and perusing your report as the senior officer present, and the reports of the commanding officers of the several vessels that were engaged in the encounter with the rebel iron-clad ram Albemarle and her tender on the afternoon of the 5th instant in Albemarle sound.

The department congratulates all of the officers and men of the United States navy who participated in this remarkable contest between wooden gunboats and a formidable armored vessel—in which the latter was forced to retreat to prevent capture—and it particularly thanks you for your vigilant and gallant use of the means placed at your command to thwart the designs of the rebels to regain control of the sounds of North Carolina.

Very respectfully, &c.,

GIDEON WELLES,
Secretary of the Navy.

Captain MELANCTON SMITH, U. S. N.,
Senior Officer, Sounds of North Carolina.

THE STRENGTH AND EFFICIENCY OF THE NAVY.

Letter of Donald McKay, transmitting copy of letter addressed to the Boston Advertiser.

EAST BOSTON, MASSACHUSETTS,
November 9, 1864.

SIR: I beg leave to call your attention to the enclosed communication of mine, printed in the Boston Advertiser of the 29th ultimo, giving the strength and efficiency of our navy to the present time. I beg that you will give this

a careful perusal, and if, in your judgment, you deem it of interest to our country, would respectfully request that it may be inserted in your next naval report to Congress.

I remain your obedient servant.

DONALD McKAY.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Our Navy.—Donald McKay's letter to the Boston Advertiser.

To the Editor of the Boston Daily Advertiser:

During my sojourn in England, before the commencement of the war, I was permitted to inspect all the royal dockyards, and all the principal private ship-building establishments in the kingdom, and communicated, in a condensed form, the result of my observations to the Commercial Bulletin, and to other papers. The letters embodying my views were copied extensively, and when the rebellion broke out were referred to by naval writers in complimentary terms. From England I proceeded to France, where every facility was afforded me to examine the dockyards of the empire. In the navies of these great powers I saw much that was new, and much that I thought might be copied with advantage by our own Navy Department, and opened communication with some of its officers. My suggestions were always received with marked consideration, and some of them were adopted. When war was upon us, my interest in our navy was increased. I knew the strength of England and France upon the ocean, and the respect which that strength elicited from other nations, and with many others came frequently before the public with a view of developing our own naval resources. I saw that these powers respected nothing but force, and knew that if we desired to prevent foreign intervention in our affairs, our navy must be largely increased. I refer to these facts at this time to show that when I write of naval affairs, I write of that which I know, and which will stand the test of fair-minded scrutiny. Nothing is easier than to find fault, and I can state, from my own experience, that with all my care, I never yet built a vessel that came up to my own ideal; I saw something in each ship which I desired to improve. But I should have felt unfairly dealt with if my ships had been judged by their blemishes rather than by their merits. The same rule I propose to apply to a review of our naval affairs, that those interested may see what has been done, and is still doing, by the Navy Department.

At the breaking out of the rebellion the navy of the United States consisted of the following steamers, namely: The screw frigates Merrimack, Wabash, Minnesota, Roanoke, and Colorado, of about 3,350 tons each; of the large screw sloop Niagara, of 4,582 tons; of the first-class screw sloops Richmond, Brooklyn, San Jacinto, Hartford, Pensacola, and Lancaster, of about 2,000 tons each; of the second-class sloops Pawnee, Iroquois, Wyoming, Mohican, and Dacotah, of about 1,070 tons each; of the third-class sloops Narragansett and Seminole, of about 850 tons each; of the first-class paddle-wheel sloops Susquehanna and Powhatan, of about 2,430 tons; the Mississippi, of 1,692 tons; and the Saranac, of 1,446 tons; and of small paddle-wheel steamers Michigan, Saginaw, and Water Witch, of about 470 tons each; making a total of 25 steamers and 49,700 tons.

The maximum speeds of those vessels in smooth water, and for a short time, were as follows, in knots per hour, namely: Niagara, 10.9; Merrimack, Wabash, Minnesota, Roanoke, and Colorado, 9; Brooklyn, 9.2; San Jacinto, 8.8; Hartford and Lancaster, 9.5; Richmond, 7.5; Pawnee, 8; Iroquois, Wyom-

ing, Mohican, and Dacotah, 11.7; Narragansett and Seminole, 8; Susquehanna and Powhatan, 11; Mississippi, 8.7; Saranac, 9.2; Saginaw, 9; Water Witch, 9; Michigan, 10.5. The Pensacola proved a total failure, and the machinery had to be removed.

Such was the steam navy with which the administration began the task of rigorously blockading 3,600 miles of the most difficult coast in the world, against the fastest and best steamers that the shops of England could produce, built exclusively for speed and blockade running at the particular localities; in addition to which, the oceans of the world were to be kept free of the steamers called confederate cruisers, but which were in reality English pirates, being built in England, equipped with English guns and manned by English crews, whose purpose was, not to fight our cruisers as war vessels, but to plunder our sailing merchant ships, and to keep out of the paths of our war steamers. With the enormous advantage of having all the ports of the world, except those of the country they pretended to belong to, open to them for coaling, repair, refuge when closely pursued, and sale of the most valuable and less bulky portion of their plunder; and with the sympathy and active co-operation of the officials of those ports; and with the strong incentive of the free plunder of a large, rich, and defenceless commerce, without the slightest personal danger, even if captured, it is indeed miraculous they should have been able to do us the little injury they have.

The means at the command of the administration for building a steam navy to achieve the herculean task just indicated were about two dozen machine-shops, great and small, distributed from Maine to Maryland, many of them very small and without the tools, workmen, or skill requisite for the production of marine machinery. The first-class shops did not exceed eight in number. But the entire force of those shops could not be commanded by the Navy Department for the construction of new machinery. There were the enormous quantity of repairs to the merchant steamers of the country to be done, and new construction to be made for that service. The War Department also drew largely on their resources for transport steamers, while the locomotive and tool-making shops found it utterly impossible to meet the demand upon them. Neither was there sufficient raw material in the country for the large and sudden demand; the iron, copper, tin, and coal had to be mined and manufactured. Hundreds of steamers, hundreds of locomotives, shops full of tools, tens of thousands of tons of metal, were called for instantly, and there was nothing on hand to answer the call. War steamers cannot be built in a day. Inexperienced labor cannot be converted into skilled mechanics in a day; the prices of machinery rose immensely, the pay of the mechanics and the cost of material reached a point far above what they were worth, except from the factitious cause of the suddenness of the demand. The result was felt in the poor materials and poorer workmanship with which the machinery was made. Any kind of material, and the most unskilled labor, had to be brought into use, and all this time the amount of even that labor was consequently diminishing by the absorption of men into the military service.

In this pressing emergency the department did all that could possibly be done. It purchased every merchant steamer that could be converted into a blockading vessel or a war cruiser, and the navy at this moment contains every merchant steamer of any size or excellence that has been built in this country. It set at work every steam-engine factory in the land, that could produce marine machinery. It considered all plans offered for armoring vessels, and tried many. It instituted experiments in machinery, in ordnance, and in armor-plating. It rapidly covered the Mississippi and its tributary waters with an immense inland fleet, many of which were armored, and which, sweeping the rebels from these waters, have been an indispensable element to our holding the whole interior of the country, as it gives us the exclusive command of its water

highways. It lined the Atlantic coast with such a blockading fleet as the world never witnessed before, and has practically closed the rebellious district to the world, the few vessels which succeed in running the blockade being too small to carry cargo sufficient to give aid of any consequence. The rebels have not been able to import even drugs enough to supply the medical department of its army. The coast around the port of Wilmington, which is the only one at which blockade running is practicable, is peculiarly favorable for that purpose, and is lined for miles on each side with batteries which protect the blockade runners and keep our cruisers at a distance. These runners are small vessels of light draught, and very low decks. They are painted lead color, and approach the coast in the night. From the moment it is possible to discover them until they reach the protection of the batteries is a time of minutes, and not of hours, and they owe to that their occasional success. Were the circumstances such that they could not reach the port until after a chase of a few hours, their escapes would be very rare. Nearly all that have been chased in this manner at sea have been caught; it is not the speed of the blockade runners, but the conditions of the blockading service, that gives them an occasional success. Their fastest and newest steamers, built principally for speed, have been captured by our sloops in fair chase, and the speed of the vaunted Alabama is now known to have been greatly exceeded by that of the Kearsarge.

The first vessels constructed by the department were 23 screw gunboats of 504 tons each, with a speed of ten knots, and a draught of nine feet.

They were intended especially for blockading the mouths of the smaller rivers.

The Iroquois, Wyoming, and Mohican were next duplicated, the former twice, in the Oneida, Kearsarge, Wachusett, and Tuscarora. The reason for exactly duplicating them was the fact, that, as the drawings and patterns were still in the hands of their original builders, the machinery could be obtained much quicker; and time was the element of most importance.

These vessels were followed by the paddle-wheel gunboats Maratanza, Mahaska, Sebago, Octorara, Sonoma, Conemaugh, Tioga, Genesee, Miami, Paul Jones, Port Royal, and Cimarron, twelve in number, of about 850 tons each, and having a maximum speed of eleven knots per hour. To these succeeded twenty-seven others of the same type, but larger and faster, being of 974 tons burden, and having a maximum speed of $14\frac{1}{2}$ knots per hour. Their names are the Eutaw, Sassacus, Wateree, Pawtuxet, Tallapoosa, Winooska, Mackinaw, Shamrock, Tallahoma, Tacony, Iosco, Agawam, Pontoosuc, Massasoit, Osceola, Mattabesett, Chickopee, Ascutney, Otsego, Metacomet, Chenango, Lenapee, Mendota, Mingoe, Wyalusing, Pontiac, and Peoria. Another seven of this class, but still larger, faster, and of iron, have been lately added, namely, the Winnipeg, Ashuelot, Muscoota, Suwanee, Shamokin, Mohongo, and Monocacy, all of 1,030 tons each. These paddle-wheel gunboats have the light draught of 8 feet, and carry enormous batteries. They were built for special service in the narrow and tortuous channels of the shallow sounds and river embouchures of the southern coasts. For these localities, where turning was impossible, it was necessary they should be double bowed, or constructed with both ends alike, and that their machinery should be equally well adapted for going forward or back.

In the autumn of 1861 the department commenced the construction of ten second-class screw sloops-of-war, of about 1,350 tons. They are the Ticonderoga, Lackawanna, Shenandoah, Monongahela, Ossipee, Juniata, Sacramento, Adirondack, Housatonic, and Canandaigua. They have a maximum speed of $12\frac{1}{4}$ knots, carry a large armament, and are efficient ocean cruisers.

There is now in progress of construction the Chattanooga, of 3,000 tons, building for the department by outside parties; also the Idaho, of similar tonnage, and by other outside parties; while the department is itself constructing the Madawaska, Wampanoag, Neshaminy, Ammonoosuc, and Pompanoosuc.

These vessels are of wood, about 3,200 tons, and intended to have a speed of sixteen knots per hour. They will carry immense batteries, be full rigged, and will doubtless prove the fastest and most formidable ocean cruisers ever built by any power.

There are also in progress of building by the department twenty first-class wooden screw steamers of 2,200 tons each, to have a speed of thirteen knots, carry enormous batteries, and be full rigged for ocean cruisers. They will soon be completed. They are named the Antietam, Arapaho, Guerrière, Hassalo, Illinois, Java, Keosauqua, Kewaydin, Manitou, Minnetonka, Mosholu, Ontario, Piscataqua, Pushmataha, Tahgayuta, Wanaloset, Watauga, Willamette, Contook, and Mondamin.

While these vessels are building, there have been completed the Nipsic, Shawmut, Nyack, Pequot, Maumee, Kansas, Yantic, and Saco, all screw vessels of 593 tons each. The machinery is from the designs of various parties building to compete with the department. The first three, having the department's machinery, have been thoroughly tried, and can maintain a speed of $11\frac{1}{2}$ knots.

There are now nearly completed the wooden iron-clad coast steamers Tona-wanda, Miantonomah, Agamenticus, and Monadnock, of 1,564 tons, drawing 12 feet of water, and having two turrets each, carrying two 15-inch guns. The Monadnock has been tried, and is found capable of achieving a maximum speed of 11 knots.

There are also in process of construction four other iron-clads of the same type, but larger, and to be faster. They are Kalamazoo, Passaconaway, Quinsigamond, and Shackamaxon, each of 3,200 tons.

The department has also constructed 74 wooden and iron-clad vessels of the monitor type, with an aggregate tonnage of 78,100 tons.

There are now in the navy in active service 558 steamers, with an aggregate tonnage of 408,000 tons, against the original 26 steamers and 49,700 tons with which the war commenced. Of this number 200 steamers, with an aggregate of 241,000 tons, have been built by the department.

In no country, and with such limited means, and under such difficult circumstances, has there ever been put afloat in the same time such immense naval armaments. In no place has there been any failure, but whenever the naval forces moved victory followed. The rebel coast has been held with a grasp of iron, and nearly hermetically sealed. The pirates of the enemy have been followed around the world, and captured wherever they could be found, and the internal navigation and command of this vast country has been kept open, and in the hands of the government.

The naval administration has done all which any naval administration could do in such a war, and it will still have to be relied on for maintaining a large portion of what has been conquered. Let any one ask himself the question how the contest would stand with the navy withdrawn, if he would understand its necessity and the value of the service it had rendered.

In the foregoing communication I have stated nothing but facts—facts which can easily be verified by reference to official documents, and which I deem justly due to our present Navy Department, in view of the erroneous statements put forth by some writers, who evidently know but little whereof they affirm, or intend to mislead public opinion. I hold that in a time like the present we should all unite to strengthen rather than to weaken the arms of government. Certainly it cannot be said, with the above facts before us, that, in the time of trial, the Navy Department has been found wanting.

Very respectfully yours,

DONALD McKAY.

EAST BOSTON, *October 29, 1864.*

THE MONITOR IRON-CLADS.

Opinion of Admiral Lesoffsky, of the Russian navy.

[Communicated to the Navy Department in a St. Petersburg semi-official gazette.]

The reports of the admiral and captains of the American iron-clad squadron of the bombardment of Charleston have offered a new occasion for expressing different opinions as to what system of iron-clad ship-building generally preference is to be given, and what system is best suited to our navy.

Supposing that those opinions (founded upon a special knowledge of the subject) will assist in clearing up this important and entirely new thing, especially in Russia, we present below two articles on this subject. The first of them, by its clearness and general accessibility, will probably attract attention even of those who, not belonging to the naval profession, are interested in the question of maritime defences adopted in Russia.

The principal problems which had to be solved in armor-plated ship-building were the following:

First. The protection of vessels as much as possible from the danger of fire and sinking, wooden vessels being inevitably exposed to that from the destructive nature of the artillery of the present time; and

Second. The preservation of the lives of the crew from the terrible effects of firing, the common wooden vessels generally in use not offering them that protection at all.

The affair at Charleston demonstrated that both of these problems were most successfully solved by the monitors. They came out of a terrible and unprecedented fire without a hole in any part of the vessels under water; their entire loss of men was confined to one man killed and a few wounded. The losses and injuries sustained by them were of such a nature as could be easily guarded against in future, and there was no necessity to take them into dock, as the repairs were all done in Port Royal, one of the most insignificant ports in North America.

Until the present internal struggle called for extraordinary exertions, the federal army and navy were neglected. Public opinion in the United States looked with doubt and derision upon the trials and experiments that were made on a large scale by the European powers for the solution of the question of armored vessels. In 1861, in view of the rebellion taking enormous proportions, the public mind became impressed with the importance of the subject, and, on the report of the Secretary of the Navy, presented during an extra session of Congress, a competition was offered for the best system of construction of iron-clad or invulnerable vessels.

The commission of naval officers to whom was intrusted the examination of projects gave preference to three different systems; the vessels built according to those systems were named *New Ironsides*, *Galena*, and *Monitor*. The *New Ironsides*, constructed on the same main principles as most of the iron-clad frigates and floating batteries of the European powers, did not present anything new; this vessel is acknowledged generally to be a success, except, however, in regard to speed and turning. The *Galena* also presented nothing new; covered with a light iron armor supported by a weak backing, she proved very unsatisfactory. Afterwards her armor was taken off and she remained a common wooden vessel.

The *Monitor*, invented by Captain Ericsson, was built on entirely new principles; she was a covered box or raft, on which was placed a revolving turret. Any one who has observed the action of the waves on a common raft will understand the idea of the inventor. A raft does not rock on the waves, because the waves break over it; and if its parts can be bound together so firmly and effect-

ually as to resist the destructive action of the waves, and not allow the box itself to be filled with water, such a raft may be conveyed even through an open sea.

An example is known that a large wooden raft, made in Canada, was successfully taken to England, though certainly in going across the Atlantic it must have been most of the time submerged, as it happens now with the monitors.

Rejecting the high sides of vessels, to cover which thousands of pounds of iron would be required, the inventor of the Monitor has gained, in comparison with other armored vessels, the following advantages :

First. A comparative cheapness in construction.

Second. The insignificance of target presented to the enemy's fire.

Third. The safety of the submerged part of the vessel from shots.

Fourth. The possibility of using guns of the heaviest calibres, and capability to give great thickness to the turrets and side armor easier than it could be done on armored vessels of other systems.

The system of Captain Ericsson must not be confounded with the turreted system of Captain Coles. The latter places his turret on a common vessel with pretty high sides, for the protection of which by armor, as was mentioned before, an enormous weight of iron is required. Those are the advantages presented by Captain Ericsson's system. In relation to the execution of details, the first monitor presented an extensive field for improvement. The famous action in Hampton Roads at the beginning of 1862 compelled the government of the United States to choose this system of vessels for coast defence in preference to others.

Five large vessels-of-war very nearly became victims to the Merrimack, but were rescued by the timely arrival of the small Monitor, which forced the Merrimack to leave the field of battle.

In reference to artillery, the choice of the American government fell on the 15-inch Rodman gun. Up to that time the largest guns used in the navy were 11-inch Dahlgren guns, but the monitor system is able to use the largest guns, the defeating force of which is more effectual than that of the 11-inch guns.

From that time it may be said that this class of vessel is sufficiently tried in America. We will briefly bring forth some of the most noted occasions in which their merits were exhibited. In order of time, the following favorable news concerning monitors transpired: First was the report by Commodore Rodgers of the storm encountered by him on the Atlantic ocean on board the monitor Weehawken. This renowned naval officer went to sea in tow of a steamer in the same way as all monitors generally make their sea voyages. Near the capes of the Delaware, perceiving the approach of a storm, Commodore Rodgers sent his companion to the nearest port, determined to remain at sea himself to test the monitor under these circumstances.

In his report he praises the qualities of the Weehawken observed by him during the storm. The other monitors have repeatedly made sea passages during the tempestuous winter time. Out of their number only the first monitor was lost, and that from causes more or less accessory.

After this we have the intelligence of the action on the Ogeechee against sand batteries; the distance was from 400 to 600 fathoms, impediments preventing a nearer approach; several other vessels, armed partly with mortars, participated in the action. The fortifications were completely demolished, though repaired during the night. The absence of land forces prevented the driving of the enemy out of the forts, as the execution of the artillery alone, at a distance of 400 fathoms, was insufficient for that purpose. One of the enemy's cruisers, the Nashville, attempted to break through the monitors, but a 15-inch shell decided her fate.

Thereupon follows the attack on Fort Sumter. A careful study of this affair shows that the injuries sustained by the monitors were, more or less, of a light character. Many weak points were discovered, also many defects requiring

alterations on the vessels already built, and some changes in those that were in process of building; but the main principle on which the system of building these vessels was founded came out of this effective trial with a complete triumph.

The next trial was of a real naval character—a combat between two iron-clads, the monitor Weehawken against the Atlanta. On both sides much was expected from the issue of this battle, but almost the first shot from the 15-inch gun of the Weehawken decided the affair in her favor.

The monitors continue to play, if not the principal, still, however, an important part at the siege of Charleston. Continually exposed to the fire of the enemy for several months, they obstinately occupy their position in an almost open roadstead, maintaining a successful blockade of Charleston. All these circumstances certainly speak a great deal more for the usefulness of the monitors than against them. The last accident to the Weehawken, which unexpectedly foundered in the midst of a whole squadron of similar vessels, while at an anchorage at which those vessels have remained so long a time with impunity, is not investigated, and it may be will only show that these vessels require particular precautions and care, and that it is impossible to treat them as common vessels.

Such, in short, is the substance of the knowledge we have of the monitors.

In Russia, the navy department, in the person of his highness the general admiral and his nearest assistants, did not cease to follow from the beginning the trials of armored ship-building in other states, but with prudent caution it was decided not to do anything until the new vessels had been sufficiently tested. In consequence, after the first battle between iron-clad vessels in America, the navy department immediately sent out there several officers belonging to different branches of the naval service to study those new vessels on the spot. Those persons fulfilled the commission with which they were charged in the most successful manner. Their reports confirmed the navy department in its conclusions that out of all known systems of iron-clads the monitor was preferred for our coast defences, especially in our shallow waters. The protection of Cronstadt, our principal naval port, an object of constant and particular solicitude of our navy department, presents besides such local conveniences for the use of those vessels as cannot be found everywhere. In consequence of all this, several vessels were commenced on the exact model of the American monitors. These vessels, destined exclusively for the protection of Cronstadt, rapidly and successfully move to completion. All the improvements, the necessity of which has been proved by experience in America, will be introduced on our vessels, and it is expected that those vessels will be a very effective and necessary addition to our land defences of Cronstadt.

At the same time the navy department did not neglect to adopt all measures to provide the new vessels with the most perfect artillery, and we hope that our single-turreted vessels, representing the exact copy of the American monitors, will be armored with formidable artillery, combine all the new improvements, and give satisfaction to all the demands of contemporary military science.

In addition to this, we did not stop on one system exclusively. With prudent calculation, concentrating all our efforts on means exclusively defensive, we shall have at the same time, besides the monitors, a few iron-clad vessels representing models of all the principal systems now in use, and which could be adapted to our exclusive and local condition.

In conclusion, we may say we have before us an extensive and vast road for the further study of this question, and investigation of those improvements which are called forth by numerous imperfections of all the systems of iron-clad vessels known at the present time.

In examining the reports of the captains of the monitors which participated in the bombardment of Fort Sumter, knowing exactly the kind of battle the

monitors were engaged in, the injuries received by them, and remembering that, notwithstanding a severe concentrated fire from the numerous southern forts, the federal fleet had only one man killed and two wounded, we come inevitably to the conclusion that the attack on Charleston positively proves the monitors capable to compete, and probably with chances of success, with the best iron-clad vessels of the French and English navies.

It is true that, from injuries received in this battle, the Keokuk was sunk; but it must not be forgotten that, having been constructed on a different system, she was fastened imperfectly in comparison with her companions, the injuries to which, though important, were for the most part of such a character as will be easily provided against on the monitors that are now being built in our yards and factories.

For instance, on board the vessels that participated in the action of the 7th April, 1863, a great many bolts that fastened the turret-plates were broken. In the pilot-houses and turrets, where there was no inside iron sheathing, the captains and the men at the guns were exposed to great danger from the nuts and ends of bolts rebounding inside. Those nuts and pieces of bolts falling between the foundations of turrets and decks prevented the turret from revolving. The fire of the monitors also was not so very effective from continual stoppages of the guns. Finally, there were some few more or less important defects and errors.

A well-considered new system of fastening iron plates in turrets, taken from experience, a large iron ring covering the space between the lower part of the turret and the deck, and the 9-inch cast-steel gun, are the means from which we expect a great deal.

Notwithstanding the defects of the American monitors, the strength shown by them during the bombardment is truly astonishing. The southerners were firing from guns of the heaviest calibres at distances which probably were carefully measured before the commencement of the action—these distances being smaller than half the distance of an ordinary pointing fire—and yet not one of the monster charges penetrated the turrets. The strongest experience of this kind was sustained by the Passaic, and what was the result? A shot from a gun of a heavy calibre struck the upper edge of the turret, broke eleven plates, but did not penetrate the turret, though the strength of the shock was such that the projectile, rebounding upwards, made an indentation of $2\frac{1}{2}$ inches in the pilot-house and bent it on one side; and notwithstanding all this, in the turret proper of the Passaic, as well as in the turrets of the other monitors, there was no one killed or wounded—a result certainly very important, and which confirms the great superiority of the monitor system over all other systems of armor-plated vessels.

The fighting test through which the monitors have passed is certainly more effectual and decisive than the experiments made on plates representing the sides of a Warrior or a La Gloire; $4\frac{1}{2}$ -inch plates of those were fractured by occasional shots.

We may well ask what would have become of the vessels covered by such plates, and their sides presenting a large target, and if (as it happened with the Nahant) they would be exposed for some time to a concentrated fire of 100 guns at a distance less than 1,500 feet? It is not difficult to answer. Not only the Warrior with the La Gloire, but all those Minotaurs, Northumberlands, Magentas, and Solferinos, constructed on improved models, would be sunk in such circumstances; while the Nahant got out of the action with injuries comparatively not very important.

In examining the reports of the captains we can find several other places confirming the solidity of the monitors. With the exception of the Keokuk and Passaic, all the vessels of the squadron were in a condition to continue the fight, and it was only the signal of the admiral (to stop the battle) that made

them stop the attack. The monitors Weehawken, Montauk, Patapsco, and Catskill, after a hot action of forty minutes, had no serious injuries, not only in their turrets, but in any other parts of the vessels. In one word, from whatever side you look upon the results of the battle, they are positively favorable to the monitor system of constructing vessels, inasmuch as the same is subject to improvements which can be partly adopted on the monitors building at the present time, and unconditionally on those that are to be built. Passing to the reproach of slowness of fire from the monitors, it is easy to prove that, taking into consideration the present state of artillery, the number of projectiles fired within a certain specified time is not so very important as is the degree of destruction they produce. Five shots from the Weehawken were quite sufficient to force the Atlanta, a beautiful iron-clad corvette which cost the southerners a million of dollars, to strike her flag.

And it is certain that nine shots from a fifteen-inch gun fired by the Passaic in forty-five minutes would do a great deal of harm to the Warrior or Black Prince. In three-quarters of an hour the federal squadron let out 139 projectiles, excluding three shots that the Keokuk made, and remembering that the admiral's ship, the New Ironsides, scarcely participated in the fight, it appears that the mean number of shots fired from the fourteen guns of the remaining seven monitors during the action was nine, or one shot for every five minutes; a result, if not particularly brilliant, still very satisfactory, if we remember that the continual stoppages in firing are partly explained by inevitable accidents in first experiments, and for the most part are set aside by another system of artillery, possible improvements in loading guns and port stoppers.

In conclusion, it will not be amiss to remark, that, in examining the reports of the captains who participated in the bombardment of the 7th April, we are far from affirming that their vessels were perfect. No, certainly not. Monitors, like all other specimens of ship-building, have their defects. They are not easily managed; they are unsuited for passages of long duration; *for fight against fortresses they are nearly useless*; and notwithstanding this, it can be boldly asserted that, not only eight months ago, when we commenced their construction, but at the present time, after all the experiments and latest inventions, it is difficult to designate any other system for constructing coast vessels more useful for the defence of Cronstadt from an attack from sea, to navigate narrow and shallow channels, and particularly is there no other system more suitable to the means of construction we had in Russia in the summer of 1863.

The monitors that are being constructed at the Petersburg yards undoubtedly are not in a condition to cope with Cherbourg, or to take Portsmouth; but they will perform their part of duty, and will be of such use as to prevent an unmolested bombardment of the fortifications of the port of Cronstadt, which are so important to Russia.

Statement of vessels captured or destroyed in attempting to violate the blockade, and in battle, from November, 1863, to November, 1864, as shown by reports received at the Navy Department.

Class.	Name.	Cargo.	When captured.	Where captured.	By what vessel.	Sent to—	Remarks.

REPORT OF THE CHIEF OF THE BUREAU OF YARDS AND DOCKS.

Compendium of the annual report from the Bureau of Yards and Docks, dated October 15, 1864.

Introductory remarks.

Remarks in reference to great increase of cost of materials and labor, causing deficiency in some appropriations.

Remarks in reference to purchase of land adjoining Boston yard.

Remarks in reference to New York yard.

Remarks in reference to purchase of land at Philadelphia.

Remarks in reference to Norfolk yard.

Statement of difficulties at Mare island.

Site for cemetery for naval asylum.

Floating dry docks at New York and Philadelphia.

Remarks respecting new and temporary stations.

Views respecting contract system.

Necessity for early appropriations.

Recommends increase of pay of certain clerks at navy yards.

Recommends increase of pay of the clerks in the bureau.

Presents statement of improvements and repairs at each navy yard, naming the objects completed and the amount expended thereon; what works have been in progress, with the aggregate expenditure on the same; also the amount expended for contingent on account of yards and docks at each navy yard for the fiscal year ending June 30, 1864.

Remarks in reference to naval asylum, stating the number of inmates, and the expenditures for the same.

Submits estimates for objects of improvement and repair at navy yards and naval asylum for the fiscal year ending June 30, 1866, with detailed remarks as to the necessity of each object for which an appropriation is asked.

NAVY DEPARTMENT, BUREAU OF YARDS AND DOCKS,

October 15, 1864.

SIR: Agreeably to your order of the 26th ultimo, I have the honor to present the annual report of this bureau for the fiscal year ending June 30, 1864, with estimates for the fiscal year ending June 30, 1866, with explanatory remarks.

It is a matter of notoriety that the prices of materials and labor have largely advanced during the past and present years, which has caused a deficiency in

the funds appropriated for some of the objects coming under the cognizance of this bureau. The demand for the numerous supplies under the head of contingent expenses increases with the augmentation of the navy, especially in the construction of steam and armored vessels, and this bureau is called upon to furnish the necessary tools, temporary shops, launching slips, &c., an additional number of which is required at most of the northern yards.

The bureau regrets that Congress, at its last session, refused to grant funds for the purchase of an important addition of water front to the navy yard at Boston, which was thought by competent judges to be of much importance to the yard, and at a reasonable price. This appropriation was defeated by the passage of a law in the House of Representatives, (which I cannot find in the volume of laws published,) authorizing the seizure of any premises considered necessary for the public service, the value of the premises seized to be decided by a jury or commission. This process of procuring land, and taking it from the owner, without the ready funds, by an appropriation in advance, to pay for it, seems to be arbitrary, and might throw the owner out of his business while waiting for payment, dependent on an appropriation by Congress, and thereby subject him to great inconvenience and loss. The Boston yard should possess all the water front up to near Charles River bridge, and whether the necessities of the service will compel the government to take this and other portions of the city of Charlestown for government use is yet to be decided. The water front, however, is absolutely required, cost what it may.

It is urged by the people that this country must have a navy, and therefore the means and accommodations for constructing it must be furnished by them. At the New York yard, where the heaviest and largest portion of naval work is done, the working ground is so much crowded that it is with difficulty that the various operations of the yard can be carried on to advantage, especially the construction of new vessels; therefore it is important to enlarge the area of the working ground, by filling in the alluvial grounds, and for this object annual appropriations should be made until the work is accomplished.

No definite arrangement has yet been made with the city of Brooklyn for an exchange of ground to accommodate both parties, as authorized by resolution of Congress of July 2, 1864.

The purchase of a small addition to the Philadelphia navy yard, as provided by law, has not yet been consummated; the titles are under consideration, and I learn a caveat has been filed against the conveyance of this property by its present owners or claimants to the government.

At Norfolk the demand for repairs of steamers and their machinery is pressing, and cannot be fully complied with for want of appliances; still a large amount of work is done there, with the means we have been able to employ with the appropriations available.

At Mare island, California, the fluctuating state of the currency has embarrassed the department so far as to compel it to curtail the expenditures there to repairs of vessels and current repairs of the yard improvements.

The appropriations will but barely procure materials, leaving but little for labor or objects estimated for. Where gold is the currency, and legal-tender notes at a large discount, the difficulty of executing work within the estimates made previous to the financial troubles will be readily perceived.

It was found necessary, upon the demand of workmen to be paid in gold, to yield to a large increase of wages, dependent upon the price of gold until master mechanics were receiving some nineteen to twenty dollars per day in treasury notes, or at the rate of more than five thousand (\$5,000) per annum, while the commanding officer of the station was receiving three thousand two hundred dollars (\$3,200) per annum, and other salaried officers in that proportion, which created much dissatisfaction, and the department came to the conclusion to cur-

tail the operations there to keeping our vessels in that sea in serviceable condition, and the yard machinery and improvements in proper order for work.

A site has been selected near the naval asylum for a cemetery under the authority of law, and arrangements will soon be made for the removal of the dead from the old burial place in the asylum grounds.

Contracts have been made for two floating dry docks, one at New York, and one at Philadelphia, as authorized by law. A difficulty will arise in providing a location at the latter place for the safe-keeping and working of this dock, and a further expenditure must be incurred by leasing wharf and dock room for it.

The yard could be extended by the purchase of adjoining property on reasonable terms, as I am informed, so that if no new yard be established on the Delaware, I would recommend such extension of the present establishment.

The navy yard is so circumscribed that its operations are with difficulty executed, but with the extension alluded to its dimensions would be such as to afford room for a large number of additional buildings, and space for the execution of a greatly increased quantity of work.

Large demands are made for improvement at stations not before definitely placed in charge of this bureau, so that I deem it expedient to ask an appropriation of one million of dollars, (\$1,000,000,) to meet emergencies not specified. The experience of the past shows the absolute necessity of having a fund at the disposal of the department to meet the demands for wharves, stores, and workshops, at points not anticipated, and which are indispensable to the navy. In some instances this bureau has been obliged to draw on other bureaus to meet these imperative demands, and the amounts drawn must be refunded.

In regard to the system of contracting with the lowest bidder for supplies, including all small articles, in number legion, by advertisements, as provided by law, I consider it the worst that can be devised; indeed, Congress has passed laws on this subject which are most difficult if not impracticable to execute to the letter.

The operation of the law on this bureau differs somewhat from that on other bureaus, for appropriations are made for this for many specific objects at each yard, while for other bureaus they are made in large amounts for fewer objects.

When the appropriations are made at a late period of long sessions, about one-half of the working season is lost before materials can be procured for the work. This bureau cannot prepare schedules of materials until the appropriations are made, they being for specific objects; the preparation of schedules, correction, printing, distribution, advertisement for proposals, opening, sealing, and examination of bids, and awarding contracts and executing the same, occupies at least three months, so that the contracts for the present year are now in process of execution, and will not be completed before the end, probably, of this month.

Thus one-third of the fiscal year will have passed before materials under these contracts can be available, and during that time indispensable supplies must be procured in open purchase.

In all this process of contracting with the lowest bidder, numerous questions arise to be decided; the proposals are full of errors, erasures, and miscalculations, some of them no doubt intended to deceive; when these errors are corrected, bidders become dissatisfied and suspicious, and one of them, who has come out as a champion of reform in naval contracts, has charged the bureaus, or their clerks, with complicity with bidders, and the chairman of the committee of investigation of the Senate tacitly confirms the truth of the charge in his minority report.

If Congress would pass the navy appropriation bill every session before the 4th of March, this delay would be avoided, because the new contracts could be executed by the commencement of the fiscal year for which the supplies are intended.

The fluctuations in the market in these times cause bidders to be extremely cautious how they set prices at low figures for a year in advance, and it is my judgment that we shall pay this year twenty per cent. more for many articles under contract than they could be obtained for in market as wanted. Some materials it is absolutely necessary to advertise and contract for, but the volume of small items scheduled could be better procured in open purchase.

Another objection to the contract system is, that contractors are bound to wait for their money till the treasury shall pass the Secretary's warrants, and the delay on this point is doubtful, and contingent upon the demands upon the treasury from other quarters, or from the will or pleasure of the Secretary to pay claimants in their order, at his discretion. I respectfully recommend that the procuring of supplies for the navy be left more to the discretion of the department than is now permitted by law, and that a competent paymaster or purchasing agent be appointed at each yard, to be confirmed by the senate, to be subject to naval laws, and put under bonds. He should make himself acquainted with the market prices by personal inquiry and correspondence, and make all purchases for the navy required of him on the best terms. Also an inspector, to be appointed under similar restrictions, who should be a competent weigher, gauger, and measurer, to inspect all supplies which come into the yard, and certify to their quality and quantity; these officers to act under detailed instructions from the Secretary of the Navy.

I beg leave to repeat my previous recommendations for an increase of the pay of the principal clerks at navy yards.

While Congress legislated at its last session in favor of clerks of paymasters under the Bureau of Provisions and Clothing, it left unnoticed the appeal of those of the navy yards, whose duties are as onerous as any others.

I also beg leave to recommend an increase of the pay of the clerks in this bureau; when the present salaries were fixed by law the amount was sufficient to afford a good and comfortable living to those occupying the positions, but recently the cost of the necessaries of life, to say nothing of the comforts, has increased in such an unprecedented rate that it is almost impossible for those holding clerkships, and dependent entirely upon their salaries, to live even in the most economical manner. While the pay of all mechanics and laboring men has advanced with the increased cost of all articles of consumption, some of them as much as one hundred per cent., the pay of these salaried clerks has remained the same as when established by law, at a time when all the necessaries of life were cheap and easily obtained.

The case of these officers is one of peculiar hardship, and it is hoped Congress will give it merited consideration.

I submit a statement of the progress of improvements at the several navy yards during the past fiscal year, and estimates for the next, commencing with:

PORTSMOUTH, N. H.

The works of improvement which have been completed at this yard during the fiscal year ending June 30th, 1864, are: reservoir, storehouse No. 11 extension, futtock saw mill, and building, paint shop, porter's house, and knee-dock wall.

The amount expended upon these several objects during the year is, for materials, \$25,692 09; for labor, \$8,100 96, making an aggregate of of \$33,793 05. Most of these works have been completed within the amounts allotted; others have cost more than the original estimates, owing to the increased cost of materials used; the excesses of cost, however, have been less than the amounts saved on other objects, so that the aggregate cost of all the objects has been less than the original estimates.

The works which have been in progress during the year, but which are not

yet completed, are : machine shop and smithery, fitting and furnishing machine shop and smithery, capstan for shears, ordnance machinery and shops, boat-house and carpenters' shop, railway, floating dry dock, and repairs of all kinds. On these objects there have been expended during the year, for materials, \$95,094 46, and for labor, \$74,244 16, making an aggregate of \$169,338 62. The work upon these objects has progressed rapidly and in a satisfactory manner, but will not be completed for the amounts appropriated. There has been expended during the year, for objects coming under the head of contingent the sum of \$83,817 23.

Plans and estimates are submitted for the fiscal year ending June 30, 1866, for the following objects, viz: for reservoir and gutters, oakum store, siding mill, extension of ship-house R, railway, &c., for floating dock, machinery and tools, grading, gutters and drains, completing plumbers', coppersmiths', and tanners' shops, completing quay wall, completing mooring pier, completing extension of ship-house S, two launching slips, and for repairs of all kinds, amounting in the aggregate to the sum of \$316,250.

Reservoir, gutters, &c.—The supply of fresh water at this yard is very limited, and more is wanted to furnish the boilers in the new boat shop, and to obtain it, it is proposed to construct a reservoir to receive the rain water falling upon the roofs.

Oakum store.—The present oakum store is small, and, in part, necessarily occupied for other purposes; the large amount of work now being done at this yard renders a good and sufficient oakum store absolutely necessary; an estimate is therefore submitted for such a building as will meet the wants of the service.

Siding mill.—The operation of siding ship timber is now performed by the slow, tedious, and expensive process of hand labor, and it is proposed to construct a mill in connexion with the futtock saw-mill now in successful operation, so that the whole preparation of the timber may be performed by aid of machinery; this will be a valuable addition to the yard facilities, and will affect a great saving in the construction of wooden vessels.

Extension of ship-house R.—The present ship-houses, built many years since, are not of sufficient length to cover the ships of the present day, and some of the new ships extend from fifty to one hundred feet beyond the upper end of the houses, that portion being exposed to the weather and liable to injury. It is proposed to extend this house to a length proper for the size of ships now building, and the object is considered of importance.

Railway &c., for floating dock.—The railway upon which vessels are taken from the floating dock has become much decayed and requires extensive repairs. The decks and some other parts of the dock also require repairs, and it is all important that these works should be kept in proper working condition, as they afford the only means at this station for the examination and repairs of vessels' bottoms.

Machinery and tools.—The quantity of machinery at this yard is entirely insufficient to meet the demands for repairs of steam vessels and their machinery. An additional amount is absolutely necessary, and for that purpose an appropriation is earnestly urged.

Grading gutters and drains.—This item is much needed to prevent the accumulation of water about some of the new buildings, and to put the roads in proper condition for the large amount of heavy transportation about the yard.

Completing plumbers', coppersmiths', and tanners' shops, quay walls, mooring piers, and extension of ship-houses.—These objects have all been appropriated for heretofore, and they are all far advanced towards completion, but owing to the great increase in the cost of materials and labor since the estimates were made, an additional appropriation is necessary for their completion.

Two launching slips.—All the slips at this yard are now occupied by ships

under construction, and others are necessary to the wants of the service. This object is of much importance, and an appropriation for it is strongly urged.

Repairs of all kinds.—The amount asked under this head will be necessary for the proper preservation of the various buildings and other improvements in the yard. Under present circumstances, the demands upon this fund are very heavy, and of such a nature as to admit of no delay; the appropriation is therefore much needed.

BOSTON.

The only object of improvement which has been completed during the last fiscal year is the futtock saw-mill and building. This has been erected under contract with the patentee, and its operation has been satisfactory. The cost of the whole is \$10,000.

The objects which have been in progress during the year, but which are not yet completed, are machinery for machine shop, repairing machinery for ropewalk, paving and draining new shops, coal-house for foundry and smithery, pipes for Cochituate water, water-closets, house for heavy steam-hammer, repairing and repairing drains around dry dock, extension of shear wharf, joiners' shop and paint loft, and repairs of all kinds. Upon these different objects a large amount of materials has been purchased, and the work has been pushed forward with energy, and the progress has been satisfactory.

The amount expended upon them during the year is \$203,210 06.

There has been expended at this yard during the past year, for objects coming under the head of contingent, the sum of \$210,150 89.

Plans and estimates are submitted for the fiscal year ending June 30, 1866, for the following objects, viz: For addition to second story of ropewalk; commencing building for sawing, planing, and working heavy wood work for ships; two building slips; provision store; one set of spinning preparation and repairs of ropewalk machinery; tarpit, and for repairs of all kinds, amounting in the aggregate to the sum of \$493,500.

Addition to second story of ropewalk.—The present amount of spinning machinery, and the accommodations therefor, are entirely insufficient to meet the present enormous demands upon the rope-making establishment, and it is proposed to enlarge them by extending the second story over a portion of the laying-up room. This improvement will greatly increase the capacity of the ropewalk, and is an object of much importance.

Commencing building for sawing, planing, and working heavy wood work for ships.—Much of the sawing for ships is now done by hand, the present saw-mill being of little power, and inadequate for the performance of the large amount of work required. It is proposed to erect a large building for the accommodation of the futtock and other sawing machinery, wood-planers, &c., where all the heavy ship work can be done cheaply and conveniently to the building slips.

This arrangement will be the means of saving large amounts now expended for hand labor, and an appropriation is strongly urged.

Two building slips.—The demands upon this yard in the way of ship-building are very heavy; all the slips are occupied, and others are required for setting up new slips. This object is of much importance, and is indispensably necessary.

Provision store.—The great increase at the business in this yard requires additional storeroom for provisions and clothing; the present store is crowded with the various articles belonging to this department, and to meet the demands of the service an additional storehouse is necessary.

An estimate is therefore submitted for a new building, similar to the present storehouse.

One set of spinning preparation and repairs of ropewalk machinery.—In view

of the contemplated extension of the spinning room, additional machinery will be required. That now in use requires repairs, and an appropriation for this object is deemed indispensable.

Tar-pit.—Large quantities of tar are used at this yard in the manufacture of cordage, and for other purposes, and to provide a safe and proper place for its stowage it is proposed to construct a pit, with fire-proof covering, near the rope-making establishment. This is an important improvement, both on account of safety and economy, and an estimate for the purpose is submitted.

Repairs of all kinds.—With the large amount of ship work being done at this yard, the demands upon this item, for temporary buildings, shops, and other objects, are very heavy, and it is believed the amount estimated will be no more than sufficient to meet these demands and effect the necessary annual repairs upon the various docks, wharves, buildings, and other improvements.

NEW YORK.

The objects which have been completed at this yard during the past year are: officers' houses, water-pipes and hydrants, and cylinder for roasting coffee. The amount expended on these objects during the year is \$35,068 55. These works have been completed in a substantial and satisfactory manner. The objects of improvement which have been in progress during the year, but which are not yet completed, are: dredging channels, repairs of dry dock, new derrick, removing small shears, rebuilding long dock, repairs to ship-houses, extension of sewer, quay wall, new foundry, chain-cable shop, railway, drains, paving and flagging, filling low places, machinery for machine shop, repairs of machinery, boilers, &c., repairs of engines in machine shop, repairs and increase of ordnance machinery and shops, and repairs of all kinds.

Upon these various objects there has been expended during the past fiscal year the sum of \$418,542 08. The work upon these improvements has been urged forward with all possible despatch, and the progress made is highly satisfactory. There has been expended during the year, for objects coming under the head of contingent, the sum of \$185,176 54.

Plans and estimates are submitted for the fiscal year ending June 30, 1866, for the following objects, viz: for continuing quay wall, receiving store, grading and filling, drains, paving and flagging, muster office addition, completing new foundry, continuation of machine shop and iron-plating shop, launching ways, ship-house D, launching ways for steamers, joiners' shop addition, paint shop, water-pipes and hydrants, officers' houses, general increase of machinery in the yard, and for repairs of all kinds, amounting in the aggregate to the sum of \$1,065,663.

Continuing quay wall.—This important work has been in progress some years, and great benefits have already been derived from the use of the portion completed, and an estimate is submitted for its continuation.

Receiving store.—An appropriation has been made for this object, and the work is in progress, but, owing to the enormous increase in the cost of materials and labor, the amount allotted is found insufficient. The object is of great importance and necessity, and an appropriation for its completion is strongly urged.

Grading and filling.—The present area of this yard is much crowded with buildings and materials, and it is absolutely necessary that more working ground should be obtained, which can readily be had by filling in the old timber dock, which is now useless and a lost space. An estimate is submitted for this object.

Drains, paving and flagging.—A system of drainage has been adopted which, as far as executed, has proved very beneficial, and for the continuation of this important work an estimate is submitted.

Muster office addition.—In consequence of the very large number of men

employed in the yard, the muster office is insufficient to accommodate the officers necessary for the discharge of the duties of the office, and it is proposed to add a story to the building, for which purpose a small appropriation is asked.

Completing new foundry.—This fine building has been erected, but owing to the increased cost of materials and labor, the funds allotted are not sufficient for its completion. The building is of the utmost importance, and an additional appropriation for its completion is strongly urged.

Continuation of machine shop and iron-plating shop.—Appropriations have been made for these objects, but the sites originally intended for them are now used for building ships, and it is proposed to change the locations to the vicinity of the new foundry, and enlarge the buildings. When erected according to the present plans, these buildings will afford ample accommodations for the execution of a large amount of work. The object is considered of the first importance, and it is hoped the means will be furnished to complete it at an early day.

Launching ways for ship-house D.—The foundations for this work have been completed so that the ship now building can be launched, but funds are required for building the stone walls, and connecting them with the quay walls at the entrance of the slip. This appropriation is much needed.

Launching slips for steamers.—This yard is deficient in launching slips, and it has been necessary to build several vessels upon temporary slips, which are inconvenient and unsafe for heavy vessels; it is therefore proposed to construct some of a more permanent character, and for this purpose an estimate is submitted.

Joiners' shop extension.—The accommodations for this department are entirely insufficient for the large number of workmen now employed, and to obtain the necessary space, without encroaching upon the working ground of the yard, it is proposed to raise the present building one story, which will add greatly to the facilities for doing the joiners' work. This object is very much needed, and it is hoped an appropriation will be made for it.

Paint shop.—The present paint shop is a small, dilapidated building, unfit for the purpose, and much in the way of operations around the dry dock. It is proposed to erect a new and suitable building, and an estimate is submitted for that purpose.

Water-pipes and hydrants.—An additional number of these important appendages is required, and the necessity and utility of them are too apparent to require comment. An estimate is submitted for this object.

Officers' houses.—An estimate is submitted for houses for the ordnance officer, paymaster, and others. These officers have no quarters in the yard, and it is desirable that they should be provided with houses, so that they may at all times be at hand, in case their presence should be necessary.

General increase of machinery in the yard.—To meet the heavy demands upon this yard for repairs of steamers, the present machinery is quite insufficient, and an increase is absolutely necessary. For this purpose an estimate is submitted, and an appropriation is most urgently desired.

Repairs of all kinds.—This item embraces an amount for some especial repairs which are greatly needed, and also the amounts required for the usual annual repairs of the various buildings, docks, wharves, and other improvements, and it is believed the sum asked will be no more than necessary for the proper protection and preservation of the public property.

PHILADELPHIA.

The objects of improvements which have been completed at this yard during the past year are: extension of storehouse, extension of joiners' shop, and extension of smithery. These works have been completed for the amounts appropriated, and the sum expended upon them during the year is \$30,141 24. These

works were executed under contract, and the buildings have been constructed in a good, substantial manner. The works which have been in progress, but which are not yet completed, are : dredging, repairs of dry dock, and repairs of all kinds, and the amount expended upon them during the year is \$52,715 71. These are all current expenses, and the work upon these objects has been executed as the wants of the service required. There has been expended for objects coming under the head of contingents, during the year, the sum of \$79,407 65.

Plans and estimates are submitted for the fiscal year ending June 30, 1866, for the following objects, viz: for boat shop, machine shop, saw-mill, storehouse, plumbers' shop, crib for foundation of launching ways, brick wall around new purchase, bulkhead at new purchase, repairs of dry dock, repairs of dredger, filling in new purchase, and for repairs of all kinds, amounting in the aggregate to the sum of \$285,680.

Boat shop.—The present boat shop is in the mast-house, and there is not sufficient room for the two departments, their operations often interfering with each other. It is, therefore, proposed to erect a new building for the boat-builders.

Machine shop.—There is no proper machine shop at the yard, the small amount of machinery in operation being in temporary sheds, which are small, inconvenient and dangerous. It is intended to erect a new and appropriate building, where the present and additional machinery can be put up in an advantageous position. This building is much needed, and an appropriation is strongly urged.

Saw-mill.—Nearly all the sawing at this yard is now done by hand, at great expense. The erection of a proper saw-mill will prove a great acquisition to the yard, and the saving effected by its use will soon pay for the cost. An estimate is submitted for this important object, with the hope that an appropriation will be granted.

Storehouse.—The present store accommodations are quite insufficient to meet the wants of the service. It is, therefore, proposed to extend the present store by occupying the ground now used for saw-pits. This object is much needed.

Plumbers' shop.—The shop now used by the plumbers is small and inconvenient, and an appropriation is asked to extend this building so as to furnish room for the accommodation of the workmen.

Crib foundation for launching slip.—The estimate submitted for this object is absolutely necessary to prepare the ways for launching the ship now building; without it the ship cannot be launched.

Brick wall around new purchase.—The purchase of the lot, as authorized by law, has not yet been consummated; but when the United States obtains the title to the land, it must be enclosed, and for that purpose an appropriation is asked.

Bulkhead at new purchase.—This estimate is for running a bulkhead across the new purchase, to retain the filling that may be put upon it. The appropriation is necessary to render the lots useful.

Repairs of dry dock.—The amount asked for this object is necessary for the proper preservation and safe-keeping of this very important appendage to the yard.

Repairs of dredger.—The use of this machine is required to maintain the proper depth of water for working the dry dock, and cleaning out around the wharves, and it is necessary that it should be kept at all times in a condition for work.

Filling in new purchase.—On the lots to be purchased there are some slips and low places which require filling up, and the estimate submitted will be necessary for the purpose.

Repairs of all kinds.—This item embraces the usual amount asked for repairs of the various buildings, docks, wharves, bridges, roads, fences, and other

improvements, and is such as will be required to keep these different works in a proper condition.

WASHINGTON, D. C.

The only work of improvement which has been completed at this yard during the past year is paving. The amount expended on this object is, for materials, \$14,205 76, and for labor, \$794 24, making an aggregate of \$15,000. This work has been done in a substantial manner, and affords improved facilities for the transportation of heavy articles.

The objects which have been in progress, but which are not yet completed, are dredging channels, machinery and tools, coal depot, repairs and increase of ordnance machinery and shops, and repairs of all kinds. The amount expended upon these works during the year is, for materials, \$41,004 51, and for labor, \$56,726 94, making an aggregate of \$97,731 45.

The amount expended during the year for objects coming under the head of contingent is \$168,388 10.

Plans and estimates are submitted for the fiscal year ending June 30, 1866, for the following objects, viz: For completing copper rolling-mill extension, completing storehouse for provisions, new cradle for railway, coal depot and machinery, machinery and tools, flagging and draining, dredging channels, rail tracks, and for repairs of all kinds, amounting in the aggregate to the sum of \$218,300.

Completing copper rolling-mill extension.—An appropriation for this object has been made, but owing to the greatly increased cost of materials and labor the amount allotted will be insufficient to complete it. The object is an important one, as the demands upon the rolling-mill are more than can be fulfilled by the present establishment. An appropriation is, therefore, asked to complete the work.

Completing storehouse for provisions.—An appropriation has also been made for this object, but since the estimate was made the cost of labor and materials has greatly increased, and the amount allotted will not complete the building. It is an important one, and much needed, and therefore an additional sum is asked for its completion.

New cradle for railway.—This railway has been in almost constant use for several years, and the cradle requires renewal. The railway is an indispensable appendage to the yard in repairing the numerous small vessels belonging to the Potomac flotilla, and it is of the utmost importance that a new cradle should be provided. An estimate for this object is submitted, and an appropriation strongly urged.

Coal depot and machinery.—This work has been nearly completed, so far as the construction of the wharf goes; but an additional amount is necessary to provide the requisite machinery, for which purpose an appropriation is asked.

Machinery and tools.—An estimate is submitted for an addition to the machinery and tools at this yard. The quantity now in use is not sufficient for the performance of the large amount of work required at this station, and an appropriation for this object is greatly needed.

Flagging and drainage.—The large amount of heavy transportation over the yard renders it necessary that great attention should be paid to the roads and the drainage of the grounds. The estimate submitted is considered necessary to put the surface of the yard in proper condition.

Dredging channels.—The use of the dredging machine is required for cleaning out around some of the wharves and channels to maintain a proper depth of water, and to defray the expense the estimate submitted will be necessary.

Rail tracks.—To expedite the transportation of heavy materials, manufactured articles and stores to and from the different workshops and storehouses, it is

proposed to lay rail tracks in the yard. The use of this facility will effect a great saving in time and money, and it is hoped the amount asked for will be granted.

Repairs of all kinds.—Some of the large workshops require extensive repairs, and to meet that expense, and the cost of the usual annual repairs to the various buildings, wharves, docks, roads, fences, furnaces, and other improvements, the amount estimated can be judiciously and profitably expended.

NORFOLK, VIRGINIA.

The operations at this yard during the past fiscal year have been confined to the repairing of such buildings and other works as were absolutely necessary for the storage of materials and protection of the workmen employed in repairing the very large number of vessels of the North Atlantic squadron which are now constantly visiting this important station for repairs. A new caisson has been built for the dry dock, and that important work has again been brought into successful operation, as the damage done to the masonry was not such as to materially affect the use of the dock. Repairs have been made upon the victualling-house, mast-house, wharves, offices, blocks and shears, machine and boiler shop, lighters, pitch-house, gas-pipes, guard-house, foundry, &c. The work upon these objects has been prosecuted with vigor, and upon most of them it is still in progress. The amount expended under the head of repairs of all kinds during the year is \$112,695 96. The amount expended during the year under the head of contingent is \$28,053 33.

Estimates are submitted for the fiscal year ending June 30, 1866, for the following objects, viz: For repairs of boat-shed No. 29; repairs of timber-sheds Nos. 30 and 31; repairs of naval store No. 15; repairs of stables; repairs of carpenters' shop; repairs of buildings Nos. 19 and 37; machinery and tools; dredging channels, and for repairs of all kinds, amounting in the aggregate to the sum of \$514,000.

As all the buildings in this yard were destroyed by the rebels when they evacuated the place, and as this is one of the most important stations where large numbers of vessels resort for repairs, it will be necessary to ask for large appropriations for some time to come in order to place the yard in a comparative state of efficiency. Already much has been done towards repairing the buildings, and a very large number of vessels belonging to the North Atlantic blockading squadron have been repaired here. The want of proper storehouses and workshops produces great inconvenience, and it is very desirable that the amount of the estimates now submitted should be appropriated.

PENSACOLA, FLORIDA.

At this yard but little has been done towards its improvement. The work has been confined to the repairs of such buildings as were found absolutely necessary to meet the wants of the Gulf squadron. It consists of repairs upon the building formerly used as a chapel and armory, building two half docks for the examination and repair of small vessels, machine shop and machinery for the same, smithery, storehouse, and wharves. These works have been so far repaired as to afford moderate facilities for repairing the various vessels visiting the yard. The amount expended during the year is \$26,900 26. There has been expended for objects coming under the head of contingent the sum of \$16,747 56.

Estimates are submitted for the fiscal year ending June 30, 1866, for the following objects, coming under the head of repairs of all kinds: For repairs of machine shop, repairs of storehouse, repairs of commandant's quarters, repairs of commanders' quarters, repairs of officers' quarters, and for repairs of all kinds, amounting in the aggregate to the sum of \$171,000.

This yard was also almost entirely destroyed by the rebels, and thus far but little has been done to restore it to its former condition. Some small amount of machinery has been erected to meet the most pressing want of the Gulf squadron, and it is now proposed to repair a few of the buildings for the accommodation of the officers, stores, &c., and the amount estimated will probably be sufficient to meet the demands which will be made upon the yard at present.

MARE ISLAND, CALIFORNIA.

The works of improvement which have been completed at this yard during the past fiscal year are officers' houses Nos. 7, 9, 11 and 13, four cisterns for rain water, boat-house and landing slip, basin and railway, Bishop's derrick, and portable engines. Upon these several objects there has been expended for materials the sum of \$3,925 55, and for labor, \$41,862 71, making an aggregate of \$45,788 26.

The works which have been in progress during the year, but which are not yet completed, are: wharf, gradin g and paving, drainage and sewerage, tar and pitch house, foundry, boiler establishment, &c., machinery for machine shop, two iron wharf-cranes, scows, lighters and stages, repairs of sectional dock, smithery, boiler-house in smithery, cistern and holder for gas-works, saw-mill, stables, coal-house and wharf, sea-wall, and repairs of all kinds. The amount expended upon these various objects during the past fiscal year is \$274,125 17. Under the head of contingent there has been expended during the year the sum of \$120,734 48.

Plans and estimates are submitted for the fiscal year ending June 30, 1866, for the following objects, viz: For continuing grading and paving, foundry establishment, completing iron wharf-cranes, smithery, tools and machinery, cistern and holder for gas-works, saw-mill machinery, coal-house and wharf, sea-wall continuation, guard-house, commencing wall at foundry, completing one-half of storehouse, paint shop, commencing timber-shed, and for repairs of all kinds, amounting in the aggregate to the sum of \$348,800.

Continuing grading and paving.—This important and highly necessary work has been in progress since the commencement of the yard, and as other improvements are made this must continue in progress. An estimate is submitted for such sum as will be required during the next fiscal year.

Foundry establishment.—This work is far advanced towards completion, and a small additional amount is required to place it in a state of efficiency, for which an appropriation is asked.

Completion of iron wharf-cranes.—These important appendages to the yard have been purchased and partially set up. For completing the foundations, setting up and putting in operation, a small appropriation is necessary.

Smithery, tools, and machinery.—This establishment has been in successful operation for some time, but the increasing demands of the service require additional tools and machinery, and for that purpose an estimate is submitted.

Cistern and holder for gas-works.—This work is nearly completed, but, owing to the great advance in the cost of materials and labor, the amount allotted is insufficient, and a further appropriation is required to complete the work.

Saw-mill machinery.—The saw-mill building has been commenced, but the amount available for the object will not complete it. The great increase in cost of all work since the estimates were made renders it impossible to execute them within the amount allotted. This is a very necessary work, and it is desirable that it should be completed at an early day, and therefore an estimate is submitted for the purpose.

Sea-wall continuation.—This improvement is necessary for the protection of that portion of the yard bordering on the bay of San Pablo. It has been commenced, and an additional appropriation is necessary for its continuation.

Guard-house.—Materials have been procured for this object, and the building is much needed for the accommodation of the guard and watchmen, who now occupy temporary and inconvenient quarters. The price of labor is now so high that additional funds will be required to complete the building.

Commencing quay wall at foundry.—To afford a good landing and working ground in front of the foundry, this wall is absolutely necessary; and as it is hoped the foundry establishment will soon be in condition for full operation, it is highly important that this work should be commenced at once. An appropriation for this object is therefore urged.

Completing one-half of storehouse.—The amount of store accommodation at this yard is quite limited, and as the business of the yard increases great difficulty occurs in finding room for the storage and safe-keeping of the large quantity of stores constantly accumulating. It is therefore proposed to construct one-half of one of the stores as laid down on the plan of the yard. This will afford room to meet the present wants of the service, and the appropriation is deemed highly necessary.

Paint shop.—This building is much needed, there being no proper place provided for the painters' paint-mills, varnish boilers, &c. They are now located in a loft over a timber-shed, and as many of the materials used are of an inflammable nature, it is deemed best to have them in an isolated building, where, in case of accident, other property may not be in danger. An estimate is therefore submitted for this object.

Commencing timber-shed.—The want of proper buildings for the stowage of timber causes great loss to the government in the rapid decay of that material when exposed to the excessive alternations of wet and dry weather. An appropriation is therefore asked for commencing a new timber-shed in the vicinity of the saw-mill, which it is hoped will be granted.

Repairs of all kinds.—The amount estimated under this head will be required for the necessary annual repairs of the various buildings, docks, wharves, roads, and other improvements.

SACKETT'S HARBOR.

The expenditures at this station, during the past fiscal year, have been confined to the necessary repairs of the existing improvements. The amount expended during the year for this purpose is \$598 32.

For the necessary repairs of the ship-house and other buildings, wharves and roads, during the next fiscal year, there will be required the sum of \$2,000.

MISCELLANEOUS STATIONS.

During the progress of the war it has become necessary to establish temporary stations at various points, (and to meet extraordinary demands,) such as Port Royal, South Carolina, Key West, Florida, Ship Island, Mississippi, Cairo, Illinois, and Memphis, Tennessee. In its future progress probably others will be required, and means should be at the disposal of the department to meet such emergencies as they occur. For an object of this kind no detailed estimates can be made, because the expenditures are entirely dependent upon the future operations of the land and naval forces; it is therefore deemed proper and wise to ask an appropriation of \$1,000,000, to meet these demands should they occur.

NAVAL ASYLUM.

This institution has been judiciously administered under its present governor, and the inmates seem contented and happy, though occasionally cases of intoxication occur, notwithstanding the rules of temperance are sedulously urged in the most persuasive and conciliatory manner. The advance in the

This yard was also almost entirely destroyed by the rebels, and thus far but little has been done to restore it to its former condition. Some small amount of machinery has been erected to meet the most pressing want of the Gulf squadron, and it is now proposed to repair a few of the buildings for the accommodation of the officers, stores, &c., and the amount estimated will probably be sufficient to meet the demands which will be made upon the yard at present.

MARE ISLAND, CALIFORNIA.

The works of improvement which have been completed at this yard during the past fiscal year are officers' houses Nos. 7, 9, 11 and 13, four cisterns for rain water, boat-house and landing slip, basin and railway, Bishop's derrick, and portable engines. Upon these several objects there has been expended for materials the sum of \$3,925 55, and for labor, \$41,862 71, making an aggregate of \$45,788 26.

The works which have been in progress during the year, but which are not yet completed, are: wharf, gradin g and paving, drainage and sewerage, tar and pitch house, foundry, boiler establishment, &c., machinery for machine shop, two iron wharf-cranes, scows, lighters and stages, repairs of sectional dock, smithery, boiler-house in smithery, cistern and holder for gas-works, saw-mill, stables, coal-house and wharf, sea-wall, and repairs of all kinds. The amount expended upon these various objects during the past fiscal year is \$274,125 17. Under the head of contingent there has been expended during the year the sum of \$120,734 48.

Plans and estimates are submitted for the fiscal year ending June 30, 1866, for the following objects, viz: For continuing grading and paving, foundry establishment, completing iron wharf-cranes, smithery, tools and machinery, cistern and holder for gas-works, saw-mill machinery, coal-house and wharf, sea-wall continuation, guard-house, commencing wall at foundry, completing one-half of storehouse, paint shop, commencing timber-shed, and for repairs of all kinds, amounting in the aggregate to the sum of \$348,800.

Continuing grading and paving.—This important and highly necessary work has been in progress since the commencement of the yard, and as other improvements are made this must continue in progress. An estimate is submitted for such sum as will be required during the next fiscal year.

Foundry establishment.—This work is far advanced towards completion, and a small additional amount is required to place it in a state of efficiency, for which an appropriation is asked.

Completion of iron wharf-cranes.—These important appendages to the yard have been purchased and partially set up. For completing the foundations, setting up and putting in operation, a small appropriation is necessary.

Smithery, tools, and machinery.—This establishment has been in successful operation for some time, but the increasing demands of the service require additional tools and machinery, and for that purpose an estimate is submitted.

Cistern and holder for gas-works.—This work is nearly completed, but, owing to the great advance in the cost of materials and labor, the amount allotted is insufficient, and a further appropriation is required to complete the work.

Saw-mill machinery.—The saw-mill building has been commenced, but the amount available for the object will not complete it. The great increase in cost of all work since the estimates were made renders it impossible to execute them within the amount allotted. This is a very necessary work, and it is desirable that it should be completed at an early day, and therefore an estimate is submitted for the purpose.

Sea-wall continuation.—This improvement is necessary for the protection of that portion of the yard bordering on the bay of San Pablo. It has been commenced, and an additional appropriation is necessary for its continuation.

Guard-house.—Materials have been procured for this object, and the building is much needed for the accommodation of the guard and watchmen, who now occupy temporary and inconvenient quarters. The price of labor is now so high that additional funds will be required to complete the building.

Commencing quay wall at foundry.—To afford a good landing and working ground in front of the foundry, this wall is absolutely necessary; and as it is hoped the foundry establishment will soon be in condition for full operation, it is highly important that this work should be commenced at once. An appropriation for this object is therefore urged.

Completing one-half of storehouse.—The amount of store accommodation at this yard is quite limited, and as the business of the yard increases great difficulty occurs in finding room for the storage and safe-keeping of the large quantity of stores constantly accumulating. It is therefore proposed to construct one-half of one of the stores as laid down on the plan of the yard. This will afford room to meet the present wants of the service, and the appropriation is deemed highly necessary.

Paint shop.—This building is much needed, there being no proper place provided for the painters' paint-mills, varnish boilers, &c. They are now located in a loft over a timber-shed, and as many of the materials used are of an inflammable nature, it is deemed best to have them in an isolated building, where, in case of accident, other property may not be in danger. An estimate is therefore submitted for this object.

Commencing timber-shed.—The want of proper buildings for the stowage of timber causes great loss to the government in the rapid decay of that material when exposed to the excessive alternations of wet and dry weather. An appropriation is therefore asked for commencing a new timber-shed in the vicinity of the saw-mill, which it is hoped will be granted.

Repairs of all kinds.—The amount estimated under this head will be required for the necessary annual repairs of the various buildings, docks, wharves, roads, and other improvements.

SACKETT'S HARBOR.

The expenditures at this station, during the past fiscal year, have been confined to the necessary repairs of the existing improvements. The amount expended during the year for this purpose is \$598 32.

For the necessary repairs of the ship-house and other buildings, wharves and roads, during the next fiscal year, there will be required the sum of \$2,000.

MISCELLANEOUS STATIONS.

During the progress of the war it has become necessary to establish temporary stations at various points, (and to meet extraordinary demands,) such as Port Royal, South Carolina, Key West, Florida, Ship Island, Mississippi, Cairo, Illinois, and Memphis, Tennessee. In its future progress probably others will be required, and means should be at the disposal of the department to meet such emergencies as they occur. For an object of this kind no detailed estimates can be made, because the expenditures are entirely dependent upon the future operations of the land and naval forces; it is therefore deemed proper and wise to ask an appropriation of \$1,000,000, to meet these demands should they occur.

NAVAL ASYLUM.

This institution has been judiciously administered under its present governor, and the inmates seem contented and happy, though occasionally cases of intoxication occur, notwithstanding the rules of temperance are sedulously urged in the most persuasive and conciliatory manner. The advance in the

price of all articles will necessitate a small increase over last year's appropriation in the item of "support of beneficiaries." There were, on the 1st of July, 1863, one hundred and seventy-six (176) persons, including officers and attendants, borne on the rolls of the asylum. Eight (8) beneficiaries have been admitted, seventeen (17) have died, and one (1) has been sent to the insane asylum during the fiscal year ending June 30, 1864.

The expenses of the institution for the year ending June 30, 1864, have been as follows:

Subsistence	\$15,668 03 $\frac{3}{4}$
Clothing, tobacco, &c.	7,850 05
Miscellaneous items	7,619 39

JOS. SMITH, *Chief of Bureau.*

Hon. GIDEON WELLES,
Secretary of the Navy.

Schedule of papers accompanying the report of the chief of the Bureau of Yards and Docks to the Secretary of the Navy, dated October 15, 1864.

A.—General estimates from yards and docks.

No. 1.—Estimate for the support of the bureau.

No. 2. Estimate for officers and others at yards and stations.

No. 3.—Statement showing the sums which make up the first and second items of Y. & D., A.

No. 4.—Estimate for improvements and repairs at yards and stations.

No. 5.—Estimate for repairs of all kinds, showing the sums which make up the amounts under this head in Y. & D., No. 4.

No. 6.—Statement of expenditures under the head of contingent during the past fiscal year, and estimates for the same for the fiscal year ending June 30, 1866.

No. 7.—Estimates of appropriations, under the cognizance of the Bureau of Yards and Docks, required for the service of the fiscal year ending June 30, 1866.

BUREAU OF YARDS AND DOCKS, *October 15, 1864.*

Y. & D., A.

General estimate of the Bureau of Yards and Docks for the fiscal year ending June 30, 1866, in addition to the balances remaining unexpended July 1, 1865.

	Estimated for the year end- ing June 30, 1866.	Estimated for the year end- ing June 30, 1865.
1. For the pay of commission, warrant, and petty officers, (see paper Y. & D., No. 3).....	\$188,816	\$185,216
2. For the pay of superintendents, naval constructors, and all the civil establishments of the several yards and stations, (see Y. & D., No. 3).....	132,870	130,120
3. For the improvements and repairs at yard, stations, and naval asylum, (see Y. & D., No. 4).....	4,492,793	2,465,528
4. For contingent expenses that may accrue during the fiscal year for the following purposes, viz: for freight and transportation; for printing, advertising, and stationery; for books, maps, models, and drawings; for the purchase and repair of fire-engines; for machinery of every description, and patent right to use the same; for repairs of steam-engines and attendance; for purchase and maintenance of oxen and horses and driving teams; for carts, timber-wheels, and workmen's tools of every description for navy yard purposes; for telegrams and postage of letters on public service; for furniture for government offices and houses; for coals and other fuel; for candles, oil, and gas; for cleaning and clearing up yards; for flags, awnings, and packing boxes; for pay of watchmen; for incidental labor at navy yards not applicable to any other appropriation; for rent of landing at Portsmouth, N. H.; for tolls and ferriages; for water tax; and for rent of stores and rendezvous, (see Y. & D., No. 6).....	1,760,000	1,370,000
Total.....	6,574,479	4,150,864

BUREAU OF YARDS AND DOCKS, *October 15, 1864.*

2 dozen pallet knives.....	7 50	per dozen.
2 dozen putty knives.....	5 00	per dozen.
2 dozen drawer locks.....	4 00	per dozen.
1 dozen 3-tumbler desk locks.....	30 00	per dozen.
4 dozen 3-tumbler drawer locks.....	22 50	per dozen.
1 dozen 3-tumbler cupboard locks.....	30 25	per dozen.
2 dozen iron chest locks.....	7 50	per dozen.
3 dozen mortise locks, mineral knobs and trimmings,	15 25	per dozen.
1 dozen large size door latches.....	7 00	per dozen.
12 dozen brass drawer locks, two and one-half-inch.	5 25	per dozen.
2 dozen cupboard locks, three by two and one-half- inches.....	3 50	per dozen.
1 dozen store-door locks.....	37 50	per dozen.
1 dozen night latches, 3 keys each.....	18 75	per dozen.
1 dozen lanterns, samples to be seen at the yard....	60 00	per dozen.
1 dozen lanterns.....	45 00	per dozen.
6 globe lanterns, brass trimmings.....	5 25	each.
24 dozen hand lanterns.....	15 00	per dozen.
6 globe lanterns, with guards.....	2 00	each.
2 dozen globe lanterns.....	15 00	per dozen.
500 pounds sheet lead, three and one-half pounds per foot.....	27	per pound.
500 pounds sheet lead, three and one-half pounds per foot.....	27	per pound.
1,000 pounds lead pipe, sizes as required.....	27	per pound.
6 iron ladles, large, for plumbers.....	2 00	each.
2,000 pounds sheet lead, 3 pounds per foot.....	27	per pound.
2 spirit levels.....	5 00	each.
3 sets steel letters, for marking iron.....	7 00	per set.
2 dozen water-closet door knobs, 3 keys each.....	15 00	per dozen.
2 dozen glaziers' nippers.....	60 25	per dozen.
5 pairs cutting nippers, Stubbs's, assorted sizes, 4, 6, and 9-inch.....	4 00	per pair.
300 iron nuts, hot pressed, three-eighths to 1 inch square	4 25	per 100.
500 iron nuts, hot pressed, hexagonal, three-eighths to 1 inch.....	4 25	per 100.
4 dozen pickaxes, steel-pointed, samples to be seen at the yard.....	20 00	per dozen.
2 plough planes, common size, one-half inch wide, with cast steel plane irons.....	15 00	each.
3 plane irons, matched, two and one-quarter-inch....	1 75	each.
6 plane irons, matched, two and one-half-inch.....	2 10	each.
6 plane irons, matched, 2-inch.....	1 50	each.
6 plane irons, single, 2-inch.....	75	each.
3 plane irons, single, two and one-quarter-inch.....	88	each.
6 plane irons, single, two and one-half-inch.....	1 00	each.
1 pair one-half-inch matched planes.....	4 25	per pair.
3 pair seven-eighth-inch matched planes.....	4 10	per pair.
1 pair three-quarter-inch matched planes.....	4 40	per pair.
1 pair 1-inch matched planes.....	4 45	per pair.
6 beading planes, one quarter to five-eighths-inch....	1 10	each.
1 grooving plane, one quarter-inch.....	2 25	each.
2 grooving planes, three-eighths-inch.....	2 00	each.
3 grooving planes, one-half-inch.....	2 10	each.
1 grooving plane, five-eighths-inch.....	2 15	each.
1 grooving plane, three-quarters-inch.....	2 20	each.
3 grooving planes, seven-eighths-inch.....	2 05	each.

1 grooving plane, 1-inch.....	\$2 16	each.
2 three-eighths-inch bead planes, double irons.....	4 40	each.
2 one-quarter-inch bead planes, double irons.....	4 50	each.
2 sets planing machine irons, 3 irons to each set, one set to fit Woodbury's and one set to fit Andrews's patent planing machines, at the joiners' shop...	20 00	per set.
6 moulding planes, one and one-quarter to two and one-half inches.....	4 00	each.
6 hollowing planes, one and one-quarter to three inches each.....	3 75	each.
1 plough plane and set of irons.....	20 00	each.
4 dozen papers glazing points.....	2 30	per dozen.
24 pairs steel axle window pulleys, 3-inch.....	37	per pair.
12 pairs steel axle window pulleys, 2 and a half-inch..	1 10	per pair.
2 dozen iron padlocks	7 50	per dozen.
3 dozen brass padlocks	20 00	per dozen.
2 dozen padlock irons	2 50	per dozen.
11 pairs plyers, round, assorted, 4, 6, and 9 inches ...	2 45	each.
11 pairs plyers, flat, assorted, 4, 6, and 9 inches.....	2 60	each.
6 pairs plyers, cutting Nos. 2 and 3, three of each...	3 25	each.
2 belt punches, sample to be seen at the yard.....	1 50	each.
2 and a half dozen steel rakes	11 50	per dozen.
16 self-feeding patent ratchets, J. C. Chapman's, Nos. 1, 2, 4, and 6, as required	50 00	each.
186 riddles, Nos. 2, 3, 4, and 6, as required	2 90	each.
20 gross round-headed brass screws, 1 to 1 and a half-inch	4 00	per gross.
66 gross wood screws, brass, half to 1-inch.....	4 50	per gross.
12 gross screws, assorted, three-quarters to 3-inch....	10 75	per gross.
175 gross iron wood-screws, half to 3 inches, as required	2 50	per gross.
90 gross iron screws, gimlet-pointed, assorted	3 50	per gross.
4 dozen hand-screws	5 75	per dozen.
3 dozen hand-screws, half, five-eighths, and three-quarters, as required	5 80	per dozen.
1 pit saw, 8 inches wide, with handles.....	30 00	each.
1 handsaw, for sawing iron, large size	5 25	each.
1 handsaw, for sawing iron, 18 inches long	4 00	each.
6 and a half dozen handsaws, for sawing iron and copper, with backs	60 00	per dozen.
2 handsaws	5 50	each.
6 wood saws	2 75	each.
1 dozen handsaws, cast-steel	47 00	per dozen.
2 dozen handsaws, six teeth to the inch.....	48 00	per dozen.
3 cross-cut saws, samples to be seen at the yard.....	11 50	each.
3 and one sixth dozen cross cut saws, cast-steel, 4 and a half feet long.....	90 00	per dozen.
3 dozen cross-cut saws, cast-steel 4 feet long.....	80 00	per dozen.
6 jig saws, 18 inches long, three-sixteenths inch wide, and nine teeth to the inch	1 10	each.
6 jig saws, 18 inches long, quarter-inch wide, and nine teeth to the inch	1 25	each.
36 jig saws, 9 and a half inches long, one-fourth, three-eighths, one-half, and five-eighths inch, as required	70	each.
2 dozen circular saws, 30 and 18 inches diameter	300 00	per dozen.
6 dozen web saws, 24 and 26 inches long, assorted widths	13 00	per dozen.
1 dozen web saws, 14 inches long, assorted widths....	7 50	per dozen.
62 hack saws, 10 inches	87½	each.
2 dozen iron spoke-shaves	7 50	per dozen.
1 dozen iron spoke-shaves, 3-inch.....	9 50	per dozen.
1 dozen iron spoke-shaves, 3 and a half inch.....	11 25	per dozen.
20 dozen Ames's No. 5 cast-steel shovels	31 00	per dozen.
4 dozen Ames's No. 2 cast-steel shovels	30 00	per dozen.
2 shovels, per sample.....	2 50	each.

8 and a half dozen cast-steel coal shovels.....	\$30 00	per dozen.
2 and a quarter dozen cast steel coal scoops	31 00	per dozen.
4 dozen stove scoops.....	2 50	per dozen.
2 dozen stove shovels	2 50	per dozen.
32 dozen cast-steel shovels, best quality.....	31 00	per dozen.
96 dozen cast-steel moulders' shovels, Ames's best.....	31 00	per dozen.
2 dozen cast steel shovels, long-handled	32 00	per dozen.
1 dozen cast-steel spades, long-handled	31 50	per dozen.
1 dozen cast-steel spades.....	31 00	per dozen.
1 dozen coal screens, No. 7 wire	15 00	per dozen.
3 brass sand sieves.....	3 00	each.
1 scythe, to be selected	1 50	each.
1 pair shears for sheet iron, No. 0.....	22 50	per pair.
1 pair squaring shears, for tinnerns	50 00	per pair.
1 pair circular shears, for tinnerns.....	58 50	per pair.
6 dozen shears, for cutting copper.....	175 00	per dozen.
1 pair lever shears, for cutting heavy copper	30 00	per pair.
2 pairs No. 6 snips, for tinnerns.....	9 50	per pair.
2 pairs No. 4 snips, for tinnerns.....	11 50	per pair.
2 dozen square stakes, for tinnerns.....	70 00	per dozen.
2 dozen door springs, Torrey's patent.....	12 00	per dozen.
78 and a half reams of sand-paper, assorted numbers, from 0 to 3.....	6 50	per ream.
13 and a third dozen steel squares.....	45 00	per dozen.
2 sets stocks, taps, and dies, to cut one, seven-eighths, three-fourths, and three-eighths inch, with tap- wrench fitted.....	15 00	per set.
2 sets stocks, taps, and dies, to cut half, three-eighths, and one-fourth inch	7 50	per set.
1,500 pounds Banca tin	1 10	per pound.
3 boxes D IX tin plate	30 00	per box.
6 boxes 10 by 14 IX tin plate.....	37 50	per box.
2 boxes 14 by 20 IXX tin plate	45 00	per box.
20 sheets japanned tin, 14 by 20	75	per sheet.
2 one-inch taps, to fit one, seven-eighths, three-fourths, and five-eighths.....	1 00	each.
2 one-inch taps, to fit half, three-eighths, and one- fourth.....	1 00	each.
2 and a half dozen masons' trowels, samples to be seen at the yard	12 00	per dozen.
22,000 tacks, sizes as required.....	30	per M.
20,000 tacks, copper and iron, sizes as required.....	1 00	per M.
72 hand vices, Stubbs's, assorted sizes	4 50	each.
6 bench vices, wrought-iron, as per sample.....	44 00	each.
36 screw wrenches, Coe's, sizes as required	5 50	each.
2 monkey wrenches	5 75	each.
1 monkey wrench, 22 inches.....	7 00	each.
4 monkey wrenches, one-fourteenth, one-twelfth, and one-tenth inch.....	5 75	each.
2 dozen monkey wrenches, hammer, sizes as required, samples to be seen at the yard	6 50	per dozen.
500 iron washers, sizes as required	37	per 100.
3 dozen window fastenings, per sample	7 50	per dozen.
1,600 pounds sheet zinc	30	per pound.
150 pounds pig zinc.....	25	per pound.

To be delivered as required.

JOHN M. WHITTEMORE & Co. DATE OF CONTRACT, OCTOBER 8, 1864.

27 quart bottles Maynard & Noyes's ink.....	67 per bottle.
2 bottles Maynard & Noyes's ink, half pints.....	25 per bottle.
2 bottles indelible brown ink.....	1 00 per bottle.
24 bottles black writing ink.....	50 per bottle.
3 pieces India ink, samples seen at the constructing engineer's office.....	75 each.
3 pieces Japan or Chinese ink.....	1 00 each.
2 sets ink saucers, 3 and a half inch chambers.....	2 00 per set.
14 penknives.....	2 00 each.
12 penknives, best Congress.....	2 50 each.
6 desk knives.....	1 00 each.
1 ledger, to pattern.....	17 00 each.
43 quart bottles mucilage.....	1 00 per bottle.
1 box mathematical instruments, per sample.....	75 00 per box.
1 whole cake Winsor & Newton's neutral tint.....	60 each.
7 cards Gillott's mapping pens.....	90 per card.
4 cards Gillott's crow quill pens.....	1 00 per card.
16 gross Gillott's steel pens, assorted.....	1 25 per gross.
60 gross pens, as per sample.....	1 00 per gross.
1 gross pens, Henks & Welles's, No. 1021.....	1 00 per gross.
4 drawing pens, 2 large and 2 small, sample seen at the constructing engineer's office.....	3 00 each.
1 dozen drawing pens, per sample.....	25 each.
2 bow pens, 1 large and 1 small.....	3 50 each.
26 dozen penholders.....	50 per dozen.
3 gross patent pen-fasteners.....	1 50 per gross.
3 paper-holders.....	1 50 each.
3 gross paper-fasteners.....	1 50 per gross.
6 paper weights.....	40 each.
15 paper-folders, ivory.....	1 00 each.
52 reams foolscap paper.....	7 50 per ream.
25 reams letter paper.....	6 50 per ream.
11 reams letter paper, ruled and printed per pattern.....	9 50 per ream.
8 reams ruled letter paper.....	7 00 per ream.
11 reams note paper, ruled and printed per pattern.....	6 50 per ream.
12½ reams note paper.....	4 50 per ream.
12½ reams regulation paper.....	11 00 per ream.
4 reams, half-sheets, regulation paper, printed head- ings, per sample.....	13 50 per ream.
2 reams, whole sheets, regulation paper, printed head- ings, per sample.....	13 50 per ream.
1 quire press paper.....	5 50 per quire.
5 ³ / ₁₀ reams log paper.....	14 00 per ream.
12 ¹ / ₁₀ reams wrapping paper, assorted sizes.....	18 00 per ream.
8 ¹ / ₁₀ reams envelope paper.....	8 50 per ream.
2½ quires tracing paper.....	5 00 per quire.
4 quires oiled paper, per pattern.....	5 50 per quire.

66 sheets, hot and cold pressed, Whatman's antiquarian drawing paper, best quality.....	\$2 25 per sheet.
100 sheets, cold and hot pressed, Whatman's double elephant drawing paper, best quality.....	45 per sheet.
98 sheets, cold and hot pressed, Whatman's imperial drawing paper, best quality.....	30 per sheet.
42 dozen lead pencils.....	1 00 per dozen.
30 dozen lead pencils, eagle No. 3.....	90 per dozen.
6 dozen lead pencils, eagle No 4.....	90 per dozen.
6 dozen lead pencils, mould loft.....	1 75 per dozen.
12 dozen Faber's pencils, Nos. 2 and 3.....	1 20 per dozen.
1 dozen Faber's pencils, No. 3, hexagonal, best quality.....	1 50 per dozen.
$\frac{1}{2}$ dozen Faber's pencils, No 4, hexagonal, best quality.....	1 50 per dozen.
$17\frac{2}{3}$ dozen soapstone pencils.....	10 per dozen.
2 bow pencils, 1 large and 1 small.....	3 00 each.
1 dozen packages pins, best quality, medium size.....	3 25 per dozen.
4 papers pins, common.....	15 per paper.
2 dozen drawing pins.....	40 per dozen.
1 eyelet punch and set, with eyelets, as per sample....	2 00 each.
8 pounce boxes with pounce.....	50 each.
248 sheets pasteboard.....	20 per sheet.
48 sheets pasteboard, 24 by 30 inches.....	20 per sheet.
100 quills.....	1 00 per 100.
$\frac{1}{2}$ dozen pieces of clear native rubber.....	15 each.
26 large pieces of rubber.....	30 each.
6 dozen pieces best English rubber.....	80 per dozen.
$2\frac{1}{2}$ dozen pieces superior ink-erasing rubber.....	80 per dozen.
5 reams requisitions, per sample.....	5 50 per ream.
1 ream monthly pay-rolls.....	12 00 per ream.
4 reams daily labor reports.....	15 00 per ream.
2 reams monthly reports.....	15 00 per ream.
2 reams master mechanics' reports.....	14 75 per ream.
3 round ebony rulers, best quality.....	50 each.
4 flat rulers.....	50 each.
2 boxwood rules, 4 foot each, 4 folds, brass bound....	4 00 each.
3 boxwood rules, 2 foot each, 4 folds, brass bound....	2 50 each.
1 pen rack.....	35 each.
14 papers sand.....	05 each.
2 cup sponges, 4 ounces each.....	50 each.
$4\frac{1}{2}$ pounds sealingwax.....	1 50 per pound.
14 large log-slates.....	1 75 each.
3 marble slates.....	2 50 each.
3 porcelain slates.....	2 75 each.
3 pair large shears.....	2 50 per pair.
4 pair small shears.....	1 25 per pair.
1 Gunter's scale.....	1 25 each.
9 glass tumblers.....	30 each.
$4\frac{1}{2}$ dozen pieces silk taste.....	5 00 per dozen.
$9\frac{1}{2}$ dozen pieces red tape.....	1 25 per dozen.
6 pounds twine, as per sample.....	1 75 per pound.
24 yards tracing cloth, 36 inches wide, No. 6, Dowse's patent.....	1 50 per yard.
48 yards tracing cloth, 30 inches wide, No. 6, Dowse's patent.....	1 25 per yard.
1 roll tracing cloth, 30 inches wide.....	30 00 per roll.
3 rolls, 24 yards each, tracing cloth, 36 inches wide....	33 00 per roll.
6 reams vouchers, plain.....	16 00 per ream.
2 reams vouchers, with headings.....	16 50 per ream.
2 half-cakes Indian yellow.....	60 each.

All the above articles to be of the best quality, and to be delivered as required.

TRICKEY & JEWETT. DATE OF CONTRACT, OCTOBER 4, 1864.

Class No. 19, firewood.

75 cords white pine wood..... \$8 00 per cord.
To be delivered as required.

MULLETT & BRADBURY. DATE OF CONTRACT, OCTOBER 6, 1864.

Class No. 20, hay and straw.

300 tons best timothy hay..... \$34 95 per ton.
To be delivered as required.

MULLETT & BRADBURY. DATE OF CONTRACT, OCTOBER 6, 1864.

Class No. 21, provender.

2,500 bushels meal..... \$1 75 per bushel.
150 bushels cracked yellow corn..... 1 75 per bushel.
125 bushels fine feed..... 38 per bushel.
900 bushels northern oats..... 90 per bushel.
50 bushels potatoes..... 50 per bushel.
To be delivered as required.

OAKMAN & ELDRIDGE. DATE OF CONTRACT, OCTOBER 6, 1864.

Class No. 22, charcoal.

16,000 bushels of charcoal, birch or maple..... \$0 35 per bushel.
To be delivered as required.

CHARLES C. WENTWORTH. DATE OF CONTRACT, OCTOBER 6, 1864.

Class No. 23, belting, packing, and hose.

1 leather belt, 17 feet long, 4 inches wide, single..... \$0 62 per foot.
1 leather belt, 21 feet long, 6 inches wide, single..... 1 00 per foot.
1 leather belt, 40 feet 4 inches long, 5 inches wide,
single..... 92 per foot.
1 leather belt, 26 feet 4 inches long, 5 inches wide,
single..... 87 per foot.
1 leather belt, 27 feet long, two and a half inches wide,
single..... 35 per foot.
1 leather belt, 23 feet long, 2 inches wide, single..... 26 per foot.
1,000 feet single, 12 superficial inches per foot, 1 to 6 inches
wide, oak-tanned leather belting..... 1 16 per foot.
500 feet single, 12 superficial inches per foot, 6 to 12
inches wide, oak-tanned leather belting..... 18 per foot.
1,000 feet double, 12 superficial inches per foot, 1 to 6 inches
wide, oak-tanned leather belting..... 30 per foot.
500 feet double, 12 superficial inches per foot, 6 to 12
inches wide, oak-tanned leather belting..... 32 per foot.
150 feet 3-inch belting..... 42 per foot.
100 feet 4-inch belting..... 56 per foot.
75 feet 2-inch belting..... 30 per foot.
60 new creel belts, same as those used at present..... 16 00 each.
40 new gil belts, for the spinning machines, same as those
now in use..... 200 03 each.
1,000 feet 4-ply rubber hose, per sample..... 2 00 per foot.
1,000 feet 4-ply rubber hose, 2 and a half inches diameter..... 2 00 per foot.
50 yards rubber packing, one-sixth to one-fourth inch..... 6 00 per yard.
100 pounds rubber gaskets..... 2 00 per pound.
50 pounds vulcanized gum..... 1 75 per pound.
To be delivered as required.

CHARLES H. POLLOCK. DATE OF CONTRACT, OCTOBER 10, 1864.

Class No. 24, sperm and lubricating oils.

992 gallons best sperm oil..... 2 85 per gallon.
90 gallons sperm oil, for machinery..... 2 85 per gallon.
160 gallons lard oil..... 2 25 per gallon.
2,700 gallons best refined lubricating oil..... 2 00 per gallon.
To be delivered as required.

NOT BID FOR.

Class No. 25, iron castings.

12 pitch-furnace flues frames, heavy castings, samples seen
at the yard.....

To be delivered as required.

CHARLES C. WENTWORTH. DATE OF CONTRACT, OCTOBER. 6, 1864.

Class No. 26, augers.

1 dozen nine-sixteenths-inch augers.....	\$11 50	per dozen.
1 dozen ten-sixteenths-inch augers.....	12 50	per dozen.
$\frac{1}{2}$ dozen eleven-sixteenths-inch augers.....	14 00	per dozen.
$\frac{1}{2}$ dozen twelve-sixteenths inch augers.....	15 00	per dozen.
$\frac{1}{2}$ dozen thirteen-sixteenths-inch augers.....	16 00	per dozen.
$\frac{1}{2}$ dozen fourteen-sixteenths-inch augers.....	17 50	per dozen.
(Patent twist, best kind ; one-quarter of the number with screws.)		
4 dozen 1-inch screw augers.....	14 00	per dozen.
4 dozen three-quarter-inch screw augers.....	11 50	per dozen.
4 dozen five-eighths-inch screw augers.....	11 25	per dozen.
4 dozen half-inch cast steel augers.....	12 00	per dozen.
4 dozen five-eighths-inch cast steel augers.....	15 00	per dozen.
6 dozen seven-eighths-inch cast steel augers.....	20 00	per dozen.
6 dozen three-fourth-inch cast steel augers.....	17 50	per dozen.
$\frac{1}{2}$ dozen eight-sixteenths-inch pod augers.....	7 50	per dozen.
$\frac{1}{2}$ dozen ten-sixteenths-inch pod augers.....	10 00	per dozen.
1 dozen seven-eighths-inch patent twist ship augers, with screws.....	17 50	per dozen.
1 dozen seven-eighths-inch patent twist ship augers.....	17 00	per dozen.
15 dozen fifteen-sixteenths-inch patent twist ship augers.....	18 50	per dozen.
20 dozen thirteen-sixteenths-inch patent twist ship augers..	16 00	per dozen.
20 dozen six-eighths-inch patent twist ship augers.....	15 00	per dozen.
20 dozen eleven-sixteenths-inch patent twist ship augers...	14 00	per dozen.
20 dozen five-eighths-inch patent twist ship augers.....	12 50	per dozen.
10 dozen nine-sixteenths-inch patent twist ship augers....	11 50	per dozen.
10 dozen four-eighths-inch patent twist ship augers.....	10 00	per dozen.
8 dozen seven-sixteenths-inch patent twist ship augers....	16 00	per dozen.
6 dozen three-eighths-inch patent twist ship augers.....	8 00	per dozen.
$\frac{1}{2}$ dozen 1-inch ship augers, with worms.....	20 00	per dozen.
$\frac{1}{4}$ dozen half-inch ship augers, with worms.....	10 00	per dozen.
$\frac{1}{4}$ dozen five-eighths-inch ship augers, with worms.....	12 50	per dozen.
$\frac{1}{2}$ dozen 1 and three-eighths-inch treenail screw augers, long bits.....	30 00	per dozen.
15 dozen 1 and two-eighths-inch treenail ship augers, double twist.....	25 00	per dozen.
10 dozen 1 and one-eighth-inch treenail ship augers, double twist.....	25 00	per dozen.
1 dozen augers, inclined twist, assorted sizes.....	22 00	per dozen.
2 dozen four-eighths-inch augers.....	10 00	per dozen.
1 dozen five-eighths-inch augers.....	12 50	per dozen.
2 dozen six-eighths-inch augers.....	15 00	per dozen.
1 dozen seven-eighths-inch augers.....	17 00	per dozen.
2 dozen 1-inch augers.....	20 00	per dozen.
$\frac{1}{2}$ dozen 1 and one-quarter-inch augers.....	25 00	per dozen.
$\frac{1}{2}$ dozen 1 and one-half inch augers.....	30 00	per dozen.
(J. L'Hommedieu's single twist ship augers, without screws.)		
6 1-inch framing augers.....	2 00	each.
6 half-inch framing augers.....	1 25	each.
1 post-hole auger.....	5 00	each.

To be delivered as required.

ALBERT R. BASS. DATE OF CONTRACT, OCTOBER 7, 1864.

Class No. 27, anthracite coal.

600 tons, 2,240 pounds per ton, white ash Lehigh coal,
lump size, hand-picked, for foundry use..... \$14 45 per ton.

275 tons, 2,240 pounds per ton, white ash Lehigh coal, egg size	\$14 35	per ton.
5,000 tons, 2,240 pounds per ton, white ash Lehigh coal, steamboat size	14 55	per ton.

All of the above coal to be of the best quality of its kind, and to be delivered in monthly quantities, as may be required; the whole to be delivered on or before the 1st day of December, 1864. The contractor is to place it in carts provided by the government, and the quantity delivered is to be paid for at the weights of the navy yard scales.

EATON & GAGE. DATE OF CONTRACT, OCTOBER 5, 1864.

Class No. 29, bituminous Cumberland coal.

1,000 tons, 2,240 pounds per ton, Cumberland coal	\$14 73	per ton.
---	---------	----------

All the above coal to be of the best quality of its kind; to be delivered monthly as required. The contractor is to place it in carts provided by the government, and the quantity delivered is to be paid for at the weights of the navy yard scales.

3,500 barrels lime, equal to best Thomaston, put up in barrels, well hooped, containing 300 pounds each	\$1 64 per barrel.
25 barrels lime, extra quality, for whitewashing	2 25 per barrel.
50 barrels plaster of Paris	2 95 per barrel.
150 barrels goats' hair, for plastering	3 00 per barrel.
To be delivered as required.	

E. TOMKINS, president. DATE OF CONTRACT, OCTOBER 5, 1864.

Class No. 8, cement.

3,800 barrels hydraulic cement, equal to "Hoffman's," fresh ground from hydraulic stone, put up in tight barrels well prepared, containing 300 pounds each	\$1 60 per barrel.
10 barrels Roman cement, best quality, in tight barrels, well hooped	10 75 per barrel.
6 barrels Portland cement, best quality, in tight barrels, well hooped	11 75 per barrel.
To be delivered as required.	

EATON & GAGE. DATE OF CONTRACT, OCTOBER 5, 1864.

Class No. 9, gravel and sand.

54 cubic yards fine white beach sand	\$0 90 per cubic yard.
3,500 cubic yards sharp building sand, Staten Island	90 per cubic yard.
To be delivered as required.	

DAVID BABCOCK. DATE OF CONTRACT, OCTOBER 10, 1864.

Class No. 9½, moulding and fire sand and fire clay.

200 cubic yards iron moulding sand	\$2 25 per cubic yard.
20 cubic yards brass moulding sand	3 50 per cubic yard.
50 barrels ground fire clay, (constructing engineer)	2 00 per barrel.
44 cubic yards fire sand	2 25 per cubic yard.
40 cubic yards fire clay	2 25 per cubic yard.
To be delivered as required.	

NOT BID FOR.

Class No. 10, slate.

370 squares best Susquehanna blue slates, 18 inches long, not less than 9 nor more than 12 inches wide, and $\frac{1}{4}$ inch thick	
10 squares best Susquehanna blue slates, 24 inches long, not less than 12 nor more than 16 inches wide, and $\frac{1}{4}$ inch thick	
To be delivered as required.	

JOHN R. ELVANS. DATE OF CONTRACT, OCTOBER 4, 1864.

Class No. 11, iron, iron spikes, and nails.

25,000 pounds best American round iron, sizes as required ..	\$0 12 per pound.
10,100 pounds best American flat iron, sizes as required	11 per pound.
5,800 pounds best American square iron, sizes as required ..	11 per pound.
2,000 pounds horseshoe iron, $\frac{1}{2}$ inch thick, 1 to $1\frac{1}{8}$ inch wide	15 per pound.
11,000 pounds best American charcoal boiler-plate iron, of such lengths, widths, and thicknesses as may be re- quired	15 per pound.
2 sheets best American charcoal boiler-plate iron, $\frac{7}{16}$ - inch thick, 4 feet 6 inches diameter	55 00 per sheet.

3,500 pounds best American boiler-plate iron, No. 1, wire gauge, 16 inches wide, in 14 feet lengths, (machine shop ex.).....	\$0 15	per pound.
280 lineal feet rolled channel or trough iron, 6 inches wide by 5 inches deep, weighing 32 pounds per lineal foot, cut to such lengths as are ordered, not exceeding 20 feet, the cross section to be as per drawing, (receiving store and machine shop ex.)..	6 50	per lineal foot.
4,000 pounds best American angle iron, sizes as required..	15	per pound.
4,000 pounds best American T iron, sizes as required.....	15	per pound.
100 sheets No. 14 sheet iron, 36 by 96 inches, 78 pounds to the sheet.....	11 70	per sheet.
100 sheets No. 16 sheet iron, 36 by 96 inches, 64 pounds to the sheet.....	11 70	per sheet.
10,500 pounds sheet iron, best quality, thickness and sizes as required.....	20	per pound.
5 bundles sheet iron, best quality, 20 sheets per bundle, Nos. 14 to 22, wire gauge, 36 by 96 inches, as required	25 00	per bundle.
8 bundles Russia sheet iron, 20 sheets per bundle, Nos. 10 to 20	100 00	per bundle.
1 bundle galvanized sheet iron, 20 sheets, No. 17, wire gauge, 30 by 72 inches.....	60 00	per bundle.
500 pounds hoop iron, assorted.....	25	per pound.
200 best American lap-welded iron boiler tubes, 2½ inches diameter, No. 13, wire gauge, lengths as required, not exceeding 8 feet, say 1,500 lineal feet.....	1 00	per lineal foot.
2,000 lineal feet best American lap-welded iron boiler tubes, such as are required.....	1 50	per lineal foot.
50 pounds bellows nails, largest size.....	40	per pound.
13,800 pounds iron cut nails, 4d. to 40d	10	per pound.
2,000 pounds iron clinch nails, assorted	12½	per pound.
920 pounds iron clout nails, ¾-inch, and assorted.....	25	per pound.
200 pounds iron clout nails, wrought, per sample	25	per pound.
1,250 pounds finishing nails, ¾ to 2-inch	15	per pound.
50 pounds horseshoe nails, best quality.....	50	per pound.
1,000 pounds lath nails, 3d., fine	15	per pound.
25 pounds ox-shoe nails, best quality	40	per pound.
100 pounds roofing nails, tinned.....	40	per pound.
1,000 pounds shingle nails, 4d.....	15	per pound.
3,000 pounds hot-pressed wrought iron hexagonal nuts, ¾ to 1½-inch.....	25	per pound.
10,000 pounds iron boiler rivets, 1½ by ⅝ inch, and over, (constructing engineer).....	17	per pound.
6,000 pounds iron boiler rivets, assorted sizes.....	18	per pound.
540 pounds iron rivets, sizes as required	20	per pound.
9,000 pounds cut spikes, 6 and 7 inch.....	12	per pound.
6,000 pounds hand-made iron spikes, 6 to 12 inch.....	16½	per pound.
1,000 pounds railroad spikes, sizes as required.....	20	per pound.
300 pounds iron washers, ¾ to 1½ inch hole, as required, (constructing engineer).....	19	per pound.
The iron to be the best American, equal to Ulster.		
To be delivered as required.		

S. A. WHEELWRIGHT. DATE OF CONTRACT, OCTOBER 8, 1864.

Class No. 12, steel.

44,150 pounds best and extra English cast steel, equal to Sanderson's, assorted shapes and sizes, such as may be required.....	\$0 40	per pound.
1,700 pounds German steel, assorted sizes.....	20	per pound.
1,600 pounds blister steel, assorted sizes, [L].....	35	per pound.
1,300 pounds spring steel, assorted sizes.....	16	per pound.
To be delivered as required.		

S. A. WHEELWRIGHT. DATE OF CONTRACT, OCTOBER 8, 1864.

Class No. 13, pig iron.

160 tons No. 1, American, anthracite pig iron, 2,240 pounds
to the ton, equal to Thomas's..... \$79 00 per ton.
To be delivered as required.

S. A. WHEELWRIGHT. DATE OF CONTRACT, OCTOBER 8, 1864.

1 dozen 4 and one half-inch malleable iron lathe dogs.	40 00 per dozen.
4 pairs dividers, such as may be selected.....	2 25 per pair.
10 ratchet drills, No. 1, equal to "Packer's".....	9 00 each.
10 ratchet drills, No. 2, equal to "Packer's".....	12 00 each.
20 ratchet drills, No. 3, equal to "Packer's".....	15 00 each.
30 ratchet drills, No. 4, equal to "Packer's".....	18 00 each.
30 ratchet drills, No. 5, equal to "Packer's".....	21 00 each.
24 ratchet drills, large size, equal to "Charles Merrill's"	30 00 each.
12 ratchet drills, Ashcroft's.....	25 00 each.
6 ratchet drills, best quality, selected.....	30 00 each.
3 breast drills, No. 4.....	9 00 each.
10 dozen thread escutcheons	1 00 per dozen.
7 tube expanders, equal to "Prosser's," as required or selected.....	3 00 each.
12 pairs back flaps, iron.....	10 per pair.
13 dozen sash fastenings, brass, porcelain knobs, selected.	9 00 per dozen.
22 dozen sash fastenings, iron, of approved pattern	6 00 per dozen.
24 faucets, brass, one half to one three-fourths inch....	90 each.
4,000 ferules, equal to Clark's patent, such as are selected..	60 each.
3 sets water-closet fixtures, water valves, stop-cocks, China basin, &c., complete, as selected.....	13 00 per set.

150 sets window shade fixtures, such as may be selected..	\$0 10 per set.
12 hay forks, 3-pronged, steel.....	1 75 each.
12 manure forks, 4-pronged, steel.....	1 75 each.
1 dozen nail gimlets, assorted.....	1 00 per dozen.
200 glasses, for water gauges, per sample.....	1 00 each.
11 spirit-level glasses, ground, English, 6 inches long ..	25 each.
24 firmer gauges, three-fourths to 2 inch.....	75 each.
48 socket gauges, three-fourths to 2 inch.....	1 00 each.
2 sets turning gauges, 12 pieces each	4 75 per set.
29 grindstones, Ohio, 6-inch face, 4 to 5 feet diameter..	37 50 each.
3 grindstones, Ohio, 6 and a half inch face, 5 feet diameter.....	44 00 each.
3 grindstones, Ohio, 4-inch face, 2 feet diameter, with frame and crank, on friction rollers, complete....	30 00 each.
2 sets hand grooves, plumber.....	1 00 per set.
1 drawing gauge, harness-makers'	1 00 each.
6 steam gauges, 6 to 10 inch, per sample.....	9 00 each.
4 wire gauges, (Stubbs's make,) selected.....	3 00 each.
1 set bumping hammers, assorted, plumber.....	17 00 each.
41 claw hammers, handled, best quality	1 00 each.
24 pean hammers, plumber.....	2 75 each.
12 cross pean hammers, plumber.....	3 75 each.
12 planishing hammers, handled, assorted, plumber....	1 25 each.
2 sets raising hammers, handled, plumber.....	3 75 per set.
6 riveting hammers, 3 to 4 pounds each, handled	3 75 each.
3 sledge hammers, 15 pounds each, handled.....	3 00 each.
30 hatchets, cast steel, handled, as required.....	1 00 each.
3 double-headers, 12 pounds each.....	3 25 each.
3 square heads, plumber.....	3 25 each.
1 head, 6-inch, for Smith's patent planer.....	7 75 each.
1 set, consisting of 1 moulding and 4 tonguing and grooving heads, for Smith's patent planer, com- plete	29 50 per set.
32 dozen pairs butt hinges, brass, assorted sizes.....	12 00 per dozen.
43 dozen pairs butt hinges, iron, assorted sizes.....	2 00 per dozen.
21 dozen plantation hoes, steel, best quality, per sample..	9 00 per dozen.
24 hooks and thimbles, for 10, 12, and 14 inch bolts....	1 00 each.
5 dozen cant hooks, with bars, per sample.....	12 00 per dozen.
12 gig saddle hooks.....	1 00 each.
4 dozen screw hooks, brass, assorted sizes.....	60 per dozen.
6 coopers' beck irons, steel-faced.....	9 00 each.
6 extra irons, for heading jointers.....	9 50 each.
6 extra irons, for stave jointers.....	6 00 each.
1 hydraulic jack, 50-ton.....	100 00 each.
1 hydraulic jack, 60-ton, to run out 9 inches.....	150 00 each.
2 hydraulic jacks, 30-ton, to run out 12 inches.....	90 00 each.
2 hydraulic jacks, 15-ton, to run out 12 inches and lift from the foot.....	90 00 each.
2 hydraulic jacks, 10-ton, to run out 12 inches and lift from the foot.....	70 00 each.
2 hydraulic jacks, 7-ton, to run out 12 inches and lift from the foot	60 00 each.
2 hydraulic jacks, 7-ton, to run out 24 inches and lift from the foot.....	50 00 each.
1 hydraulic pulling jack, to pull 8 tons, 2 feet, without fleeting	50 00 each.
(All the above hydraulic jacks to be selected, equal to "Dudgeon's," with wide bases, when so required.)	
3 heading jointers, 5 feet long, 4 and a half inches wide on face, 4 inches thick, double irons, 3 inches wide, of beech wood, equal to "Horton's" make..	11 00 each.
6 stave jointers, 6 feet long, 5 inches wide on face, 4 inches thick, double irons, 3 and a half inches wide, of beech wood, equal to "Horton's" make..	7 00 each.
6 dozen mortise lock keys, brass, blank.....	2 50 per dozen.
6 dozen rim lock keys, brass, blank.....	1 50 per dozen.

10 dozen till lock keys, brass, blank, assorted.....	\$1 00 per dozen.
2 hacking knives.....	1 00 each.
6 hollowing knives, best quality.....	1 00 each.
1 marking knife, per sample, "timber inspector".....	1 00 each.
2 oil-cloth knives, 6-inch.....	1 00 each.
1 pallet knife.....	1 00 each.
6 putty knives.....	30 each.
6 race knives.....	50 each.
6 shoeing knives.....	1 20 each.
30 shoemakers' knives, as required.....	20 each.
1 pair knives, steel, for cutting rope, per sample.....	1 50 per pair.
30 dozen knobs, black walnut and mahogany, assorted sizes.....	50 per dozen.
12 dozen carriage-curtain knobs.....	10 per dozen.
2 dozen brass knobs and spindles, 1 and three-quarters to 2 inch.....	4 40 per dozen.
6 dozen mineral knobs and spindles, 1 and three-quarters to 2 and one-quarter inch.....	6 50 per dozen.
10 dozen white porcelain knobs and spindles, 1 and three-quarters to 2 and three-quarters inch.....	11 00 per dozen.
27 iron ladles, 6 to 8 inches, and assorted.....	3 00 each.
1 turning lathe, per sample.....	133 00 each.
13 rolls, 3-pound milled lead—say 7,800 pounds.....	25 per pound.
4 rolls, 6 to 8 pound milled lead—say 2,400 pounds.....	25 per pound.
7 sets letters and figures, steel dies, one-eighth to 1 inch, assorted.....	9 17 per set.
19 spirit-levels, 2 to 3 feet long, ground or clear glass, as required.....	7 17 each.
20 carriage-curtain glass lights.....	25 each.
24 dozen chest locks, brass, assorted sizes.....	24 00 per dozen.
6 dozen cupboard locks, brass, assorted sizes.....	24 00 per dozen.
3 dozen dead locks, iron, 10-inch, right and left hand.....	40 00 per dozen.
3 dozen desk locks, brass, assorted sizes.....	20 00 per dozen.
14 dozen drawer locks, brass, assorted sizes.....	20 00 per dozen.
2 dozen lever locks and keys, brass, equal to "Hobbs's," assorted.....	100 00 per dozen.
10 dozen mortise locks, iron, 4 to 8 inch.....	9 00 per dozen.
6 dozen padlocks, brass, 3-inch, and assorted.....	21 00 per dozen.
10 dozen padlocks, iron, 3-inch, and assorted.....	11 00 per dozen.
6 dozen rim locks, iron, 5 to 12 inch, with furniture.....	15 00 per dozen.
1 bolt machine, per sketch in chief engineer's office.....	500 00 each.
1 boring machine, per sample at saw-mill.....	100 00 each.
2 burr machines, large and small, plumber.....	62 50 each.
1 dovetailing machine, No. 3 size, for making boxes, with inside covers, less than 42 inches, with hangers, shafting, and pulleys for the same, complete, equal to A. A. Davis's.....	100 00 each.
2 thick-edged machines, small, for plumber.....	100 00 each.
1 hand machine, for drilling, with crank.....	50 00 each.
1 machine for punching copper, plumber.....	40 00 each.
1 re-sawing machine, vertical, with 1 and one-half dozen saws for the same.....	40 00 each.
1 scroll sawing machine, with shaft and countershaft, tight and loose, and cone pulleys, per sample in use at saw-mill.....	40 00 each.
2 hand paint-mills, per sample.....	26 50 each.
10 pounds sheet mica, for stoves.....	12 00 per pound.
4 boxes carriage-band nails.....	50 per box.
30 square feet copper-wire netting, for windows, per sample in yard.....	5 00 per sq. foot.
3 hydrant nozzles, brass, five-eighths inch.....	1 00 each.
6 dozen ornaments for cart saddles, brass, selected.....	1 00 per dozen.
2 dozen picks, steel-pointed, 8 and 10 pounds each, handled.....	20 00 per dozen.
15 pairs pincers, assorted, as required.....	11 00 per pair.
3 blow-pipes.....	11 00 each.

3,000 pounds lead pipe, a. a. a., five-eighths inch, and assorted, as required	\$0 25	per pound.
3 fore-planes, double irons, best quality	2 00	each.
9 jack-planes, double irons, best quality	1 50	each.
13 smoothing planes, double irons, best quality	1 50	each.
4 screw plates and taps, complete, per sample	7 00	each.
24 basin plugs and couplings, plated	1 50	each.
2 plumb-bobs, brass, per sample, in constructing engineer's office	75	each.
51 pairs plyers, assorted, as required	1 00	per pair.
6 pairs pipe plyers, half-inch, three quarter-inch, and 1-inch	1 00	per pair.
50 papers glaziers' points	70	per paper.
8 gross sash pulleys, iron axles, 1 and three-quarters to 2 inch, extra heavy	32 00	per gross.
2 steam pumps, equal to "Woodward's," No. 1	100 00	each.
48 belt punches, cast steel, assorted, as required	1 00	each.
1 belt punch, with 6 hollow punches	12 00	each.
2 sets flat punches, plumber	13 00	per set.
3 sets hollow punches	12 00	per set.
5 sets rivet punches, plumber	5 00	per set.
1 screw punch, three-quarters-inch hole, one-half-inch plate	5 00	each.
2 pairs steel punches, 12 to 20-inch	5 00	per pair.
8½ dozen rakes, wrought iron, 16-inch, long handled	15 00	per dozen.
1½ dozen rakes, wooden	5 00	per dozen.
40 riddles, iron wire, one-quarter and one-half-inch, per sample, chief engineer	1 25	each.
1 gross rings, for harnesses, seven-eighths-inch, japanned ..	3 75	per gross.
2 dozen breeching rings, one-half-inch, japanned	3 20	per dozen.
7 pounds rivets and burrs, copper, assorted	1 25	per pound.
20 pounds belt rivets, copper, assorted sizes, to be selected ..	1 25	per pound.
130 pounds hose rivets and burrs, copper, assorted as required ..	1 25	per pound.
2 sets rollers, large and small, plumbers'	7 17	per set.
24 pairs rosettes, for harnesses	79	per pair.
3 shrunk rules, steel, 24-inch, U. S. standard, manufactured at Bangor, Maine	7 00	each.
3 shrunk rules, steel, 12-inch, U. S. standard, manufactured at Bangor, Maine	5 00	each.
42 rules, U. S. standard, double-jointed, 2-foot, boxwood ..	1 00	each.
6 rules, U. S. standard, double-jointed, 2-foot, boxwood, brass bound	1 75	each.
12 rules, U. S. standard, single-jointed, 2-foot, boxwood ..	1 50	each.
22 buck-saws, with frames complete	1 00	each.
2 circular saws, 40 inches diameter, Nos. 6 to 9 gauge, 1¾-inch hole	17 00	each.
3 circular saws, 36 inches diameter, Nos. 6 to 8 gauge, 1½-inch hole	16 00	each.
6 circular saws, 30 inches diameter, Nos. 7 to 9 gauge, 1½-inch hole	15 00	each.
12 circular saws, 24 inches diameter, Nos. 9 to 10 gauge, 1½ inch hole	15 00	each.
12 circular saws, 20 inches diameter, No. 11 gauge, 1½-inch hole	14 00	each.
9 circular saws, 18 inches diameter, No. 13 gauge, 1½-inch hole	12 00	each.
9 circular saws, 16 inches diameter, No. 13 gauge, 1½-inch hole	10 00	each.
9 circular saws, 14 inches diameter, No. 14 gauge, 1½-inch hole	7 50	each.
6 circular saws, 12 inches diameter, No. 16 gauge, 1½-inch hole	5 50	each.
6 circular saws, crosscut, 16 inches diameter, No. 14 gauge, 1-inch hole	10 00	each.

11½ dozen crosscut saws, 4½ to 6 feet long, as required, selected.....	\$66 75	per dozen.
1½ dozen futtock saws, 5 feet 2 inches long, 7 inches wide, ground backs.....	46 00	per dozen.
28 hack-saws, 12 to 20 inches, frames and blades, complete.....	2 50	each.
72 hand hack-saws, assorted, equal to Diston's best, selected.....	2 75	each.
17 hand-saws, assorted, equal to Spear & Jackson's, selected.....	3 75	each.
18 mill-saws, 7 feet long, 9 inches wide, No. 7.....	7 00	each.
2 rigging saws, boatswain.....	7 00	each.
3 dozen scroll saws, 30 inches long, 1¼-inch wide, Nos. 13 to 14 gauge, teeth five-eighths inch apart.....	14 50	per dozen.
22 dozen scroll saws, 28 inches long, one eighth to 1 and one-quarter inch wide, Nos. 13 to 20 gauge, teeth from 2 to 10 per inch, as required.....	14 50	per dozen.
25 dozen scroll saws, 19 inches long, one-eighth to 1-inch wide, Nos. 15 to 20 gauge, teeth 3 to 10 per inch, as required.....	12 00	per dozen.
(All saws to be of the best and most approved manufacture, and selected.)		
6 pairs scissors, large size, as required.....	1 75	per pair.
12 dozen ship scrapers, cast steel, handled, per sample....	9 00	per dozen.
4 sand screens, fine iron.....	7 60	each.
70 gross brass screws, gimlet points, assorted numbers and sizes.....	3 00	per gross.
685 gross iron screws, gimlet points, assorted numbers and sizes.....	1 00	per gross.
10 dozen bench screws, iron, assorted, as required.....	15 00	per dozen.
6 gross coach screws, iron, 4 inches long, three-eighths-inch diameter, square head.....	6 40	per gross.
12 dozen hand screws, assorted, cabinet-makers'.....	17 00	per dozen.
2 dozen hand-rail screws, single or double nuts, as required.....	7 00	per dozen.
24 jack-screws, 2 to 3½ feet long, as required, equal to Ballard's, selected.....	6 00	each.
12 jack-screws, clawed timber, riveted, equal to Ballard's, timber inspector.....	11 00	each.
12 jack-screws, "Jenny Lind," per sample.....	17 00	each.
6 pad-screws, for harnesses.....	1 00	each.
6 pairs rigging screws, boatswain.....	9 00	per pair.
1 double seamer, plumber.....	9 00	each.
12 drift sets, plumber.....	9 00	each.
3 sets rivet sets, assorted, as required, plumber.....	5 00	per set.
6 saw-sets, per sample.....	1 50	each.
2 pairs shears, selected, one for cutting copper, &c., per sample.....	29 00	per pair.
½ dozen coal shovels, cast steel.....	22 00	per dozen.
18 dozen scoop shovels, cast steel, assorted.....	18 00	per dozen.
98½ dozen shovels, back-strapped, cast steel, assorted, best quality, equal to Ames's.....	19 50	per dozen.
1 dozen shovels, back-strapped, cast steel, long-handled.....	19 50	per dozen.
40 sieves, brass wire, Nos. 8 and 10, chief engineer.....	3 80	each.
2 hand sieves, brass wire, fine, 12 inches.....	4 80	each.
2 sieves, for white mortar, 14 by 24 inches, best quality.....	4 80	each.
1 paint sieve, wire.....	4 80	each.
80 pounds oilstone slips, (Turkey or Washtenaw,) as required.....	1 00	per pound.
2 dozen spring-snaps, for harnesses.....	1 00	per dozen.
18 pairs trimmers' snips, straight and circular, as required, plumber.....	7 75	per pair.
50 pounds spelter solder.....	1 00	per pound.
10 dozen spades, cast steel, best quality.....	19 50	per dozen.
2 pairs carriage springs, steel, finished, heavy, selected..	19 00	per pair.
2 pairs cart springs, steel, 3-inch, selected.....	29 00	per pair.

2 dozen door springs, equal to Torrey's patent.....	\$12 00	per dozen.
4 dozen sofa springs, steel.....	1 75	per dozen.
2 sets truck half springs, steel, 3-inch, 4 to the set, selected.....	14 00	per set.
2 sets wagon springs, steel, 4 to the set, selected.....	34 00	per set.
2 machinists' squares, 12 and 18 inch tongue, manufactured by Brown & Sharp, Providence, R. I.....	16 67	each.
78 squares, steel, 2 feet.....	1 75	each.
1 trying square, steel blade, not exceeding 12 inches....	2 75	each.
2 creasing stakes, plumber.....	29 00	each.
2 blow-iron stakes, plumber.....	29 00	each.
2 folding stakes, or beak irons, plumber.....	29 00	each.
2 teakettle stakes, with heads, complete, plumber.....	29 00	each.
6 sets hand stocks and dies, to cut from one-quarter to three-quarters inch, per sample, selected.....	7 00	per set.
4 sets hand stocks and dies, to cut from one-half to 1 and one-quarter inch, per sample, selected.....	9 00	per set.
1 set stocks, for screwing iron pipe, from one-eighth to 3 inch.....	12 00	per set.
9 oilstones, Turkey, to be selected—say 35 pounds.....	1 00	per pound.
6 scythestones.....	10	each.
1 paint strainer, wire.....	1 00	each.
40 papers copper tacks, assorted.....	1 25	per paper.
10 papers gimp tacks, assorted.....	10	per paper.
287 papers iron cut tacks, assorted.....	10	per paper.
570 pounds Banca tin.....	1 00	per pound.
12 boxes IC tin, 10 by 14 inches.....	35 00	per box.
6 boxes IC tin, 14 by 20 inches.....	40 00	per box.
18 boxes IX tin, 10 by 14 inches.....	40 00	per box.
6 boxes IX tin, 14 by 20 inches.....	45 00	per box.
10 boxes IXX tin, 14 by 20 inches.....	75 00	per box.
4 boxes XX tin, 14 by 20 inches.....	60 00	per box.
(All to be of the best charcoal plate.)		
16 pairs pipe tongs, in equal quantities of 8 sizes, from three-quarters to three-and-a-half inch.....	2 00	per pair.
1 set of tools, for inserting "Lanergan's" deck lights, all sizes of lights used, complete.....	275 00	per set.
2 vices, wrought iron, steel-faced, 150 pounds each....	40 00	each.
2 bench vices, wrought iron, steel-faced, 150 to 250 pounds, per sample.....	60 00	each.
15 bench vices, wrought iron, 40 to 45 pounds each, with composition boxes.....	10 00	each.
24 vices, wrought iron, 100 to 150 pounds each, with composition boxes—say 3,000 pounds.....	31 25	each.
1 clamp vice, gas-fitters', universal, movable head.....	17 00	each.
36 parallel vices, equal to Packer's, 12 each of Nos. 2, 3, and 4.....	17 00	each.
24 Swivel vices, equal to Packer's, Nos. 3 and 4, with swivel jaws.....	17 00	each.
13,000 pounds sash weights, iron, such as are required.....	06	per pound.
5 pounds blind wire.....	50	per pound.
175 pounds brass wire, Nos. 1 to 16, as required.....	1 00	per pound.
30 pounds brass wire, three-eighths-inch.....	1 00	per pound.
60 pounds copper wire, assorted.....	1 00	per pound.
331 pounds iron wire, Nos. 1 to 20.....	50	per pound.
30 pounds iron wire, three-eighths-inch.....	50	per pound.
40 pounds steel wire, Nos. 8 to 16.....	1 00	per pound.
36½ dozen screw wrenches, finished, 6 to 21 inches long, (averaging not more than 15 inches,) equal to Taft's, selected.....	40 00	per dozen.
1 dozen hand wrenches, assorted.....	4 00	per dozen.
1 dozen slide-key wrenches, 18 to 36 inches long, as required.....	9 00	per dozen.
1,000 pounds sheet zinc, 3 feet wide, Nos. 16 to 20.....	30	per pound.
100 pounds slab zinc.....	30	per pound.

To be delivered as required.

WM. H. ARTHUR. DATE OF CONTRACT, OCTOBER 8, 1864.

Class No. 18, stationery.

54 dozen India-rubber bands, assorted.....	\$0 50 per dozen.
11 waste-paper baskets, willow.....	1 50 each.
2 alphabetical books, large size, carpenter, per pattern.....	25 00 each.
2 6-quire bill books, demy, full bound, commandant °.....	12 50 each.
1 3-quire book, 10 by 16 inches, half-bound, ruled per pattern, constructing engineer.....	9 00 each.
3 4-quire books, monthly reports of vessels °.....	17 50 each.
4 4-quire books, register of shipments, storekeeper °.....	12 00 each.
1 6-quire book, register of contracts, storekeeper °.....	13 50 each.
1 5-quire book, 16 and a half by 21 inches, monthly report of expenditures, bound in cloth, per sample, constructing engineer °.....	27 50 each.
2 4-quire books, consolidated reports of vessels, naval constructor °.....	15 00 each.
26 1-quire cap books, half-bound, faint-lined, paged, chief engineer.....	1 20 each.
80 2-quire cap books, half-bound, faint-lined, paged....	1 75 each.
50 3-quire cap books, half-bound, faint-lined, paged....	2 25 each.
74 4-quire cap books, half-bound, faint-lined, paged....	3 00 each.
8 5-quire cap books, half-bound, faint-lined, paged, constructing engineer.....	3 60 each.
46 6-quire cap books, half-bound, faint-lined, paged....	4 50 each.
7 4-quire cap books, full bound, as directed, constructing engineer and chief engineer °.....	6 00 each.
1 2-quire cash book, half-bound, paymaster °.....	4 00 each.
72 monthly day books, storekeeper.....	4 00 each.
13 6-quire expenditure books, demy, full bound °.....	13 50 each.
1 guard book, for register of contracts, storekeeper °.....	9 00 each.
46 guard books, for letters, selected °.....	4 75 each.
8 6-quire letter books, demy, full bound °.....	12 50 each.
4 log-books, per pattern, master.....	14 75 each.
382 memorandum books, assorted sizes and patterns....	90 each.
8 memorandum books, gilt-edged, tuck, selected, constructing engineer.....	2 00 each.
741 4-quire muster-roll books, per pattern.....	6 50 each.
1 6-quire general order book, demy, full bound, chief engineer °.....	12 50 each.
30 4-quire order, receipt, and delivery books, storekeeper °.....	4 50 each.
2 4-quire order books, half-bound, constructor.....	4 50 each.
2 2-quire pay and receipt-roll books, half-bound, paymaster.....	23 50 each.
6 6-quire pay-roll books, printed and ruled, per sample, clerk of yard °.....	35 00 each.
8 6-quire receipt books, demy, full-bound, storekeeper °.....	12 50 each.

5 paste brushes.....	75 each.
4 calendars, daily, selected.....	1 00 each.
24 letter-clips, assorted.....	80 each.
16 paper-cutters and folders, tin or ivory, selected.....	50 each.
2 dictionaries, Webster's unabridged.....	7 00 each.

*To be labelled and numbered as directed.

2 directories, Brooklyn city, constructing engineer and chief engineer.....	\$4 00 each.
2 directories, New York city, constructing engineer and chief engineer.....	5 00 each.
24,425 self-sealing envelopes, official, assorted sizes and colors, printed per sample, if so required.....	15 50 per M.
24,900 self-sealing envelopes, letter and note, assorted sizes and colors, printed per sample, if so required.....	6 75 per M.
1 dozen pieces ink eraser, Green's, constructing engineer	1 25 per dozen.
3 boxes eyelets.....	90 per box.
6 hook files.....	25 each.
50 ruled forms, for abstract sheets, constructor.....	20 each.
225 ruled forms, for monthly sheets, 75 for chief engineer, 150 for laborer.....	20 each.
7 reams ruled forms, for abstracts, storekeeper.....	22 50 per ream.
17½ reams ruled forms, for monthly sheets, 14½ for pay rolls.....	31 50 per ream.
10 reams ruled forms, for vouchers, storekeeper.....	19 50 per ream.
25 reams ruled and printed forms, for bill-heads, storekeeper.....	12 00 per ream.
2 reams ruled and printed forms, for bills of lading, storekeeper.....	17 50 per ream.
11 reams ruled and printed forms, for daily reports, 9 for constructing engineer, and 2 for chief engineer....	16 75 per ream.
5 reams ruled and printed forms, for invoices, storekeeper.....	19 50 per ream.
48½ reams ruled and printed forms, requisitions for materials.....	15 25 per ream.
4½ reams ruled and printed forms, requisitions for workmen.....	16 00 per ream.
15 reams ruled and printed forms, for vouchers, storekeeper.....	18 25 per ream.
6 reams ruled and printed forms, cap size, constructing engineer.....	13 60 per ream.
15 reams ruled and printed forms, letter size, full sheet, 10 storekeeper, 5 commandant.....	11 00 per ream.
12 reams ruled and printed forms, letter size, half-sheet, 4 constructing engineer, 8 commandant.....	11 00 per ream.
4½ reams ruled and printed forms, calender, same as muster-books, unbound, constructor.....	18 00 per ream.
7 quires ruled and printed forms, for receipts and accounts current, paymaster.....	5 00 per quire.
50 ruled and printed forms, morning report, constructor.	40 each.
400 ruled and printed forms, police reports, master.....	10 each.
200 ruled and printed forms, time reports, master.....	08 each.
(All ruled and printed forms to be per pattern.)	
33 quart bottles Arnold's best writing fluid.....	1 50 each.
3 sponge glasses, with sponge complete, commandant.	1 00 each.
24 pounds gum-arabic, refined.....	1 50 per pound.
31 dozen pieces erasing gum, best, one ounce each.....	1 00 per dozen.
12 dozen bottles, quarts, black ink, equal to Maynard & Noyes's.....	10 00 per dozen.
36 pint bottles carmine ink, Arnold & David's.....	1 75 each.
7 dozen bottles French carmine ink, Guyot & Co.'s....	4 50 per dozen.
40 inkstands, assorted, selected.....	1 00 each.
51 erasing knives, Rodgers's best, ivory and cocoa handles	1 50 each.
5 abstract ledgers, per sample, storekeeper.....	25 50 each.
2 hand eyelet machines, patent, complete, per sample, constructing engineer and chief engineer.....	5 00 each.
97 bottles mucilage, quarts and pints.....	1 25 each.
109 quires blotting paper, treasury, 17 by 24 inches, assorted, to weigh 5 pounds to the quire.....	2 50 per quire.
15 quires blotting paper, thick red.....	60 per quire.
5 reams demy paper, paymaster.....	17 50 per ream.
1 ream legal cap paper, heavy, constructing engineer...	12 00 per ream.

18 ¹ / ₅ reams envelope paper, water-lined, buff or white, as required	\$14 00 per ream.
4 reams folio-post paper, faint-lined, 18 pounds per ream, one-half quire to be ruled per pattern	15 50 per ream.
1 ¹ / ₂ ream cap paper, printed and ruled, per pattern	15 00 per ream.
3 reams cap paper, extra heavy, regulation ruled	14 00 per ream.
27 ¹ / ₂ reams official cap paper, white, 13 ¹ / ₂ by 16 ¹ / ₂ inches, weighing 16 pounds to the ream, of pure linen stock, stop ruled, with 24 blue lines on first and third pages only, leaving 1 inch margin back and front, top and bottom, per sample	13 50 per ream.
89 ¹ / ₂ reams cap paper, faint-lined, heavy, wide-ruled	9 50 per ream.
58 reams letter paper, faint-lined, wide-ruled, 12 pounds per ream	9 00 per ream.
2 ¹ / ₁₀ reams log paper	18 00 per ream.
47 reams note paper, faint-lined, wide-ruled, 5 pounds per ream	7 50 per ream.
(The above paper to have neatly printed headings, if so required.)	
3 reams transfer paper, storekeeper	15 00 per ream.
1 ¹ / ₁₀ ream manilla wrapping paper, 24 by 36 inches, 55 pounds per ream	14 00 per ream.
17 ³ / ₄ gross black lead pencils, Faber's best, round, assorted numbers	18 00 per gross.
6 ¹ / ₂ gross black lead pencils, Faber's best, hexagon, assorted numbers	24 75 per gross.
2 dozen black lead pencils, for marking lumber, per sample, constructor	3 50 per dozen.
15 dozen carpenters' pencils, No. 2, constructor	4 00 per dozen.
9 dozen red and blue pencils, best, assorted	4 00 per dozen.
2,224 slate pencils, white soapstone	50 per 100.
24 penholders, with gold nibs, large, to be selected	5 00 each.
44 dozen penholders, assorted, to suit pens	75 per dozen.
47 penknives, 4 blades, equal to Rodgers's best	4 50 each.
97 gross steel pens, barrel and nib, assorted, as required • or selected	4 00 per gross.
5 dozen papers pins, solid heads, assorted	1 00 per dozen.
1 embossing press, complete, to order, constructing engineer	22 50 each.
400 swan quills, No. 80	5 00 per 100.
6 pieces vulcanized rubber, paymaster	20 each.
16 dozen half-pint papers black sand	1 50 per dozen.
6 pairs scissors, large size, for cutting paper	2 75 per pair.
1 pound sealingwax, scarlet, paymaster	2 50 per pound.
1,000 sheets pay-rolls, for mechanics' and laborers', clerk of yard	15 per sheet.
1,000 sheets for monthly pay-rolls, per pattern, clerk of yard	18 per sheet.
8 log-slates, double, large size, hardware frames	2 50 each.
10 slates, framed, 10 by 14 inches	38 each.
1 porcelain slate, large size, constructor	3 00 each.
2 pounds fine Turkey sponge, large pieces	17 00 per pound.
25 dozen pieces red tape, assorted	1 00 per dozen.
62 rolls silk taste, colors as required	80 each.
13,500 printed tickets, storekeeper and clerk of yard	10 00 per M.
38 cut-glass tumblers, half pints, best quality	60 each.
12 balls linen twine, assorted colors, 8 ounces each	60 each.
12 paper weights, assorted, storekeeper	1 25 each.

Drawing materials and instruments.

1 pair balances, to weigh grains, avoirdupois, selected, constructing engineer	94 00 per pair
2 guard books, for drawings, 31 by 52 inches, with strings, chief engineer	22 50 each.
1 guard book, for drawings, 42 by 48 inches, 6 inches thick, chief engineer	32 50 each.
24 sketch books, selected	2 00 each.

6 solid sketch books, small, selected, constructing engineer.....	\$3 50 each.
2 sets, 3 pieces each, spring bows, 3-inch, selected.....	7 50 each.
1 ounce pure carmine, in powder, constructing engineer.....	6 00 per ounce.
24 rolls best tracing-cloth or vellum, English or French, each 24 yards long, of the greatest width made, per sample.....	45 00 per roll.
24 cakes illuminating colors, Winsor & Newton's best, selected, constructing engineer.....	2 75 per cake.
30 pots moist colors, Winsor & Newton's best, selected..	2 75 each.
72 cakes water colors, Winsor & Newton's best, selected..	2 75 each.
1 box Winsor & Newton's water colors, 24 whole cakes, with lock and drawer, ink slab, &c., complete, selected, constructing engineer.....	34 50 per box.
2 beam compasses, German silver, complete, per sample, constructor and constructing engineer.....	37 50 each.
2 pairs compasses, German silver, double-jointed, 6-inch, with pencils, pen, wheel, and needle-point legs, complete, constructor and constructing engineer.....	27 50 per pair.
2 sets French curves, 6 pieces each, selected, constructing engineer.....	9 50 per set.
1 pair dividers, German silver, 4½-inch, constructing engineer.....	2 50 per pair.
2 pairs hair-spring dividers, German silver, 5-inch.....	7 50 per pair.
6 feather dusters, for drawings, &c., large size.....	2 50 each.
3 pounds best white bonnet glue, constructing engineer..	1 25 per pound.
5 hones for sharpening instruments, Scotch.....	2 25 each.
12 bottles indelible liquid brown ink, Winsor & Newton's, constructing engineer.....	1 75 each.
18 pieces India ink, best, 2 ounces each.....	1 50 each.
242 sheets antiquarian drawing paper, Whatman's, hot or cold pressed, as required.....	3 25 per sheet.
295 sheets double elephant drawing paper, Whatman's, hot or cold pressed, as required.....	80 per sheet.
108 sheets imperial drawing paper, Whatman's, hot or cold pressed, as required.....	60 per sheet.
600 sheets drawing paper, American, French, or German, to be selected.....	1 00 per sheet.
1 roll continuous colossal drawing paper, No. A, 24 yards long, of the greatest width made, constructor.....	32 50 per roll.
½ ream wove imperial paper, extra heavy, selected, constructing engineer.....	56 00 per ream.
2 rolls manilla paper, 40 inches wide, 30 to 40 pounds each, selected, say 75 pounds, constructing engineer..	20 00 per roll.
1 ream manilla paper, 36 by 48 inches, 110 pounds per ream, constructing engineer.....	32 50 per ream.
410 sheets double elephant tracing paper, double clarified..	40 per sheet.
72 sheets French tracing paper, per sample, constructor..	50 per sheet.
9 dozen pencils, assorted.....	2 00 per dozen.
54 dozen black lead pencils, Faber's hexagon, HH to HHHHHH.....	3 50 per dozen.
6 dozen camel's hair pencils, assorted, constructing engineer.....	2 00 per dozen.
32 dozen black sable pencils, assorted, selected.....	10 50 per dozen.
1 gross crow-quill pens, on cards, Gillott's, constructing engineer.....	16 00 per gross.
5½ gross mapping or drawing pens, best, to be selected..	16 00 per gross.
14 right-line drawing pens, German silver, jointed, ivory handles.....	3 50 each.
1 bow pen, German silver, double-jointed, needle points, constructing engineer.....	5 75 each.
1 bow pencil, German silver, double-jointed, needle points.....	5 75 each.
2 gross drawing pins or tacks, German silver, assorted..	15 00 per gross.
2 portfolios, for drawings, as directed, chief engineer..	16 50 each.

1 protractor, 6-inch, full circle, German silver, to order, constructing engineer	\$24 00 each.
7 ivory rules, double-jointed, 2-foot, marked to order ..	12 50 each.
5 nests color saucers, ground together, 3 to 4 inch	3 00 per nest.
3 flat boxwood scales, 24-inch, marked to order, constructing engineer	6 00 each.
2 triangular boxwood scales, 12-inch, selected, constructing engineer	4 00 each.
2 triangular scales, standard, 18-inch, marked to order, constructor	5 75 each.
3 ivory scales, architects', 12-inch, constructing engineer	9 00 each.
6 ivory scales, marked to order, constructor	7 25 each.
1 set paper scales, 18 pieces, constructor	19 00 per set.
3 chamois skins, for instruments, soft	1 25 each.

All stationery to be first class and per samples; when samples are not furnished, to be selected.

All drawing materials and instruments to be of the very best quality and manufacture, and selected by those using them.

All to be delivered as required.

JOSEPH LEVY. DATE OF CONTRACT, OCTOBER 7, 1864.

Class No. 20, hay and straw.

100 tons, 2,240 pounds each, first quality loose timothy hay ..	\$55 90 per ton.
8 tons, 2,240 pounds each, straw in bundles of three pounds or over	32 00 per ton.

To be delivered as required.

WM. M. SHIPMAN. DATE OF CONTRACT, OCTOBER 13, 1864.

Class No. 21, provender.

100,000 pounds ground feed	\$0 03 per pound.
100,000 pounds Indian meal	03 per pound.
400 pounds oil meal	01½ per pound.
2,000 bushels oats, 32 pounds to the bushel	95 per bushel.
6 sacks salt	2 50 each
600 bushels shipstuff	10 per bushel.

To be delivered as required.

EDWARD FOX. DATE OF CONTRACT, OCTOBER 15, 1864.

Class No. 22, charcoal.

10,000 bushels hard-wood charcoal	\$0 34 per bushel.
12 bushels pulverized charcoal	1 10 per bushel.
25 bushels pulverized sea coal	84 per bushel.

To be delivered as required.

S. S. VANDERHOEF. DATE OF CONTRACT, OCTOBER 8, 1864.

Class No. 23, belting, packing, and hose.

250 feet 12-inch single leather belting, oak-tanned, machine-stretched, and riveted	\$1 62 per foot.
250 feet 11-inch single leather belting, oak-tanned, machine-stretched, and riveted	1 46 per foot.
250 feet 10-inch single leather belting, oak-tanned, machine-stretched, and riveted	1 32 per foot.
250 feet 9-inch single leather belting, oak-tanned, machine-stretched, and riveted	1 17 per foot.
250 feet 8-inch single leather belting, oak-tanned, machine-stretched, and riveted	1 02 per foot.
250 feet 7-inch single leather belting, oak-tanned, machine-stretched, and riveted	87 per foot.
880 feet 6-inch single leather belting, oak-tanned, machine-stretched, and riveted	74 per foot.

400 feet 5-inch single leather belting, oak-tanned, machine-stretched, and riveted.....	\$0 61 per foot.
950 feet 4-inch single leather belting, oak-tanned, machine-stretched, and riveted.....	48 per foot
300 feet 3½-inch single leather belting, oak-tanned, machine-stretched, and riveted.....	42 per foot.
1,200 feet 3-inch single leather belting, oak-tanned, machine-stretched, and riveted.....	36 per foot.
1,100 feet 2½-inch single leather belting, oak-tanned, machine-stretched, and riveted.....	30 per foot.
1,000 feet 2-inch single leather belting, oak-tanned, machine-stretched, and riveted.....	24 per foot.
100 feet 18-inch double leather belting, oak-tanned, machine-stretched, and riveted.....	5 36 per foot.
300 feet 12-inch double leather belting, oak-tanned, machine-stretched, and riveted.....	3 24 per foot.
200 feet 10-inch double leather belting, oak-tanned, machine-stretched, and riveted.....	2 64 per foot.
300 feet 8-inch double leather belting, oak-tanned, machine-stretched, and riveted.....	2 04 per foot.
450 feet 6-inch double leather belting, oak tanned, machine-stretched, and riveted.....	1 48 per foot.
350 feet 5 inch double leather belting, oak-tanned, machine-stretched, and riveted.....	1 22 per foot.
150 feet 4-inch double leather belting, oak-tanned, machine-stretched, and riveted.....	96 per foot.
100 feet 4-inch double leather belting, white-oak tanned....	96 per foot.
100 feet 3½-inch double leather belting, white-oak tanned..	84 per foot.
100 feet 3-inch single leather belting, white-oak tanned....	36 per foot.
100 feet 2½ inch single leather belting, white-oak tanned..	30 per foot.
100 feet 2-inch single leather belting, white-oak tanned....	24 per foot.
100 feet 1½-inch single leather belting, white-oak tanned..	15 per foot.
150 feet India-rubber leading hose, 1-inch, 3-ply, with brass couplings complete, constructing engineer.....	70 per foot.
1,200 feet leather leading hose, 3-inch, yard size, with Lawton & Bliss's couplings to fit fire-engines and hydrants in the yard.....	1 90 per foot.
6 lengths leather suction hose, yard size, 6-inch, with couplings complete to fit yard engines, master.....	125 00 per length.
50 sides bellows leather, not less than 5 pounds each, master.	5 50 each.
8 sides breeching leather, white-oak tanned, laborer.....	6 00 each.
2 sides patent dash leather, laborer.....	10 00 each.
1 side patent leather, for cart saddles, laborer.....	12 00 each.
12 sides fly-net leather, white-oak tanned, laborer.....	6 00 each.
500 pounds harness leather, white-oak tanned, laborer.....	65 per pound.
556 pounds hose leather, best white-oak tanned.....	65 per pound.
39 sides lacing leather, best white-oak tanned, per sample.	4 00 each.
200 pounds pump leather, best white-oak tanned, master....	65 per pound.
350 pounds metallic packing, equal to Martin's patent, selected.	1 75 per pound.
75 pounds round rubber packing, with duck outside, three-eighths to seven-eighths inch diameter, constructing engineer.....	1 75 per pound.
200 pounds sheet rubber packing, with cloth insertion, 1-sixteenth to 4-sixteenths inch thick, constructing engineer.....	1 50 per pound.
200 pounds sheet rubber packing, without cloth insertion, three-fourths to 1 inch thick, constructing engineer.....	1 75 per pound.
1 side raw hide, one-fourth-inch thick, for scroll saw straps.	10 00 each.
300 pounds valve rubber, five-eighths to seven-eighths inch, pure gum, constructing engineer.....	1 75 per pound.
8 chamois skins, large size.....	1 00 each.
12 sheep-skins, large size, laborer.....	4 00 each.
150 feet India-rubber tubing, three-eighths inch diameter, constructing engineer.....	26 per foot.

200 feet India-rubber tubing, one-half inch diameter, constructing engineer.....	\$0 33 per foot.
150 feet India-rubber tubing, five-eighths inch diameter, constructing engineer.....	40 per foot.
48 valves, pure rubber, per sample, about 850 pounds, chief engineer.....	1 75 per pound.
To be delivered as required.	

JOHN J. BINGHAM. DATE OF CONTRACT, OCTOBER 13, 1864.

Class No. 24, sperm and lubricating oils.

1,976 gallons lard oil, best quality.....	\$2 00 per gallon.
123 gallons neat's-foot oil, best quality.....	1 50 per gallon.
1,000 gallons pure winter-strained sperm oil, best quality, subject to the usual yard tests, viz: by specific gravity, by burning, and others, if necessary.....	2 95 per gallon.
To be delivered as required, in suitable and tight barrels.	

FELIX CAMPBELL. DATE OF CONTRACT, OCTOBER 18, 1864.

Class No. 25, iron work, piping, &c.

100 return bends, $\frac{3}{4}$ -inch, for box coils.....	\$0 50 each.
10 gas brackets, 2 burners each, with globes complete, and strong, for large engine-room, selected.....	12 50 each.
30 bronzed brackets, cast, with 2 swing joints.....	3 00 each.
25 brackets, single swing, heavy and plain.....	2 50 each.
25 brackets, double swing, heavy and plain.....	3 00 each.
4 dozen brass burners, 5-foot, for street lamps.....	5 00 per dozen.
6 Argand burners, brass.....	3 00 each.
2 gross gas-burners, selected.....	10 00 per gross.
1,000 bushings, from $\frac{3}{8}$ to 2 inch, as required.....	60 each.
10 pounds gas-fitters' cement.....	2 00 per pound.
12 Argand chimneys, glass.....	1 25 each.
50 gas bracket cocks, heavy, $\frac{1}{8}$ -inch.....	2 00 each.
60 gas bracket cocks, heavy, $\frac{3}{8}$ -inch.....	2 50 each.
60 gas bracket cocks, heavy, $\frac{1}{4}$ by $\frac{1}{8}$ inch.....	4 00 each.
60 gas cocks, steam metal, $\frac{1}{4}$ and $\frac{3}{8}$ inch.....	3 00 each.
4 gas cocks, brass, $1\frac{1}{2}$ -inch.....	12 00 each.
4 gas cocks, brass, $1\frac{1}{4}$ -inch.....	10 00 each.
8 gas cocks, brass, 1-inch.....	8 50 each.
10 gas cocks, brass, $\frac{3}{4}$ -inch.....	4 50 each.
12 gas cocks, brass, $\frac{1}{2}$ -inch.....	3 00 each.
2 gas meter cocks, 2-inch.....	20 00 each.
100 gas pendant cocks, plain, $\frac{1}{4}$ by $\frac{1}{8}$ inch.....	3 00 each.
50 gas pendant cocks, plain, $\frac{1}{8}$ -inch.....	3 00 each.
25 service cocks, brass, $\frac{1}{2}$ to $\frac{3}{4}$ inch.....	4 00 each.
6 heating coils, with iron casings and marble slab complete, similar to those in armory at yard.....	75 00 each.
600 iron couplings, right and left hand, sizes as required.....	75 each.
100 drop elbows, $\frac{3}{8}$ -inch.....	40 each.
180 cast-iron elbows, $\frac{1}{2}$ -inch.....	50 each.
175 cast-iron elbows, $\frac{3}{4}$ -inch.....	62 each.
300 cast-iron elbows, 1-inch.....	72 each.
150 cast-iron elbows, $1\frac{1}{4}$ -inch.....	82 each.
150 cast-iron elbows, $1\frac{1}{2}$ -inch.....	1 00 each.
140 cast-iron elbows, 2-inch.....	1 75 each.
20 cast-iron elbows, 3-inch.....	4 00 each.
25 galvanized iron elbows, not to exceed $1\frac{1}{2}$ -inch.....	1 00 each.
250 pounds iron flanges, tapped to fit pipes, $\frac{1}{2}$ to 3 inch.....	20 per pound.
1 heater, for $\frac{3}{4}$ -inch pipe, complete.....	30 00 each.
1 heater, for 1-inch pipe, complete.....	40 00 each.
8 expansion joints, steam metal, for 1-inch pipe.....	8 00 each.

6 expansion joints, steam metal, for 2-inch pipe, extra lengths.....	\$15 00 each.
150 swing joints, for $\frac{1}{8}$ -inch pipe.....	1 50 each.
6 gas lanterns, to be selected.....	4 00 each.
150 nipples, wrought-iron, extra, as required or selected.....	80 each.
200 lock nuts, assorted sizes.....	80 each.
20 heavy gas pendants, plain, selected.....	4 00 each.
25 heavy gas pendants, plain, with rubber swing, selected.....	6 00 each.
4 dozen pillars, for gas tips.....	1 50 per dozen.
200 feet galvanized iron pipe, $\frac{1}{2}$ -inch, with couplings.....	50 per foot.
200 feet galvanized iron pipe, $\frac{3}{4}$ -inch, with couplings.....	60 per foot.
200 feet galvanized iron pipe, 1-inch, with couplings.....	75 per foot.
100 feet galvanized iron pipe, $1\frac{1}{4}$ -inch, with couplings.....	1 00 per foot.
100 feet galvanized iron pipe, $1\frac{1}{2}$ -inch, with couplings.....	1 30 per foot.
200 feet galvanized iron pipe, 2-inch, with couplings.....	1 80 per foot.
600 feet wrought-iron gas pipe, $\frac{1}{8}$ -inch, with couplings.....	21 per foot.
800 feet wrought-iron gas pipe, $\frac{1}{4}$ -inch, with couplings.....	22 per foot.
1,400 feet wrought-iron gas pipe, $\frac{3}{8}$ inch, with couplings.....	27 per foot.
1,200 feet wrought-iron pipe, $\frac{1}{2}$ -inch, with couplings.....	31 per foot.
1,800 feet wrought-iron pipe, $\frac{3}{4}$ -inch, with couplings.....	41 per foot.
8,900 feet wrought-iron pipe, 1-inch, with couplings.....	50 per foot.
1,250 feet wrought-iron pipe, $1\frac{1}{4}$ -inch, with couplings.....	75 per foot.
1,000 feet wrought-iron pipe, $1\frac{1}{2}$ -inch, with couplings.....	1 00 per foot.
900 feet wrought-iron pipe, 2-inch, with couplings.....	1 50 per foot.
200 feet wrought-iron pipe, 3-inch, with couplings.....	3 50 per foot.
(The wrought-iron pipe to be cut as directed.)	
150 hook plates, from 2 to 6 pipes high.....	20 each.
50 cast-iron plugs, $\frac{3}{4}$, 1, and $1\frac{1}{4}$ inch.....	30 each.
40 cast-iron plugs, $1\frac{1}{2}$, 2, and 3 inch.....	1 00 each.
4 gas posts, with lamps, per sample.....	12 00 each.
60 reducers, brass, $\frac{3}{8}$ and $\frac{1}{2}$ inch, as required.....	20 each.
4 gas shades, metallic, selected.....	1 50 each.
2 gas stands, portable, with flexible tube, brass wire body, complete, selected.....	8 00 each.
200 tees, galvanized iron, not to exceed $1\frac{1}{2}$ -inch.....	1 00 each.
575 tees, cast-iron, sizes as required or selected.....	1 00 each.
100 branch tees, 2 to 4 way, 1-inch.....	1 50 each.
500 drop tees, $\frac{3}{8}$ to 2 inch, selected.....	50 each.
200 reducing tees, $\frac{3}{8}$ to 2 inch, selected.....	50 each.
6 dozen Scotch tips, 4 and 5 foot burners.....	50 per dozen.
48 lineal feet flexible tube, for gas stands, with wire body, very best quality.....	1 00 per foot.
12 unions, brass, $\frac{1}{2}$ -inch.....	1 00 each.
12 unions, brass, $\frac{3}{4}$ -inch.....	1 50 each.
10 unions, brass, 1-inch.....	2 00 each.
8 unions, brass, $1\frac{1}{4}$ -inch.....	2 50 each.
8 unions, iron, 1-inch.....	1 00 each.
6 unions, iron, 2-inch.....	2 50 each.
25 check valves, $\frac{1}{2}$ -inch.....	3 00 each.
25 check valves, 1-inch.....	5 00 each.
20 check valves, angle and line, $\frac{1}{2}$ to 1 inch.....	4 00 each.
20 globe valves, brass, $\frac{1}{2}$ -inch.....	2 95 each.
20 globe valves, brass, $\frac{3}{4}$ -inch.....	4 00 each.
38 globe valves, brass, 1-inch.....	5 80 each.
14 globe valves, brass, $1\frac{1}{4}$ -inch.....	8 50 each.
10 globe valves, brass, $1\frac{1}{2}$ -inch.....	11 00 each.
10 globe valves, brass, 2-inch.....	16 30 each.
2 globe valves, brass, 3-inch, flanged.....	60 00 each.
3 safety valves, $1\frac{1}{2}$ to 2 inch, flanged, if so required.....	40 00 each.
2 stop and throttle valves, $1\frac{1}{2}$ -inch.....	25 00 each.

To be delivered as required.

STEVENS BROTHERS & Co. DATE OF CONTRACT, OCTOBER 4, 1864.

1 ivory scale, architect's, 12 inches.....	10 00	each.

One-half to be delivered in 30 days, and the remainder in 60 days from date of contract.

LYMAN REYNOLDS. DATE OF CONTRACT, OCTOBER 8, 1864.

Class No. 19, firewood.

600 cords pine wood..... \$6 70 per cord.
To be delivered as required.

S. A. WHEELWRIGHT. DATE OF CONTRACT, OCTOBER 8, 1864.

Class No. 20, hay and straw.

75 tons (2,240 pounds) of hay, (timothy and clover)..... \$41 00 per ton.
To be delivered as required, with a ice of 12 days.

S. A. WHEELWRIGHT. DATE OF CONTRACT, OCTOBER 8, 1864.

Class No. 21, provender.

900 bushels oats, (32 pounds to the bushel) \$1 20 per bushel.
45,000 pounds hominy..... 08 per pound.
To be delivered as required.

WM. PATTERSON. DATE OF CONTRACT, OCTOBER 14, 1864.

Class No. 22, charcoal.

5,150 bushels hard-wood charcoal..... \$0 29 per bushel.
25 barrels pulverized charcoal..... 5 50 per barrel.
25 barrels pulverized sea coal..... 9 00 per barrel.

One-third to be delivered in 30 days, one-third in 60, and one-third in 90 days from the date of the contract.

DICKINSON & ELVANS. DATE OF CONTRACT, OCTOBER 4, 1864.

Class No. 23, belting, packing, and hose.

350 pounds hemp packing, best quality \$1 00 per pound.
550 pounds gum packing, $\frac{1}{4}$ to $\frac{7}{8}$ inch thick, best quality..... 2 00 per pound.
4 gum valves, for dock engine pumps, 48 inches diameter,
1 $\frac{1}{4}$ inch thick, best quality..... 200 00 each.
4 gum valves, for dock engine pumps, 45 $\frac{1}{2}$ inches diameter,
1 $\frac{1}{4}$ inch thick..... 175 00 each.
2 gum rings, 55 $\frac{1}{2}$ inches outside diameter, 48 inches inside
diameter, 1 $\frac{1}{4}$ inch thick, best quality, (dock engine).... 50 00 each.
240 feet oak-tanned leather belting, double riveted, 24 inches
wide 3 00 per foot.
300 feet oak-tanned leather belting, double riveted, 12 inches
wide 2 75 per foot.
150 feet oak-tanned leather belting, double riveted, 8 inches
wide 1 50 per foot.
250 feet oak-tanned leather belting, double riveted, 6 inches
wide 1 00 per foot.
300 feet oak-tanned leather belting, double riveted, 5 inches
wide 75 per foot.
500 feet oak-tanned leather belting, double riveted, 4 inches
wide 50 per foot.
400 feet oak-tanned leather belting, double riveted, 3 $\frac{1}{2}$ inches
wide 25 per foot.
500 feet oak-tanned leather belting, double riveted, 3 inches
wide 25 per foot.

300 feet oak-tanned leather belting, double riveted, 2½ inches wide	\$0 20 per foot.
100 feet oak-tanned leather belting, double riveted, 2½ inches wide	20 per foot.
25 sides lacing leather, best quality	4 00 per side.
500 feet leading hose, leather, with regulation couplings complete, and two brass nozzles	2 00 per foot.

All of the above articles to be of the best quality, and to be delivered in ninety days from the date of the contract.

S. A. WHEELWRIGHT. DATE OF CONTRACT, OCTOBER 8, 1864.

Class No. 24, sperm and lubricating oils.

700 gallons winter-strained sperm oil	\$2 80 per gallon.
500 gallons lard oil	2 15 per gallon.
90 gallons neat's-foot oil	1 80 per gallon.

To be delivered in thirty days after the date of the contract.

DICKINSON & ELVANS. DATE OF CONTRACT, OCTOBER 4, 1864.

Class No. 26, augers.

3 dozen round-lipped augers, ½ to 1½ inch, screw bits	\$16 00 per dozen.
½ dozen screw augers, 1½ inch	9 00 per dozen.
½ dozen screw augers, 1¼ inch	8 00 per dozen.
½ dozen screw augers, 1 inch	8 00 per dozen.
6 dozen ship carpenters' augers, 1½ inch, without screws	14 00 per dozen.
6 dozen ship carpenters' augers, 1¾ inch, without screws	17 00 per dozen.
6 dozen ship carpenters' augers, 1½ inch, without screws	19 00 per dozen.
1 dozen plug bits, ¾ to 1½ inch	6 00 per dozen.

To be delivered in thirty days from the date of the contract.

WM. Y. AGARD. DATE OF CONTRACT, SEPTEMBER 29, 1864.

Class No. 27, anthracite coal.

1,300 tons, of 2,240 pounds, white ash anthracite coal, steamboat size	\$13 45 per ton.
50 tons, 2,240 pounds, white ash anthracite coal, egg size	13 45 per ton.

All the above coal is to be of the best quality of its kind; 300 tons to be delivered in thirty days after date of contract, and to be completed on or before the 1st December, 1864. The contractor is to discharge it into carts provided by the government, and the quantity delivered is to be paid for at the weights of the navy yard scales.

EATON & GAGE. DATE OF CONTRACT, OCTOBER 5, 1864.

Class No. 29, bituminous Cumberland coal.

300 tons, 2,240 pounds, best Cumberland coal, smiths' use	\$15 00 per ton.
---	------------------

The above coal is to be of the best quality; to be delivered in sixty days after date of contract. The contractor is to discharge it into carts provided by the government, and the quantity delivered is to be paid for at the weights of the navy yard scales.

EATON & GAGE. DATE OF CONTRACT, OCTOBER 5, 1864.

Class No. 30, semi-bituminous Broad Top coal, lump.

275 tons, 2,240 pounds, for smiths and engines	\$15 00 per ton.
--	------------------

To be delivered in thirty days after date of contract. The contractor is to place it in carts provided by the government, and the quantity delivered is to be paid for at the weights of the government scales.

EATON & GAGE. DATE OF CONTRACT, OCTOBER 5, 1864.

Class 31, copper and composition nails.

145 sheets braziers' copper, thickness as required, (6,700 pounds)	\$0 65 per pound.
582 sheets 16 oz. sheathing copper, (2,716 pounds)	70 per pound.

To be delivered in ninety days after the date of contract.

CHAS. H. POLLOCK. DATE OF CONTRACT, OCTOBER 10, 1864.

Class No. 32, machinery and tools.

1 screw-cutting lathe, shears 24 feet long, swing 48 inches, gearing complete.....	\$4,200 each.
1 screw-cutting lathe, shears 20 feet long, swing 24 inches, gearing complete.....	1,600 each.
1 screw-cutting lathe, shears 20 feet long, swing 30 inches, swivel head, gearing complete.....	2,200 each.
1 screw-cutting lathe, shears 10 feet long, swing 16 inches, swivel-head, gearing complete.....	1,000 each.
1 screw-cutting lathe, shears 6 feet long, swing 12 inches, gearing complete.....	900 each.
1 drill press, large size.....	1,200 each.
1 slotting machine, medium size.....	1,600 each.
1 gear-cutting machine, medium size.....	1,200 each.
1 governor and throttle valve, equal to "Judson's patent," for sawmill engine—flange of valve to be 10 inches diameter, and bore of valve and diameter of pipe 5 inches.....	200 each.
1 steam pump, equal to "Woodward's," No. 5.....	800 each.

The above tools to be on the most improved plan, and each lathe to have one adjustable chuck plate and steady rest. To be delivered in six months after the date of the contract.

WM. F. SIMES & SON. DATE OF CONTRACT, SEPTEMBER 30, 1864.

Class A, sashes, glazed.

Sashes, glazed, for 59 windows, to fit openings, 3 feet 8½ inches wide by 7 feet 1½ inch high, 10 by 13 glass, two casements.....	\$6 93 per window.
Sashes, glazed, for 45 windows, to fit openings, 3 feet 8½ inches wide by 7 feet 7½ inches high, 10 by 14 glass, two casements.....	7 39½ per window.
Sashes, glazed, for 34 windows, to fit openings, 3 feet 1½ inch wide by 7 feet 3 inches high, two casements.....	7 73½ per window.
Sashes, glazed, for 124 windows, to suit window frames 6 feet 7 inches high and 3 feet 8½ inches wide, two casements.....	6 66½ per window.

To be delivered in 90 days from date of contract.

Schedule of materials required at the United States navy yard, Pensacola, Fla.

SAMUEL A. WHEELWRIGHT. DATE OF CONTRACT, OCTOBER 7, 1864.

Class No. 16 ship chandlery.

1,000 pounds tallow.....	\$0 30 per pound.
500 pounds cotton waste.....	55 per pound.
1 American ensign, No. 6.....	15 00 each.
1 American ensign, No. 10.....	36 00 each.

To be delivered as required.

SAMUEL A. WHEELWRIGHT. DATE OF CONTRACT, OCTOBER 7, 1864.

Class No. 17, hardware.

1 dozen clamp screws, 18 to 24 inches.....	\$125 00 per dozen.
1 dozen double headed mauls.....	44 00 per dozen.
3 gross whip-saw files.....	64 00 per gross.
12 gross handsaw files, 4 inches.....	34 00 per gross.
6 gross handsaw files, 6 inches.....	50 00 per gross.
3 gross rip-saw files, 8 inches.....	90 00 per gross.
2 dozen mill-saw files, 12 to 14 inches.....	13 00 per dozen.

To be delivered as required.

Not bid for. Class No. 18, stationery.

2 reams official paper.....	per ream.
5 reams foolscap paper.....	per ream.
5 reams letter paper.....	per ream.
3 reams note paper.....	per ream.
15 quires envelope paper.....	per quire.
5 quires wrapping paper.....	per quire.
150 sheets thick white blotting paper.....	per sheet.
2,000 official envelopes.....	per M.
2,000 letter envelopes.....	per M.
1 copying letter press, 10 by 15 inches in clear.....	each.
1 letter book for same, brush, silk, &c., complete.....	each.
2 bottles Arnold's copying ink.....	per bottle.
1 dozen bottles Arnold's writing fluid.....	per dozen.
10 bottles Guyot's carmine ink.....	per bottle.
9 dozen penholders.....	per dozen.
12 gross steel pens.....	per gross.
2 pen racks.....	each.

STEVENS BROS. & Co. DATE OF CONTRACT, OCTOBER 4, 1864.

Class No. 32, machinery and tools.

1 first-class medium sized compound planer..... \$1,000 00 each.

1 set boiler plate rolls—rolls to be 9 feet long, and the machine to be worked by hand-power..... 2,000 00 each.

To be delivered in four months from date of contract.

No. 3.

NAVY DEPARTMENT, BUREAU OF EQUIPMENT AND RECRUITING,
Washington, October 15, 1864.

SIR: I have the honor to submit herewith estimates for this bureau for the fiscal year ending June 30, 1866. Though larger than the current year's appropriation, they are based upon its probable expenditures, and believed to be as economical as possible. No "contingent" is estimated for, as the estimated balance remaining on the 30th of June, 1865, will, no doubt, be sufficient for the next fiscal year. The consumption of coal this year will be about 500,000 tons. This, with the demurrage, damages, and other incidental expenses, attendant on its transportation, will exceed the amount appropriated, and at the proper time an additional appropriation will be asked for to meet the deficiency. Difficulties among the operatives at the mines and on the railroad, last summer, threatened very serious embarrassment to the department, and, though during some ten days no coal was forwarded to the squadrons, the supplies on hand fortunately prevented any hindrance to their operations and effectiveness. It is proposed to have a large surplus on hand at the different depots, to guard against winter and other contingencies. The ship *Greenland*, loaded with 900 tons for the West Gulf squadron, was destroyed by the *Florida*, in July last. Government assumed the war risk on her, and paid the appraised value, \$23,500.

The ropewalk at Charlestown navy yard continues to furnish all the larger sizes of rope required for the navy, but much of the smaller cordage is required to be purchased.

Proposals were advertised to furnish anchors to the navy, in May last, but no bids were received, and in this connexion I would suggest that it would be to the advantage of government to have its own establishments for the manufacture of cables and anchors, the navy yard at Washington being unable to supply the wants of the navy.

The personnel of the navy is about 6,000 officers and 45,000 men. Under the President's last call for 500,000 men, they were permitted, with privilege to furnish substitutes in advance of draft, to enter either the army or navy. This, with the same bounties given as in the army, rapidly filled up the naval deficiencies, but, owing to the great preponderance of landsmen, the department was compelled to confine their enlistments to 15 per cent. Several new rendezvous were opened in different localities, to facilitate the enlistment of those desiring to enter the naval service.

There are 100 or more apprentice boys on board the school-ship *Sabine*, and the commander speaks very encouragingly of the system, and the proficiency of the apprentices.

The various branches of public service connected with this bureau, and the great amount of writing required in the recruiting department, and its correspondence, compel me to ask for additional clerical force, and I have accordingly submitted an estimate for one clerk of the third class, and one of the first class.

I have the honor to be, very respectfully, your obedient servant,

A. N. SMITH,
Chief of Bureau.

Hon. GIDEON WELLES,
Secretary of the Navy.

No. 3.

E. & R., No. 7.

LIST OF CONTRACTS MADE BY THE BUREAU OF EQUIPMENT & RECRUITING
FOR THE FISCAL YEAR ENDING JUNE 30, 1865.

Schedule of materials required at the United States navy yard, Kittery, Maine, under cognizance of the Bureau of Equipment and Recruiting, for the fiscal year ending June 30, 1865.

WM. BRAND, NEW YORK. DATE OF CONTRACT, AUGUST 24, 1864.

Class No. 1, flax canvas and twine.

140 bolts No. 1 flax canvas.....	\$63 00 per bolt.
350 bolts No. 2 flax canvas.....	61 00 per bolt.
300 bolts No. 3 flax canvas.....	59 00 per bolt.
250 bolts No. 4 flax canvas.....	57 00 per bolt.
250 bolts No. 5 flax canvas.....	55 00 per bolt.
350 bolts No. 6 flax canvas.....	53 00 per bolt.
200 bolts No. 7 flax canvas.....	51 00 per bolt.
200 bolts No. 8 flax canvas.....	49 00 per bolt.

100 bolts light ravens duck, No. 12	\$30 00 per bolt.
100 bolts flax hammock stuff	110 00 per bolt.
100 bolts flax bag stuff	90 00 per bolt.
1,000 yards light parcelling	40 per yard.
600 pounds flax seine twine	2 00 per pound.

All applications for samples or information will be made to the commandant of the yard.

The flax canvas to be 20 inches wide, and each bolt to contain 40 running yards; the blue thread to be $1\frac{1}{8}$ inch from the selvage; the warp and filling to be spun exclusively from long, well-dressed water-rotted flax, of the best quality, without any mixture of shorts or tow; the yarns to be evenly spun, and of proper fineness; the warp to be rather more twisted than the filling.

The warp and filling from Nos. 2 to 5, inclusive, to be double thread, moderately twisted; No. 6, double warp and single weft or filling, and Nos. 7 and 8 single thread. No description of weavers' dressing, or any pressing or beating, to be used in the manufacture. The strips to test the strength to be 1 inch in width, except No. 8, which will be $1\frac{1}{4}$; the hammock stuff to be 42 inches wide, and 50 running yards to each bolt, and to weigh 100 pounds to the bolt; the bag stuff to be 42 inches wide, and 50 running yards to each bolt; to weigh 75 pounds to the bolt.

No.	Weight per bolt.	WEIGHT TO BE BORNE BY STRIPS.	
		Crosswise.	Lengthwise.
2	38 pounds avoirdupois	420 pounds	280 pounds.
3	35 pounds avoirdupois	370 pounds	250 pounds.
4	32 pounds avoirdupois	340 pounds	230 pounds.
5	29 pounds avoirdupois	320 pounds	216 pounds.
6	26 pounds avoirdupois	300 pounds	200 pounds.
7	23 pounds avoirdupois	280 pounds	193 pounds.
8	20 pounds avoirdupois	300 pounds	213 pounds.

One-third part, comprising a due proportion of each kind, to be delivered on or before 1st December next; one-third part on or before 1st April; and the remaining part on or before 30th June, 1865; unless earlier required, with a notice of twenty days.

SOUTHARD, HERBERT & Co., BOSTON. DATE OF CONTRACT, SEPTEMBER 5, 1864.

25,000 official envelopes, best linen stock, white, yellow, and buff, No. 10	\$15 00	per M.
25,000 letter envelopes, best linen stock, white, yellow, and buff	10 00	per M.
5,000 note envelopes, best linen stock, white, yellow, and buff	10 00	per M.
1 gross metallic paper fasteners, Swartwout's	8 00	per gross
1 gross paper clips, as per sample	15 00	per gross.
2 dozen iron paper-folders	3 00	per dozen.
10 pounds gum-arabic	75	per pound.
6 gross penholders, best quality	9 00	per gross.
10 dozen inkstands, barometer	24 00	per dozen.
2 dozen inkstands, hydrometer	24 00	per dozen.
10 dozen mucilage, large size, best	12 00	per dozen.
25 reams paper, best linen stock, white foolscap, unruled	9 00	per ream.
30 reams paper, best linen stock, white letter, ruled	7 50	per ream.
20 reams paper, best linen stock, white letter, unruled	6 00	per ream.
5 reams paper, best linen stock, white note, ruled	6 00	per ream.
150 dozen pencils, Faber's, black lead, assorted numbers	1 50	per dozen.
24 dozen penknives, best quality, 4-blade, Congress	30 00	per dozen.
4 gross drawing-pins or tacks, steel, blued	9 00	per gross.
12 dozen pieces rubber, prepared for erasing, best quality, not less than 2 by 3 inches	6 00	per dozen.
10 pounds sealing-wax, best quality, red	4 00	per pound.
3 dozen pencil-sharpeners	2 00	per dozen.
6 dozen slates, double log	12 00	per dozen.
4 dozen slates, single log	6 00	per dozen.
50 dozen pieces tape, narrow, red	1 00	per dozen.
12 dozen bolts taste, or pieces of narrow, red, white, and blue ribbon	7 50	per dozen.

All applications for samples or information will be made to the commandant of the yard.

One-third part, comprising a due proportion of each kind, to be delivered on or before the 1st of December next; one-third part on or before the 1st of April; and the remaining part on or before the 30th of June, 1865; unless earlier required, with a notice of 20 days.

E. WHEELER & SONS. DATE OF CONTRACT, AUGUST 24, 1864.

Class No. 23, hardware.

2 dozen bolts, flush, brass, $\frac{3}{8}$ inch wide and 4 inches long	\$2 00	per dozen.
2 dozen bolts, flush, brass, $\frac{1}{2}$ inch wide and 5 inches long	3 00	per dozen.
2 dozen bolts, flush, brass, $\frac{5}{8}$ inch wide and 6 inches long	4 00	per dozen.
100 pounds brass, in sheets, 24 inches wide, Nos. 12 to 24	1 00	per pound.
300 feet chain, brass wire, Nos. 12, 14, and 18	10	per foot.
2 dozen pairs hinges, rule joint, wrought iron, table, 2 by 3 inches	1 20	per dozen.
3 dozen pairs hinges, rule joint, brass, 1 by 1 inch	1 50	per dozen.

3 dozen pairs hinges, rule joint, brass, $1\frac{1}{2}$ by $1\frac{1}{2}$ inch...	\$2 50	per dozen.
4 dozen pairs hinges, rule joint, brass, $1\frac{1}{2}$ by 2 inches ..	3 00	per dozen.
4 dozen pairs hinges, rule joint, brass, 2 by 2 inches ...	4 00	per dozen.
6 dozen pairs hinges, rule joint, brass, 2 by 3 inches ...	6 00	per dozen.
4 dozen pairs hinges, rule joint, brass, 3 by 3 inches ...	12 00	per dozen.
2 dozen locks, best brass, desk, $2\frac{1}{2}$ by 3 inches.....	24 00	per dozen.
6 dozen locks, best brass, drawer, 2 by $3\frac{1}{2}$ inches	24 00	per dozen.
4 dozen locks, best brass, cupboard, $1\frac{3}{4}$ by 3 inches	12 00	per dozen.

Cupboard lock bolts to shoot right and left.

All of the locks to be spring and tumbler, with brass works, keys of brass to differ, except the drawer locks, which may have three kinds of keys to the dozen, and two keys to each lock.

20 pounds rivets, tinned iron, from $\frac{1}{2}$ to 4 pound papers.	30	per pound.
12 gross rings, brass, curtain, $1\frac{1}{4}$ inch diameter.....	1 50	per gross.
12 gross rings, brass, curtain, 1 inch diameter.....	1 25	per gross.
12 gross rings, brass, curtain, $\frac{3}{4}$ inch diameter.....	1 00	per gross.
10 gross screws, brass, $1\frac{1}{4}$ inch, No. 10	3 00	per gross.
5 gross screws, brass, 1-inch, No. 8	2 00	per gross.
5 gross screws, brass, $\frac{3}{4}$ inch, No. 7	1 50	per gross.
5 gross screws, brass, $\frac{5}{8}$ inch, No. 6	1 25	per gross.
5 gross screws, brass, $\frac{1}{2}$ inch, No. 5	1 00	per gross.
12 dozen shovels, scoop, steel, "Ames," or equal.....	30 00	per dozen.
6 dozen springs, steel, sofa, No. 5	1 50	per dozen.
6 dozen springs, steel, sofa, No. 3	3 00	per dozen.
25 spigots, brass, $\frac{1}{4}$ and $\frac{3}{8}$ inch.....	75	each.
30 papers tacks, gimp	10	per paper.
100 pounds wire, brass, No. 6 to 14.....	80	per pound.

All applications for samples or information will be made to the commandant of the yard.

One-third part, comprising a due proportion of each kind, to be delivered on or before the 1st of December next; one-third part on or before the 1st of April; and the remaining part on or before the 30th of June, 1865; unless earlier required, with a notice of twenty days.

E. WHEELER & SON. DATE OF CONTRACT, AUGUST 24, 1864.

Class No. 24, ship chandlery.

500 pounds beeswax	\$1 00	per pound.
30 calls, boatswains', silver.....	12 00	each.
50 pounds chalk, red.....	15	per pound.
50 pounds emery flour.....	15	per pound.
100 fenders, Manilla hitched cork, large size.....	8 00	each.
300 sheets horns, for lanterns, clear white, 8 by $4\frac{1}{2}$ inches...	50	each.
50 gross lampwicks, wove round and flat, assorted sizes, as ordered.....	4 50	per gross.
10 gallons oil, linseed, raw	3 00	per gallon.
3 gallons spirits of wine, 95 per cent. proof.....	4 50	per gallon.
5 pounds gum shellac.....	2 00	per pound.
2 seines, 125 fathoms each, best quality.....	150 00	each.

All applications for samples or information will be made to the commandant of the yard.

One-third part, comprising a due proportion of each kind, to be delivered on or before the 1st of December next; one-third part on or before the 1st of April; and the remaining part on or before the 30th of June, 1865; unless earlier required, with a notice of twenty days.

LOCKWOOD & COLLINS. DATE OF CONTRACT, AUGUST 25, 1864.

Class No. 25, copper wire.

500 pounds copper bell wire, assorted numbers.....	\$0 90	per pound.
--	--------	------------

All applications for samples or information will be made to the commandant of the yard.

To be delivered on the 30th June, 1865, unless earlier required, with a notice of twenty days.

WM. A. WHEELER. DATE OF CONTRACT, AUGUST 23, 1864.

Class No. 27, dry goods.

150 pieces binding, scarlet and blue worsted, best quality, 1 inch wide and 12 yards long	\$1 50	per piece.
100 yards carpeting, Brussels, best quality	3 00	per yard.
100 yards carpeting, ingrain, 3-ply, best quality	4 00	per yard.
2,000 yards oil-cloth, best quality	2 75	per yard.
30 yards cloth, green, billiard, best quality	10 00	per yard.
60 yards cambric, black, best quality	75	per yard.
800 yards cotton, bleached, 4-4 wide, best quality	1 00	per yard.
100 yards damask, figured, best quality	6 00	per yard.
200 yards damask, plain, best quality	5 00	per yard.
1,000 pounds curled hair, white	1 50	per pound.
500 yards linen sheeting, 8-4 wide	2 50	per yard.
144 papers needles, best drilled-eyed, sewing	20	per paper.
1 pound silk, black sewing, best quality	15 00	per pound.
100 pounds thread, Scotch, linen, red, white, and blue, Nos. 45 to 50	5 50	per pound.
5 pounds thread, Scotch linen, black, best quality	6 50	per pound.
100 yards velvet plush, best quality	9 00	per yard.

All applications for samples or information will be made to the commandant of the yard.

One-third part, comprising a due proportion of each kind, to be delivered on or before the 1st of December next; one-third part on or before the 1st of April; and the remaining part on or before the 30th of June, 1865; unless earlier required, with a notice of twenty days.

E. WHEELER & SON. DATE OF CONTRACT, AUGUST 24, 1864.

Class No. 32, galley iron, &c.

9,000 pounds galley plate iron, as ordered	\$0 20	per pound.
6,000 pounds galley bar iron, as ordered, round, flat, and square	15	per pound.
3,000 pounds long flat iron, 51 inches long and 27 inches wide, No. 13 gauge	14	per pound.
2,000 pounds long flat iron, 67 inches long and 19½ inches wide, No. 14 gauge	16	per pound.
50 pounds iron rivets, ¼ inch diameter, ½-inch long, in- side of head	15	per pound.
8,000 pounds forge-plate iron, ¼-inch thick, 30 to 59 inches, and 8 to 31 inches wide, as ordered	15	per pound.
3,000 pounds bar iron, square, ¾ to 1½ inches, as ordered ..	12	per pound.
3,000 pounds bar iron, round, ¼ to ¾ inch, as ordered	15	per pound.
600 pounds round iron, Nos. 5, 6, and 8, as ordered	15	per pound.
500 pounds iron, American sheet, Nos. 16 to 24, wire gauge	15	per pound.
500 pounds iron, Russia sheet, No. 11, wire gauge	40	per pound.

All applications for samples or information will be made to the commandant of the yard.

To be of the best quality American iron, from charcoal blooms, free from blisters, hollows, and all other defects; cut to the exact sizes given; kept straight from the shears and level, and to stand flanging 2 inches around the edges.

About two-thirds of the bar iron to be of the best quality American rolled iron, with square edges, and cut to the exact lengths, without sag or raw ends. The other third to be hammered iron of the best quality, and will be designated in the schedules to be furnished by the commandant of the yard, to whom the contractor will apply.

One-third part, comprising a due proportion of each kind, to be delivered on or before the 1st December next; one-third part on or before the 1st April; and the residue on or before the 30th June, 1865; unless earlier required, with a notice of twenty days.

WM. E. COFFIN & Co. DATE OF CONTRACT, AUGUST 27, 1864.

Class No. 34, chain iron.

47,000 pounds chain links, from $\frac{3}{16}$ to 1 inch diameter, inclusive	\$0 10	per pound.
135,000 pounds chain iron, from $1\frac{1}{2}$ to $2\frac{1}{2}$ inches diameter, inclusive	10	per pound.
13,000 pounds chain iron, from $\frac{1}{4}$ to $\frac{1}{2}$ inch, in bundles...	12	per pound.

To be of the best refined American iron. The whole must be delivered in straight lengths, free from flaws, ragged ends, and other defects, subject to such proof, test, and evidence of manufacture, as to be in all respects satisfactory to the commandant of the yard. In the weight of each side is included the various pieces for shackles, swivels, &c., of which drawings, showing the shapes and dimensions, will be forwarded by the commandant of the yard, to whom all applications for information will be made.

One-third part, comprising a due proportion of each kind, to be delivered on or before the 1st December next; one-third part on or before the 1st April; and the remaining part on or before the 30th June, 1865; unless earlier required, with a notice of twenty days.

Class No. 36, walnut, mahogany, and ash.

10,000 feet, board measure, black walnut boards, $\frac{5}{8}$ to 3 inches thick	\$0 00	per M feet.
6,000 feet, board measure, mahogany boards, $\frac{5}{8}$ to 3 inches thick	00	per M feet.
25,000 feet, board measure, clear white ash plank, $1\frac{1}{2}$ to 4 inches thick	00	per M feet.

The walnut and mahogany to be in 16 feet lengths, and from 10 to 22 inches wide. The ash to be from 10 to 20 feet in length, and from 8 to 22 inches wide. The whole to be of the best quality, straight-grained and seasoned; to be sawed to an even thickness, free from knots, splits, shakes, strains, and all other defects. The respective quantity of each thickness and length, and any intermediate size, to be as the commandant of the yard may direct, and to whom the contractor will apply.

One-third part, comprising a due proportion of each kind, to be delivered on or before the 1st December next; one-third part on or before the 1st of April; and the remaining part on or before the 30th June, 1865; unless earlier required, with a notice of twenty days..

LOCKWOOD & COLLINS. DATE OF CONTRACT, AUGUST 25, 1864.

Class No. 12, lignumvitæ.

10 tons lignumvitæ, 5 to 7 inches diameter	\$200	per ton.
--	-------	----------

To be of the best quality St. Domingo lignumvitæ, straight, round, free from shakes, cracks, and other defects, and in lengths not less than 4 feet; the ton being 2,240 lbs. The respective quantity of each size, and those intermediate, to be as the commandant of the yard may designate, and to whom the contractor will apply.

One-third part, comprising a due proportion of each kind, to be delivered on or before the 1st December next; one-third part on or before the 1st April; and the remaining part on or before the 30th June, 1865; unless earlier required, with a notice of twenty days.

LOCKWOOD & COLLINS. DATE OF CONTRACT, AUGUST 25, 1864.

Class No. 38, ingot copper.

10,000 pounds lake copper, Cliff or Minnesota mines.....	\$0 56	per pound.
--	--------	------------

Subject to the necessary test and inspection of the proper officers of the yard.

One-third part, comprising a due proportion of each kind, to be delivered on or before the 1st December next; one-third part on or before the 1st April; and the remaining part on or before the 30th June, 1865; unless earlier required, with a notice of 20 days.

All applications for information will be made to the commandant of the yard.

E. WHEELER & SON. DATE OF CONTRACT, AUGUST 24, 1864.

Class No. 4, tin and zinc.

1,000 pounds Straits tin	\$0 80	per pound.
4 boxes IX tin, 14 by 20 inches, best charcoal brand ..	35 00	per box.
2 boxes IC tin, 14 by 20 inches, best charcoal brand ..	34 00	per box.
1 box XXD tin, 12½ by 17 inches, best charcoal brand.	40 00	per box.
500 pounds sheet zinc	30	per pound.
500 pounds slab zinc	20	per pound.

The quantity of each description, and of any intermediate size, to be as the commandant of the yard may direct, and to whom all applications for information will be made.

One-third part, comprising a due proportion of each kind, to be delivered on or before the 1st December next; one-third part on or before the 1st of April; and the remaining part on or before the 30th June, 1865; unless earlier required, with a notice of twenty days.

No. 4.

BUREAU OF NAVIGATION.

Annual report and estimates for the fiscal year ending June 30, 1866.

BUREAU OF NAVIGATION, NAVY DEPARTMENT,

Washington, October 29, 1864.

SIR: I have the honor to submit the following report from the Bureau of Navigation; to which is appended the estimates of the bureau proper, those of the Naval Academy, Naval Observatory, and Nautical Almanac, and the reports of the superintendents of the two last-named institutions.

NAVAL ACADEMY.

The large increase in the number of midshipmen has led to an increase in the number of teachers. It has always been one of the peculiar advantages of this institution, and of the Military Academy at West Point, that the body of instructors is larger in proportion to the number of individuals taught than in other places of learning, and this has been indispensable to that thorough and rigid system of instruction and discipline which aims to render every graduate a useful public servant. And this advantage cannot be too sedulously maintained.

The school has recently added to its usefulness by teaching the young gentlemen, during the last cruise in the practice-ships, the management of marine engines. When the views of the department are wholly carried out in this direction, and also in relation to the plan for allowing officers of the navy of all ranks to return to the academy, from time to time, to pursue special studies—after the manner of resident graduates in civil colleges—the education of the navy will be greatly extended and improved.

NAVAL OBSERVATORY.

The nautical charts and instruments still remain in charge of the Observatory, and the bureau, since its own organization, has made no essential change in their purchase or mode of distribution. I refer you, therefore, to the report of the superintendent for information on these subjects.

There is now a bill before Congress, passed by the Senate at the last session, which, if it becomes a law, will alter the mode of collecting and distributing charts.

With regard to instruments of navigation, I have taken pains to banish from the navy all those of foreign manufacture, and have succeeded to a great extent. In a short time, instruments of American manufacture will exclusively be used on board of our ships-of-war.

The new transit circle for the Observatory, mentioned in my last report, is not yet completed. The preparation to receive it is going on.

The triangulations of the clusters Pleiades and Praesepe for the important theoretical uses, discussed at some length in my preceding report, are still in progress.

The regular work of the Observatory, when the new instrument is received, will overtask the abilities of the present assistants. I therefore recommend that the means be granted to the bureau to supply the Observatory with an additional aid, and the bureau has approved the superintendent's estimate for this purpose.

NAUTICAL ALMANAC.

The work of the American Ephemeris and Nautical Almanac is kept up satisfactorily. Besides the regular annual volumes, two other books have proceeded from this office—the tables of Mercury, and a catalogue of zodiacal stars, the preparations for making the last of which were contemplated in my report, as superintendent of the Nautical Almanac, for the year 1851.

I have taken pains to push forward the theoretical work of this office, and I always kept it in view to advance the publication of the Almanac as much as possible. I mention with gratification that the extension of the *Tabulæ Reductionum* of Wolfers to our time star list has been carried forward up to the year 1880.

The estimates for the Nautical Almanac have, like all of the estimates of the bureau, been increased to meet the exigencies of the times, and that increase has seemed to me so just and necessary that I have not hesitated to approve of it.

PUBLICATIONS.

The articles composing the work of "Special Instructions" in the sciences of observation for the use of the officers of the navy (provided for in my last estimates, and embraced in the act of appropriation) have been, most them, assigned, and it is very gratifying to be able to say that I have secured the services of several of the most distinguished men of science in the country. The time of the publication of this book is uncertain.

The bureau has in the printer's hands a pamphlet containing a new method of finding the time at sea. This method was conceived by Von Littrow, the director of the Imperial Observatory at Vienna, and was applied to practice by Rear-Admiral Von Wüllerstorff, in his circumnavigation of the globe, in the Austrian frigate Novara. It may be well to say a word in explanation of the principle on which this method rests.

At sea we depend principally on the altitudes of heavenly bodies for the determination of the time. Having the latitude of our place of observation, and the altitude of an object of which the declination is known, (and we generally employ the sun for this purpose,) the hour-angle is calculated by resolving the triangle contained between the pole, the zenith, and the object observed. The hour-angle of the sun gives the apparent time at the moment of observation, and the mean time is obtained by applying to the apparent time the equation of time. With some restriction this method is exact throughout the sun's diurnal course; the restriction consists in this—that in order to determine the time with the greatest accuracy, we must choose for our observation the period when the changes in altitude are the greatest, in the same manner as we determine an angle by means of its sine with greater nicety, when the angle is very small and the change in the sine is very rapid. This requisite condition is fulfilled

when the sun is near the prime vertical, and consequently the farthest from the meridian. This observation of the time has for its ultimate purpose the determination of the longitude. Now, on the other hand, the determination of the latitude at sea is habitually (always in clear weather) obtained by measuring the altitude of the sun on the meridian. Thus it will be seen that the moment of determining, the two co-ordinates of position are removed from each other several hours, and it is only the latter co-ordinate that results directly from an astronomical observation, while the other co-ordinate (the longitude) is determined by the solution of a problem in nautical astronomy, in which the latitude at the time of observation is used, and which must, therefore, be a computed latitude, or what we call a latitude by dead reckoning, subject to all those errors which may arise from the use of the log and compass, or from unknown currents, and from such effects of wind and sea as can only be approximately estimated. And after the longitude is thus determined, that element itself must be carried forward by means of dead reckoning to the time of noon.

Mr. Von Littrow is said to have invented this method twenty years ago, while engaged in a nautical expedition, for the purpose of avoiding the inaccuracies and inconveniences above recited. He proposed to substitute in the place of actual altitudes near the prime vertical, differences of altitudes near the meridian, and to employ the latter in giving the time, and consequently the longitude, at the instant of observing the latitude, thus bringing the determination of the two co-ordinates to coincide in time.

Such is the fundamental principle of Mr. Von Littrow's method. It is limited, however, in its application; it cannot be relied upon when the distance of the sun from the zenith exceeds twenty degrees; and in order to guard against any errors arising from this limitation, and in order also to define precisely the degree of dependence to be placed upon every observation, a table is appended, in which is given the error of time corresponding to an error of one minute in each of the observed altitudes for all zenith distances from four degrees to fifty degrees, and for the interval of thirty minutes of time in the observations.

We recognize in navigation two classes of astronomical problems; one possessing perfect accuracy of computation, and admitting no other error than the probable error of observation; the other uncertain, and approximate only in its results. The first class is, of course, always employed when the weather and other circumstances are favorable. The second class of problems, that which gives only approximate deductions, is never resorted to except from necessity. The latter, however, serves a useful purpose by enabling the navigator to know his position more nearly than he could otherwise do, and by often affording perfect security by informing him of the limit of safety, beyond which he should not venture. Mr. Von Littrow's method belongs in general to the second class. Under the most favorable conditions it could be relied upon as the sole and sufficient means of navigation. But these conditions apply at a given time only to a comparatively small portion of the earth's surface. Where they are not fulfilled, the method furnishes only an approximate determination, and is always to be used with caution, and with a reference to the table added by the bureau.

The new reprint of the Signal Code of the United States navy is almost ready for issue.

The preparation of the new Telegraphic Dictionary is completed.

NAVIGATION.

Mr. Frye is still employed in the adjustment and correction of compasses of vessels built wholly or partially of iron. A good deal of delay and embarrassment has attended the placing of the Ritchie compasses on board of the monitors, owing to changes introduced after the compasses were fitted; not only trouble but expense has arisen from this source. Experience, however, will

furnish a remedy. I am in hopes of introducing into the navy a better practical acquaintance on the part of the officers with the modes of observing, correcting, and registering compass deviations. It is desirable that this subject should receive some attention at the Naval Academy.

The supplies coming under the charge of this bureau have, as has been said before, been obtained whenever possible from American manufacturers. Among the exceptions, however, to this rule is the bunting employed in making the flags and signals of the navy. We have hitherto been compelled to depend almost exclusively upon foreign factories for this indispensable article. It certainly is a matter of regret, if not of mortification, that we should be obliged to go abroad for the material of which the national ensign is made. I am happy to have it in my power to report that the efforts of the bureau for obtaining American bunting have been attended with partial success, and with the assurance that a very short time will elapse before our own bunting will equal in every respect that of Europe. The bunting manufactured by the Pacific mills surpasses the English bunting in beauty and fastness of colors, though it falls a little short of it in durability. When all departments of the government make use of no other than American bunting, its manufacture will be carried to perfection.

Considerable difficulty has been experienced in obtaining an adequate supply of small cordage from the navy rope-walk; it has been necessary to make purchases from outside establishments.

HYDROGRAPHY.

Charts of Gotto and Iki straits, Japan, sheet No. 2, and of the compass stations and trial courses, have been published by the bureau during the last year. A chart of Behring's sea and Arctic ocean is nearly finished; also a chart of the Ochotsk sea, which includes the mouth of the Amoor river. I have taken up the work of the La Plata Expedition, and I am endeavoring to extract something useful from the notes and drawings left by its commander. This investigation has not proceeded sufficiently far to allow me to speak with certainty of the results. I am also employed in making additions to the Danger chart of the Pacific ocean, which originated with Commodore John Rodgers, while in command of the North Pacific surveying expedition.

ESTIMATES.

The sum called for in the accompanying estimates, under the head of navigation and navigation supplies, is larger than it was last year. This increase is due to several causes.

1st. To the transfer to this head of the appropriation "for the purchase of nautical and astronomical instruments, nautical books and charts, and for repairs of instruments, and for binding and backing books and charts," which appropriation for the fiscal year ending June 30, 1865, was \$101,042.

2d. To the transfer to this bureau of the estimates for the purchase of running lights and musical instruments from the Bureau of Equipment and Recruiting.

3d. To the transfer to this bureau of the estimate for the purchase of Coston's night signals from the Bureau of Ordnance.

4th. To the greatly enhanced cost of all these supplies.

Very respectfully, your obedient servant,

C. H. DAVIS,
Chief of Bureau.

Hon. GIDEON WELLES,
Secretary of the Navy.

NAVIGATION—A.

The appendix to the Report of the Chief of the Bureau of Navigation, dated October, 1864, comprises the following papers:

Navigation B.—Estimate for the support of the bureau.

Navigation, No. 1.—Estimate for pay of navigation officers on duty at yards and stations.

Navigation, No. 2.—Estimate for navigation and navigation supplies.

Navigation, No. 3.—Estimate for contingent expenses.

Navigation, No. 4.—Report of superintendent of naval observatory and estimate for its support.

Navigation, No. 5.—Report of superintendent of naval academy and estimate for its support.

Navigation, No. 6.—Report of superintendent of nautical almanac office and estimate for its support.

Navigation, No. 7.—General estimate from the Bureau of Navigation.

Navigation, No. 8.—Estimate of appropriations under the cognizance of the Bureau of Navigation required for the fiscal year ending June 30, 1866.

Navigation, No. 9.—Abstract of offers for supplies for the fiscal year ending June 30, 1864.

Navigation, No. 10.—List of contracts made by the Bureau of Navigation for the fiscal year ending June 30, 1866.

NAVIGATION—B.

Estimate of the amount required for the support of the Bureau of Navigation for the fiscal year ending June 30, 1866.

SALARIES.

For salary of the chief of bureau, per act of July 16, 1862, (Statutes at Large, edition in pamphlet, chapter CLXXXIII, section 15, page 586)	\$4,000 00
For salary of chief clerk, per act of July 5, 1862, (Statutes at Large, edition in pamphlet, chapter CXXXIV, section 3, page 511)	1,800 00
For salaries of two clerks, one of the first class, the other of the second class, per act of July 5, 1862, (Statutes at Large, edition in pamphlet, chapter CXXXIV, section 3, page 511)	2,600 00
For salary of messenger, per act of July 5, 1862, chapter CXXXIV, section 3, page 511, and per act of June 25, 1864, chapter CXLVII, section 3, page 160, (Statutes at Large, edition in pamphlet)	1,000 00
For wages of laborer, per act of February 25, 1863, chapter LIX, section 3, page 695, and per act of June 25, 1864, chapter CXLVII, section 3, page 160, (Statutes at Large, edition in pamphlet)	720 00
Total	10,120 00
Appropriated for year ending June 30, 1865	\$10,120 00

NAVAL ACADEMY,
Newport, R. I., October 3, 1864.

SIR: I transmit herewith, in duplicate, estimates for the Naval Academy for the fiscal year ending June 30, 1866.

It will be seen that the contingent expenses of the academy exceed those of former years, and are predicated upon its very large increase, its temporary location, rent of quarters for the accommodation of the academy, and the present very high prices of materials generally—materials for heating and lighting the academy and school-ships, for repairs of all kinds, and for incidental labor, &c., not applicable to any other appropriation.

Although prices are now declining very much, I consider it proper to predicate the estimates upon those which now exist.

I am, sir, very respectfully, your obedient servant,

G. S. BLAKE,

Commodore, and Superintendent Naval Academy.

Rear-Admiral CHARLES H. DAVIS, U. S. N.,

Chief of Bureau of Navigation,

Navy Department, Washington, D. C.

Estimate of the amount required for the pay of commissioned, warrant, and petty officers and seamen proposed for duty at the United States Naval Academy for the fiscal year ending June 30, 1866, chargeable to the appropriation for "pay of the navy."

1 superintendent, (commodore)	\$3,200 00
1 commandant of midshipmen, (commander)	2,240 00
15 assistants to the commandant of midshipmen to aid in instructing in seamanship, naval gunnery, naval tactics, infantry tactics, and howitzer drill, and for police duties, (5 lieutenant commanders and 10 lieutenants)	24,375 00
1 professor of astronomy, navigation, and surveying, (commissioned)	1,800 00
1 assistant professor of astronomy, navigation, &c., (lieutenant)	1,500 00

1 professor of mathematics, (commissioned)	\$1, 800 00
1 assistant professor of mathematics, (commissioned professor)	1, 800 00
1 professor of natural and experimental philosophy, (commissioned)	1, 800 00
4 assistant professors of natural and experimental philosophy, (second assistant engineers)	4, 800 00
1 professor of ethics and English studies, (commissioned)	1, 800 00
1 professor of the French language, (commissioned)	1, 800 00
1 professor of the Spanish language, (commissioned)	1, 800 00
1 professor of drawing and draughting, (commissioned)	1, 800 00
1 surgeon	2, 400 00
2 assistant surgeons	2, 100 00
1 chaplain	1, 500 00
3 chaplains, (acting assistant professors)	4, 500 00
525 midshipmen, as students, each \$500	262, 500 00
1 hospital steward	480 00
1 gunner's mate	469 50
1 quarter gunner	409 50
1 cockswain	469 50
1 cook for midshipmen's mess	325 50
2 seamen to assist gunner's mate, and attend in department of seamanship, infantry tactics, &c.	699 00
1 seaman to attend in department of seamanship, for police duties, &c.	349 50
Total	<u>326, 717 50</u>

Estimate of the amount required for the pay of the civil assistant professors, the assistant librarian and others, proposed for duty at the United States Naval Academy, for the fiscal year ending June 30, 1866, chargeable to the appropriation for the support of the Naval Academy.

6 assistant professors of mathematics, (civil)	\$8, 400 00
7 assistant professors of ethics and English studies, (civil) ...	9, 800 00
4 assistant professors of the French language, (civil)	5, 600 00
1 assistant professor of the Spanish language, (civil)	1, 400 00
1 assistant professor of drawing and draughting, (civil)	1, 400 00
1 secretary	1, 600 00
1 sword master	1, 200 00
1 assistant sword master	800 00
1 assistant librarian	1, 000 00
1 first clerk to the superintendent	1, 000 00
1 clerk to the paymaster	1, 000 00
1 second clerk to the superintendent	800 00
1 clerk to the commandant of midshipmen	800 00
2 clerks to aid in auditing the accounts of the midshipmen quartered in school-ships	1, 200 00
1 commissary to subsist midshipmen, &c.	288 00
1 attendant at hospital, &c.	800 00
1 messenger to the superintendent	480 00
1 master of the band	528 00
8 musicians of the first class	2, 784 00

7 musicians of the second class	\$2,100 00
1 drummer } musicians of the first class	696 00
1 fifer }	
Total	<u>43,676 00</u>
Pay of the navy	\$326,717 50
Pay of assistant professors and others	43,676 00
Total	<u>370,393 50</u>
Amount appropriated for the year ending June 30, 1865	356,794 00
Excess	<u>13,599 50</u>

DIFFERENCE RECONCILED AS FOLLOWS:

Proposed increase under "Pay of the Navy."

Transfer from head "Naval Academy."

1 professor of ethics and English studies	\$1,800 00
1 professor of Spanish	1,800 00
1 professor of drawing and draughting	1,800 00

INCREASE AS FOLLOWS:

1 assistant surgeon	1,050 00
4 additional midshipmen, at \$500 each	2,000 00
2 second assistant engineers, (acting assistant professors,)	2,400 00
Increase of pay to second assistant engineers	400 00
Increase of pay to petty officers	765 50

PROPOSED INCREASE UNDER "NAVAL ACADEMY."

1 assistant professor of mathematics	1,400 00
2 assistant professors of French	2,800 00
2 additional clerks, at \$600 each	1,200 00
1 attendant at hospital, &c.	800 00
1 messenger to superintendent	480 00
Increase to assistant librarian, clerks, and others	340 00
Increase to 18 musicians, recommended in conformity with department's order of May 16, 1864	<u>1,764 00</u>

Total 20,799 50

Deduct under "Pay of the Navy" for less one assistant professor of mathematics, (commissioned professor) \$1,800 00

Deduct, under "Naval Academy," for less one professor of ethics, &c. 1,800 00

For less one professor of Spanish 1,800 00 |

G. S. BLAKE,

Commodore, and Superintendent Naval Academy.

NAVAL ACADEMY, Newport, R. I., October 3, 1864.

NAVIGATION, No. 5.

U. S. NAVAL OBSERVATORY AND HYDROGRAPHICAL OFFICE,
Washington, September 20, 1864.

SIR: As instructed by the bureau under date 2d instant, I have the honor to submit a report upon the operations of the Observatory during the past year, and estimates of the sums which will be required for its support in the fiscal year terminating 30th June, 1866. These papers are presented in duplicate.

NAUTICAL INSTRUMENTS.

It is certain that the number of thoroughly made and reliable American chronometers, sextants, and azimuth compasses annually completed prior to 1861 was too small to supply even the limited naval fleet then employed by the government; and the success of efforts to stimulate native workmen in these branches of the mechanic arts is referred to in the annual statement which I had the honor to lay before the bureau in September last. On all occasions it has been my pleasure, as it was my duty, to respond to the inquiry of makers, and counsel them in their progressive improvements. The present state of the art is highly honorable to the nautical instrument makers of the country.

The only purchases made by the Observatory during the year have been to meet probable wants of the Potomac flotilla, and such vessels from other blockading squadrons as casually come to Washington for repairs. To a very large extent these wants have been supplied from instruments sent to the Observatory in a defective state and repaired in its workshop. As all instruments requiring repairs at the several naval stations are forwarded to us, the number accumulated became greater than the instrument-maker could put in order within a reasonable time, and a journeyman to aid him has been temporarily employed by authority from the bureau.

CHARTS.

As during the two preceding years, our main supply for blockading vessels has been obtained from the United States Coast Survey. Its superintendent promptly and cordially meets all demands for their publications, and is most considerately preparing special sheets of our Atlantic coast required by "off-shore" navigators. The last sheet of the series will be completed during the present month. Within the fiscal year we received 16,500 sheets from the Coast Survey.

Of foreign charts, the purchases embrace 4,200 sheets. These were exclusively publications of the British Hydrographical Office, that establishment reproducing the results of continental surveys with very little delay, as well as publishing original contributions from very numerous parties constantly employed by the admiralty.

The number of cases containing full sets of charts despatched from the Observatory was 103. Besides these there were many smaller parcels and single sheets for despatch-boats and tugs, and to supply casualties. The total distribution during the year amounted to 33,350 sheets.

ASTRONOMICAL INSTRUMENTS.

An order for construction of the transit circle authorized by the bureau was sent to Messrs. Pistor & Martins, of Berlin, in November last. The dimensions of its telescope were controlled by the asteroids, distinct vision of all of them now known to astronomers being the basis. In other respects, details were decided upon from my previous experience, after a careful examination of the

most recently constructed circles at Albany and Ann Arbor, and free conference by letter with the eminent makers intrusted with the work. The instrument will have an object-glass $8\frac{1}{2}$ inches diameter and 12 feet focal length; two minutely divided circles, each of 42 inches diameter, and improvements in its adjustments, facilities for observation and illumination not possessed by any other. It will probably arrive towards the close of the year.

Meantime, the instruments of the west wing have been dismantled to prepare it for the new circle, and the meridian transit instrument has been erected in the east wing. In the original construction of the Observatory the mural circle also was in the west wing. The two instruments are again together, as they always should have been. The clock made under the direction of Dr. Locke will be mounted in the nautical instrument room and adjusted to mean time, to be used for chronometer comparisons should the present standard clock become deranged. No other changes have been made in the instruments.

The small meridian circle made for the old depot of charts and instruments in 1842, having been dismantled to make place for the transit instrument, is no longer of use at the Observatory. It will be a valuable accession to a college observatory, and I respectfully advise that it be sold. It is in perfect condition in every respect, and has been carefully packed in anticipation of its removal.

OBSERVATIONS.

The routine of the two preceding years has been varied only by giving greater attention to meridional observation of the asteroids. The astronomer royal at Greenwich having stated in his annual report to the board of visitors that the burden of observing all these bodies had devolved upon the Observatory under his charge, and that the labor involved, after completing the duties assumed by that establishment since its foundation, had become onerous, I at once offered to become responsible for meridian observations of every asteroid visible with our transit and mural circles. The proposition was accepted by him in the most satisfactory manner.

Unfortunately for the cause of science, only about twelve out of the eighty-one bodies known can be seen with these two instruments. This was the immediate cause of my recommendation in the annual report of the last year for the erection of a transit circle of suitable dimensions, a recommendation fully appreciated and promptly and favorably responded to by the bureau. But as more than a year would elapse before this Observatory could begin the special labor for which the new instrument is primarily designed, a circular was addressed to American astronomers asking co-operation in equatorial observations. The annual volume of the Observatory was offered as a vehicle for publishing details should they desire it, and every facility at its command was most frankly tendered to them. Favorable replies were received from Professors Watson, at Ann Arbor, Michigan; Rogers, at Alfred Centre, New York; Hough, at Albany, New York; Bond, at Cambridge, Massachusetts; and Davis, at Cincinnati, Ohio—each of whom named the asteroids they would observe; and when the same body was selected by more than one observer, the allotment of others was left to my discretion. In all, thirty-one were appropriated by those astronomers, leaving twenty-eight to be observed with the Washington equatorial, the remaining twenty-two not being in opposition during 1864.

Owing to defective ephemerides with some, and to continuous unfavorable weather near the opposition periods of others, we have failed to observe six of our number; seventeen have been recognized, and the others are yet to come in opposition. These, together with two comets, many double stars, occultations by the moon, and continuation of the measurements of the Pleiades and Præsepe clusters, have given full employment to the equatorial.

The sun, moon, larger planets, and seven asteroids, have been observed with the meridian instruments; the last near their respective periods of opposition

only; and the others on all possible occasions, except Sundays and the national holidays. I have already alluded to continuous unfavorable weather. This operated against asteroid observations mainly, because of their faintness; but the zeal of the observers more than compensated for this loss, as their records embrace a fourth more observations than were made in the corresponding months of last year. The transit instrument in the prime vertical has been employed in continuing the series upon α Lyrae.

Besides the above-mentioned observations with the meridian instruments, much of the time with them has necessarily been given to small stars recorded in the zones observed prior to 1850. The discrepancies with some of the instruments were so numerous that the zones could be rendered useful only by redetermining the places of these zero stars. But the special work is now nearly completed, and the entire series of observations which remained to be completed when I took charge of the Observatory in 1861 will be ready for the press within a year.

Meteorological observations continue to be made at every third hour, day and night. The absolute times, relative paths, duration of visible flight and comparative brightness of 213 meteors, were noted during a portion of the night of November 13-14, the sky being overcast part of the time. The observations were specially made at the request of a committee of the Connecticut Academy of Arts and Sciences.

Publication.—The annual volume for 1862 was received from the public printers in March last, and was immediately distributed, copies for foreign correspondents being forwarded through the Smithsonian Institution. The manuscript copy of the observations made in 1863 was delivered to the printers in February last. The obstacles to publication remain as reported last year, and as less than one-tenth the work has been printed, the progress made does not justify expectation of its early completion. No proofs have been received of the volume which will contain observations made in 1851-52.

Personnel.—In 1861, Congress authorized the appointment of four aids from civil life for the performance of duties for which naval officers could no longer be detailed. The duties of the establishment could not be attended to with the desired promptitude by a smaller number. Under misapprehension of the wishes of the department, Congress, at its last session, diminished the number of aids, and increased the pay one-third to each of the three authorized.

In view of the knowledge which they are required to prove to a board of examiners at the Observatory before appointment, and the cost of living at Washington, the additional salary is eminently just; but I do not regard the reduction of our working force as just, either to the public interests or to those who were already amply and faithfully employed. For these reasons I have estimated for an additional aid, to make the number as before, and the salary asked for is that assigned by Congress to the others.

Respectfully submitted:

J. M. GILLISS,

Captain United States Navy, Superintendent.

Rear-Admiral CHARLES H. DAVIS, U. S. N.,

Chief Bureau of Navigation, Navy Department.

Estimate of the sums which will be required for the United States Naval Observatory and Hydrographical Office during the fiscal year ending June 30, 1866.

The sums asked for are of like amount to those granted by Congress for the fiscal year 1864-5, with two exceptions:

1. Until officers can be spared from the naval service, four aids are necessary

for performance of the duties properly. One is asked for, to replace one omitted by Congress at the last session.

2. An increase of \$2,000, under the head "contingent expenses and wages," is asked for. The buildings will require re-painting in 1865, and the cost of materials and laborers on grounds has been nearly doubled since 1861.

J. M. GILLISS,

Captain United States Navy, Superintendent.

U. S. NAVAL OBSERVATORY,

Washington, September 20, 1864.

Estimate of the amount required for the pay of commissioned officers, proposed for duty at the United States Naval Observatory and Hydrographical Office, for the fiscal year ending June 30, 1866.

UNITED STATES NAVAL OBSERVATORY,
Washington, September 20, 1864.

NAVIGATION, No. 6.

NAUTICAL ALMANAC OFFICE,
Cambridge, Mass., September 28, 1864.

SIR: In compliance with your order of September 2, I have the honor to submit the following report of the progress of the work of the Nautical Almanac office during the past year.

The volume of the American Ephemeris and Nautical Almanac for the year 1865 was published December 24, 1863, The almanac for the use of navigators for the year 1866 was published May 23, 1864, and the large volume for 1866 is completed and ready for publication with the exception of the examination of some proofs.

The enclosed schedule shows the distribution of the work for the volume for 1867, as well as the progress made up to this time. The small volume for the year 1867 will probably be published before the 1st of February, 1865.

Professor Peirce's investigations to redetermine the masses and elements of the principal planets have made as much progress during the past year as in former years. A portion of this work has been assigned to Mr. Runkle, to be done under Professor Peirce's direction, and other arrangements will be made to hasten its completion, in the hope that results of great interest and value may be reached within the present year.

Owing to the increased expenses of the office during the past year, caused by high prices of printing and material, the arrangement for computing the Asteroid Ephemeris has not been completed: something has been done, however. Mr. G. W. Hill has been assigned to that work, and Professor W. A. Rogers, of Alfred Centre, N. Y., has been employed on it, by authority of the bureau, and it is proposed to publish an asteroid supplement, for the year 1865, to accompany the volume of the Ephemeris for 1867. The tables of the planet Mercury mentioned in my last annual report have been published during the year, and also the almanac catalogue of Zodiacal stars. This last has been done under the direction of the bureau, in pursuance of a plan announced in the annual report of the superintendent of the Nautical Almanac, October 22, 1851.

Much progress has been made on the star tables, and the extension of the *Tabulae Reductionum* of Wolfers to our time star list has been completed up to the year 1880.

An arrangement was made with Mr. Blunt, May 5, 1864, by which the prices of the almanac were fixed as follows:

Small vol., wholesale.....	\$0 45 cts. per copy.
Do. retail.....	60 do.
Large vol., wholesale.....	1 20 do.
Do. retail.....	1 50 do.
Instead of—	
Small vol., wholesale.....	\$0 30 cts. per copy.
Do. retail.....	50 do.
Large vol., wholesale.....	80 do.
Do. retail.....	1 00 do.

This increase of price was rendered necessary by the increased cost of manufacture of the books.

The sales for the past year have been about as great as during the preceding year.

The estimates for the probable expenditures which will be required for the fiscal year ending June 30, 1866, which accompany this report, exceed those of last year thirty (30) per cent. I have thought that this increase was rendered necessary by the high prices of everything used in making the almanac or in sustaining the computers; and I would call attention especially to the item for salaries: they are obviously very small, even for the cost of living five years ago; as will appear by a glance at the list, only two of them exceed \$1,500. The present salaries, or the most of them, were adapted to the necessities of young men having had only a few years' experience in our work, many of whom now have families to support, and claims founded on ten or more years' service. If we are to retain the efficient services of the best of those trained to the office we must have some higher salaries.

I have the honor to be, most respectfully, your obedient servant,

JOSEPH WINLOCK,

*Professor of Mathematics, U. S. Navy,
Superintendent of Nautical Almanac.*

Rear-Admiral C. H. DAVIS, U. S. N.,

Chief of Bureau of Navigation, Washington, D. C.

Estimate of the amount required for the pay of commissioned officers proposed for duty on the Nautical Almanac for the fiscal year ending June 30, 1866.

1 superintendent, (commissioned professor of mathematics,).....	\$1, 800

Excess.....	4, 875

Estimate of the amount required for the pay of clerk and servant, for materials, and for contingent expenses, on account of the Nautical Almanac, for the fiscal year ending June 30, 1866.

For the purchase of paper, printing, &c., in order to publish in the year 1866 the Nautical Almanac for the year 1869, and for occasional printing, stationery, books, binding, &c.....	\$4, 680
For the new planets discovered since 1849.....	3, 900
For printing tables.....	1, 300
For extra editions of the volumes already published.....	1, 040
For pay of clerk.....	650
For contingent, including rent of office, servant-hire, fuel, &c.....	910
Total.....	12, 480
Appropriated for the year ending June 30, 1865.....	9, 600
Excess.....	2, 880

Difference reconciled as follows:

Proposed increase of 30 per cent. to the pay of computers—that is, 30 per cent. on \$16,250.....	\$4, 875
Proposed increase of 30 per cent. on the estimate for pay of clerk and servant, and for materials, &c.—that is, 30 per cent. on \$9,600.....	2, 880
Total excess, as before.....	7, 755

RECAPITULATION.

Appropriation, "Pay of the Navy".....	\$1, 800
Appropriation, "Nautical Almanac"—	
Pay of computers and others.....	\$21, 125
Printing, contingent, &c.....	12, 480
	33, 605
Total.....	35, 405

JOSEPH WINLOCK,

*Professor of Mathematics, U. S. Navy,
and Superintendent of Nautical Almanac.*

NAUTICAL ALMANAC OFFICE, CAMBRIDGE, MASS.,

September 28, 1864.

NAVIGATION, No. 7.

General estimate from the Bureau of Navigation for the fiscal year ending June 30, 1866, in addition to the balances remaining unexpended July 1, 1865.

FOR SUPPORT OF BUREAU.

1. For salaries of the chief of bureau, chief clerk, clerks, messenger, and laborer, (Navigation, B).....	\$10, 120 00
2. For contingent expenses, including stationery, &c., (Navigation, B).....	800 00
Total for support of bureau.....	10, 920 00

FOR THE NAVAL SERVICE.

1. For pay of commissioned, warrant, and petty officers; navigation officers, (Navigation, No. 1).....	\$4,486 00
Naval Academy, (Navigation, No. 4).....	326,717 50
Naval Observatory, (Navigation, No. 5).....	14,240 00
Nautical Almanac, (Navigation, No. 6).....	1,800 00
	347,237 50
2. For navigation, and navigation supplies, (Navigation, No. 2)	447,000 00
3. For contingent expenses, for navigation supplies, (Navigation, No. 3).....	5,000 00
4. For support of Naval Academy—pay of professors, &c., (Navigation, No. 4).....	\$43,676 00
Wages of watchmen, &c., (Navigation, No. 4)....	19,950 00
Contingent expenses, (Navigation, No. 4).....	52,000 00
	115,626 00
5. For support of Naval Observatory—pay of assistant astronomer, &c., (Navigation, No. 5) ..	9,333 33
Wages and incidentals, &c., (Navigation, No. 5) ..	14,000 00
	23,333 33
6. For preparing and publishing the Nautical Almanac—pay of computers, &c., (Navigation, No. 6).....	21,125 00
Materials, printing, &c., (Navigation, No. 6).....	12,480 00
	33,605 00
Total for naval service.....	971,801 83

C. H. DAVIS, *Chief of Bureau.*

NAVIGATION, No. 8.

Estimate of appropriations under the cognizance of the Bureau of Navigation required for the fiscal year ending June 30, 1866.

Titles of appropriations.	Estimates of appropriations required for the service of the fiscal year ending June 30, 1866.	Estimates of balances of appropriations unexpended June 30, 1865, which may be applied to the service of the next fiscal year.	Appropriations for the fiscal year ending June 30, 1865.
Navigation and navigation supplies.....	\$447,000 00		\$126,000 00

3. William A. Wheeler.....	3,525 00

BUREAU OF NAVIGATION, 1864.

NAVIGATION, No. 10.

List of contracts embracing all coming under the cognizance of the Bureau of Navigation, made and received since the date of last report, October 20, 1863, to October 25, 1864, prepared in conformity with acts of Congress of April 21, 1808, and March 3, 1809.

WILLIAM S. MITCHELL, MARCH 3, 1864.

Contract for bunting for the United States navy yard, Brooklyn, for the year ending June 30, 1864.

	Price.	Amount.
350 pieces 18-inch red bunting, per sample, per piece.....	\$11 90	\$4,165 00
230 pieces 12-inch red bunting, per sample, per piece.....	8 69	1,998 70
230 pieces 9-inch red bunting, per sample, per piece.....	7 10	1,633 00
180 pieces 4½-inch red bunting, per sample, per piece.....	4 89	880 20
380 pieces 18-inch white bunting, per sample, per piece..	11 05	4,199 00
230 pieces 12-inch white bunting, per sample, per piece..	8 14	1,872 20
190 pieces 9-inch white bunting, per sample, per piece...	6 60	1,254 00

* Declined to execute contract, and new proposals advertised for.

§ Accepted.

† Ruled out, partial bid, and no guarantees.

‡ Ruled out for informality.

	Price.	Amount.
190 pieces 4½-inch white bunting, per sample, per piece..	\$4 40	\$836 00
230 pieces 18-inch blue bunting, per sample, per piece....	11 88	2,732 40
230 pieces 12-inch blue bunting, per sample, per piece....	8 70	2,001 00
180 pieces 9-inch blue bunting, per sample, per piece....	7 05	1,269 00
190 pieces 4½-inch blue bunting, per sample, per piece....	4 90	931 00
70 pieces 18-inch green bunting, per sample, per piece..	11 90	833 00
80 pieces 18-inch yellow bunting, per sample, per piece..	11 90	952 00
Total.....		<u>25,556 50</u>

The bunting to be all wool, fast colors, smooth selvages, and each piece to contain not less than forty yards.

One-third part, comprising a due proportion of each kind, to be delivered on or before the 20th March next; one-third part on or before the 10th May; and the remaining part on or before the 30th June; 1864, unless earlier required, with a notice of twelve days.

WILLIAM MATHEWS, MARCH 9, 1864.

Contract for dry goods for the United States navy yard, New York, for the year ending June 30, 1864.

	Price.	Amount.
80 pieces ravens duck, per sample, per piece.....	\$11 00	\$880 00
1,000 yards whitemuslin, 1 yard wide, per sample, per yard...	40	400 00
100 dozen spools cotton, per sample, per dozen.....	1 00	100 00
200 dozen spools white linen thread, assorted, per sample, per dozen.....	1 25	250 00
100 pounds linen thread, assorted colors, Nos. from 45 to 60, per sample, per pound.....	2 00	200 00
50 pounds cotton twine, per sample, per pound.....	50	25 00
50 papers sewing needles, assorted sizes, per sample, per paper.....	04	2 00
1,000 pounds white line, assorted sizes, per sample, per pound.....	35	350 00
Total.....		<u>2,207 00</u>

The white muslin to be "York Mills," or an American manufacture equally good.

One-third part, comprising a due proportion of each kind, to be delivered on or before the 20th March next; one-third part on or before the 10th of May; and the remaining part on or before the 30th of June, 1864; unless earlier required, with a notice of twelve days.

BUREAU OF NAVIGATION, 1864.

No. 5.

BUREAU OF ORDNANCE, NAVY DEPARTMENT,
November 1, 1864.

SIR: I have the honor to submit the annual report of the Bureau of Ordnance, with accompanying estimates for the fiscal year commencing July 1, 1865.

I shall endeavor to present to the department in this paper, as briefly as possible, the manner in which the bureau has met the requirements of the ser-

vice since the date of its last report, introducing at the same time such questions of ordnance detail as have arisen during the past year, and offering such suggestions for the more efficient arming and preparing our national ships for battle as have been gathered from the experience of actual warfare.

The department will find, however, that no changes are here recommended in the system of our naval ordnance which are not warranted by the most careful attention to facts and the undeniable results of well-conducted experiment; and it may be assured that each recommendation is made only after a deliberate review of the subject.

In using the terms "system of our naval ordnance," I beg to be understood as intending to embrace everything which comes within the cognizance of this bureau, even to the minutest detail, and by no means to confine their application to the *cannon* alone of our navy. So also in speaking of ordnance and ordnance stores, the same comprehensive meaning is to be applied. And in these introductory remarks, it may be proper for me to suggest the propriety of establishing by law this construction of these terms, and thus avoid hereafter all complication and difficulty in obtaining supplies for ordnance purposes.

The department is well aware of the annoyance, delay, and positive loss occasioned by the present system. To remedy this state of things, it is earnestly recommended that Congress be asked to enact that the law of 1846 on the subject shall hereafter be construed to apply to *all articles* for ordnance purposes coming under the cognizance of this bureau.

In the review of the ordnance work at the navy yards, this subject is also considered in the remarks on the system of accounts, which has during the past year occupied no little of the thoughtful attention of the bureau, with the design of providing additional safeguards against a wasteful expenditure of the public property both on shore and afloat.

The method adopted in my last annual report, of dividing it into separate headings, and treating of each subject in its distinctive character, being in many respects advantageous, is followed in the present report. It thus becomes a *résumé* of the last, and in connexion with it forms a historical record of the important part performed by the navy ordnance in suppressing the existing rebellion, and indicates the vast power at hand and in course of preparation for our national defence in the future. Quietly and unostentatiously the work has been prosecuted, while at the same time all the important questions of ordnance have been carefully examined and decided, as far as the means of the bureau would permit.

The results of these labors are given in the following pages, with the earnest hope that the department will second the appeals made therein to Congress for the several items of extra appropriations, which are sincerely believed to be indispensable. If these are granted, the bureau will be more than ever assured of its ability to provide for the wants of our navy, and to repeat, as it does here, the assertion made in the introduction to the last annual report, that not a single ship or squadron has ever been delayed in its movements for the want of ordnance or ordnance supplies.

THE ORDNANCE OF THE NAVY—1863, 1864.

Under this heading, in my last annual report, was given a detailed statement of the number and calibre of the guns belonging to the navy at the commencement of 1861, how they were distributed on board ships in service, and parked on shore, with a tabular exhibit of the number of effective cannon, of all classes,

added to the stock since March of that year, and remaining on hand November 1, 1863.

Since then the work of fabricating cannon of the new system, as represented by the guns of the Dahlgren model, the XV-inch guns introduced by Assistant Secretary Fox, and the rifled cannon of Mr. Parrott, has steadily progressed, so as to keep pace with the growing demands of the navy; while, at the same time, the supply of bronze howitzers and rifles has been unceasing. Hence the grand total of cannon has been increased during the year, ending November 1, 1864, by the addition of 1,522 guns of the different calibres.

The loss in guns sustained by the navy is trifling compared with the value of the services rendered by it, not only in guarding our extended sea-coast, bays, and river shores, but also in the magnificent results obtained in battle. Few guns have been *surrendered*, or abandoned to the enemy; nearly all the losses have been by the inevitable accidents of battle, as in the case of the *Tecumseh* and Commodore Jones.

To the total on hand there should be added seven X-inch solid shot guns, intended for heavy work against plating, and three XIII-inch Dahlgren guns, originally designed for the monitor turrets, but superseded by the modifications made in the length and thickness at muzzle of the XV-inch guns, thereby adapting them to the use of a smaller port-hole.

There are also now in process of fabrication a new class of 32-pounders and 8-inch smooth-bore guns, for the broadsides of light vessels that are unable to carry and work efficiently the IX-inch shell guns. It is likewise in contemplation to provide for such vessels a new 8-inch solid shot gun, to bear a heavy charge, in order to obtain greater penetration. The first gun of this kind has been cast, and will soon be subjected to regular experiment, the details of which are necessarily confined to the projection of a solid globe of hard iron or steel against a sample of any ordinary plating which can be used for the protection of vessels. This is one of the many diverse questions presented for solution in determining the armament of vessels built entirely of wood, but which may at any time be called upon to take an active, and perhaps a decisive, part in an engagement with iron-clads.

In the rifled ordnance adopted for naval purposes by the bureau no changes have been made, except in the introduction of one more calibre among the Parrott rifles, viz: the 60-pounder. This, as an intermediate between the 30 and 100-pounder, has been found to be of great service as a chase gun, and fully supplies the place in the armament of ships contemplated by the 50-pounder of Rear-Admiral Dahlgren's system. It is generally used as a pivot gun, and as its bore corresponds with that of the army smooth-bore 18-pounder, the round projectile of the latter is always available where high velocities are needed at close range.

In the system of bronze howitzers, and rifles for boat service and the decks of light vessels, no changes whatever have been made. Its intrinsic value is fully recognized, and whenever the accidents of service have called these guns into play, either in detached boat expeditions on our sea-coast or on board the light-draught cruisers of our inland rivers, they have done excellent service. They have also been introduced as the special armament of many transports of the War Department. As a special gun for long range in chase, the 20-pounder three-grooved rifle is preferred, and it now occupies a prominent place in the armament of the double-ender vessels.

The greatest embarrassment experienced in arming and equipping our vessels arises from the variety of calibres and the changes of battery recommended for particular ships, according to the opinions or decisions of officers who have either sailed in them or in vessels of a similar class. For it may be that a certain battery, calculated for the tonnage and deck-room of a vessel, will prove in service to be too heavy a burden; or, on the other hand, an additional gun

may increase very much the efficiency of a vessel of less tonnage. And this state of things cannot be remedied so long as the requirements of ordnance are made subordinate to other details. There are certain classes of guns with determined weights, and space is required for their manœuvre on board ship. If these weights and spaces are not considered in the design of the vessel about to be built or purchased, an inferior armament is very apt to result from such neglect.

It may be said, nevertheless, that whatever battery is proposed for any vessel hitherto built or purchased, and intended for general or special service, guns of proper calibre and sufficient range to meet any requirement have always been ready at a moment's warning. And however irregular they may appear to the casual observer, a closer scrutiny will reveal the fact that all the elements which constitute effective and powerful batteries afloat are carefully and systematically arranged in the different rates.

This remark naturally leads to a review of the composition of the batteries of our men-of-war, in order that the effective power of the guns carried by each class of vessels may be understood.

COMPOSITION OF BATTERIES.

The governing rule in arming our ships-of-war has been to place on board of them the very heaviest and most effective guns they can bear with safety.

In general it may be stated, that the IX-inch are used for broadside, the X-inch and XI-inch and the Parrott rifles in pivot, the XV-inch for the monitor turrets, and the bronze howitzers and rifles for boat and deck service in shore. A few of our ships continue to be armed with the 32-pounder and 8-inch guns of the old system; but these will probably give way to the modified guns of similar classes above alluded to.

As no special changes have been made in the general arrangement of batteries since my last report, the same vessels, mentioned therein as types of their rates, may be again taken to illustrate the system of armament still in vogue.

Thus the battery of a first rate is represented by the *Minnesota*, carrying—

One 150-pounder rifled,	} in pivot;
One XI-inch smooth,	
Forty-two IX-inch smooth,	} in broadside,
Four 100-pounders, rifled,	

and four howitzers.

Of a second rate by the *Brooklyn*, carrying—

Two 100-pounder rifled, in pivot;	
Twenty IX-inch smooth,	} in broadside,
Two 60-pounder rifled,	

and two howitzers.

Of a third rate by the *Eutaw*, carrying—

Two 100-pounder rifled, in pivot;	
Four IX-inch smooth,	} in broadside.
Two 24-pounders, smooth,	
Two 20-pounders, rifled,	

Of the fourth rate by the *Owasco*, carrying—

One XI-inch smooth,	} in pivot;
One 20-pounder rifled,	
Two 24-pounders, howitzers, in broadside.	

And by the *Nipsic*, carrying—

One 150-pounder rifle,	} in pivot;
One 30-pounder rifle,	
Two IX-inch smooth, in broadside, and four howitzers.	

Of the monitors, by

The Tonawanda, four XV-inch ;

The Onondaga, two XV-inch and two 150-pounders ;

And Montauk, one XV-inch and one 150-pounder.

Of the iron-plated gunboat of the western rivers, by the Carondelet, carrying three IX-inch, four 8-inch, two 100-pounder rifles, one 50-pounder rifle, one 30-pounder rifle.

The development of the power of each individual ship named as representatives of the several rates is—

	In shot.	In shells.
First rate.....	2,606 lbs.	2,123 lbs.
Second rate.....	1,220	990
Third rate.....	424	343
Fourth rate.....	210	183
And.....	294	255
In the monitors—		
Tonawanda.....	1,704	1,320
Onondaga.....	1,180	930
Montauk.....	606	465
In the western gunboat—		
Carondelet.....	588	480

These figures express the weight of metal thrown for breeching purposes by the guns at a single broadside in solid shot or shells. Conjoined with these, however, are the destructive and terrible agencies of grape, canister, and shrapnell, available at all times in the general course of naval warfare, but most especially and signally so when used against uncovered masses of men. The effective power of a ship is, therefore, increased in a very great degree by these auxiliaries, which are common to both rifled and smooth-bores, excepting grape, which is not used in the rifles.

It will be noticed that, in each of the four rates of vessels above mentioned, pivot guns are associated with those of broadside, so as to meet more fully the necessity for long range at high elevations in chasing or bombardment, and at the same time to maintain a direct fire without materially altering the course of the vessel. The mechanical arrangement of the pivot carriage also enables the mounting and working with ease a much heavier gun than could possibly be handled on an ordinary broadside carriage.

These pivot guns are always placed near the ends of the vessel, and therefore do not interfere in the least with the working of the broadside.* The rapidity of fire from them is, of course, not so great as from an individual gun of broadside, but is fully sufficient for the purpose of accuracy at ranges beyond the reach of the lesser calibres. No ship can, therefore, be considered properly armed that has not a pivot gun of greater power and range than the guns of broadside. But whether a battery, consisting entirely of heavy pivot guns, would be more formidable than one of broadside alone—the aggregate weights being equal—has not yet been tried, the only effort of the kind being that of the Niagara, which has a battery of twelve 150-pounder rifles mounted in pivot, and no regular broadside guns. It is not worth while, however, to speculate on the probable results of a battery so constituted. No doubt, under certain circumstances, the peculiar merits of the plan would be fully developed ; but whether its excellence would ever be made so manifest as to cause its adoption in lieu of the present mixed system of pivot and broadside, is a question which could only be decided under all the varying conditions of an engagement at sea.

* An exception to this rule is found in the New Ironsides and Niagara.

The decisive power of the heavy gun in pivot is, however, most strikingly exemplified in the recent fight between the Kearsarge and Alabama, although the distance at which the action was fought was fully within the scope of the broadside 32-pounders of either vessel, being only about 700 yards. The water, also, was smooth, and both ships moved steadily under steam in a continuous circle around a common centre. Every condition was, therefore, most favorable for the full exercise of the offensive power of each class and description of gun used; but it does not appear, from the official reports, or the published statements of the affair, that much damage was inflicted on either vessel by the guns of broadside, the decisive work having been performed only by the pivot guns of the Kearsarge.

And these were the two XI-inch guns, mounted at either end of the ship, the light 30-pounder being too feeble to have had any bearing whatever upon the result.

There does not appear to have been the slightest difficulty in manœuvring these pivots; and although their fire was much slower than that of the broadside, yet the weight and explosive power of their shells fully compensated for any want of rapidity. For it is stated in the official reports that the total number of rounds fired by the Kearsarge in this action of one hour and two minutes was, exclusive of those from the 12-pounder bronze rifle, one hundred and sixty-three. That is, from the XI-inch, 55; from the 30-pounder, 48; and from the broadside 32-pounders, 60; equal to 163.

Throwing out the rounds fired from the 30-pounder, we have nearly an equal number from the pivot and broadside guns; but the preponderance of power is decidedly in favor of the 55 XI-inch shells, weighing in the aggregate 7,425 pounds of iron, with an explosive charge in each shell of six pounds of powder, while the total weight of metal thrown from the 32-pounders of broadside in the 60 rounds is, in solid shot, 1,920 pounds, and in shells only 832 pounds of iron, with an explosive charge of not quite one pound in each shell.

And we gather from the official report of Captain Semmes, of the Alabama, that the effect of the XI-inch shells of the Kearsarge was most disastrous. For he states that "after the lapse of about one hour and ten minutes our [his] ship was ascertained to be in a sinking condition, the enemy's shell having exploded in our sides and between decks, opening large apertures, through which the water rushed with great rapidity." This part of his report is most certainly true, if all the rest is questionable.

On the other hand, the Alabama opposed to this fire one Blakely 7-inch, or 120-pounder rifle, one 68-pounder—both in pivot, and the especial favorites of the English navy—and six 32-pounders, in broadside. The weight of metal thrown from these guns—assuming that *all* were used—is about equal to that from the Kearsarge; but it is also stated that the firing of the Alabama was much more rapid than that of the Kearsarge. This, however, together with great precision and concentration of blows, was to have been expected from a crew trained in the gunnery exercises of a navy whose boasted superiority over all others was never before so signally disproved. It does not appear that correctness of aim was much attended to by the crew of the Alabama, whilst thus delivering their rapid fire; for the Kearsarge was only hit twenty-eight times in all, and in no instance was she badly injured. Singularly enough, not a man though was killed outright on board of her, and only three were wounded.

There can be no question with regard to the superiority of the XI-inch guns over the Blakely 120-pounder, and the 68-pounder of the English pivot system, either in penetration, smashing effect of the shot, or explosive power of the shells. Hence, although the vessels were nearly equally matched as to tonnage, motive power, and number of men and guns, yet the preponderating influence of calibre, properly disposed in pivot, and coolly and deliberately handled by American seamen, was sufficient to settle the question briefly and most conclusively;

for the Alabama was sunk in a little more than an hour after the Kearsarge began firing, and the English and French navies were thus taught a lesson in practical gunnery and seamanship which they will not soon forget.

The result of this action may, therefore, be taken as proving beyond doubt the wisdom of arming our ships with a mixed battery of pivot and broadside guns, taking due care to place on board of each ship the heaviest and most powerful guns that she can safely carry and manage with ease in all weather; and whatever the object of its fire, whether it be an Anglo-rebel buccaneer, or a regular, legitimate cruiser, unless completely overmatched by superior numbers and calibre, this style of battery will never fail to vindicate the judgment which adopted it as the standard of our naval system. This seems to have been fully and immediately understood by the officers of the French navy at Cherbourg, who did not fail to avail themselves of the opportunity thus afforded them of studying the details of armament on board the Kearsarge upon her return to that port after the battle. They are entirely welcome to the information thus obtained; the lesson is merely elementary, and by no means so instructive as the one since presented for the world's investigation on the waters of Mobile bay.

THE FOUNDRIES.

The number of these establishments engaged in the fabrication of cannon for the navy has been reduced by one since the date of my last report, the Portland Company having withdrawn from their contract. The others have been fully employed in the work of keeping the navy supplied with guns of unequalled strength and beauty of finish, from the ponderous XV-inch to the light 32-pounder. No delay or embarrassment has occurred in the delivery of the cannon contracted for, and the bureau is more than ever assured of the reliability of the firms engaged in this important business.

The Fort Pitt foundry, with its immense facilities and very great experience in the art of founding cannon, was at first the only establishment able and willing to undertake the task of making the XV-inch guns. But during the past year two other foundries—the South Boston and the Scott foundries, at Reading, Pennsylvania, having completed all the arrangements necessary for the process of hollow casting—have now each a contract for this class of gun. No difficulty whatever is anticipated in the fabrication of these very large cannon, for the irons now used by the respective foundries are known to be of the very best quality for the purpose. The primary and most important element being thus assured, the remainder of the task is entirely within the mechanical ability of the foundries.

It is, therefore, no idle boast, that the cannon of the United State navy, made exclusively from American irons, are unsurpassed by those of any other nation; and this will continue to be the case so long as the enterprise of our citizens is left untrammelled, and full opportunities are afforded for the exercise of their skill in this most important art.

Besides the XV-inch guns, the Fort Pitt, South Boston, and Reading foundries are all engaged in making the other classes in use, including also the new models of 8-inch and 32-pounders elsewhere alluded to. The Builders' Iron Foundry, at Providence, Rhode Island, has just completed a contract for XI-inch guns, and is now engaged on a new one for the 8-inch and 32-pounders; while the firm of Hinkley, Williams & Co. are still engaged upon their contract for XI-inch guns. Thus the work has been steadily prosecuted during the past year, and will be continued by these foundries as fast as the demand for the smooth-bores increases.

The cast-iron banded rifles of Mr. Parrott, made at the West Point foundry, are still the only kind used in the navy, except the bronze 12 and 20-pounders

of Rear-Admiral Dahlgren. Since November of last year there have been added to the stock of these rifles on hand at the depots and in service 385 of the different calibres, including 20 new 60-pounders, making a total at present available of 1,005 guns, after deducting 23 lost or disabled by the accidents of battle. Of these thus lost or disabled, six gave way at the breech, four were broken by the explosion of shells near the muzzle, three were cracked in the bodies, two were condemned for excessive enlargement of vent, seven were lost by wreck, and three captured by the rebels. The percentage of loss by rupture and enlargement is therefore very small.

It may be remarked that no rifled gun has yet been devised which can be considered perfect, and the bureau has sought in vain among the systems of European nations and the improvements of our own country for a better gun, taken as a whole, than the Parrott rifle. Its lifetime, as fixed by the inventor, is 750 rounds, but the navy guns have in many instances shown a greater endurance.

It is true that reports are occasionally received of failures with the Parrott projectiles, (also prepared at the West Point foundry,) but these are again counterbalanced by the most favorable reports; and it is certain that, whenever a close attention is paid to details in loading and firing, these guns may be relied upon for range and accuracy. But if these details from any cause are not sufficiently attended to, the firing of no rifled gun can be considered safe or certain. At all events, whatever may be the defects of the Parrott system of rifled ordnance, no other has yet been produced which commends itself so strongly to the service; and until another and a better one is devised and subjected to the same ordeal, the bureau will continue to place its guns in the batteries of ships as important auxiliaries to the smooth-bore pivots.

The condition of endurance is undoubtedly the first to be secured in all guns, and no one expects to find this in as great a degree in the rifle as in the smooth-bore. Hence the cast-iron gun of Mr. Parrott, although strengthened by a spiral coil of wrought-iron around the locality of greatest strain, is by no means to be expected to last as long under protracted firing as a smooth-bore of the same calibre. But its probable strength when carefully used, as *all* ordnance should be, is sufficiently ascertained to avoid accidental rupture by attempting too much.

The rule of the navy is to pay particular attention to the wear of the bores and vents and to the manner of loading, especially in batteries established on shore, as will be seen from the following circular order issued on this subject:

“DECEMBER 29, 1863.

“The bureau desires to impress upon all officers who may be placed in charge of naval batteries on shore, whether co-operating with the army or otherwise, the importance of exercising great care to prevent sand or dirt from being blown into the muzzles of rifled guns, and the exposure of rifled projectiles to sand or dirt before loading.

“To guard against the drifting or whirling of sand into the bore, after the piece has been sponged and cleaned, a mask of cloth or canvas should immediately be placed over the face of the muzzle; and after the projectile is introduced, the same course should be adopted until the word ‘ready’ is given, when the mask is to be withdrawn.”

A correct record is also kept of the number of fires from every gun, and this, in connexion with the indications of weakness shown by the impressions of the interior of the vents, is a safeguard against accidents of bursting.

Propositions have been made to supersede cast-iron for rifles (and in fact for smooth-bores also) by wrought-iron; and a heavy wrought-iron rifled gun of 7-inch bore, forged in a peculiar manner, is even now under process of trial, as

well as one of smooth-bore, designed and constructed by our distinguished citizen, Mr. John Ericsson. But the experiments have not been sufficiently advanced with either of these guns to form a reliable judgment as to the probable result, for there are many grave questions involved besides the ability to resist rupture, and these will inevitably be developed under the strain of excessive charges.

For a long time the question of casting guns in a solid mass, and cooling them from the exterior, or casting them hollow, and cooling from the interior, upon the comprehensive plan of Major Rodman, has occupied the attention of the bureau; and in a paper presented to the department on the subject, under date of May 17, 1864, an opinion was expressed decidedly in favor of the latter for all the heavy guns of the navy.

As these views were subsequently fully sustained by the recorded opinions of the best authorities of the army and navy, and of the founders to whom the question was submitted, the official sanction of the department is only needed to enable the bureau to adopt this plan of founding in future all the cannon for the navy above an 8-inch calibre, after it shall have been submitted to Admiral Dahlgren. It may be remarked, that Mr. Parrott has recently determined to manufacture his heavy rifles in this way, being convinced that he thereby obtains a more solid gun, of greater uniform strength, and a surface of bore better suited to resist the action of the rifled projectiles.

It would no doubt be interesting to describe fully the process of founding cannon by both methods; but the limits of a general official report on various other subjects render this inexpedient. It is sufficient to know, however, that the casting of the enormous 20-inch cannon at Fort Pitt foundry for the army and are each perfectly understood by the men engaged in the business; and since the navy, there really would seem to be no limit to the ambition and daring of our artisans. These huge masses of iron were cast without the slightest difficulty, the time elapsing from the moment of tapping the furnaces to the complete filling of the mould of the army gun being only 22 minutes. To produce this casting no less than 105 tons of iron were melted.

This huge cannon, having been bored and finished, and the test specimens confirming the opinion formed of the soundness of the metal in working under the tools, it has been recently placed in battery at Fort Hamilton, where it will be subjected to proof at an early day. (See note C.)

To guard the public interest, in a matter of such great importance as the manufacture of cannon, the bureau maintains the usual supervision over the work at each foundry. The officers at present employed on this duty are Commodore T. A. Hunt, Commodore R. B. Hitchcock, Commander E. M. Yard, and Lieutenant Commander W. W. Queen; Commander Yard having relieved Captain Berrien, at Fort Pitt, and Lieutenant Commander Queen, Lieutenant Commander May, at Reading. The services of these officers are of the highest value to the bureau, for with them lies the responsible duty of entering upon record the history of the fabrication of every gun, embracing therein the minutest detail of the process, beginning with a description of the metals used, and following each successive operation with unceasing vigilance, until the guns are finally finished, proved, and delivered to service.

The large experience and thorough practical knowledge of ordnance possessed by Commodore Hunt enables the bureau to confide to him the supervision of three foundries, viz: the South Boston, Providence, and that of Messrs. Hinkley, Williams & Co., in Boston. It is by no means a trifling task, but the record of the manner in which it has been performed, during a long period, is entirely satisfactory.

So also with the highly important trust confided to Commodore Hitchcock, of superintending the fabrication, at West Point, of the Parrott rifle guns; for an error of judgment, or a relaxation of the watchful scrutiny necessary to secure the most perfect guns, would be detrimental to the interests of both the

government and the founder. The duty is also laborious, as it is not only the simple casting, finishing according to the standard, and proving as in the case of the smooth-bores, but there are also the details of banding, grooving the bores, bouching the vents, and inspecting the projectiles to be attended to. In all these, however, he is seconded by the founder, and the bureau is convinced that, whenever a defective gun is met with, as in the case of those referred to elsewhere, its faulty condition could not have been ascertained by any of the usual methods, before acceptance into service.

Captain Berrien has recently been relieved from duty as the inspector of ordnance at the Fort Pitt foundry. The bureau parted with him with much regret, for his services were highly valuable, especially in the introduction of the first XV-inch guns. The promptitude with which he always carried out the instructions given him, is the best guarantee that in his new sphere of duty the department will find him a faithful and zealous officer.

PROJECTILES.

As it is of vital importance that projectiles should be properly made and adjusted to the bores of their respective guns, the utmost care is taken by the bureau to obtain the very best description of iron suitable for shells and shot, and in giving out contracts or orders, the terms exacted and the rules of inspection laid down are quite as rigid and comprehensive as in the case of contracts or orders for cannon. The wisdom of this measure has been fully proved during the existing rebellion, wherever the guns of the navy have been trained upon the enemy, either afloat or ashore.

The bureau is thus assured of having always good and reliable spherical shells and shot for the smooth-bores, whether made by contractors or at the several navy yards. The former, carefully inspected, gauged, and prepared in other respects for service, are perhaps the most efficient projectiles of their kind known anywhere; while the latter, being made from the best charcoal iron, poured and worked in a peculiar manner, so as to obtain hard and solid masses, have been found by recent experiment able to penetrate at close range any given thickness of iron armor which can be worn upon the sides of ships of war.* In fact the penetration is quite as great and uniform as that obtained with steel shot of equal weights, propelled by similar charges, the only difference being that the iron breaks after passing through, while the steel is only compressed or flattened, a result rather in favor of the iron shot, if entrance is made between decks, where men are exposed to its fragments.

During the past year experiments of the kind indicated have been quietly and systematically made with both shells and shot from smooth-bores and rifles, of all the heavier calibres, the entire results of which will, at an early day, be laid before the department for its consideration. The importance of the subject has been fully appreciated by the bureau, and it has therefore endeavored to investigate it in such a manner as to obtain the most assured facts, and in doing so has taken care to avoid all publicity, and premature discussion. The powers of the guns belonging to the navy, and in common use in the batteries of our ships, have been fairly tested against both solid and built up plates, and the conclusion reached is wholly in favor of the guns and their solid projectiles, the spherical shot for smooth-bores being, however, immeasurably superior to the elongated rifle shot in every form. That is to say, no manner or thickness of iron or steel armor that could be carried on the hulls of sea-going ships will resist the impact of solid spherical shot fired from the heaviest calibres of the navy, at close range, with appropriate charges of cannon powder. This

* In 1862 experiments were made here in casting *chilled* shot, in the same manner as subsequently tried in England in 1863. The results were, however, unfavorable, and the idea was abandoned for the one above mentioned.

result has been reached by a course of well-conducted experiments in the fabrication of simple globes of iron, and in the face of recorded opinions of experts; for it was generally accepted as an established fact that it was impossible to cast a spherical shot of large diameter which would be *solid* throughout. It is now known, however, beyond any question, that it is easy to cast a XV or XX-inch shot which will be perfectly sound and solid from circumference to centre of figure, and one of the former has resisted without breaking 222 continuous blows of an 8-ton steam-hammer. This being decided, the solution of the remaining elements of the problem of guns *versus* armor is of easy process; for, thanks to the skill of our artisans, the cannon required to hurl these compact masses of iron, with the high velocities due to heavy charges of powder, are readily obtained. (See Note A.)

In the fabrication of spherical shells the iron used must be sufficiently strong to resist the shock of discharge; otherwise they are broken in the gun, to the manifest injury of the bore. The good quality of the iron is also necessary to the proper adjustment of the fuze, that most indispensable adjunct to their effectiveness, upon which depends entirely the development of their power. So also with shrapnell shells, by far the most destructive missiles which can be used against uncovered troops beyond the effective range of grape and canister, and which are now supplied to all the guns.

From the foregoing remarks, it is seen that there is nothing in the economy of ordnance that claims in a greater degree the attention of the bureau than this subject of projectiles. It is not only necessary that the supply should be kept up, but also that every care shall be taken to obtain the very best, to prepare them in the most approved manner, and to adapt them to the particular service for which they are intended; otherwise, the sums expended in their purchase and manufacture would be a most wasteful expenditure of the public treasure.

With the rifled projectiles, however, it is hardly possible to exercise the same scrutiny as with the spherical; for these are, with the exception of a few made at the ordnance yard, on the plan of Rear-Admiral Dahlgren, the patented property of private citizens, from whom they are ordered from time to time to meet the wants of the service. Under such circumstances the bureau is obliged to confine itself to the ordinary inspection as to size, weight, and calibre.

Besides the Dahlgren rifle projectiles just mentioned, and which are only used in the *bronze* rifles, those of Parrott, Hotchkiss, and Schenkl are furnished almost exclusively for the iron guns. Other kinds have been tried, but hitherto with far less success than either of these just mentioned; and until something better is presented, they must continue to serve the necessities of our rifled ordnance.

As a special agent at long range, under favorable circumstances, these rifle shot or shell will no doubt continue to be the most effective. But under the varying conditions of an engagement at sea, where there is a complicated and deceptive movement of the platform upon which the gun is placed, the accuracy of flight, and extreme range claimed for them by their advocates as against the spherical, render their effectiveness extremely uncertain. For if perfectly sure to reach the point aimed at, within distances beyond the range of the smooth bore, it is evident that the slightest change of elevation, or of lateral direction of aim *at the time of firing*, will inevitably cause them to miss that point. Again, in *ricochet*, especially at sea, the elongated rifle projectile is perfectly worthless as compared with the swift and smoothly bounding spherical shot or shell, fired at low elevations from the smooth-bores.

Grape and canister furnished for all the smooth-bores, but not for the rifles, as above stated, do not require that extreme care, in preparation for service, as the other projectiles. They are, nevertheless, skilfully adjusted to the calibres of the guns, and, when used at proper distances, are exceedingly destructive to exposed troops, or the hulls of boats and light crafts. They are employed at

distances varying from one to three hundred, and never beyond four hundred yards, under ordinary circumstances; but there is upon record an instance in the Crimean campaign where the Russian frigate Vladimir used grape from her 10-inch guns at a distance of 1,200 yards, the elevation being twenty-three degrees, with terrible effect upon the French reserves, moving to the assault of the Malakoff. Similar effects have resulted during the present war from the use of grape from navy guns at long range; and in the recent memorable affair in Mobile bay, the guns of the rebel forts were completely silenced, and the embrasures cleanly swept by the fire of grape and canister from the guns of the passing ships; thus settling the question of the ability of wooden ships to pass a fort even at close range.

GUNPOWDER AND NITRE.

In my last annual report the department was informed that, in order to meet the wants of the service, it had been necessary to order no less than 2,980 tons of gunpowder during the period elapsing from March 1, 1861, to the date of that report, and that this large amount was readily obtained from the several powder-mills in the loyal States, only 44 tons of it having been purchased from other sources.

Since then the consumption of this indispensable article by our squadrons in service, and for experimental practice, has compelled the purchase and manufacture of 1,325,000 pounds of powder, and 575 tons of nitre, 500 tons of the latter being *domestic*, and supplied entirely from the New Haven chemical works, the only establishment that has yet undertaken its manufacture for the navy.

The number of mills engaged in the fabrication of powder for the navy has been diminished by one since my last report, so that the only present sources of supply are the works of Messrs. Dupont, and those of the Schaghticoke, Hazard, and Union Powder Companies. Their product has, however, been quite sufficient to supply the demand, although frequent explosions have occurred to retard their operations. The excellence of their powder is well known, the manufacturers being most zealous in their endeavors to satisfy the standards of strength, density, and hygrometric qualities fixed by the bureau.

Uniformity in the size of grain in the different grades of powder being most essential, a system of sieves was devised in 1852, to regulate the granulation, and prevent too great an admixture of small and large grains, which, in our service, is not believed to be favorable to the proper development of strength. Until the introduction of rifled cannon, and the larger calibres of smooth-bores, the navy powders were divided into two classes—cannon and musket—and these sieves answered the purpose for which they were intended; but experiments having shown that a sufficiently high velocity, with less proportionate strain upon a rifle gun, could be obtained with powder of a larger grain than the ordinary cannon powder, the kind known as No. 7 was finally adopted. This size of grain, however, could not be so well regulated by the sieves then in use, and anomalies were constantly occurring. In order, therefore, to reconcile the differences, and at the same time simplify as much as possible the manufacture, the question of changing the sizes of the holes in the sieves, with the view of approaching more nearly the *natural* granulation resulting from the process of manufacture, was submitted to the powder men and ordnance experts. Their decision was unanimous in favor of the change, and the bureau accordingly gave the necessary directions, at the same time ordering the nomenclature of the navy powders to be in future, rifle, cannon, and musket.

From this change the most beneficial results are anticipated, inasmuch as it facilitates the manufacture, and reduces the risk of loss to the makers, and consequent delay to the government, which is apt to arise from a want of conformity to the standard granulation.

The use of the *mammoth* grain in navy guns has been entirely abandoned; experiment having shown that in the XV-inch guns, for which it was specially designed, a better result is obtained with thirty-five pounds of the ordinary cannon than with fifty pounds of the mammoth powder, and this charge (fifty pounds) of the latter cannot all be burned in the gun.

The experience of the past indicates that, even with the limited number of mills in the loyal States, an ample supply of powder can be manufactured by them, *provided* the nitre is attainable. To depend, however, for a supply of this article from abroad, or of even the necessary bases from which it is prepared, is, to say the least, highly injudicious; for in case of a foreign war, it is certain that the supply would be immediately cut off. I feel it my duty, therefore, to bring the subject again to the notice of the department, and earnestly suggest that Congress be requested to make some special provision by law for the encouragement of the production, throughout the country at large, of this prime essential to our national defence. The process is simple, and fully within the means of our farmers and citizens generally, and the product might be received, at a fair valuation, in lieu of a portion of the taxes.

It is to be regretted that the example of the New Haven chemical works has not been followed by other establishments, as these works have succeeded in making an excellent article of domestic nitre, from which very good powder is now prepared for the navy; but an impetus of some kind is wanted to induce a more extended manufacture, and this it is believed will be best given by judicious legislation on the part of Congress. As regards the prospective value of this business, it should be remembered that the expenditure of nitre is much greater in time of peace than during war—vast quantities being consumed in the arts and in civil engineering. This may be inferred from the following statement of the annual consumption in the United States since 1854, as obtained from the reports of the principal brokers in Boston:

1854.....	90,000 bags.
1855.....	105,000 "
1856.....	75,000 "
1857.....	80,000 "
1858.....	70,000 "
1859.....	111,000 "
1860.....	64,000 "
1861.....	105,000 "
1862.....	89,000 "
1863.....	84,000 "
1864 (estimated)	60,000 "
the consumption up to the present date of 1864 being about	40,000 "

The attention of the bureau has also been invited to the results, said to have been obtained recently in Europe, with gun-cotton prepared in a peculiar manner, and it is ready to make trial of its properties, as compared with gun-powder, whenever the samples ordered are received. One fact, however, connected with the use of this material is certainly an objection to its general use, and that is the liability to explode at uncertain and low temperatures.

GUN-CARRIAGES.

There is probably no part of the ordnance equipment of our navy that has been so little changed from the old designs as the ordinary wooden broadside carriage. In all its essential features, it is the same to-day as in the year 1750. In fact, the only modifications consist in the removal of the rear trucks and substituting a vertical friction-piece on the bracket to resist the movement of recoil, and the appliance of a breast sweep, as a pivot, in lateral training. The tests of service have not indicated any other changes. The material, however,

is objectionable on account of its inevitable decay, liability to warp and shrink, and the disabling effects of its flying splinters when struck by shot or shells. Hence, in my report of last year, the subject of *iron* carriages was adverted to, and the attention of the department called to the results obtained with the iron carriages of the New Ironsides. Since then a broadside carriage of iron has been constructed and subjected to proof firing, at the ordnance yard in this city; and the bureau is convinced, from this experiment, that for all practical purposes, and especially on the score of economy, carriages made of iron can be safely introduced. It has accordingly ordered the construction of fifty IX-inch carriages, and also a sufficient number to mount the improved class of 8-inch and 32-pounder guns. This will not create a waste of the stock of wooden carriages, as those of IX-inch will be placed in the batteries of new ships, and new carriages are in any case necessary for these 8-inch and 32-pounder guns, whose dimensions differ from the old models.

During the recent naval battles in Mobile bay, a chock, designed by Captain Alden, to assist in checking the recoil of the IX-inch guns, under the action of heavy charges, was tried on board the Brooklyn, and has been recommended for general use. But as a rule it is best to avoid a complication of details in the manœuvre of cannon on board ship, and additions should only be made for special occasions.

The pivot carriages, as at present arranged, seem to meet fully the requirements. The recoil of the guns is easily controlled by the compressors, while the movement in training is steady, and readily performed. Wood for these carriages is also quite as objectionable as for those of broadside, and the bureau contemplates changing them for iron ones upon the plan of those on board the Ironsides, with, however, some important modifications, especially in the manner of compressing. The detail of manufacture in the broadside carriage is quite simple, and not more expensive when made of iron than of wood; but in the pivot carriage the difference in cost is somewhat in favor of wood, and the exorbitant price of iron has hitherto prevented the bureau from making the necessary purchases, while the stock of timber on hand for these carriages is large, and cannot be economically used for other purposes, as it is all cut to dimensions.

The iron-carriages of the monitors still continue to work satisfactory, and are, no doubt, strong enough to sustain any amount of protracted firing.

No changes have been made in the details of the carriages for boat and field howitzers, and it is very doubtful whether any modifications can be suggested which would give better results. In general, the plan may be considered perfect, and its excellence is admitted by other navies.

From the above statements it will be seen that the guns of our navy are properly mounted on carriages specially adapted to each particular class; but much difficulty is sometimes experienced in placing suitable guns on board a given ship, for the want of sufficient room. The custom has been to build a ship, apportion the space for provisions, water, engine, boilers, and coal, cut the hatches of every imaginable size from one end of the decks to the other, and then call upon the bureau for an armament suited to the tonnage and size of the ship; and until recently no detail has ever been modified to accommodate the wants of the ordnance. Hence the carriages must either be shortened so as to work clear of the hatches, or fewer guns, or guns of lighter calibres and shorter carriages, must be provided, to the manifest detriment of the power of battery. The only corrective of this evil is to view the man-of-war as a huge gun-carriage, and to make every other question subordinate to that of ordnance and its accommodation. That is to say, whatever may be the tonnage of the ship about to be built, a certain proportion of this tonnage must be devoted to the guns and their appliances; and after the calibre and weight of battery, according to that proportion, have been decided upon, sufficient deck-room should be provided

for its carriages, as well as proper magazine and shell-room; otherwise, the order of things is reversed, and the power of the ship proportionally lessened.

To obviate these difficulties as far as possible, the bureau has prepared for general use a set of diagrams showing the minimum space required for working each class of gun; and these have been approved by the Bureau of Construction for future guidance in arranging the decks so as to receive the proper batteries.

THE ORDNANCE WORK AT THE SEVERAL YARDS AND STATIONS.

PORTSMOUTH, N. H.

The supervision of the work at this navy yard is at present intrusted to Captain J. R. Goldsborough, who relieved Lieutenant Commander Sicard. It is still confined principally to the construction of carriages, in which business it probably excels the other stations; and although the facilities for preparing the ordnance equipment of a ship are moderate compared with those of Boston or New York, still they are found to be amply sufficient for the limited number of vessels usually prepared for sea at that place.

At the suggestion of the bureau, the department established some time ago a battery on Seavy's island for the defence of the harbor, manning it with contrabands. The training of these men as artillerists will no doubt prove advantageous, and it would perhaps be well to extend the plan to other localities along our northern seaboard, not only as a measure of harbor defence, but as schools of practice from which well drilled men may be obtained for service on board ship.

BOSTON AND NEW YORK.

At these navy yards the bureau has its principal depots of ordnance and ordnance material and stores for the supply of our squadrons, together with the most enlarged facilities for the preparation of batteries. Although the wharves are constantly crowded with ships of all rates, no delay has ever been permitted to occur in filling their requisitions; for the manufacture and preparation of shot and shells, of gun-carriages with their appliances, and all the manifold details of equipments and stores, is unceasingly going on, so that it not unfrequently happens that the battery of a new ship is ready for her before she is launched.

It is also most creditable to the ordnance establishments of these yards that in no instance have they failed to meet the very heavy demands constantly made upon them for supplies, not only from our fleets, but very often from the other yards and stations, entailing a great amount of labor in forwarding by rail and water.

At New York, however, a greater amount of ordnance work in the preparation and shipment of stores, and the outfitting of ships, is carried on than in any of the other navy yards, and consequently a larger space is required, not only for these purposes, but also to park the multitude of guns belonging to the batteries of vessels, or needed as a stock. To meet this necessity, and as the old gun park has been occupied by the Bureau of Yards and Docks for the erection of large general storehouses, this bureau has, under the recent authority of the department, commenced the filling in of the unoccupied marsh adjacent to the cob-dock and opposite Williamsburg, making it in fact an extension of this dock in a southerly direction. When this great work is completed, the bureau will there have ample room for the accommodation of all the workshops and storehouses needed for ordnance purposes, and besides a park for 2,000 cannon, with all the requisite appliances for sighting and otherwise fitting them for

service. This will completely relieve the navy yard proper of all ordnance work, and leave it entirely unembarrassed in the prosecution of other business.

The money appropriated at the last session of Congress for powder tugs has been used for that purpose, and the bureau has now two fine vessels built at Portsmouth, which perform excellent work, not only as powder boats, but also in towing and other dock-yard service.

PHILADELPHIA.

The limited space occupied by this navy yard, although situated in the greatest manufacturing city of the United States, has necessarily restricted the ordnance work to the simple preparation of the batteries of ships. It cannot, therefore, strictly speaking, be considered a manufacturing depot for ordnance stores; but within its capacity it has never failed to respond to the calls made upon it, and the bureau is well assured that, if at any time an extension of room in this yard is possible for ordnance purposes, the eminent skill of the artisans of Philadelphia will be developed in the production of work unexcelled by the mechanics of any other locality. This yard has, moreover, the advantages of an abundance of coal and iron near at hand, with a large foundry at Reading to supply the guns, and a well-located magazine at Fort Mifflin for powder and shells; while a few miles beyond the magazine, on the river line, are the important powder mills of Messrs. Dupont & Co., from whence to draw supplies.

WASHINGTON AND OTHER ORDNANCE DEPOTS.

As a special establishment, embracing not only the casual outfit of a vessel, but also the manufacture of boat guns, carriages, laboratory stores, and the highly important experiments upon every conceivable idea of ordnance improvement, the depot in this city, now generally known to the service as the "ordnance yard," is in some respects the most important.

Organized under many difficulties, and with exceeding labor and perseverance, by my predecessor, the distinguished officer at present in command of the South Atlantic squadron, it has not only furnished the standards which govern the work at all the yards and foundries, but it has also proved the safeguard of the service against the nostrums and visionary improvements of would-be inventors and speculators. Its experimental batteries and records are the crucial tests to which we submit every one of the great questions which command at any time the attention of artillerymen at home and abroad; and the satisfactory manner in which they are solved is exemplified by the condition of our naval armaments. But especially is the service indebted to this depot for the high excellence of those indispensable details of ordnance embraced in the products of its laboratory, such as fuzes, primers, percussion caps, fire-works, and small-arm ammunition, besides all the ammunition for boat and field howitzers.

The limits of this report will not permit an extended recital of the various resources and work of this interesting and important station. Nor is it necessary, perhaps, for their character is well known to the department and the country. The estimates for its support are considered as most essential, and should rather be increased than diminished.

During the past year the naval depot at Fortress Monroe has been transferred to the naval magazine at Fort Norfolk, that building, with its appurtenances, having been finally rendered up by the army to the navy for that purpose. In conjunction with the frigate *St. Lawrence* as a store-ship, it now remains as the regular depot for supplies of the Atlantic Blockading Squadron, under the immediate command of Commander D. Lynch. For the ordinary requirements of the squadron it is found to be amply sufficient; but for extended operations the bureau has been compelled to resort to the dangerous and extremely expensive arrangement of chartered vessels as store-ships.

At Baltimore sufficient provision is made to supply vessels arriving at that station for casual repairs; and for the Mississippi squadron a depot is established at Mound City, Illinois, to which are forwarded all needful articles for distribution.

For our squadron in the Pacific ocean an ordnance storehouse is located in the navy yard at Mare island, California, whither consignments are made from time to time, as opportunities offer. This course is necessarily adopted, for the lack of proper facilities in that quarter for the manufacture of stores and munitions of war. There are now, however, on hand at Mare island guns enough to equip, if necessary, a large fleet, together with munitions of war for naval purposes of all kinds.

To meet the wants of our squadrons in the South Atlantic, East and West Gulf, ordnance supplies are always to be found at Port Royal, Key West, Pensacola, and New Orleans, ashore and on board ship; and every effort is made by the bureau to make the system of supplies as perfect as possible, and to avoid the enormous expense of chartered vessels on demurrage.

If the permanent maintenance of our present fleet stations is contemplated, I would respectfully urge upon the department the propriety of recommending to Congress an additional special appropriation for an ordnance depot at the rendezvous selected for each fleet.

In concluding this part of my report, I feel it my duty to mention favorably to the department the officers who have been employed upon ordnance duty at the several navy yards and stations. They have all faithfully performed the tasks assigned them, and assisted the bureau in the heavy responsibilities resting upon it, each according to his respective station.

At Portsmouth, New Hampshire, Captain Goldsborough has been in charge during the past year; at Boston, Commodore Missroon; while at New York several changes have been made since Captain Drayton was assigned to duty as fleet captain of the West Gulf squadron; at present the office is in care of Captain Gansevoort.

At Philadelphia the duties are assigned to Commodore Hoff; and the management of the ordnance yard, together with the conduct of all experiments, and the very important duty of revising the "ordnance instructions," are confided to Lieutenant Commander Jeffers.

At Mound City, the reception and distribution of supplies is intrusted to Captain Stanley; and at New Orleans, as the depot of the West Gulf squadron, to Acting Master Starrett, an officer of great zeal and activity.

Finally, it is but just that the bureau should pay a passing tribute to the memory of a most valuable officer, Gunner John Clapham, recently deceased. For many years he continued to govern and manage the naval laboratory in this city with skill and success; and was most remarkable for the conscientious manner in which he discharged his dangerous and important duties. The bureau has lost a most efficient assistant, society an honorable and Christian member, and the country a loyal citizen and devoted servant.

SMALL ARMS.

These, on account of the limited number used in the navy, and the rather infrequent occasions for their employment in sea engagements, have usually been considered as secondary in importance to the great guns. This is perhaps natural, if the operations of single ships or squadrons were confined to battle on the high seas alone, ship against ship, or fleet against fleet. But in the peculiar warfare of the present rebellion, where the small-arm is constantly brought into play during boat expeditions, and the contingent co-operation of seamen and marines with the army, it rises in importance, and commands the attention quite

as much as that more ponderous and terrible exponent of national power, the cannon of battery.

Impressed with this view of a subject which forms so important a part of the economy of ordnance, the bureau has diligently pursued its inquiries in every direction for the purpose of obtaining an arm which would combine the several qualities of range, accuracy, and sufficient weight of ball, together with endurance, simplicity in use, and perfect adaptability to the varied circumstances under which it would be most likely to be brought into action. The difficulty in making a good selection, however, has not been found in the paucity of models, for these have been presented in almost every conceivable form that the ingenuity of inventors could design, each claiming certain extraordinary qualities for his plan over all others. The embarrassment, in fact, has arisen from this very multitude of designs.

I here allude, of course, to breech-loaders, and those of the lighter description, as the carbine or short rifle; for the muzzle-loading musket, whether smooth or rifled, is easily obtained, there being but the single question of calibre to be decided in making a choice for use on board ship; and we have now in service 10,000 muzzle-loading rifled muskets of the heavy calibre of sixty-nine hundredths of an inch, known as the Plymouth musket, besides a large number of army pattern, calibre fifty-eight hundredths of an inch. These, with a few smooth-bore army muskets and captured Enfield rifles, constitute the stock of muzzle-loaders.

The advantages of a muzzle-loading musket of heavy calibre, with sabre bayonet attached, are best experienced in army operations, provided they are used by veterans well drilled and accustomed to deliver their fire with precision. But for naval purposes it may well be questioned whether it is not better to abandon the muzzle-loader, with its paper cartridge and percussion cap, and substitute therefor some well-conditioned breech-loader, with a barrel of convenient length, and the metallic cartridge. This subject is now, in fact, engaging the attention of military men everywhere; and there are strong indications that the current of professional opinion is setting against the muzzle-loader with so much force as to threaten its removal entirely from, at least, a very large proportion of our regiments.

The points of advantage gained by the breech-loader are—

1. Facility of loading.
2. Certainty and rapidity of fire.
3. Lightness, and consequently less weight to be carried in marching.
4. Impossibility of multiplying the loads under any circumstances.

Assuming that the piece selected is made accurately in its different parts, and the ammunition fixed in metallic cartridges, the rim of the base enclosing the percussive fulminate, the first and second of these advantages are self-evident, while the third is of course governed by the calibre. The fourth is no less self-evident, for the cartridge of the breech-loader cannot be entered at the muzzle, only one can be placed at a time in the opening at the breech, and in the event of a failure to explode, generally the cartridge is withdrawn by the movement of cocking and opening the breech. Singularly enough, the lesson of one of the greatest battles of this war proves how immensely important this last-mentioned advantage of the breech-loader really is.

Upon the field of Gettysburg, after the battle, an immense number of muzzle-loading arms were picked up, both of our own and the rebel soldiery. Nearly all of these were found to be loaded, and this of itself is, perhaps, not to be wondered at; but the curious fact was discovered, that about one-half of the number loaded contained *two* loads each, one-fourth from *three* to *ten* loads, and the remainder one legitimate load; and in one or two instances as many as 32 and 42 bullets were found in the barrels! (See note B.)

There was excessively hard fighting where these guns were found, it is true;

but to what are we to attribute this most remarkable waste of effective strength on the battle-field? Certainly we are led to believe, while reflecting upon this extraordinary disclosure, that the calculations of Gassendi and Piobert, as to the number of cartridges required to kill one man in battle, are by no means erroneous; the former asserting that of 3,000 balls (fired) only one ever hit; the latter, that from 3,000 to 10,000 cartridges were usually expended in killing or wounding one man. But these calculations are, no doubt, based upon the number of cartridges actually fired; such a thing as repeatedly loading and never firing could not have been suspected by these high authorities while engaged in analyzing the results of modern wars. The discovery of this inherent and certainly mortifying defect in the simple use of the standard arm of infantry regiments has been left to the experience of a people celebrated for their skill in all the sciences and arts, and in none more so than that of war and its manifold details.

By reference to my last annual report, the department will see that this question of providing a suitable arm for naval purposes has been one of great concern to the bureau. Primarily, I have contemplated the use of a single calibre alone; and this idea, if practicable, will necessarily do away with the borrowed and captured arms now on hand; but the advantages gained will more than compensate for the seeming loss. I desired, also, to extend the system so as to include a belt-pistol for boarding purposes, because the revolver, in the hands of seamen, is a most useless and, generally speaking, dangerous thing. For these reasons, the matter has been constantly kept in view during the past year, and I am gratified in being able to say that my exertions in this direction bid fair to be crowned with success. For a carbine (short rifle) and a breech-loading pistol of the same design and calibre have recently been presented, which meet all the requirements of effective weapons for navy use more fully than any I have yet seen. They are about to be subjected to trial, and if the results are satisfactory, a proposition to adopt them as the exclusive small-arms of the naval service will be submitted for the consideration of the department. In these, only the metallic cartridge will be used; all the doubts as to its safety, economy, durability in transportation, and security from dampness, having long ago been settled and removed by the tests of actual service. Indeed, the day appears to be not far distant when no other kind will ever be used; for the readiness with which the breech-loader is charged with these cartridges, even while the soldier is advancing, enables him to keep his eye fixed upon the objects of fire, let them change ever so rapidly in distance or direction; while to the sailor, either aloft, on deck, or in the casual requirements of action, in boats approaching the beach, or moving between the banks of hostile streams, the advantages of this detail are inestimable. For instance, taking the last-mentioned contingency as an example, he has nothing to do, in the event of discovering an enemy on either side, than to trail or throw his oar athwartships, fire, reload, and resume his oar or continue his fire without rising or moving from his seat.

GUNNERY SHIP.

Again the bureau respectfully but earnestly recommends to the consideration of the department and of Congress the absolute necessity of providing at once for the establishment and maintenance of a thoroughly organized gunnery ship—an institution specially and wholly set apart for the training of officers and men in gunnery and all its details. The necessity of this measure is so well understood and appreciated by the service at large, that it needs no further special recommendations than are contained in my last annual report. No matter how perfect may be our preparations, or how elaborate and precise the methods we pursue in arming and equipping our naval batteries, after all we

must depend in the hour of battle almost entirely upon the individual intelligence of the captains of guns. Hence a school of practice is needed, in which these men may be thoroughly and efficiently drilled and qualified for the important duties of seamen gunners. *Well enough*, as demonstrated by the results of naval operations during the existing rebellion, is a good motto; but *better still*, is a far more cheering and welcome inscription to be written upon the battle-flags of the future.

The text-books, the teachers, the implements of science, the examples of the present and the histories of the past, are all at hand, and available for the foundation and continuance of a system of education for our seamen, which will result in incalculable benefit to the country; and it only requires the enlightened legislation of Congress to give life and certainty to its organization. I do not pretend to give the details here, but only urge the initiatory appropriation.

To counterbalance as far as possible the want of some such school of practice, the bureau has endeavored to make the Ordnance Instructions for the navy as comprehensive, and at the same time as simple in their details, as the manifest wants of the service indicated; and this more especially in the exercise of the great guns, with its concomitant system of supplies of powder, shells, and shot. Submitted to the navy in a revised and extended form during the past year, as containing all the instructions deemed necessary to prepare for and engage in battle, the bureau awaited with much anxiety the result of the first general action, in order to know how much dependence could be placed upon the rules laid down in this most important text-book.

Therefore, immediately after the affair in Mobile bay, the bureau addressed a letter to Rear-Admiral Farragut on the subject, requesting him to direct the commanders of the ships engaged to report "the result of the firing, and to state, freely and fully, whether they discovered anything in the service of the guns, magazines, shell-rooms, or in the projectiles used, which was in the slightest degree imperfect or requiring modifications."

The answers of the gallant men who participated in this most remarkable of all naval achievements are now before me; and it is with no little pride and gratification that I place upon the record of this official report the following extracts:

In the opening paragraph of his reply, Captain Drayton, fleet captain and commanding the Hartford, says: "I beg to state that, after careful inquiry, I can discover few things which would be improved by a change, and those few were not particularly brought out on that day," (5th August.) He then calls the attention to several minor matters of detail requiring modification—all of which, emanating from such a source, will be attended to—and closes his paper with the following sentences: "In conclusion, I beg to say that, during the fight of the 5th August, ammunition was supplied in sufficient quantities without the least difficulty, and that there was not one instant's delay in the firing from any cause connected with faulty materials, or confusion anywhere; from which it may be inferred that both drill and ordnance appliances and supplies are all-sufficient for every exigency."

Captain Jenkins, of the Richmond, after stating the number of each kind of projectiles used on board his ship "in the actions with Fort Morgan and its outlying batteries, and with the late rebel iron-clad steamer Tennessee, on the morning and forenoon of August 5, 1864," says: "The heavy concentrated fire into this fort and batteries from the three leading ships (Brooklyn, Hartford, and Richmond) prevented the arrival at any correct opinion as to the effect of particular projectiles or guns. The general result, however, was the early abandonment by the enemy of his guns. The men stationed at the light-house and water batteries were plainly seen leaving their stations for cover soon after the three leading ships opened; and for a period of ten or fifteen minutes, while

this ship was lying close under the light-house and water batteries, not a shot was fired at us, as far as could be discovered.

"The howitzers in the tops, from their elevated positions and proximity to the open batteries, did most effective service, so long as there were any men in the enemy's batteries."

In speaking more particularly of the bombardment of Fort Morgan, in which the firing was confined, by order, to the three rifled guns, he describes the firing as being "generally good and effective." He also remarks that "the navy and Bormann fuzes used in both actions seldom failed, so far as was observed;" and concludes by saying, "this ship, having been in commission for the whole of the four years last past, and for more than a year of that time, previous to the attack on Mobile, under my command, with the able assistance of the executive officer, Lieutenant Commander Edward Terry, all the necessary and practical appliances for facilitating while in action, and insuring a rapid and ample supply of powder and projectiles, had been introduced and practiced on board long prior to the action of the 5th of August." The result of which was that the Richmond fired on that day two hundred projectiles from her several guns in "a period of from twenty-five to forty minutes"—say five rounds per minute.

Commander Strong, of the Monongahela, writes, "that nothing in the service of the guns, magazines, or shell-rooms was imperfect. The effect of the firing while passing the forts could not be ascertained, as several ships were firing at the same time."

Lieutenant Commander Perkins bears testimony in his reply, that on board the iron-clad Chickasaw he discovered "*nothing* in the service of the guns, magazines, shell-rooms, or in the projectiles used, which was imperfect."

Lieutenant Commander Jouett, of the Metacomet, is equally explicit. He states that "everything worked in the most satisfactory manner; though working and fighting both sides, the magazines, shell-rooms, and shell-whips kept the guns more than supplied." And Lieutenant Commander Gherardi, of the Port Royal, makes the following brief and emphatic reply:

"I have the honor to inform you that during the engagement of the 5th August, everything worked admirably in the service of the guns, magazines, shell-rooms, and projectiles used."

In the report of Captain Marchand, commanding the Lackawana, are some valuable suggestions relating to the service of the magazines, and to the difficulty, which seems insuperable, with the elevating screws of the Parrott guns. He says, however, that "the result of the firing, so far as visible, appeared to be good," the projectiles from all the guns except one, a 50-pounder rifle, exploding or striking as well as could be expected. Also, that "the XI-inch and IX-inch solid shot and shells were unexceptionable on the same occasion."

Finally, as a relief to the regret felt in reading the statements in some of these replies of the inadequacy of the XI-inch, IX-inch, and the heavy rifled shot to penetrate the armor of the rebel ram Tennessee, we have the report of Commander Nicholson, of the Manhattan, in which he says:

"I am satisfied that most if not all the serious damage she (the rebel ram) has sustained was caused by the XV-inch shot from this vessel."

There can be no doubt that her fire compelled the Tennessee's surrender, and perhaps saved the entire fleet of wooden ships from destruction, thus again vindicating the judgment which added this peculiar class of vessels to our navy list, and placed on board of them the powerful guns with which they are armed.

From the testimony here presented, it may safely be assumed that the "Ordnance Instructions," up to the present time, are nearly perfect in all that relates to the preparation of vessels-of-war for battle, to the duties of officers and men at quarters, to the equipment and manœuvre of armed boats, and to the details of ordnance and ordnance stores. Nothing is, therefore, needed to give additional excellence and both physical and moral power to the "right arm of our national

defence," except a proper school in which the lessons of this text-book may be impressed upon the minds of officers and men, and prepare them to pass through the fiery ordeal of battle. In no other way can this be so effectually accomplished as by establishing a gunnery ship as a component part of our navy, to the discipline and instructions of which those of the Naval Academy shall strictly conform.

MAGAZINES AND DEPOTS OF NITRE.

In again presenting this important subject for your consideration, I feel that I can do no better than to reproduce here the arguments presented last year in support of my recommendation to remove the present magazines to more secure localities. Nothing whatever has since taken place to cause a change of my opinions; on the contrary, not very long ago an accident occurred in Brooklyn, New York, which has confirmed them. I allude to the explosion of a storehouse containing nitre and sulphur, (gunpowder, minus only charcoal,) which caused great damage to surrounding property and some loss of life.

In speaking of this subject last year I held the following language: "The proximity of these great magazines to the sea-coast and to the cities near which they are respectively located, especially those at Portsmouth, Boston, and New York, is a subject worthy of the most serious consideration.

"To the recommendation made by Rear-Admiral Dahlgren in his report of last year, in treating of this matter, I now desire to add that the danger of accidental explosion, always possible, even when guarded against by the utmost human foresight, is now greatly increased by the necessity of entering the magazines daily in order to receive, deliver, and prepare powder for service.

"In times of peace, although danger still existed, the chances of disaster were very much reduced, because the magazines contained moderate quantities, and were only required to be opened and work performed in them to supply occasionally the wants of a cruiser. Now the demand for powder and magazine stores is unceasing, and the chances of disaster are multiplied proportionally.

"Fully aware of the great responsibility which rests upon the bureau to do everything in its power to protect this species of public property from loss, and at the same time to guard the lives and estates of our citizens from destruction, I desire most earnestly to recommend to the consideration of the department and Congress the necessity of removing, as soon as possible, these large quantities of powder from their present localities, and of establishing depots at the north, east, west, and interior, placing them, however, near our principal railways and watercourses.

"Whenever the necessary appropriation for this object shall have been made, the bureau will be ready, with the information and data now in its possession, to proceed immediately with the erection of suitable buildings and the removal thereto of these terrible agents, which are passive and harmless enough when undisturbed, but inconceivably destructive when aroused.

"The importance of this subject will be sufficiently felt by reflecting on the terrific consequences of the explosion of five hundred tons of gunpowder in the vicinity of a city like Boston, New York, or Philadelphia. Words can hardly do justice to the disastrous effects of such an event. It would level spire and dome with the earth, and shake either of those cities to their very foundations. By an explosion of a far less quantity of powder than that named, an entire quarter of the city of Leyden was destroyed in 1807, and one hundred and fifty persons perished in the ruins."

I respectfully reiterate these words of caution from the report of last year, and solicit for them the favorable consideration of the department and Congress. See note D.)

THE ESTIMATES.

These are based upon the experience of the past, and, fully convinced of the necessities which call for each of the separate items, I respectfully submit them as the least possible amount to which they can be reduced without crippling our energies. Again would I remark that we must not pause in the work of preparation for the future, or fail to make ample provision for all emergencies. Profiting by the lessons of adversity, we must not permit ourselves to be again embarrassed by a neglect of proper precautions.

In the foregoing pages I have endeavored to fulfil the duty assumed in the opening paragraphs. Many ideas and suggestions are unavoidably omitted, because the limits of a report of this kind do not permit of too great an extension. The facts presented, however, are believed to be of most importance, and deserve careful consideration. I may be permitted also to revert here to the remarks made in the beginning, in reference to the system of obtaining naval supplies in general, but more particularly those of ordnance, and to say that I have long been convinced that serious defects existed therein.

The frauds that have been brought to light during the past year have made these defects more apparent, and I have made every exertion on my part, and exercised constant vigilance to guard against them, establishing new rules to govern the inspection and receipt of stores, as well as a careful scrutiny of prices.

The proper use of all the material received at the different yards, to be worked up into equipments, is found to be a question of no less difficulty and importance. Materials to the value of millions of dollars are necessarily placed in the hands of the mechanics and others employed, to be worked up into ordnance stores, and it is highly important that these materials should be so issued and accounted for as to make the detection of waste or fraud most certain.

Hence the bureau requires a most accurate and comprehensive return of stewardship in this respect to be forwarded to it monthly and quarterly from all the yards, and to render the whole system of ordnance accounts on shore and on board ship as complete as possible, I have recently caused a close and searching examination to be made at all the yards of the manner in which this duty is performed, with the view of adopting a uniform plan for the whole service.

In these labors the ordnance officers have co-operated with zeal, especially Commodore Missroon, whose method, precision, and large experience in such matters have proved invaluable to the bureau.

In conclusion, I am again called upon to acknowledge the assistance always cheerfully and courteously rendered to us by the ordnance bureau of the army, in the matter of supplies and valuable information; and this I have reciprocated to the full extent of my power, regarding a cordial co-operation of the two arms of the service, in the cause of our common country, as at once the most incumbent duty and the highest pleasure.

I have the honor to be, with high respect, your obedient servant,

H. A. WISE, *Chief of Bureau.*

Hon. GIDEON WELLES,

Secretary of the Navy.

NOTE A.—As a general summary of the results obtained in practice against iron targets, it may be stated that the X-inch gun is capable of piercing four and a half ($4\frac{1}{2}$) inches of the best iron plating, backed by twenty (20) inches of solid oak.

That the new X-inch solid-shot gun will penetrate any iron-clad of which we have, at present, any information.

defence," except a proper school in which the lessons of this text-book may be impressed upon the minds of officers and men, and prepare them to pass through the fiery ordeal of battle. In no other way can this be so effectually accomplished as by establishing a gunnery ship as a component part of our navy, to the discipline and instructions of which those of the Naval Academy shall strictly conform.

H. A. WISE, *Chief of Bureau.*

Hon. GIDEON WELLES,

Secretary of the Navy.

NOTE A.—As a general summary of the results obtained in practice against iron targets, it may be stated that the X-inch gun is capable of piercing four and a half ($4\frac{1}{2}$) inches of the best iron plating, backed by twenty (20) inches of solid oak.

That the new X-inch solid-shot gun will penetrate any iron-clad of which we have, at present, any information.

defence," except a proper school in which the lessons of this text-book may be impressed upon the minds of officers and men, and prepare them to pass through the fiery ordeal of battle. In no other way can this be so effectually accomplished as by establishing a gunnery ship as a component part of our navy, to the discipline and instructions of which those of the Naval Academy shall strictly conform.

MAGAZINES AND DEPOTS OF NITRE.

In again presenting this important subject for your consideration, I feel that I can do no better than to reproduce here the arguments presented last year in support of my recommendation to remove the present magazines to more secure localities. Nothing whatever has since taken place to cause a change of my opinions; on the contrary, not very long ago an accident occurred in Brooklyn, New York, which has confirmed them. I allude to the explosion of a storehouse containing nitre and sulphur, (gunpowder, minus only charcoal,) which caused great damage to surrounding property and some loss of life.

In speaking of this subject last year I held the following language: "The proximity of these great magazines to the sea-coast and to the cities near which they are respectively located, especially those at Portsmouth, Boston, and New York, is a subject worthy of the most serious consideration.

"To the recommendation made by Rear-Admiral Dahlgren in his report of last year, in treating of this matter, I now desire to add that the danger of accidental explosion, always possible, even when guarded against by the utmost human foresight, is now greatly increased by the necessity of entering the magazines daily in order to receive, deliver, and prepare powder for service.

"In times of peace, although danger still existed, the chances of disaster were very much reduced, because the magazines contained moderate quantities, and were only required to be opened and work performed in them to supply occasionally the wants of a cruiser. Now the demand for powder and magazine stores is unceasing, and the chances of disaster are multiplied proportionally.

"Fully aware of the great responsibility which rests upon the bureau to do everything in its power to protect this species of public property from loss, and at the same time to guard the lives and estates of our citizens from destruction, I desire most earnestly to recommend to the consideration of the department and Congress the necessity of removing, as soon as possible, these large quantities of powder from their present localities, and of establishing depots at the north, east, west, and interior, placing them, however, near our principal railways and watercourses.

"Whenever the necessary appropriation for this object shall have been made, the bureau will be ready, with the information and data now in its possession, to proceed immediately with the erection of suitable buildings and the removal thereto of these terrible agents, which are passive and harmless enough when undisturbed, but inconceivably destructive when aroused.

"The importance of this subject will be sufficiently felt by reflecting on the terrific consequences of the explosion of five hundred tons of gunpowder in the vicinity of a city like Boston, New York, or Philadelphia. Words can hardly do justice to the disastrous effects of such an event. It would level spire and dome with the earth, and shake either of those cities to their very foundations. By an explosion of a far less quantity of powder than that named, an entire quarter of the city of Leyden was destroyed in 1807, and one hundred and fifty persons perished in the ruins."

I respectfully reiterate these words of caution from the report of last year, and solicit for them the favorable consideration of the department and Congress. See note D.)

THE ESTIMATES.

These are based upon the experience of the past, and, fully convinced of the necessities which call for each of the separate items, I respectfully submit them as the least possible amount to which they can be reduced without crippling our energies. Again would I remark that we must not pause in the work of preparation for the future, or fail to make ample provision for all emergencies. Profiting by the lessons of adversity, we must not permit ourselves to be again embarrassed by a neglect of proper precautions.

In the foregoing pages I have endeavored to fulfil the duty assumed in the opening paragraphs. Many ideas and suggestions are unavoidably omitted, because the limits of a report of this kind do not permit of too great an extension. The facts presented, however, are believed to be of most importance, and deserve careful consideration. I may be permitted also to revert here to the remarks made in the beginning, in reference to the system of obtaining naval supplies in general, but more particularly those of ordnance, and to say that I have long been convinced that serious defects existed therein.

The frauds that have been brought to light during the past year have made these defects more apparent, and I have made every exertion on my part, and exercised constant vigilance to guard against them, establishing new rules to govern the inspection and receipt of stores, as well as a careful scrutiny of prices.

The proper use of all the material received at the different yards, to be worked up into equipments, is found to be a question of no less difficulty and importance. Materials to the value of millions of dollars are necessarily placed in the hands of the mechanics and others employed, to be worked up into ordnance stores, and it is highly important that these materials should be so issued and accounted for as to make the detection of waste or fraud most certain.

Hence the bureau requires a most accurate and comprehensive return of stewardship in this respect to be forwarded to it monthly and quarterly from all the yards, and to render the whole system of ordnance accounts on shore and on board ship as complete as possible, I have recently caused a close and searching examination to be made at all the yards of the manner in which this duty is performed, with the view of adopting a uniform plan for the whole service.

In these labors the ordnance officers have co-operated with zeal, especially Commodore Missroon, whose method, precision, and large experience in such matters have proved invaluable to the bureau.

In conclusion, I am again called upon to acknowledge the assistance always cheerfully and courteously rendered to us by the ordnance bureau of the army, in the matter of supplies and valuable information; and this I have reciprocated to the full extent of my power, regarding a cordial co-operation of the two arms of the service, in the cause of our common country, as at once the most incumbent duty and the highest pleasure.

I have the honor to be, with high respect, your obedient servant,

H. A. WISE, *Chief of Bureau.*

Hon. GIDEON WELLES,

Secretary of the Navy.

I may be permitted also to revert here to the remarks made in the beginning, in reference to the system of obtaining naval supplies in general, but more particularly those of ordnance, and to say that I have long been convinced that serious defects existed therein.

The frauds that have been brought to light during the past year have made these defects more apparent, and I have made every exertion on my part, and exercised constant vigilance to guard against them, establishing new rules to govern the inspection and receipt of stores, as well as a careful scrutiny of prices.

The proper use of all the material received at the different yards, to be worked up into equipments, is found to be a question of no less difficulty and importance. Materials to the value of millions of dollars are necessarily placed in the hands of the mechanics and others employed, to be worked up into ordnance stores, and it is highly important that these materials should be so issued and accounted for as to make the detection of waste or fraud most certain.

Hence the bureau requires a most accurate and comprehensive return of stewardship in this respect to be forwarded to it monthly and quarterly from all the yards, and to render the whole system of ordnance accounts on shore and on board ship as complete as possible, I have recently caused a close and searching examination to be made at all the yards of the manner in which this duty is performed, with the view of adopting a uniform plan for the whole service.

In these labors the ordnance officers have co-operated with zeal, especially Commodore Missroon, whose method, precision, and large experience in such matters have proved invaluable to the bureau.

In conclusion, I am again called upon to acknowledge the assistance always cheerfully and courteously rendered to us by the ordnance bureau of the army, in the matter of supplies and valuable information; and this I have reciprocated to the full extent of my power, regarding a cordial co-operation of the two arms of the service, in the cause of our common country, as at once the most incumbent duty and the highest pleasure.

I have the honor to be, with high respect, your obedient servant,

H. A. WISE, *Chief of Bureau.*

Hon. GIDEON WELLES,

Secretary of the Navy.

NOTE A.—As a general summary of the results obtained in practice against iron targets, it may be stated that the X-inch gun is capable of piercing four and a half ($4\frac{1}{2}$) inches of the best iron plating, backed by twenty (20) inches of solid oak.

That the new X-inch solid-shot gun will penetrate any iron-clad of which we have, at present, any information.

And in the target experiments the XV-inch gun has broken up and shattered plates exceeding in thickness anything hitherto proposed as defensive armors.

NOTE B.—The official report of the examination of the arms collected upon the battle-field of Gettysburg states that “of the whole number received, (27,574,) we found at least 24,000 of these loaded; about one-half of these contained two loads each, one-fourth from three to ten loads each, and the balance one load each. In many of these guns from two to six balls have been found, with only one charge of powder. In some the balls have been found at the bottom of the bore, with the charge of powder on top of the ball. In some as many as six paper regulation calibre .58 cartridges have been found, the cartridges having been put in the guns without being torn or broken. Twenty-three loads were found in one Springfield rifle-musket, each load in regular order. Twenty-two balls and sixty-two buckshot, with a corresponding quantity of powder, all mixed up together, were found in one percussion smooth-bore musket. In many of the smooth-bore guns, model of 1842, of rebel make, we have found a wad of loose paper between the powder and ball, and another wad of the same kind on top of the ball, the ball having been put into the gun naked. About six thousand of the arms were found loaded with Johnson & Dow’s cartridges; many of these cartridges were about half-way down in the barrels of the guns, and in many cases the ball end of the cartridge had been put into the gun first. These cartridges were found mostly in the Enfield rifle musket.”

NOTE C.—A few rounds were fired on the 26th of October, 1864, from the army XX-inch gun, mounted at Fort Hamilton, with charges of powder varying from 50 to 125 pounds, and solid shot of 1,080 pounds. As this firing was merely preliminary to a more extended series for range and penetration, no opinion can be formed from it of the absolute power and efficiency of this enormous piece of ordnance; but enough was seen to warrant the belief that it, as well as the gun of the same calibre made for the navy, will fully meet the expectations of the government as most effective means of harbor defence.

NOTE D.—The remarks in relation to the removal of the powder magazines from the vicinity of our large cities to more secluded localities had been written and this report nearly closed, when, as an additional and impressive warning, came the tidings of the catastrophe at Erith, England.

On Saturday, October 1, 1864, an explosion of one hundred and fifty thousand pounds of gunpowder occurred there, from some cause unknown, the sound of which was heard at a distance of *over ninety miles*. Fortunately but twelve persons were killed and about twenty wounded; but the public prints give startling accounts of the terrible power of this exploding mass of powder. These it is unnecessary to cite here in detail, but I may refer to the single fact of the damage done to the river embankment, which at one time threatened with inundation an immense tract of country, extending from Gravesend to Battersea, on the Thames.

This occurrence is well worthy of the most serious thought, and from the English journals we learn that the local authorities at Chatham have been aroused to the importance of the subject; for meetings have been held by them with the view of effecting the removal of at least a portion of the large deposits of powder stored in the government magazines at Upnor Castle, Fort Amherst, and other places.

The quantity of powder exploded at Erith was only about sixty-seven tons. If it had been five hundred tons—the capacity of one of our large magazines—who can imagine the disastrous consequences?

No. 5.

Estimate of appropriations under the cognizance of the Bureau of Ordnance, Navy Department, required for the service of the fiscal year ending June 30, 1866.

Heads or titles of appropriations.	Estimates of appropriations required for the service of the fiscal year ending June 30, 1866.

H. A. WISE,
Chief of Bureau.

BUREAU OF ORDNANCE, *October 18, 1864.*

A.

Estimate of the amount required for the support of the Bureau of Ordnance for the year ending June 30, 1866.

For salary of chief of bureau, per act of July 5, 1862, pamphlet ed. of Laws, sec. 2, page 510.....	\$3, 500 00
For salary of assistant, per act of July 5, 1862, pamphlet ed. of Laws, sec. 3, page 511.....	3, 000 00
For salary of chief clerk, per act of February 25, 1863, pamphlet ed. of Laws, sec. 2, page 695	1, 800 00
For salary of one third-class clerk, per act of July 2, 1864, pamphlet ed. of Laws, sec. 4, page 373.....	1, 600 00
For salaries of four second-class clerks and one draughtsman, at \$1,400 each, per act of July 5, 1862, sec. 3, page 511, pamphlet ed. of Laws, and act of February 25, 1863, sec. 2, page 69.....	7, 000 00

For salary of messenger, per acts of July 5, 1862, pamphlet ed. of Laws, sec. 3, p. 511, and June 25, 1864, sec. 3, p. 160...	\$1,000 00
For salary of two laborers, per acts of July 5, 1862, pamphlet ed. of Laws, sec. 3, p. 511, and June 25, 1864, sec. 3, p. 160.	1,296 00
	<u>19,196 00</u>
Appropriated for year ending June 30, 1865.....	<u>\$17,220 00</u>

CONTINGENT EXPENSES.

For stationery and miscellaneous items.....	\$2,000 00
Appropriated for year ending June 30, 1865.....	<u>\$1,000 00</u>

The estimate for the pay of the clerical force is the same as allowed by existing laws; but in view of the arduous and responsible duties performed by this force, and also in consideration of the great increase in the expenses of living, it is not a fair and just remuneration for the services performed. The bureau, therefore, asks, as a simple act of justice, that the above amount be increased thirty (30) per cent. This amount added would make the whole appropriation for the support of the bureau as follows:

Amount above estimated for, being the amount now allowed by law.....	\$19,196 00
Thirty (30) per cent. added to pay of clerks and draughtsman..	3,120 00
Making total amount which should be appropriated.....	<u>22,316 00</u>

H. A. WISE,
Chief of Bureau.

BUREAU OF ORDNANCE, *October* 18, 1864.

B.

Estimate of pay required for officers proposed to be employed on ordnance duty, for the year ending June 30, 1866.

For inspectors of ordnance at foundries:	
Two commodores.....	\$6,400
Two commanders.....	4,480
One lieutenant commander.....	1,875
	<u>\$12,755 00</u>

For inspectors of ordnance at navy yards:

PORTSMOUTH.

One captain.....	2,800
One gunner.....	1,000
	<u>3,800 00</u>

BOSTON.

One commodore.....	3,200
Two lieutenant commanders.....	3,750
Four gunners.....	4,000
	<u>10,950 00</u>

NEW YORK.

One captain.....	\$2, 800	
Two commanders.....	4, 480	
Four gunners.....	4, 000	
		\$11, 280 00

PHILADELPHIA.

One commodore.....	3, 200	
One lieutenant commander.....	1, 875	
Two gunners.....	2, 000	
		7, 075 00

WASHINGTON.

One captain.....	2, 800	
One lieutenant commander.....	1, 875	
Two gunners.....	2, 000	
		6, 675 00

MARE ISLAND.

One captain.....	2, 800	
One gunner.....	1, 000	
		3, 800 00

NAVAL STATION, BALTIMORE.

One commander.....	2, 240	
One gunner.....	1, 000	
		3, 240 00

MOUND CITY.

One captain.....	2, 800	
One gunner.....	1, 000	
		3, 800 00

63, 375 00

Appropriated for year ending June 30, 1865.....		\$42, 885 00
---	-------	--------------

Gunners, included above, were formerly estimated for by Bureau of Yards and Docks, which accounts for the difference between the present estimate and the appropriation of last year.

H. A. WISE,
Chief of Bureau.

BUREAU OF ORDNANCE, October 18, 1864.

C.

Estimate of the amounts that will be required for ordnance and ordnance stores for labor and for contingent, for the year ending June 30, 1866.

1. For heavy cannon of all descriptions, field and boat howitzers, gun-carriages, shot, shell, magazine, and laboratory stores, and equipments of all kinds.....	\$4,200,000
2. For cannon and musket powder.....	750,000
3. For the purchase of nitre.....	1,000,000
4. For small-arms, equipments, and ammunition.....	400,000

5. For labor at navy yards, besides that included above in cost of articles.....	\$1,100,000
6. For freight, transportation, books, inspecting instruments, watchmen, assistance in fabrication and inspection of guns, and contingent expenses of all kinds, including two powder tugs.	400,000
7. For fuel for ordnance foundry shops, and four ordnance steamers.....	50,000
8. For experimental purposes in ordnance.....	250,000
9. For ordnance purposes not above enumerated.....	150,000
	<u>8,300,000</u>
Appropriated for year ending June 30, 1865.....	<u>\$8,300,000</u>

In this estimate (C) the same amounts are asked for as were appropriated for the same objects last year, and it is the lowest estimate that can be safely made.

H. A. WISE,
Chief of Bureau.

BUREAU OF ORDNANCE, *October 18, 1864.*

D.

Estimate of the amounts that will be required for ordnance buildings and magazines, additions and repairs thereto, and for machinery, tools, &c., required in the same.

PORTSMOUTH.

For metal store and pattern loft.....	\$84,190
For quarters for inspector of ordnance.....	10,000
For shot beds.....	11,100
For quay walls.....	11,825
For boiler, boiler-room, and machinery.....	8,500
For grading grounds.....	6,000
For repairs of all kinds.....	10,000
	<u>141,615</u>

BOSTON.

For repairs of magazine, shell-houses, wharf at Chelsea, and powder boat.....	\$4,500
For repairs of ordnance store, shell-houses, gun and shot park at the yard.....	853
For repairs of nitre depot at Malden.....	525
For tools for gun-carriage shop.....	500
For quarters for inspector of ordnance.....	10,000
	<u>16,378</u>

NEW YORK.

For ordnance machinery.....	\$40,000
For repairs of all kinds.....	15,000
For piling, filling in, and building crib-work, on cob dock, for gun-park.....	374,000
For quarters for inspector of ordnance.....	10,000
	439,000

PHILADELPHIA.

For two stone magazine buildings.....	\$15,696
For building for general ordnance purposes, including office, store-rooms, and workshops.....	71,514
For quarters for inspector of ordnance.....	10,000
	97,210

WASHINGTON.

For repairs to buildings in ordnance yard.....	\$10,000
For repairs to branch magazine.....	1,000
For cleaning and improving ordnance yard.....	10,000
For erecting temporary buildings.....	6,000
For additional ordnance machinery.....	10,000
For continuing work on new ordnance foundry.....	50,000
For quarters for inspector of ordnance.....	10,000
	97,000

NORFOLK.

For improvements and repairs of buildings at magazine, Fort Norfolk	\$10,000

MARE ISLAND.

For brick wall to enclose magazine grounds.....	\$29,926
For continuing shell-house and powder magazine at north end of yard.....	3,000
For building a second shell-house at magazine.....	13,803
For continuing preparations for gun-park.....	5,000
For tools and machines for ordnance shop.....	5,000
For commencing ordnance building.....	12,000
For repairs to building No. 70, occupied by ordnance.....	2,553
For repairs to magazine.....	2,000
For strengthening old wharf at magazine, and building new addition.....	13,130
	86,412

H. A. WISE,
Chief of Bureau.

BUREAU OF ORDNANCE, October 18, 1864.

E.

For pay of photographer for the fiscal year ending June 30, 1866..... \$300

This appropriation is the same as made last year.

H. A. WISE,
Chief of Bureau.

BUREAU OF ORDNANCE, *October 18, 1864.*

F.

Estimate of the amounts required for the pay of clerks and others proposed to be employed in the ordnance department of the navy yards for the year ending June 30, 1866.

PORTSMOUTH.

For salary of one clerk..... \$1,200 00

BOSTON.

For salary of one clerk, (first)..... 1,200 00

For salary of one clerk, (second)..... 1,000 00

NEW YORK.

For salary of one clerk, (first)..... 1,200 00

For salary of one clerk, (second)..... 1,000 00

PHILADELPHIA.

For salary of one clerk..... 1,200 00

WASHINGTON.

For salary of one clerk, (first)..... 1,400 00

For salary of one clerk, (second)..... 1,000 00

For salary of one draughtsman..... 1,600 00

For salary of one skilful analytical chemist 2,500 00

For salary of one assistant pyrotechnist..... 1,400 00

For salary of one keeper of magazine..... 480 00

15,180 00

The above salaried clerks are required for the proper performance of the duties in the ordnance department of the different yards. The ordnance stores and accounts were formerly kept in charge of the storekeeper, but are now entirely transferred to the ordnance officer. This change of system, and the vast increase in the labors of the ordnance departments, make it absolutely necessary that persons of ability and responsibility should be permanently attached to the ordnance offices, for the performance of the clerical and other duties connected therewith. The salaries are fixed at the very lowest amounts at which it is thought possible to secure competent persons.

The salary asked for the draughtsman is about the same as the pay now received by him.

The services of a skilful analytical chemist are greatly needed in the ordnance department of the navy. For the want of such a person, the department has frequently to resort to outside parties, and often suffers for the want of chemical analysis and information, which, if furnished, would be of great service to the government. Instead, therefore, of a pyrotechnist, which has been heretofore employed, the bureau asks for a skilled analytical chemist and an assistant pyrotechnist.

The keeper of magazine has heretofore been estimated for by the Bureau of Yards and Docks.

H. A. WISE,
Chief of Bureau.

BUREAU OF ORDNANCE, October 18, 1864.

G.

Statement of cost or estimated value of stores on hand at the several navy yards July 1, 1863; of articles received and expended from June 30, 1863, to June 30, 1864; and of those remaining on hand July 1, 1864, which are under the direction of the Bureau of Ordnance.

Navy yards.	On hand July 1, 1863.	Receipts.	Expenditures.	On hand July 1, 1864.
Portsmouth	\$353,740 20	\$495,850 69	\$459,941 58	\$389,649 31
Boston	926,121 67	2,051,880 57	1,807,389 59	1,170,612 65
New York	880,070 16	2,687,104 10	2,192,533 12	1,374,641 14

H. A. WISE, Chief of Bureau.

BUREAU OF ORDNANCE, October 18, 1864.

No. 6.

REPORT OF THE CHIEF OF THE BUREAU OF CONSTRUCTION AND REPAIR OF THE NAVY DEPARTMENT, OCTOBER 17 1864.

Summary of the report of the chief of the Bureau of Construction, &c.

Statement of amounts required for work in progress and contemplated.

Remarks on the depreciation of vessels.

A supply of seasoned timber should be kept on hand.

Necessity for more building-slips.

Increase in the size of vessels.

Necessity for armored sea-going ships.

Naval constructors should form a separate organization in the navy.

List of vessels on which work has been done in the different navy yards.

NAVY DEPARTMENT,

Bureau of Construction, &c., October 17, 1864.

SIR: In compliance with your instructions, I have the honor herewith to enclose the estimates of the appropriations necessary for the purposes of this bureau for the fiscal year ending 30th June, 1866.

The estimate for the maintenance and repair of 556 vessels for the present fiscal year was \$13,775,000; which was reduced by Congress to the sum of \$11,500,000.

There are, at this time, on the navy list 675 vessels; and considering the appropriation made by Congress for the present fiscal year as the least that will suffice for the number of vessels therein designated, the sum of \$13,960,000 is necessary for the next fiscal year without any allowance for depreciation.

The depreciation of vessels in constant service is rapid; and on these 675 vessels it cannot be less than \$1,000,000, and to keep them efficient the total sum required is \$14,960,000.

The appropriation for the present fiscal year for the Bureau of Steam Engineering embraced a sum sufficient for the construction of the machinery of twenty fast steamers of the first class, and contracts have been made accordingly; but the estimate from this bureau embraced only sixteen vessels for this machinery, for the reason that not more than that number could be advantageously commenced within the fiscal year.

It now becomes necessary to provide the four remaining vessels, which the department is under obligation to supply to the contractors for the steam machinery.

It has, on mature consideration, been decided that two of these vessels be, in the space occupied by the guns, covered with a thin iron armor to resist shells, but not of sufficient weight to interfere with the nautical qualities of the vessels; and for these four vessels it is estimated the sum of \$2,240,000 will be required.

In addition to these sixteen vessels, the department has made arrangements for the machinery for two fast spar-deck steamers to mount sixteen heavy guns, and there will be required for them \$1,180,000.

The machine shops in the navy yards being now in a condition to manufacture steam machinery with much advantage, it is proposed, in order to meet one of the wants of the service, to build eight fast vessels of a small class, in which the machinery now being constructed in the navy yards will be erected. For this purpose the sum of \$1,600,000 is required.

Experience having shown very nearly the kind of vessels best adapted for service on the western waters, and, where they are so liable to get aground, the wood vessel probably possessing the greater power of endurance, it is recommended that a few such vessels be built, to be properly protected with iron; for which it is estimated the sum of \$1,600,000 will be required.

For the completion of the four iron-clad vessels now building in the navy yards, each mounting four fifteen-inch guns in turrets, the sum of \$1,100,000 will be required.

The necessity for chartering vessels for sudden emergencies is constantly arising; also, many of the prize vessels being, with some small alterations, well suited for naval purposes, are with advantage purchased. There will be required for these purposes the sum of \$1,250,000.

For extra labor and expense in repairing vessels abroad the sum of \$600,000 is required; but should the fleets abroad be increased, it is probable a larger sum will be needed.

For the transportation of stores and materials and for incidental expenses the sum of \$75,000 is required.

It is well understood, and ought to be kept in view, that an estimate for the repairs of ships in service, embracing an infinite number of different objects, cannot be made with anything like the exactness that is to be expected for permanent works on shore. It is impossible to foresee the condition in which the vessels may return to port in eighteen months or two years hence, and experience constantly shows that the cost of the repairs exceeds the estimate made after the most careful examination of the vessel.

The old vessels and the purchased vessels are in various stages of depreciation and decay, and all have been built and repaired as rapidly as possible, both by contract and in the navy yards, using green and unseasoned materials.

Could the new vessels have remained on the stocks for a year or eighteen months, their durability would have been much increased; but that could not be permitted by the necessities of the case, and in a year or two will be felt the full weight of this evil, for they will decay with great rapidity.

The demand for materials for the construction and repairs of the vessels of the navy for the past two or three years has absorbed all the supplies that were in the yards. The appropriations for years past have made no provision for supplies beyond the want of the then passing year, and there could be thus no accumulation of timber or other materials for future wants; neither do the estimates of the present year, nor those now presented, contemplate more than the actual pressing need.

There has been in this way an expenditure of a relatively small sum of money each year, having an appearance of economy, but in reality the government has suffered a positive loss in not having a supply of seasoned timber, nor a proper assortment on hand to prevent waste.

For many years no white oak timber was received for naval purposes that had not grown within a short distance of salt water, and that had not been cut at a particular season of the year; but latterly it has been found impracticable to adhere to these requirements, and timber has been used that has grown in all sections of the country and cut at any time. Our supply of southern yellow pine timber has been exhausted, and other kinds are being used to supply the deficiency, and among them the American larch or hackmetack from the State of Maine.

To meet this want of material it would require about \$1,000,000 per year for three or four years to accumulate a supply of timber, much of which would need protection in ventilated sheds. These sheds would become prominent features in a navy yard, but might not be ornamental. If space would admit of these sheds being laid north and south, so that the sun might shine alternately

on both sides, this simple arrangement would materially contribute to the proper seasoning of the timber.

It is taken for granted that the United States must for the future be a great naval power, and maintain powerful fleets, for which preparations must be made, and the navy yards must become in reality workshops and manufactories, mainly for building and equipping ships and their steam machinery. The space now occupied as gun parks, and for the storage of provisions, will be needed for timber-sheds, work-shops, machine-shops, and saw-mills, all of which should be convenient and near the ships; and the provision stores should be used for the numerous objects required in the equipment of vessels.

The experience of foreign nations has led them to remove these departments from the localities where the ships are built, and in which so much space is required to spread out timber that proper selections can be made.

The Navy Department having neither the materials nor the conveniences for building all the vessels wanted in the navy yards, has had recourse to private enterprise, but not in all cases with equal success.

The private builders have generally but small supplies of materials on hand, and are compelled to use green timber; and it is not to be expected that the same care will be taken in the selection of materials, or in accuracy of workmanship. There has been much competition for this work. The offer of the lowest responsible bidder has been made the standard of price, and the builders expect to make a profit from their business.

It is for the interest of the government to build its own vessels, as it can, by purchasing its materials in large quantities, obtain them on better terms than private parties buying small quantities, and the inspection can be more rigid. It is under no charge for rent, insurance, and taxes, that press heavily on private individuals, and that sum which would be the profit of a contractor could be expended in the excellence of the work and the quality of the material, rendering the ship more durable and efficient.

In general, workmen prefer employment from the government for the same reason that all large establishments have an advantage over small ones, there being more constant employment, and the greater subdivision of labor makes them more skilful in particular parts, so that a suitable position is assured for all, and they have, or should have, a certainty of prompt payment.

With proper regulations there is no doubt but the government could get as much labor for the pay as private parties can succeed in doing, and there can be no motive to use inferior materials or workmanship.

It is earnestly recommended that measures be taken to increase the facilities in navy yards by the construction of additional building-slips, and providing for the accommodation of materials of metal and of timber.

For many future years wood will be the required material for ordinary cruising vessels; but the largest classes of our iron-clad steamers, though they may be temporarily constructed of wood, must finally be built of iron, for the size and strength now needed for such vessels can only be obtained with that material.

With the introduction of steam, vessels of war have much increased in size, on account of the space as well as the weight of the machinery and coal to be carried; and now there is a still further increase demanded for the weight of armor plating. The speed which is required can only be obtained by making the vessel sharper, and increasing the steam power, both of which involve additional weight, and an increase in the size of the vessel. These can only be combined in vessels of very large size, and such vessels are so costly that only the most durable materials should be used.

For the protection of our coasts and harbors we are probably well prepared; but we have only three vessels that can pretend to cope with the sea-going iron-clad vessels of European nations, and these have not yet been tried. It is a

problem to be yet resolved, whether a large steam vessel with her deck a foot or two above water, and without sails, can be effective and use her guns as a cruising ship. Experience has shown that as ships increase in dimensions and weight, there must be a certain relative portion above the water—that is, the height of the guns from the water should be increased; but this may, to some extent, be modified by making sacrifices in some other qualities.

The accounts we have of the performances of the iron-clad European vessels, if to be relied on, show that the elevated position of their armor plating has not seriously affected the motion of the vessels, and some of them are represented as being easier than ordinary vessels. Their large dimensions have much influence in this; but our principal harbors do not permit us to have so great a draught of water as European vessels have, which is stated to be from twenty-six to twenty-seven feet.

Until such time as it becomes the policy of the government to build iron-armored vessels for sea service—and, whenever commenced, it will require some years to have them in sufficient number to keep an enemy from our coast—we must have recourse to plating wood vessels, of which the first cost may appear less, though it is certain to be more expensive in the end.

Unless we have armored sea-going ships we must give up the expectation of engaging our foes on the ocean, and must limit our operations to attacks on their commerce with fast and light-armored vessels.

From the delay we now experience in repairing our vessels, in consequence of our limited number of dry-docks, we would, in a foreign war, be much embarrassed. The accidents now are slight, and can be quickly repaired; but the injuries from a naval action would require a long time to repair, and the single dock in each yard would soon be filled. This subject seems to be one for timely consideration.

In connexion with the subject of building ships in the navy yards, it may not be improper to refer to the naval constructors, who are the principal agents of this bureau in the navy yards. These persons have performed their duties with great skill and industry, showing ability fully equal to the occasion, and have, by many years of faithful service, earned a respectable connexion with the naval service. This has long been accorded to surgeons, paymasters, and steam engineers. These constructors are few in number—only nine—and can only look to the department for a proper recommendation in their behalf. The true interest of the service is believed to be involved in their having a separate and creditable organization.

All the sciences that have application to naval matters have between them certain necessary relations, and there is a common fund of theoretical knowledge which the naval officer, the steam-engine builder, and the ship-builder, equally possess. But in the daily practical application of these general principles which they are called on to make, there are numerous essential differences forming each into a separate class. If any members of these separate professions should temporarily undertake to perform the duties of the others, they must necessarily, for want of practice, be less capable than those who have made that particular subject the special study and business of their lives; and if they continue at such duty, they cease to be members of their original profession, and must become very inefficient members of either.

There is no naval power in which all the branches are not made a specialty and kept separate; and in private life we find the same principle of action.

The accompanying list of vessels on which work has been done at the several navy yards will show the work these persons have done within the last twelve months.

In closing this report, I deem it but just to the clerks employed in this bu-

reau to urge in their behalf, in consequence of the past and present high prices, a recommendation for an increase in their compensation.

I have the honor to be, very respectfully, your obedient servant,

JOHN LENTHALL, *Chief of Bureau.*

Hon. GIDEON WELLES,
Secretary of the Navy.

No. 1.

Estimate of the amount required for the expenditures of the Bureau of Construction and Repair, for the fiscal year ending June 30, 1866, as per act of July 5, 1862, pamphlet form, section 3, page 511.

For salary of chief of bureau.....	\$3, 500
For salary of one chief clerk, (fourth class,).....	1, 800
For salary of one draughtsman.....	1, 400
For salaries of five clerks, (second class,).....	7, 000
For salary of one additional temporary clerk, (second class,) submitted.	1, 400
For salary of one clerk, (first class,).....	1, 200

For salary of one messenger	\$840	
For 20 per cent., as per act of June 25, 1864, (less excess over \$1,000)	160	
	<u> </u>	\$1, 000
For salary of one laborer	600	
For 20 per cent., as per act of June 25, 1864	120	
	<u> </u>	720
		<u> </u>
		18, 020
Contingent expenses		1, 000
		<u> </u>
		19, 020
		<u> </u>

No. 2.

Estimate of the amount required for the construction, repair, wear and tear of vessels in commission, purchase and charter of vessels, armored vessels, and incidental expenses, for the fiscal year ending June 30, 1866.

Maintenance, wear and tear, repairs and stores, for 675 vessels...	\$14, 960, 000
For the completion of 4 fast steamers	2, 240, 000
For the construction of 2 fast spar-deck steamers	1, 180, 000
For the construction of 8 fast vessels of small class	1, 600, 000
For the construction of vessels on the western waters	1, 600, 000
For the completion of the 4 heavy armored iron-clads in navy yard	1, 100, 000
For the purchase and charter of vessels for naval purposes	1, 250, 000
For extra labor and expense abroad	600, 000
	<u> </u>
	24, 530, 000
Incidental expenses, viz: transportation of materials, postage, drawings, &c	75, 000
	<u> </u>
	24, 605, 000
	<u> </u>

No. 3.

Estimate of appropriations, under the cognizance of the Bureau of Construction and Repair of the Navy Department, required for the service of the fiscal year ending June 30, 1866.

Heads of appropriation.	Estimate of appropriations required for the service of the fiscal year ending June 30, 1866.	Estimate of balances of appropriations unexpended on June 30, 1865, which may be applied to the next fiscal year.	Appropriations for the fiscal year ending June 30, 1865.
1. Civil and contingent expenses of the bureau...	\$19,020		\$17,340
2. Maintenance, wear and tear, repairs, and stores for 675 vessels.....	14,960,000		
Repair and maintenance of vessels of the navy, labor, materials, and stores.....			11,500,000
3. Completion of four fast steamers.....	2,240,000		
Completion of 16 fast steam screw sloops-of-war.....			7,200,000
4. Construction of two fast spar-deck steamers...	1,180,000		
5. Construction of eight fast vessels of small class.	1,600,000		
6. Construction of vessels on the western waters.	1,600,000		
Purchase, construction, and repairs of vessels, material, and labor for western waters.....			4,000,000
7. Completion of four heavy armored iron-clads in navy yards.....	1,100,000		
Completion of armor-plated vessels.....			3,600,000
8. Purchase and charter of vessels for naval purposes.....	1,250,000		
Purchase and charter of vessels for naval and blockading purposes.....			3,000,000
9. Extra labor and expense abroad.....	600,000		600,000
10. Incidental expenses, viz, transportation of materials, postage, drawings, &c.....	75,000		75,000
Total.....	24,624,020		29,992,340

Opened in presence of—JOHN LENTHALL,
A. B. FARWELL,
GEORGE WILLIAMSON SMITH.

NAVY DEPARTMENT, BUREAU OF CONSTRUCTION AND REPAIR, February 22, 1864.

distances varying from one to three hundred, and never beyond four hundred yards, under ordinary circumstances; but there is upon record an instance in the Crimean campaign where the Russian frigate Vladimir used grape from her 10-inch guns at a distance of 1,200 yards, the elevation being twenty-three degrees, with terrible effect upon the French reserves, moving to the assault of the Malakoff. Similar effects have resulted during the present war from the use of grape from navy guns at long range; and in the recent memorable affair in Mobile bay, the guns of the rebel forts were completely silenced, and the embrasures cleanly swept by the fire of grape and canister from the guns of the passing ships; thus settling the question of the ability of wooden ships to pass a fort even at close range.

GUNPOWDER AND NITRE.

In my last annual report the department was informed that, in order to meet the wants of the service, it had been necessary to order no less than 2,980 tons of gunpowder during the period elapsing from March 1, 1861, to the date of that report, and that this large amount was readily obtained from the several powder-mills in the loyal States, only 44 tons of it having been purchased from other sources.

Since then the consumption of this indispensable article by our squadrons in service, and for experimental practice, has compelled the purchase and manufacture of 1,325,000 pounds of powder, and 575 tons of nitre, 500 tons of the latter being *domestic*, and supplied entirely from the New Haven chemical works, the only establishment that has yet undertaken its manufacture for the navy.

The number of mills engaged in the fabrication of powder for the navy has been diminished by one since my last report, so that the only present sources of supply are the works of Messrs. Dupont, and those of the Schaghticoke, Hazard, and Union Powder Companies. Their product has, however, been quite sufficient to supply the demand, although frequent explosions have occurred to retard their operations. The excellence of their powder is well known, the manufacturers being most zealous in their endeavors to satisfy the standards of strength, density, and hygrometric qualities fixed by the bureau.

Uniformity in the size of grain in the different grades of powder being most essential, a system of sieves was devised in 1852, to regulate the granulation, and prevent too great an admixture of small and large grains, which, in our service, is not believed to be favorable to the proper development of strength. Until the introduction of rifled cannon, and the larger calibres of smooth-bores, the navy powders were divided into two classes—cannon and musket—and these sieves answered the purpose for which they were intended; but experiments having shown that a sufficiently high velocity, with less proportionate strain upon a rifle gun, could be obtained with powder of a larger grain than the ordinary cannon powder, the kind known as No. 7 was finally adopted. This size of grain, however, could not be so well regulated by the sieves then in use, and anomalies were constantly occurring. In order, therefore, to reconcile the differences, and at the same time simplify as much as possible the manufacture, the question of changing the sizes of the holes in the sieves, with the view of approaching more nearly the *natural* granulation resulting from the process of manufacture, was submitted to the powder men and ordnance experts. Their decision was unanimous in favor of the change, and the bureau accordingly gave the necessary directions, at the same time ordering the nomenclature of the navy powders to be in future, rifle, cannon, and musket.

From this change the most beneficial results are anticipated, inasmuch as it facilitates the manufacture, and reduces the risk of loss to the makers, and consequent delay to the government, which is apt to arise from a want of conformity to the standard granulation.

The use of the *mammoth* grain in navy guns has been entirely abandoned; experiment having shown that in the XV-inch guns, for which it was specially designed, a better result is obtained with thirty-five pounds of the ordinary cannon than with fifty pounds of the mammoth powder, and this charge (fifty pounds) of the latter cannot all be burned in the gun.

The experience of the past indicates that, even with the limited number of mills in the loyal States, an ample supply of powder can be manufactured by them, *provided* the nitre is attainable. To depend, however, for a supply of this article from abroad, or of even the necessary bases from which it is prepared, is, to say the least, highly injudicious; for in case of a foreign war, it is certain that the supply would be immediately cut off. I feel it my duty, therefore, to bring the subject again to the notice of the department, and earnestly suggest that Congress be requested to make some special provision by law for the encouragement of the production, throughout the country at large, of this prime essential to our national defence. The process is simple, and fully within the means of our farmers and citizens generally, and the product might be received, at a fair valuation, in lieu of a portion of the taxes.

It is to be regretted that the example of the New Haven chemical works has not been followed by other establishments, as these works have succeeded in making an excellent article of domestic nitre, from which very good powder is now prepared for the navy; but an impetus of some kind is wanted to induce a more extended manufacture, and this it is believed will be best given by judicious legislation on the part of Congress. As regards the prospective value of this business, it should be remembered that the expenditure of nitre is much greater in time of peace than during war—vast quantities being consumed in the arts and in civil engineering. This may be inferred from the following statement of the annual consumption in the United States since 1854, as obtained from the reports of the principal brokers in Boston:

1854.....	90,000 bags.
1855.....	105,000 "
1856.....	75,000 "
1857.....	80,000 "
1858.....	70,000 "
1859.....	111,000 "
1860.....	64,000 "
1861.....	105,000 "
1862.....	89,000 "
1863.....	84,000 "
1864 (estimated)	60,000 "
the consumption up to the present date of 1864 being about	40,000 "

The attention of the bureau has also been invited to the results, said to have been obtained recently in Europe, with gun-cotton prepared in a peculiar manner, and it is ready to make trial of its properties, as compared with gunpowder, whenever the samples ordered are received. One fact, however, connected with the use of this material is certainly an objection to its general use, and that is the liability to explode at uncertain and low temperatures.

GUN-CARRIAGES.

There is probably no part of the ordnance equipment of our navy that has been so little changed from the old designs as the ordinary wooden broadside carriage. In all its essential features, it is the same to-day as in the year 1750. In fact, the only modifications consist in the removal of the rear trucks and substituting a vertical friction-piece on the bracket to resist the movement of recoil, and the appliance of a breast sweep, as a pivot, in lateral training. The tests of service have not indicated any other changes. The material, however,

is objectionable on account of its inevitable decay, liability to warp and shrink, and the disabling effects of its flying splinters when struck by shot or shells. Hence, in my report of last year, the subject of *iron* carriages was adverted to, and the attention of the department called to the results obtained with the iron carriages of the New Ironsides. Since then a broadside carriage of iron has been constructed and subjected to proof firing, at the ordnance yard in this city; and the bureau is convinced, from this experiment, that for all practical purposes, and especially on the score of economy, carriages made of iron can be safely introduced. It has accordingly ordered the construction of fifty IX-inch carriages, and also a sufficient number to mount the improved class of 8-inch and 32-pounder guns. This will not create a waste of the stock of wooden carriages, as those of IX-inch will be placed in the batteries of new ships, and new carriages are in any case necessary for these 8-inch and 32-pounder guns, whose dimensions differ from the old models.

During the recent naval battles in Mobile bay, a chock, designed by Captain Alden, to assist in checking the recoil of the IX-inch guns, under the action of heavy charges, was tried on board the Brooklyn, and has been recommended for general use. But as a rule it is best to avoid a complication of details in the manœuvre of cannon on board ship, and additions should only be made for special occasions.

The pivot carriages, as at present arranged, seem to meet fully the requirements. The recoil of the guns is easily controlled by the compressors, while the movement in training is steady, and readily performed. Wood for these carriages is also quite as objectionable as for those of broadside, and the bureau contemplates changing them for iron ones upon the plan of those on board the Ironsides, with, however, some important modifications, especially in the manner of compressing. The detail of manufacture in the broadside carriage is quite simple, and not more expensive when made of iron than of wood; but in the pivot carriage the difference in cost is somewhat in favor of wood, and the exorbitant price of iron has hitherto prevented the bureau from making the necessary purchases, while the stock of timber on hand for these carriages is large, and cannot be economically used for other purposes, as it is all cut to dimensions.

The iron-carriages of the monitors still continue to work satisfactory, and are, no doubt, strong enough to sustain any amount of protracted firing.

No changes have been made in the details of the carriages for boat and field howitzers, and it is very doubtful whether any modifications can be suggested which would give better results. In general, the plan may be considered perfect, and its excellence is admitted by other navies.

From the above statements it will be seen that the guns of our navy are properly mounted on carriages specially adapted to each particular class; but much difficulty is sometimes experienced in placing suitable guns on board a given ship, for the want of sufficient room. The custom has been to build a ship, apportion the space for provisions, water, engine, boilers, and coal, cut the hatches of every imaginable size from one end of the decks to the other, and then call upon the bureau for an armament suited to the tonnage and size of the ship; and until recently no detail has ever been modified to accommodate the wants of the ordnance. Hence the carriages must either be shortened so as to work clear of the hatches, or fewer guns, or guns of lighter calibres and shorter carriages, must be provided, to the manifest detriment of the power of battery. The only corrective of this evil is to view the man-of-war as a huge gun-carriage, and to make every other question subordinate to that of ordnance and its accommodation. That is to say, whatever may be the tonnage of the ship about to be built, a certain proportion of this tonnage must be devoted to the guns and their appliances; and after the calibre and weight of battery, according to that proportion, have been decided upon, sufficient deck-room should be provided

for its carriages, as well as proper magazine and shell-room; otherwise, the order of things is reversed, and the power of the ship proportionally lessened.

To obviate these difficulties as far as possible, the bureau has prepared for general use a set of diagrams showing the minimum space required for working each class of gun; and these have been approved by the Bureau of Construction for future guidance in arranging the decks so as to receive the proper batteries.

THE ORDNANCE WORK AT THE SEVERAL YARDS AND STATIONS.

PORTSMOUTH, N. H.

The supervision of the work at this navy yard is at present intrusted to Captain J. R. Goldsborough, who relieved Lieutenant Commander Sicard. It is still confined principally to the construction of carriages, in which business it probably excels the other stations; and although the facilities for preparing the ordnance equipment of a ship are moderate compared with those of Boston or New York, still they are found to be amply sufficient for the limited number of vessels usually prepared for sea at that place.

At the suggestion of the bureau, the department established some time ago a battery on Seavy's island for the defence of the harbor, manning it with contrabands. The training of these men as artillerists will no doubt prove advantageous, and it would perhaps be well to extend the plan to other localities along our northern seaboard, not only as a measure of harbor defence, but as schools of practice from which well drilled men may be obtained for service on board ship.

BOSTON AND NEW YORK.

At these navy yards the bureau has its principal depots of ordnance and ordnance material and stores for the supply of our squadrons, together with the most enlarged facilities for the preparation of batteries. Although the wharves are constantly crowded with ships of all rates, no delay has ever been permitted to occur in filling their requisitions; for the manufacture and preparation of shot and shells, of gun-carriages with their appliances, and all the manifold details of equipments and stores, is unceasingly going on, so that it not unfrequently happens that the battery of a new ship is ready for her before she is launched.

It is also most creditable to the ordnance establishments of these yards that in no instance have they failed to meet the very heavy demands constantly made upon them for supplies, not only from our fleets, but very often from the other yards and stations, entailing a great amount of labor in forwarding by rail and water.

At New York, however, a greater amount of ordnance work in the preparation and shipment of stores, and the outfitting of ships, is carried on than in any of the other navy yards, and consequently a larger space is required, not only for these purposes, but also to park the multitude of guns belonging to the batteries of vessels, or needed as a stock. To meet this necessity, and as the old gun park has been occupied by the Bureau of Yards and Docks for the erection of large general storehouses, this bureau has, under the recent authority of the department, commenced the filling in of the unoccupied marsh adjacent to the cob-dock and opposite Williamsburg, making it in fact an extension of this dock in a southerly direction. When this great work is completed, the bureau will there have ample room for the accommodation of all the workshops and storehouses needed for ordnance purposes, and besides a park for 2,000 cannon, with all the requisite appliances for sighting and otherwise fitting them for

service. This will completely relieve the navy yard proper of all ordnance work, and leave it entirely unembarrassed in the prosecution of other business.

The money appropriated at the last session of Congress for powder tugs has been used for that purpose, and the bureau has now two fine vessels built at Portsmouth, which perform excellent work, not only as powder boats, but also in towing and other dock-yard service.

PHILADELPHIA.

The limited space occupied by this navy yard, although situated in the greatest manufacturing city of the United States, has necessarily restricted the ordnance work to the simple preparation of the batteries of ships. It cannot, therefore, strictly speaking, be considered a manufacturing depot for ordnance stores; but within its capacity it has never failed to respond to the calls made upon it, and the bureau is well assured that, if at any time an extension of room in this yard is possible for ordnance purposes, the eminent skill of the artisans of Philadelphia will be developed in the production of work unexcelled by the mechanics of any other locality. This yard has, moreover, the advantages of an abundance of coal and iron near at hand, with a large foundry at Reading to supply the guns, and a well-located magazine at Fort Mifflin for powder and shells; while a few miles beyond the magazine, on the river line, are the important powder mills of Messrs. Dupont & Co., from whence to draw supplies.

WASHINGTON AND OTHER ORDNANCE DEPOTS.

As a special establishment, embracing not only the casual outfit of a vessel, but also the manufacture of boat guns, carriages, laboratory stores, and the highly important experiments upon every conceivable idea of ordnance improvement, the depot in this city, now generally known to the service as the "ordnance yard," is in some respects the most important.

Organized under many difficulties, and with exceeding labor and perseverance, by my predecessor, the distinguished officer at present in command of the South Atlantic squadron, it has not only furnished the standards which govern the work at all the yards and foundries, but it has also proved the safeguard of the service against the nostrums and visionary improvements of would-be inventors and speculators. Its experimental batteries and records are the crucial tests to which we submit every one of the great questions which command at any time the attention of artillerists at home and abroad; and the satisfactory manner in which they are solved is exemplified by the condition of our naval armaments. But especially is the service indebted to this depot for the high excellence of those indispensable details of ordnance embraced in the products of its laboratory, such as fuzes, primers, percussion caps, fire-works, and small-arm ammunition, besides all the ammunition for boat and field howitzers.

The limits of this report will not permit an extended recital of the various resources and work of this interesting and important station. Nor is it necessary, perhaps, for their character is well known to the department and the country. The estimates for its support are considered as most essential, and should rather be increased than diminished.

During the past year the naval depot at Fortress Monroe has been transferred to the naval magazine at Fort Norfolk, that building, with its appurtenances, having been finally rendered up by the army to the navy for that purpose. In conjunction with the frigate *St. Lawrence* as a store-ship, it now remains as the regular depot for supplies of the Atlantic Blockading Squadron, under the immediate command of Commander D. Lynch. For the ordinary requirements of the squadron it is found to be amply sufficient; but for extended operations the bureau has been compelled to resort to the dangerous and extremely expensive arrangement of chartered vessels as store-ships.

At Baltimore sufficient provision is made to supply vessels arriving at that station for casual repairs; and for the Mississippi squadron a depot is established at Mound City, Illinois, to which are forwarded all needful articles for distribution.

For our squadron in the Pacific ocean an ordnance storehouse is located in the navy yard at Mare island, California, whither consignments are made from time to time, as opportunities offer. This course is necessarily adopted, for the lack of proper facilities in that quarter for the manufacture of stores and munitions of war. There are now, however, on hand at Mare island guns enough to equip, if necessary, a large fleet, together with munitions of war for naval purposes of all kinds.

To meet the wants of our squadrons in the South Atlantic, East and West Gulf, ordnance supplies are always to be found at Port Royal, Key West, Pensacola, and New Orleans, ashore and on board ship; and every effort is made by the bureau to make the system of supplies as perfect as possible, and to avoid the enormous expense of chartered vessels on demurrage.

If the permanent maintenance of our present fleet stations is contemplated, I would respectfully urge upon the department the propriety of recommending to Congress an additional special appropriation for an ordnance depot at the rendezvous selected for each fleet.

In concluding this part of my report, I feel it my duty to mention favorably to the department the officers who have been employed upon ordnance duty at the several navy yards and stations. They have all faithfully performed the tasks assigned them, and assisted the bureau in the heavy responsibilities resting upon it, each according to his respective station.

At Portsmouth, New Hampshire, Captain Goldsborough has been in charge during the past year; at Boston, Commodore Missroon; while at New York several changes have been made since Captain Drayton was assigned to duty as fleet captain of the West Gulf squadron; at present the office is in care of Captain Gansevoort.

At Philadelphia the duties are assigned to Commodore Hoff; and the management of the ordnance yard, together with the conduct of all experiments, and the very important duty of revising the "ordnance instructions," are confided to Lieutenant Commander Jeffers.

At Mound City, the reception and distribution of supplies is intrusted to Captain Stanley; and at New Orleans, as the depot of the West Gulf squadron, to Acting Master Starrett, an officer of great zeal and activity.

Finally, it is but just that the bureau should pay a passing tribute to the memory of a most valuable officer, Gunner John Clapham, recently deceased. For many years he continued to govern and manage the naval laboratory in this city with skill and success; and was most remarkable for the conscientious manner in which he discharged his dangerous and important duties. The bureau has lost a most efficient assistant, society an honorable and Christian member, and the country a loyal citizen and devoted servant.

SMALL ARMS.

These, on account of the limited number used in the navy, and the rather infrequent occasions for their employment in sea engagements, have usually been considered as secondary in importance to the great guns. This is perhaps natural, if the operations of single ships or squadrons were confined to battle on the high seas alone, ship against ship, or fleet against fleet. But in the peculiar warfare of the present rebellion, where the small-arm is constantly brought into play during boat expeditions, and the contingent co-operation of seamen and marines with the army, it rises in importance, and commands the attention quite

as much as that more ponderous and terrible exponent of national power, the cannon of battery.

Impressed with this view of a subject which forms so important a part of the economy of ordnance, the bureau has diligently pursued its inquiries in every direction for the purpose of obtaining an arm which would combine the several qualities of range, accuracy, and sufficient weight of ball, together with endurance, simplicity in use, and perfect adaptability to the varied circumstances under which it would be most likely to be brought into action. The difficulty in making a good selection, however, has not been found in the paucity of models, for these have been presented in almost every conceivable form that the ingenuity of inventors could design, each claiming certain extraordinary qualities for his plan over all others. The embarrassment, in fact, has arisen from this very multitude of designs.

I here allude, of course, to breech-loaders, and those of the lighter description, as the carbine or short rifle; for the muzzle-loading musket, whether smooth or rifled, is easily obtained, there being but the single question of calibre to be decided in making a choice for use on board ship; and we have now in service 10,000 muzzle-loading rifled muskets of the heavy calibre of sixty-nine hundredths of an inch, known as the Plymouth musket, besides a large number of army pattern, calibre fifty-eight hundredths of an inch. These, with a few smooth-bore army muskets and captured Enfield rifles, constitute the stock of muzzle-loaders.

The advantages of a muzzle-loading musket of heavy calibre, with sabre bayonet attached, are best experienced in army operations, provided they are used by veterans well drilled and accustomed to deliver their fire with precision. But for naval purposes it may well be questioned whether it is not better to abandon the muzzle-loader, with its paper cartridge and percussion cap, and substitute therefor some well-conditioned breech-loader, with a barrel of convenient length, and the metallic cartridge. This subject is now, in fact, engaging the attention of military men everywhere; and there are strong indications that the current of professional opinion is setting against the muzzle-loader with so much force as to threaten its removal entirely from, at least, a very large proportion of our regiments.

The points of advantage gained by the breech-loader are—

1. Facility of loading.
2. Certainty and rapidity of fire.
3. Lightness, and consequently less weight to be carried in marching.
4. Impossibility of multiplying the loads under any circumstances.

Assuming that the piece selected is made accurately in its different parts, and the ammunition fixed in metallic cartridges, the rim of the base enclosing the percussive fulminate, the first and second of these advantages are self-evident, while the third is of course governed by the calibre. The fourth is no less self-evident, for the cartridge of the breech-loader cannot be entered at the muzzle, only one can be placed at a time in the opening at the breech, and in the event of a failure to explode, generally the cartridge is withdrawn by the movement of cocking and opening the breech. Singularly enough, the lesson of one of the greatest battles of this war proves how immensely important this last-mentioned advantage of the breech-loader really is.

Upon the field of Gettysburg, after the battle, an immense number of muzzle-loading arms were picked up, both of our own and the rebel soldiery. Nearly all of these were found to be loaded, and this of itself is, perhaps, not to be wondered at; but the curious fact was discovered, that about one-half of the number loaded contained *two* loads each, one-fourth from *three* to *ten* loads, and the remainder one legitimate load; and in one or two instances as many as 32 and 42 bullets were found in the barrels! (See note B.)

There was excessively hard fighting where these guns were found, it is true;

but to what are we to attribute this most remarkable waste of effective strength on the battle-field? Certainly we are led to believe, while reflecting upon this extraordinary disclosure, that the calculations of Gassendi and Piobert, as to the number of cartridges required to kill one man in battle, are by no means erroneous; the former asserting that of 3,000 balls (fired) only one ever hit; the latter, that from 3,000 to 10,000 cartridges were usually expended in killing or wounding one man. But these calculations are, no doubt, based upon the number of cartridges actually fired; such a thing as repeatedly loading and never firing could not have been suspected by these high authorities while engaged in analyzing the results of modern wars. The discovery of this inherent and certainly mortifying defect in the simple use of the standard arm of infantry regiments has been left to the experience of a people celebrated for their skill in all the sciences and arts, and in none more so than that of war and its manifold details.

By reference to my last annual report, the department will see that this question of providing a suitable arm for naval purposes has been one of great concern to the bureau. Primarily, I have contemplated the use of a single calibre alone; and this idea, if practicable, will necessarily do away with the borrowed and captured arms now on hand; but the advantages gained will more than compensate for the seeming loss. I desired, also, to extend the system so as to include a belt-pistol for boarding purposes, because the revolver, in the hands of seamen, is a most useless and, generally speaking, dangerous thing. For these reasons, the matter has been constantly kept in view during the past year, and I am gratified in being able to say that my exertions in this direction bid fair to be crowned with success. For a carbine (short rifle) and a breech-loading pistol of the same design and calibre have recently been presented, which meet all the requirements of effective weapons for navy use more fully than any I have yet seen. They are about to be subjected to trial, and if the results are satisfactory, a proposition to adopt them as the exclusive small-arms of the naval service will be submitted for the consideration of the department. In these, only the metallic cartridge will be used; all the doubts as to its safety, economy, durability in transportation, and security from dampness, having long ago been settled and removed by the tests of actual service. Indeed, the day appears to be not far distant when no other kind will ever be used; for the readiness with which the breech-loader is charged with these cartridges, even while the soldier is advancing, enables him to keep his eye fixed upon the objects of fire, let them change ever so rapidly in distance or direction; while to the sailor, either aloft, on deck, or in the casual requirements of action, in boats approaching the beach, or moving between the banks of hostile streams, the advantages of this detail are inestimable. For instance, taking the last-mentioned contingency as an example, he has nothing to do, in the event of discovering an enemy on either side, than to trail or throw his oar athwartships, fire, reload, and resume his oar or continue his fire without rising or moving from his seat.

GUNNERY SHIP.

Again the bureau respectfully but earnestly recommends to the consideration of the department and of Congress the absolute necessity of providing at once for the establishment and maintenance of a thoroughly organized gunnery ship—an institution specially and wholly set apart for the training of officers and men in gunnery and all its details. The necessity of this measure is so well understood and appreciated by the service at large, that it needs no further special recommendations than are contained in my last annual report. No matter how perfect may be our preparations, or how elaborate and precise the methods we pursue in arming and equipping our naval batteries, after all we

must depend in the hour of battle almost entirely upon the individual intelligence of the captains of guns. Hence a school of practice is needed, in which these men may be thoroughly and efficiently drilled and qualified for the important duties of seamen gunners. *Well enough*, as demonstrated by the results of naval operations during the existing rebellion, is a good motto; but *better still*, is a far more cheering and welcome inscription to be written upon the battle-flags of the future.

The text-books, the teachers, the implements of science, the examples of the present and the histories of the past, are all at hand, and available for the foundation and continuance of a system of education for our seamen, which will result in incalculable benefit to the country; and it only requires the enlightened legislation of Congress to give life and certainty to its organization. I do not pretend to give the details here, but only urge the initiatory appropriation.

To counterbalance as far as possible the want of some such school of practice, the bureau has endeavored to make the Ordnance Instructions for the navy as comprehensive, and at the same time as simple in their details, as the manifest wants of the service indicated; and this more especially in the exercise of the great guns, with its concomitant system of supplies of powder, shells, and shot. Submitted to the navy in a revised and extended form during the past year, as containing all the instructions deemed necessary to prepare for and engage in battle, the bureau awaited with much anxiety the result of the first general action, in order to know how much dependence could be placed upon the rules laid down in this most important text-book.

Therefore, immediately after the affair in Mobile bay, the bureau addressed a letter to Rear-Admiral Farragut on the subject, requesting him to direct the commanders of the ships engaged to report "the result of the firing, and to state, freely and fully, whether they discovered anything in the service of the guns, magazines, shell-rooms, or in the projectiles used, which was in the slightest degree imperfect or requiring modifications."

The answers of the gallant men who participated in this most remarkable of all naval achievements are now before me; and it is with no little pride and gratification that I place upon the record of this official report the following extracts:

In the opening paragraph of his reply, Captain Drayton, fleet captain and commanding the Hartford, says: "I beg to state that, after careful inquiry, I can discover few things which would be improved by a change, and those few were not particularly brought out on that day," (5th August.) He then calls the attention to several minor matters of detail requiring modification—all of which, emanating from such a source, will be attended to—and closes his paper with the following sentences: "In conclusion, I beg to say that, during the fight of the 5th August, ammunition was supplied in sufficient quantities without the least difficulty, and that there was not one instant's delay in the firing from any cause connected with faulty materials, or confusion anywhere; from which it may be inferred that both drill and ordnance appliances and supplies are all-sufficient for every exigency."

Captain Jenkins, of the Richmond, after stating the number of each kind of projectiles used on board his ship "in the actions with Fort Morgan and its outlying batteries, and with the late rebel iron-clad steamer Tennessee, on the morning and forenoon of August 5, 1864," says: "The heavy concentrated fire into this fort and batteries from the three leading ships (Brooklyn, Hartford, and Richmond) prevented the arrival at any correct opinion as to the effect of particular projectiles or guns. The general result, however, was the early abandonment by the enemy of his guns. The men stationed at the light-house and water batteries were plainly seen leaving their stations for cover soon after the three leading ships opened; and for a period of ten or fifteen minutes, while

this ship was lying close under the light-house and water batteries, not a shot was fired at us, as far as could be discovered.

"The howitzers in the tops, from their elevated positions and proximity to the open batteries, did most effective service, so long as there were any men in the enemy's batteries."

In speaking more particularly of the bombardment of Fort Morgan, in which the firing was confined, by order, to the three rifled guns, he describes the firing as being "generally good and effective." He also remarks that "the navy and Bormann fuzes used in both actions seldom failed, so far as was observed;" and concludes by saying, "this ship, having been in commission for the whole of the four years last past, and for more than a year of that time, previous to the attack on Mobile, under my command, with the able assistance of the executive officer, Lieutenant Commander Edward Terry, all the necessary and practical appliances for facilitating while in action, and insuring a rapid and ample supply of powder and projectiles, had been introduced and practiced on board long prior to the action of the 5th of August." The result of which was that the Richmond fired on that day two hundred projectiles from her several guns in "a period of from twenty-five to forty minutes"—say five rounds per minute.

Commander Strong, of the Monongahela, writes, "that nothing in the service of the guns, magazines, or shell-rooms was imperfect. The effect of the firing while passing the forts could not be ascertained, as several ships were firing at the same time."

Lieutenant Commander Perkins bears testimony in his reply, that on board the iron-clad Chickasaw he discovered "*nothing* in the service of the guns, magazines, shell-rooms, or in the projectiles used, which was imperfect."

Lieutenant Commander Jouett, of the Metacomb, is equally explicit. He states that "everything worked in the most satisfactory manner; though working and fighting both sides, the magazines, shell-rooms, and shell-whips kept the guns more than supplied." And Lieutenant Commander Gherardi, of the Port Royal, makes the following brief and emphatic reply:

"I have the honor to inform you that during the engagement of the 5th August, everything worked admirably in the service of the guns, magazines, shell-rooms, and projectiles used."

In the report of Captain Marchand, commanding the Lackawanna, are some valuable suggestions relating to the service of the magazines, and to the difficulty, which seems insuperable, with the elevating screws of the Parrott guns. He says, however, that "the result of the firing, so far as visible, appeared to be good," the projectiles from all the guns except one, a 50-pounder rifle, exploding or striking as well as could be expected. Also, that "the XI-inch and IX-inch solid shot and shells were unexceptionable on the same occasion."

Finally, as a relief to the regret felt in reading the statements in some of these replies of the inadequacy of the XI-inch, IX-inch, and the heavy rifled shot to penetrate the armor of the rebel ram Tennessee, we have the report of Commander Nicholson, of the Manhattan, in which he says:

"I am satisfied that most if not all the serious damage she (the rebel ram) has sustained was caused by the XV-inch shot from this vessel."

There can be no doubt that her fire compelled the Tennessee's surrender, and perhaps saved the entire fleet of wooden ships from destruction, thus again vindicating the judgment which added this peculiar class of vessels to our navy list, and placed on board of them the powerful guns with which they are armed.

From the testimony here presented, it may safely be assumed that the "Ordnance Instructions," up to the present time, are nearly perfect in all that relates to the preparation of vessels-of-war for battle, to the duties of officers and men at quarters, to the equipment and manœuvre of armed boats, and to the details of ordnance and ordnance stores. Nothing is, therefore, needed to give additional excellence and both physical and moral power to the "right arm of our national

defence," except a proper school in which the lessons of this text-book may be impressed upon the minds of officers and men, and prepare them to pass through the fiery ordeal of battle. In no other way can this be so effectually accomplished as by establishing a gunnery ship as a component part of our navy, to the discipline and instructions of which those of the Naval Academy shall strictly conform.

MAGAZINES AND DEPOTS OF NITRE.

In again presenting this important subject for your consideration, I feel that I can do no better than to reproduce here the arguments presented last year in support of my recommendation to remove the present magazines to more secure localities. Nothing whatever has since taken place to cause a change of my opinions; on the contrary, not very long ago an accident occurred in Brooklyn, New York, which has confirmed them. I allude to the explosion of a storehouse containing nitre and sulphur, (gunpowder, minus only charcoal,) which caused great damage to surrounding property and some loss of life.

In speaking of this subject last year I held the following language: "The proximity of these great magazines to the sea-coast and to the cities near which they are respectively located, especially those at Portsmouth, Boston, and New York, is a subject worthy of the most serious consideration.

"To the recommendation made by Rear-Admiral Dahlgren in his report of last year, in treating of this matter, I now desire to add that the danger of accidental explosion, always possible, even when guarded against by the utmost human foresight, is now greatly increased by the necessity of entering the magazines daily in order to receive, deliver, and prepare powder for service.

"In times of peace, although danger still existed, the chances of disaster were very much reduced, because the magazines contained moderate quantities, and were only required to be opened and work performed in them to supply occasionally the wants of a cruiser. Now the demand for powder and magazine stores is unceasing, and the chances of disaster are multiplied proportionally.

"Fully aware of the great responsibility which rests upon the bureau to do everything in its power to protect this species of public property from loss, and at the same time to guard the lives and estates of our citizens from destruction, I desire most earnestly to recommend to the consideration of the department and Congress the necessity of removing, as soon as possible, these large quantities of powder from their present localities, and of establishing depots at the north, east, west, and interior, placing them, however, near our principal railways and watercourses.

"Whenever the necessary appropriation for this object shall have been made, the bureau will be ready, with the information and data now in its possession, to proceed immediately with the erection of suitable buildings and the removal thereto of these terrible agents, which are passive and harmless enough when undisturbed, but inconceivably destructive when aroused.

"The importance of this subject will be sufficiently felt by reflecting on the terrific consequences of the explosion of five hundred tons of gunpowder in the vicinity of a city like Boston, New York, or Philadelphia. Words can hardly do justice to the disastrous effects of such an event. It would level spire and dome with the earth, and shake either of those cities to their very foundations. By an explosion of a far less quantity of powder than that named, an entire quarter of the city of Leyden was destroyed in 1807, and one hundred and fifty persons perished in the ruins."

I respectfully reiterate these words of caution from the report of last year, and solicit for them the favorable consideration of the department and Congress. See note D.)

THE ESTIMATES.

These are based upon the experience of the past, and, fully convinced of the necessities which call for each of the separate items, I respectfully submit them as the least possible amount to which they can be reduced without crippling our energies. Again would I remark that we must not pause in the work of preparation for the future, or fail to make ample provision for all emergencies. Profiting by the lessons of adversity, we must not permit ourselves to be again embarrassed by a neglect of proper precautions.

In the foregoing pages I have endeavored to fulfil the duty assumed in the opening paragraphs. Many ideas and suggestions are unavoidably omitted, because the limits of a report of this kind do not permit of too great an extension. The facts presented, however, are believed to be of most importance, and deserve careful consideration. I may be permitted also to revert here to the remarks made in the beginning, in reference to the system of obtaining naval supplies in general, but more particularly those of ordnance, and to say that I have long been convinced that serious defects existed therein.

The frauds that have been brought to light during the past year have made these defects more apparent, and I have made every exertion on my part, and exercised constant vigilance to guard against them, establishing new rules to govern the inspection and receipt of stores, as well as a careful scrutiny of prices.

The proper use of all the material received at the different yards, to be worked up into equipments, is found to be a question of no less difficulty and importance. Materials to the value of millions of dollars are necessarily placed in the hands of the mechanics and others employed, to be worked up into ordnance stores, and it is highly important that these materials should be so issued and accounted for as to make the detection of waste or fraud most certain.

Hence the bureau requires a most accurate and comprehensive return of stewardship in this respect to be forwarded to it monthly and quarterly from all the yards, and to render the whole system of ordnance accounts on shore and on board ship as complete as possible, I have recently caused a close and searching examination to be made at all the yards of the manner in which this duty is performed, with the view of adopting a uniform plan for the whole service.

In these labors the ordnance officers have co-operated with zeal, especially Commodore Missroon, whose method, precision, and large experience in such matters have proved invaluable to the bureau.

In conclusion, I am again called upon to acknowledge the assistance always cheerfully and courteously rendered to us by the ordnance bureau of the army, in the matter of supplies and valuable information; and this I have reciprocated to the full extent of my power, regarding a cordial co-operation of the two arms of the service, in the cause of our common country, as at once the most incumbent duty and the highest pleasure.

I have the honor to be, with high respect, your obedient servant,

H. A. WISE, *Chief of Bureau.*

Hon. GIDEON WELLES,

Secretary of the Navy.

NOTE A.—As a general summary of the results obtained in practice against iron targets, it may be stated that the X-inch gun is capable of piercing four and a half ($4\frac{1}{2}$) inches of the best iron plating, backed by twenty (20) inches of solid oak.

That the new X-inch solid-shot gun will penetrate any iron-clad of which we have, at present, any information.

And in the target experiments the XV-inch gun has broken up and shattered plates exceeding in thickness anything hitherto proposed as defensive armors.

NOTE B.—The official report of the examination of the arms collected upon the battle-field of Gettysburg states that “of the whole number received, (27,574,) we found at least 24,000 of these loaded; about one-half of these contained two loads each, one-fourth from three to ten loads each, and the balance one load each. In many of these guns from two to six balls have been found, with only one charge of powder. In some the balls have been found at the bottom of the bore, with the charge of powder on top of the ball. In some as many as six paper regulation calibre .58 cartridges have been found, the cartridges having been put in the guns without being torn or broken. Twenty-three loads were found in one Springfield rifle-musket, each load in regular order. Twenty-two balls and sixty-two buckshot, with a corresponding quantity of powder, all mixed up together, were found in one percussion smooth-bore musket. In many of the smooth-bore guns, model of 1842, of rebel make, we have found a wad of loose paper between the powder and ball, and another wad of the same kind on top of the ball, the ball having been put into the gun naked. About six thousand of the arms were found loaded with Johnson & Dow’s cartridges; many of these cartridges were about half-way down in the barrels of the guns, and in many cases the ball end of the cartridge had been put into the gun first. These cartridges were found mostly in the Enfield rifle musket.”

NOTE C.—A few rounds were fired on the 26th of October, 1864, from the army XX-inch gun, mounted at Fort Hamilton, with charges of powder varying from 50 to 125 pounds, and solid shot of 1,080 pounds. As this firing was merely preliminary to a more extended series for range and penetration, no opinion can be formed from it of the absolute power and efficiency of this enormous piece of ordnance; but enough was seen to warrant the belief that it, as well as the gun of the same calibre made for the navy, will fully meet the expectations of the government as most effective means of harbor defence.

NOTE D.—The remarks in relation to the removal of the powder magazines from the vicinity of our large cities to more secluded localities had been written and this report nearly closed, when, as an additional and impressive warning, came the tidings of the catastrophe at Erith, England.

On Saturday, October 1, 1864, an explosion of one hundred and fifty thousand pounds of gunpowder occurred there, from some cause unknown, the sound of which was heard at a distance of *over ninety miles*. Fortunately but twelve persons were killed and about twenty wounded; but the public prints give startling accounts of the terrible power of this exploding mass of powder. These it is unnecessary to cite here in detail, but I may refer to the single fact of the damage done to the river embankment, which at one time threatened with inundation an immense tract of country, extending from Gravesend to Battersea, on the Thames.

This occurrence is well worthy of the most serious thought, and from the English journals we learn that the local authorities at Chatham have been aroused to the importance of the subject; for meetings have been held by them with the view of effecting the removal of at least a portion of the large deposits of powder stored in the government magazines at Upnor Castle, Fort Amherst, and other places.

The quantity of powder exploded at Erith was only about sixty-seven tons. If it had been five hundred tons—the capacity of one of our large magazines—who can imagine the disastrous consequences?

No. 5.

Estimate of appropriations under the cognizance of the Bureau of Ordnance, Navy Department, required for the service of the fiscal year ending June 30, 1866.

Heads or titles of appropriations.	Estimates of appropriations required for the service of the fiscal year ending June 30, 1866.
For pay and contingent expenses of the bureau, (A)....	\$21, 196 00
For pay of the navy, (B).....	63, 375 00
For ordnance, ordnance stores, and other ordnance purposes, (C)	8, 300, 000 00
For ordnance buildings, magazines, &c., (D,) at	
Portsmouth.....	141, 615 00
Boston.....	16, 378 00
New York.....	439, 000 00
Philadelphia.....	97, 210 00
Washington.....	97, 000 00
Norfolk.....	10, 000 00
Mare island.....	86, 412 00
For pay of photographer, (E).....	300 00
For pay of clerks and others in ordnance departments of navy yards, (F).....	15, 180 00
	9, 287, 666 00

H. A. WISE,
Chief of Bureau.

BUREAU OF ORDNANCE, *October 18, 1864.*

A.

Estimate of the amount required for the support of the Bureau of Ordnance for the year ending June 30, 1866.

For salary of chief of bureau, per act of July 5, 1862, pamphlet ed. of Laws, sec. 2, page 510.....	\$3, 500 00
For salary of assistant, per act of July 5, 1862, pamphlet ed. of Laws, sec. 3, page 511.....	3, 000 00
For salary of chief clerk, per act of February 25, 1863, pamphlet ed. of Laws, sec. 2, page 695	1, 800 00
For salary of one third-class clerk, per act of July 2, 1864, pamphlet ed. of Laws, sec. 4, page 373.....	1, 600 00
For salaries of four second-class clerks and one draughtsman, at \$1,400 each, per act of July 5, 1862, sec. 3, page 511, pamphlet ed. of Laws, and act of February 25, 1863, sec. 2, page 69.....	7, 000 00

For salary of messenger, per acts of July 5, 1862, pamphlet ed. of Laws, sec. 3, p. 511, and June 25, 1864, sec. 3, p. 160...	\$1,000 00
For salary of two laborers, per acts of July 5, 1862, pamphlet ed. of Laws, sec. 3, p. 511, and June 25, 1864, sec. 3, p. 160.	1,296 00
	<u>19,196 00</u>
Appropriated for year ending June 30, 1865.....	<u>\$17,220 00</u>

CONTINGENT EXPENSES.

For stationery and miscellaneous items.....	\$2,000 00
Appropriated for year ending June 30, 1865.....	<u>\$1,000 00</u>

The estimate for the pay of the clerical force is the same as allowed by existing laws; but in view of the arduous and responsible duties performed by this force, and also in consideration of the great increase in the expenses of living, it is not a fair and just remuneration for the services performed. The bureau, therefore, asks, as a simple act of justice, that the above amount be increased thirty (30) per cent. This amount added would make the whole appropriation for the support of the bureau as follows:

Amount above estimated for, being the amount now allowed by law.....	\$19,196 00
Thirty (30) per cent. added to pay of clerks and draughtsman..	3,120 00
Making total amount which should be appropriated.....	<u>22,316 00</u>

H. A. WISE,
Chief of Bureau.

BUREAU OF ORDNANCE, *October 18, 1864.*

B.

Estimate of pay required for officers proposed to be employed on ordnance duty, for the year ending June 30, 1866.

For inspectors of ordnance at foundries:

Two commodores.....	\$6,400
Two commanders.....	4,480
One lieutenant commander.....	1,875
	<u>\$12,755 00</u>

For inspectors of ordnance at navy yards:

PORTSMOUTH.

One captain.....	2,800
One gunner.....	1,000
	<u>3,800 00</u>

BOSTON.

One commodore.....	3,200
Two lieutenant commanders.....	3,750
Four gunners.....	4,000
	<u>10,950 00</u>

NEW YORK.

One captain.....	\$2, 800	
Two commanders.....	4, 480	
Four gunners.....	4, 000	
		\$11, 280 00

PHILADELPHIA.

One commodore.....	3, 200	
One lieutenant commander.....	1, 875	
Two gunners.....	2, 000	
		7, 075 00

WASHINGTON.

One captain.....	2, 800	
One lieutenant commander.....	1, 875	
Two gunners.....	2, 000

BUREAU OF ORDNANCE, October 18, 1864.

C.

Estimate of the amounts that will be required for ordnance and ordnance stores for labor and for contingent, for the year ending June 30, 1866.

1. For heavy cannon of all descriptions, field and boat howitzers, gun-carriages, shot, shell, magazine, and laboratory stores, and equipments of all kinds.....	\$4,200,000
2. For cannon and musket powder.....	750,000
3. For the purchase of nitre.....	1,000,000
4. For small-arms, equipments, and ammunition.....	400,000

5. For labor at navy yards, besides that included above in cost of articles	\$1,100,000
6. For freight, transportation, books, inspecting instruments, watchmen, assistance in fabrication and inspection of guns, and contingent expenses of all kinds, including two powder tugs.	400,000
7. For fuel for ordnance foundry shops, and four ordnance steamers	50,000
8. For experimental purposes in ordnance	250,000
9. For ordnance purposes not above enumerated	150,000
	<u>8,300,000</u>
Appropriated for year ending June 30, 1865	<u>\$8,300,000</u>

In this estimate (C) the same amounts are asked for as were appropriated for the same objects last year, and it is the lowest estimate that can be safely made.

F.

Estimate of the amounts required for the pay of clerks and others proposed to be employed in the ordnance department of the navy yards for the year ending June 30, 1866.

PORTSMOUTH.

For salary of one clerk..... \$1,200 00

BOSTON.

For salary of one clerk, (first)..... 1,200 00

For salary of one clerk, (second)..... 1,000 00

NEW YORK.

For salary of one clerk, (first)..... 1,200 00

For salary of one clerk, (second)..... 1,000 00

PHILADELPHIA.

For salary of one clerk..... 1,200 00

WASHINGTON.

For salary of one clerk, (first)..... 1,400 00

For salary of one clerk, (second)..... 1,000 00

For salary of one draughtsman..... 1,600 00

For salary of one skilful analytical chemist..... 2,500 00

For salary of one assistant pyrotechnist..... 1,400 00

For salary of one keeper of magazine..... 480 00

15,180 00

The above salaried clerks are required for the proper performance of the duties in the ordnance department of the different yards. The ordnance stores and accounts were formerly kept in charge of the storekeeper, but are now entirely transferred to the ordnance officer. This change of system, and the vast increase in the labors of the ordnance departments, make it absolutely necessary that persons of ability and responsibility should be permanently attached to the ordnance offices, for the performance of the clerical and other duties connected therewith. The salaries are fixed at the very lowest amounts at which it is thought possible to secure competent persons.

The salary asked for the draughtsman is about the same as the pay now received by him.

The services of a skilful analytical chemist are greatly needed in the ordnance department of the navy. For the want of such a person, the department has frequently to resort to outside parties, and often suffers for the want of chemical analysis and information, which, if furnished, would be of great service to the government. Instead, therefore, of a pyrotechnist, which has been heretofore employed, the bureau asks for a skilled analytical chemist and an assistant pyrotechnist.

The keeper of magazine has heretofore been estimated for by the Bureau of Yards and Docks.

H. A. WISE,
Chief of Bureau.

No. 6.

REPORT OF THE CHIEF OF THE BUREAU OF CONSTRUCTION AND REPAIR OF THE NAVY DEPARTMENT, OCTOBER 17 1864.

Summary of the report of the chief of the Bureau of Construction, &c.

Statement of amounts required for work in progress and contemplated.
Remarks on the depreciation of vessels.
A supply of seasoned timber should be kept on hand.
Necessity for more building-slips.
Increase in the size of vessels.
Necessity for armored sea-going ships.
Naval constructors should form a separate organization in the navy.
List of vessels on which work has been done in the different navy yards.

NAVY DEPARTMENT,

Bureau of Construction, &c., October 17, 1864.

SIR: In compliance with your instructions, I have the honor herewith to enclose the estimates of the appropriations necessary for the purposes of this bureau for the fiscal year ending 30th June, 1866.

The estimate for the maintenance and repair of 556 vessels for the present fiscal year was \$13,775,000; which was reduced by Congress to the sum of \$11,500,000.

There are, at this time, on the navy list 675 vessels; and considering the appropriation made by Congress for the present fiscal year as the least that will suffice for the number of vessels therein designated, the sum of \$13,960,000 is necessary for the next fiscal year without any allowance for depreciation.

The depreciation of vessels in constant service is rapid; and on these 675 vessels it cannot be less than \$1,000,000, and to keep them efficient the total sum required is \$14,960,000.

The appropriation for the present fiscal year for the Bureau of Steam Engineering embraced a sum sufficient for the construction of the machinery of twenty fast steamers of the first class, and contracts have been made accordingly; but the estimate from this bureau embraced only sixteen vessels for this machinery, for the reason that not more than that number could be advantageously commenced within the fiscal year.

It now becomes necessary to provide the four remaining vessels, which the department is under obligation to supply to the contractors for the steam machinery.

It has, on mature consideration, been decided that two of these vessels be, in the space occupied by the guns, covered with a thin iron armor to resist shells, but not of sufficient weight to interfere with the nautical qualities of the vessels; and for these four vessels it is estimated the sum of \$2,240,000 will be required.

In addition to these sixteen vessels, the department has made arrangements for the machinery for two fast spar-deck steamers to mount sixteen heavy guns, and there will be required for them \$1,180,000.

The machine shops in the navy yards being now in a condition to manufacture steam machinery with much advantage, it is proposed, in order to meet one of the wants of the service, to build eight fast vessels of a small class, in which the machinery now being constructed in the navy yards will be erected. For this purpose the sum of \$1,600,000 is required.

Experience having shown very nearly the kind of vessels best adapted for service on the western waters, and, where they are so liable to get aground, the wood vessel probably possessing the greater power of endurance, it is recommended that a few such vessels be built, to be properly protected with iron; for which it is estimated the sum of \$1,600,000 will be required.

For the completion of the four iron-clad vessels now building in the navy yards, each mounting four fifteen-inch guns in turrets, the sum of \$1,100,000 will be required.

The necessity for chartering vessels for sudden emergencies is constantly arising; also, many of the prize vessels being, with some small alterations, well suited for naval purposes, are with advantage purchased. There will be required for these purposes the sum of \$1,250,000.

For extra labor and expense in repairing vessels abroad the sum of \$600,000 is required; but should the fleets abroad be increased, it is probable a larger sum will be needed.

For the transportation of stores and materials and for incidental expenses the sum of \$75,000 is required.

It is well understood, and ought to be kept in view, that an estimate for the repairs of ships in service, embracing an infinite number of different objects, cannot be made with anything like the exactness that is to be expected for permanent works on shore. It is impossible to foresee the condition in which the vessels may return to port in eighteen months or two years hence, and experience constantly shows that the cost of the repairs exceeds the estimate made after the most careful examination of the vessel.

The old vessels and the purchased vessels are in various stages of depreciation and decay, and all have been built and repaired as rapidly as possible, both by contract and in the navy yards, using green and unseasoned materials.

Could the new vessels have remained on the stocks for a year or eighteen months, their durability would have been much increased; but that could not be permitted by the necessities of the case, and in a year or two will be felt the full weight of this evil, for they will decay with great rapidity.

The demand for materials for the construction and repairs of the vessels of the navy for the past two or three years has absorbed all the supplies that were in the yards. The appropriations for years past have made no provision for supplies beyond the want of the then passing year, and there could be thus no accumulation of timber or other materials for future wants; neither do the estimates of the present year, nor those now presented, contemplate more than the actual pressing need.

There has been in this way an expenditure of a relatively small sum of money each year, having an appearance of economy, but in reality the government has suffered a positive loss in not having a supply of seasoned timber, nor a proper assortment on hand to prevent waste.

For many years no white oak timber was received for naval purposes that had not grown within a short distance of salt water, and that had not been cut at a particular season of the year; but latterly it has been found impracticable to adhere to these requirements, and timber has been used that has grown in all sections of the country and cut at any time. Our supply of southern yellow pine timber has been exhausted, and other kinds are being used to supply the deficiency, and among them the American larch or hackmetack from the State of Maine.

To meet this want of material it would require about \$1,000,000 per year for three or four years to accumulate a supply of timber, much of which would need protection in ventilated sheds. These sheds would become prominent features in a navy yard, but might not be ornamental. If space would admit of these sheds being laid north and south, so that the sun might shine alternately

on both sides, this simple arrangement would materially contribute to the proper seasoning of the timber.

It is taken for granted that the United States must for the future be a great naval power, and maintain powerful fleets, for which preparations must be made, and the navy yards must become in reality workshops and manufactories, mainly for building and equipping ships and their steam machinery. The space now occupied as gun parks, and for the storage of provisions, will be needed for timber-sheds, work-shops, machine-shops, and saw-mills, all of which should be convenient and near the ships; and the provision stores should be used for the numerous objects required in the equipment of vessels.

The experience of foreign nations has led them to remove these departments from the localities where the ships are built, and in which so much space is required to spread out timber that proper selections can be made.

The Navy Department having neither the materials nor the conveniences for building all the vessels wanted in the navy yards, has had recourse to private enterprise, but not in all cases with equal success.

The private builders have generally but small supplies of materials on hand, and are compelled to use green timber; and it is not to be expected that the same care will be taken in the selection of materials, or in accuracy of workmanship. There has been much competition for this work. The offer of the lowest responsible bidder has been made the standard of price, and the builders expect to make a profit from their business.

It is for the interest of the government to build its own vessels, as it can, by purchasing its materials in large quantities, obtain them on better terms than private parties buying small quantities, and the inspection can be more rigid. It is under no charge for rent, insurance, and taxes, that press heavily on private individuals, and that sum which would be the profit of a contractor could be expended in the excellence of the work and the quality of the material, rendering the ship more durable and efficient.

In general, workmen prefer employment from the government for the same reason that all large establishments have an advantage over small ones, there being more constant employment, and the greater subdivision of labor makes them more skilful in particular parts, so that a suitable position is assured for all, and they have, or should have, a certainty of prompt payment.

With proper regulations there is no doubt but the government could get as much labor for the pay as private parties can succeed in doing, and there can be no motive to use inferior materials or workmanship.

It is earnestly recommended that measures be taken to increase the facilities in navy yards by the construction of additional building-slips, and providing for the accommodation of materials of metal and of timber.

For many future years wood will be the required material for ordinary cruising vessels; but the largest classes of our iron-clad steamers, though they may be temporarily constructed of wood, must finally be built of iron, for the size and strength now needed for such vessels can only be obtained with that material.

With the introduction of steam, vessels of war have much increased in size, on account of the space as well as the weight of the machinery and coal to be carried; and now there is a still further increase demanded for the weight of armor plating. The speed which is required can only be obtained by making the vessel sharper, and increasing the steam power, both of which involve additional weight, and an increase in the size of the vessel. These can only be combined in vessels of very large size, and such vessels are so costly that only the most durable materials should be used.

For the protection of our coasts and harbors we are probably well prepared; but we have only three vessels that can pretend to cope with the sea-going iron-clad vessels of European nations, and these have not yet been tried. It is a

problem to be yet resolved, whether a large steam vessel with her deck a foot or two above water, and without sails, can be effective and use her guns as a cruising ship. Experience has shown that as ships increase in dimensions and weight, there must be a certain relative portion above the water—that is, the height of the guns from the water should be increased; but this may, to some extent, be modified by making sacrifices in some other qualities.

The accounts we have of the performances of the iron-clad European vessels, if to be relied on, show that the elevated position of their armor plating has not seriously affected the motion of the vessels, and some of them are represented as being easier than ordinary vessels. Their large dimensions have much influence in this; but our principal harbors do not permit us to have so great a draught of water as European vessels have, which is stated to be from twenty-six to twenty-seven feet.

Until such time as it becomes the policy of the government to build iron-armored vessels for sea service—and, whenever commenced, it will require some years to have them in sufficient number to keep an enemy from our coast—we must have recourse to plating wood vessels, of which the first cost may appear less, though it is certain to be more expensive in the end.

Unless we have armored sea-going ships we must give up the expectation of engaging our foes on the ocean, and must limit our operations to attacks on their commerce with fast and light-armored vessels.

From the delay we now experience in repairing our vessels, in consequence of our limited number of dry-docks, we would, in a foreign war, be much embarrassed. The accidents now are slight, and can be quickly repaired; but the injuries from a naval action would require a long time to repair, and the single dock in each yard would soon be filled. This subject seems to be one for timely consideration.

In connexion with the subject of building ships in the navy yards, it may not be improper to refer to the naval constructors, who are the principal agents of this bureau in the navy yards. These persons have performed their duties with great skill and industry, showing ability fully equal to the occasion, and have, by many years of faithful service, earned a respectable connexion with the naval service. This has long been accorded to surgeons, paymasters, and steam engineers. These constructors are few in number—only nine—and can only look to the department for a proper recommendation in their behalf. The true interest of the service is believed to be involved in their having a separate and creditable organization.

All the sciences that have application to naval matters have between them certain necessary relations, and there is a common fund of theoretical knowledge which the naval officer, the steam-engine builder, and the ship-builder, equally possess. But in the daily practical application of these general principles which they are called on to make, there are numerous essential differences forming each into a separate class. If any members of these separate professions should temporarily undertake to perform the duties of the others, they must necessarily, for want of practice, be less capable than those who have made that particular subject the special study and business of their lives; and if they continue at such duty, they cease to be members of their original profession, and must become very inefficient members of either.

There is no naval power in which all the branches are not made a specialty and kept separate; and in private life we find the same principle of action.

The accompanying list of vessels on which work has been done at the several navy yards will show the work these persons have done within the last twelve months.

In closing this report, I deem it but just to the clerks employed in this bu-

reau to urge in their behalf, in consequence of the past and present high prices, a recommendation for an increase in their compensation.

I have the honor to be, very respectfully, your obedient servant,

JOHN LENTHALL, *Chief of Bureau.*

40 pounds Prussian blue, dry.....	50	per pound.
1,500 pounds litharge, dry, in 100-pound kegs	24½	per pound.
3,000 pounds Spanish whiting, dry	03½	per pound.
3,000 pounds Spanish brown, dry	01½	per pound.
200 gallons Pennsylvania zinc dryers.....	2 75	per gallon.
12 packages extra deep shade gold leaf, best quality	10 00	per package.
20 papers copper bronze, gold color, best quality	1 00	per paper.

To be delivered as required.

WM. E. SPALDING. DATE OF CONTRACT, AUGUST 24, 1864.

Class No. 39, turpentine and varnish.

80 gallons bright varnish.....	\$1 25	per gallon.
100 gallons demar varnish.....	7 00	per gallon.
10 gallons coach varnish.....	9 00	per gallon.
100 gallons copal varnish	7 00	per gallon.
200 gallons Japan varnish.....	5 50	per gallon.
350 gallons alcohol, 95 per cent. proof	1 75	per gallon.
300 pounds gum shellac, (orange color).....	1 20	per pound.

To be delivered as required.

WM. E. SPALDING. DATE OF CONTRACT, AUGUST 24, 1864.

Class No. 40, linseed oil.

500 gallons linseed oil, raw	\$2 00	per gallon.
600 gallons linseed oil, boiled	2 07	per gallon.

To be delivered as required.

W. F. & W. F. SIMES, Jr. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 41, glass.

300 lights of glass, 9 by 12 inches	\$0 22	each.
300 lights of glass, 12 by 14 inches	30	each.
400 lights of glass, 12 by 18 inches	50	each.
300 lights of glass, 14 by 16 inches	56	each.
300 lights of glass, 14 by 18 inches	62	each.
300 lights of glass, 14 by 22 inches	80	each.
40 lights of glass, 26 by 32 inches	2 90	each.
50 lights of glass, straight deck, fluted, ground edges, 10 by 3½ inches	1 25	each.
150 air-port glasses, 7½ inches diameter, 1½ thick	1 25	each.
75 air-port glasses, 6½ inches diameter, ¾ thick	1 25	each.
50 magazine lenses, 12 to 18 inches diameter, 1½ to 2 inches thick	8 00	each.
12 glaziers' diamonds, best quality	5 00	each.

To be delivered as required.

LOCKWOOD & COLLINS. DATE OF CONTRACT, AUGUST 27, 1864.

Class No. 45, tallow, soap, &c.

15,000 pounds pure beef tallow	\$0 29	per pound.
10,000 pounds hard brown soap	20	per pound.
300 pounds Castile soap	20	per pound.

To be delivered as required.

E. WHEELER & SON. DATE OF CONTRACT, AUGUST 20, 1864.

Class No. 47, ship-chandlery.

5 carboys acid, muriatic, say 500 pounds	\$0 10	per pound.
5 carboys acid, sulphuric, say 500 pounds	10	per pound.
200 pounds borax	60	per pound.
72 brushes, hand dusting	75	each.
50 skeins catgut, for drill-bows, &c	50	each.
100 pounds chalk, red	15	per pound.
300 pounds chalk, white	05	per pound.
50 pounds emery, coarse	20	per pound.
25 bundles flags, coopers'	2 00	each.
3 barrels flour, condemned	10 00	each.
700 pounds guano, Peruvian, best quality	05	per pound.
500 pounds glue, white Irish, best quality	40	per pound.
500 pounds hay, timothy	02½	per pound.
200 lines, chalk	10	each.
100 jars, stone, filled with chloride of lime, properly corked, and neck covered with oiled canvas	5 00	each.
120 pounds leather, pump, sides not less than 28 pounds ..	75	per pound.
100 pounds potash	20	per pound.
5 pounds potash, prussiate of	1 25	per pound.
100 reams paper, sand, Nos. 0 to 2½	5 00	per ream.
6 reams paper, wrapping, best	3 00	per ream.
1,000 pounds paper, tarred sheathing	07	per pound.
25 pounds pumice stone, pulverized	15	per pound.
25 pounds pumice stone, lumps	10	per pound.
50 pounds rotten-stone	12	per pound.
50 pounds sash cord, white	1 50	per pound.
50 pounds yarn, lampwick, best	2 00	per pound.

To be delivered as required.

E. WHEELER & SON. DATE OF CONTRACT, AUGUST 20, 1864.

Class No. 48, oakum.

20,000 pounds oakum, best quality, long thread, for calk- ing purposes	\$0 17	per pound.
---	--------	------------

To be delivered as required.

E. WHEELER & SON. DATE OF CONTRACT, AUGUST 20, 1864.

Class No. 49, tank iron.

5,000 pounds best plate iron, $\frac{1}{4}$ inch thick, from 21 to 60 inches wide, and from 40 to 90 inches long, as ordered ----- \$0 14 per pound.
 300 pounds iron rivets, $\frac{1}{2}$ to $\frac{3}{4}$ inch in diameter, and $\frac{3}{4}$ to 1 inch long inside of head, as ordered ----- 15 per pound.
 To be delivered as required.

LOCKWOOD & COLLINS. DATE OF CONTRACT, AUGUST 27, 1864.

Class No. 50, ingot copper.

700,000 pounds ingot copper, best Baltimore ----- \$0 53 $\frac{3}{4}$ per pound.
 600,000 pounds ingot copper, best Cliff or Minnesota mines. 54 $\frac{1}{2}$ per pound.
 To be delivered as required.

WM. A. WHEELER. DATE OF CONTRACT, AUGUST 23, 1864.

Class No. 54, bellows.

12 smiths' bellows, 32 inches wide, 44 inches long, exclusive of pipe, which is to be 10 inches long, as per sample.. \$30 00 each.
 To be delivered as required.

Proposals for iron steam screw tug-boats of 350 and 170 tons, under advertisement of October 14, 1863.

No. 10, bidders.

Reaney, Son, & Archibold, Chester, Pennsylvania.—Two of 350 tons, in eight and nine months, for \$128,000 each, or two of 170 tons, in seven and eight months, for \$80,000 each.

Wm. Pernie, Brooklyn, New York.—One of 350 tons, in six months, for \$175,000, and one of 170 tons, in six months, for \$100,000.

Zeno Secor, New York.—Two of 350 tons, in six months, for \$170,000 each.

Denmead & Sons, Baltimore.—Two of 350 tons, in six and eight months, for \$175,000 each, and two of 170 tons, in six and eight months, for \$125,000 each.

James Petlow, Boston.—Two of 350 tons, in eight months, for \$84,640 each.

Opened, October 29, 1863, in presence of—

JOHN LENTHALL.

No. 11.

Proposals for armor plates, under the advertisement of November 21, 1863.

Bidders.	Deck armor.	Wrought-iron stringers.	Side armor.
Phoenix Iron Company, Philadelphia.....		*For four vessels, at 9½ cents per pound.	
Paterson Iron Company, F.C. Beckwith, treasurer		For one vessel at Brooklyn, at 16 cents per pound.....	
Harvey K. Flagler, New York.....	Rectangular plates, at New York, at 10½ cents per pound. Rectangular plates, at Boston, at 10½ cents per pound. Curved edge plates, at New York, at 12½ cents per pound. Curved edge plates, at Boston, at 12½ cents per pound.		
Seyfert, McManus & Co., Reading, Pa.....		At Philadelphia, at 14½ per pound; also, at 15 cents per pound; at Brooklyn, at 14½ cents per pound; also, at 15 cents per pound.....	
H. Abbott & Son, Baltimore	For four vessels, at 9½ cents per pound.....		At Philadelphia, at 29 cents per pound.
Bay State Iron Company, Boston, John H. Reed, treasurer.....	For one vessel, at Boston, at 11 cents per pound, and one other vessel at any other yard at same price, if sixteen months be allowed..... At Philadelphia, at 11½ cents per pound.....		
Alex. Swift & Co., Cincinnati, Ohio.....	*At Philadelphia, at 8½ cents per pound.....		
Fort Pitt Iron Works, Pittsburg, Reese, Graff & Dull.....	*At Brooklyn, at 9½ cents per pound..... At Philadelphia, at 9½ cents per pound; at Brooklyn, at 9½ cents per pound.....		
Everson, Preston & Co., Pittsburg, Pa.....	At Boston, at 10 cents per pound; at Portsmouth, 10 cents per pound.....	At Brooklyn, at 14½ cents per pound.....	
Do.....do.....		At Philadelphia, at 14½ cents per pound. At Charlestown, at 16 cents per pound. At Portsmouth, at 16 cents per pound.....	
Lazell, Perkins & Co., Bridgewater, Mass. Do.....do.....			At Charleston, at 25 cents per pound..... At Brooklyn, at 25 cents per pound, pro- vided additional time be allowed, if the Boston bid is accepted.
Morehead & Co., Pittsburg, Pa.....	*At Portsmouth and Boston, at 9½ cents per pound; at Brooklyn and Philadelphia, at 9½ cents per pound.....		*At Portsmouth and Boston, at 15½ cents per pound. * At Brooklyn and Philadelphia, at 15½ cents per pound.
Edwin L. Brady, New York.....	At New York, at 11½ cents per pound.....		
Nashua Iron Company, Nashua, N. H.....		At Boston, at 14½ cents per pound.....	
Horace L. Brooks, Avalon Iron Works, Baltimore	For two vessels at 11½ cents per pound.....		For one vessel, at 13½ cents per pound, at eleven months. For three vessels at 13½ cents per pound, rolled iron.
Do.....do.....			
Atlantic Works, East Boston.....	For two vessels, viz: one at Boston, at 12½ cents per pound, and one at Portsmouth at 13 cents per pound; or, one at Brooklyn, at 13½ cents per pound, and one at Philadelphia, at 13½ cents per pound.....		

Brown & Co., Wayne Iron Works, Pitts- burg, Pa.....	At Philadelphia, at 12 cents per pound.....	
Do.....do.....	At Brooklyn, at 12 cents per pound.....	
Globe Iron Works, Boston, Mass.....		
For four vessels, at 10½ cents per pound, as received from rolling mill.....		
For four vessels, at 11½ cents per pound.....	At Philadelphia or New York, at 15 cents per pound.....	
James Tetlow, East Boston, Mass.....	At Portsmouth or Charlestown, at 15½ cents per pound.....	
Haigh & Snowdon, Pittsburg, Pa.....		
Do.....do.....		
Curtis & Tilden, East Boston.....	At Charlestown, at 11 cents per pound.....

BUREAU OF CONSTRUCTION AND REPAIR, December 22, 1863.

No. 12.

List of contracts for vessels coming under the cognizance of the Bureau of Construction and Repair, made and received since the date of the last report, October 9, 1863, to October 15, 1864.

Date.	Names of contractors.	Vessels.	Amount of contract.	Where building.
1863. Sept. 3	William Cramp & Sons, Philadelphia.	Chattanooga, screw sloop-of-war.	\$340,000	Philadelphia.
Dec. 20	Reaney, Son & Archbold, Philadelphia.	Nina, iron tug-boat.....	128,000	Chester, Penn.
	Do.....	Pinta, iron tug-boat.....	128,000	Do.
	Pussey, Jones & Co., Wilmington, Del.	Pilgrim, iron tug-boat.....	74,000	Wilmington, Del.
	William Pernie, New York.....	Maria, iron tug-boat.....	80,000	Williamsburg, N.Y.
	Do.....	Triana, iron tug-boat.....	128,000	Do.
	James Tetlow, Boston.....	Standish, iron tug-boat.....	84,640	Chelsea, Mass.
	Do.....	Mayflower, iron tug-boat.....	84,640	Do.
	Do.....	Speedwell, iron tug-boat.....	128,000	Do.
	Do.....	Fortune, iron tug-boat.....	128,000	Do.
1864. June 1	Samuel H. Pook, New Haven, Conn.	Stromboli, torpedo-boat.....	13,500	New Haven, Conn.

REPORT OF THE BUREAU OF STEAM ENGINEERING.

NAVY DEPARTMENT,
Bureau of Steam Engineering, November 28, 1864.

SIR: I have the honor to submit to the department the following statement of the operations of this bureau during the present administration:

The breaking out of the rebellion found the government, in effect, without a navy, and with an immense coast line of the most difficult formation to be stringently blockaded. For this purpose the few sailing vessels of the service were absolutely worthless, while the whole number of steamers consisted of only sixteen screw and six paddle-wheel vessels, with an aggregate burden of forty-two thousand two hundred and forty-four tons. This fleet was composed of four screw frigates with an aggregate of 13,431 tons, and a maximum speed of nine knots per hour. One screw sloop of 4,582 tons, and a maximum speed of eleven knots per hour. Five screw sloops with an aggregate of 9,707 tons, and a maximum speed of nine and a half knots per hour. Four screw sloops with an aggregate of 4,003 tons, and a maximum speed of 11.7 knots per hour. Two screw sloops with an aggregate of 1,610 tons, and a maximum speed of eight knots per hour. Two paddle-wheel sloops with an aggregate of 4,865 tons, and a maximum speed of eleven knots per hour. One paddle-wheel sloop of 1,600 tons, and a maximum speed of nine knots per hour. One paddle-wheel sloop of 1,446 tons, and a maximum speed of ten knots per hour; and two paddle-wheel gunboats with an aggregate of 1,000 tons, and a maximum speed of nine knots per hour. These vessels were scattered over the oceans of the world; a long time elapsed before all could be collected on our own shores, and then many needed extensive repairs before they could be despatched on service. The engineer corps of the navy was very small, and barely sufficient for the steamers.

The first act of the department was the construction of twenty-three screw gunboats of 507 tons each, and having a maximum speed of ten knots per hour. The machinery of four was designed and constructed by the "Novelty Iron Works" of New York city, under the direction of this bureau; that of the re-

maining nineteen was designed by this bureau, and constructed from its drawings and specifications by various establishments over the whole country. They proved excellent sea-boats, and carry a large battery in proportion to their tonnage. They have a draught of water of nine feet, and were built especially for blockaders at the mouths of the lesser southern rivers and harbors. These vessels have now been in constant use for nearly three years; have performed every variety of service, both in battle, as ocean cruisers, and on blockade; and their machinery has proved of the most reliable, economical, and efficient description. They have taken part in every attack from that on Port Royal to the last victory in Mobile bay.

In order to save time, which was of the first consequence, the bureau at once contracted with the original builders of the machinery of the Iroquois, Wyoming, Mohican, and Seminole, for duplicate engines and boilers for the Oneida, Tuscarora, Kearsarge, and Wachusett. The only change was the substitution of Sewell's surface condenser for Pirson's, and of fixed four-bladed screws for the two-bladed hoisting ones. The hulls of all these vessels are nearly identical, and the maximum speed is 11.7 knots per hour.

There were next constructed by the department twelve double-bowed paddle-wheel steamers, the machinery of which, with the exception of that of the Miami, designed and built by Merrick & Sons, of Philadelphia, were made by various establishments from the drawings and specifications of this bureau. These vessels had an aggregate burden of 10,200 tons, and a maximum speed of eleven knots per hour.

In the autumn of 1861 ten screw sloops were constructed with an aggregate of 13,544 tons, the machinery of which was built by various establishments from the drawings and specifications of this bureau. These vessels were to have a maximum speed of eleven and a half knots per hour. Their machinery, which was very simple in design, and strongly built, proved entirely successful, giving the vessels a higher speed than that of any others in the navy, either paddle-wheel or screw, purchased or constructed. The maximum speed proved from twelve to thirteen knots per hour, and could be maintained for many consecutive hours. They have proved highly efficient vessels as blockaders, in battle, and as ocean cruisers.

In the autumn of 1862 a second set of twenty-seven double-bowed paddle-wheel steamers was commenced by the department, with machinery constructed by various establishments from the drawings and specifications of this bureau. These vessels were of 974 tons burden each, making an aggregate of 26,298 tons. Their maximum speed is fourteen and a half knots per hour.

After the completion of these vessels, the construction of six iron double-bowed paddle-wheel steamers, of 1,030 tons each, was commenced with machinery built by different establishments from the drawings and specifications of this bureau. These vessels have an aggregate burden of 6,180 tons, and an intended speed of fifteen knots per hour. They are just on the point of completion, two having already made their trial trips.

There is now in progress of construction the machinery for twenty screw steamers of 2,200 tons burden each, making an aggregate of 44,000 tons. This machinery, which is being constructed by different establishments from the drawings and specifications of this bureau, is now about half completed, and is calculated to give the vessels a maximum speed of thirteen knots per hour.

At the same time there was commenced the construction of the machinery for four screw steamers of 3,200 tons each, making an aggregate burden of 12,800 tons. The engines are geared, have cylinders of one hundred inches diameter, and a stroke of piston of four feet. They are intended to give the vessels a maximum speed of fifteen knots per hour, and have been built from the drawings and specifications of this bureau. They are now about half completed.

There are also in progress of construction at the Charlestown navy yard four

pairs of screw engines from the drawings of this bureau, with cylinders of fifty inches diameter, and a stroke of piston of four and a half feet; also, at the New York navy yard, four pairs of similar engines. The eight vessels for this machinery will have an aggregate burden of 11,200 tons, and a maximum speed of twelve and a half knots per hour.

At the Washington navy yard there is being constructed, from the drawings and specifications of this bureau, three pairs of screw engines, with cylinders of thirty-six inches diameter and three feet stroke of piston. These vessels are of 970 tons each, making an aggregate of 2,910 tons, and are intended to have a speed of twelve knots per hour for the maximum.

At the same yard there is also being constructed one pair of geared screw engines, with cylinders of one hundred inches diameter, and a stroke of piston of four feet. They are made from the drawings of this bureau, and are intended for a vessel of 3,200 tons, which is to have a maximum speed of fifteen knots per hour.

At the same yard, too, there is under construction, from the drawings of this bureau, a pair of screw engines, with cylinders of sixty inches diameter and a stroke of piston of three feet, intended for a vessel of 2,200 tons, which is to have a maximum speed of thirteen knots per hour.

There have also been constructed, from the drawings and specifications of the bureau, the machinery of the wooden armored double-turreted vessels Miantonomah and Tonawanda, and, with the exception of the engine proper, of the duplicate vessels Monadnock and Agamenticus. These vessels are of 1,564 tons burden each, making an aggregate of 6,256 tons, and have a sustained speed of nine and a half knots per hour, with a maximum speed of eleven knots.

The engines for the screw frigate Franklin are in course of construction from the drawings and specifications of the bureau. They are about half completed, and are calculated to give the vessel, which is of 3,684 tons burden, a speed of ten knots per hour for the maximum.

There have been lately completed the three first-class new gunboats Nipsic, Nyack, and Shawmut, of 593 tons each, making an aggregate of 1,779 tons. Their machinery was built from the drawings and specifications of this bureau, and the vessels have a maximum speed of eleven and a half knots per hour.

From the preceding it will be seen that this bureau has furnished the drawings and specifications for the machinery of one hundred and sixteen steamers, having an aggregate burden of 149,906 tons; besides supplying the necessary drawings and directions for the alteration or renewal, in whole or in part, of the machinery of a very large number of vessels additionally.

The following machinery has been constructed under contract with this bureau from drawings and specifications furnished by the contractors. It is additional to what has already been described.

1st. For the screw steamer Chattanooga, of 3,000 tons, by Merrick & Sons, of Philadelphia.

2d. For the screw steamer Madawasca, of 3,200 tons, by John Ericsson.

3d. For the screw steamer Idaho, of 2,500 tons, by E. N. Dickerson.

The machinery of these three vessels is competitive with that of the geared engines of one hundred inches diameter of cylinder designed by the bureau, and is about half completed.

4th. For the gunboat Yantic, of 593 tons, by Merrick & Sons, of Philadelphia.

5th. For the gunboat Pequot, of 593 tons, by William Wright.

6th. For the gunboat Saco, of 593 tons, by Messrs. Corliss, of Providence, Rhode Island.

7th. For the gunboat Kansas, of 593 tons. This machinery was captured in an English blockade runner, and was built for the rebel service in England.

8th. For the gunboat Maumee, of 593 tons; engines by John Ericsson.

The machinery of these five screw gunboats is competitive with that designed

by the bureau for the Nipsic. The Saco's machinery has proved a failure, and will probably have to be removed from the vessel. Those of the Yantic, Kansas, Maumee, and Pequot have given results much below that of the Nipsic. The machinery of the Maumee and Pequot could only be got to work after months of alteration after it was completed on the original design.

The machinery of the Pensacola, a steamer of 2,158 tons, built from the designs of E. N. Dickerson and F. E. Sickels, having proved, after lengthened trials, a complete failure, and being condemned by several boards of marine engine-builders, naval engineers, and chiefs of bureaus as irremediable, has been removed from the vessel, and will be replaced by a pair of screw engines with cylinders of sixty inches diameter, and a stroke of piston of three feet, designed by the bureau.

Our navy having become a very large one, and consisting almost exclusively of steamers, with enormous consumption of coal, and great expenditures for the building and repair of its machinery, it is of the first consequence that this machinery be of the best quality and managed in the best manner. The problem is a difficult one, and its solution slow and costly. It combines so many elements, that the great maritime countries of England and France have not yet reached it either in their war or commercial navies. In them, as in ours, nothing is to be found but variety; and the practice is as numerous as the practitioners, as prominence is given more or less to some of the many conditions involved.

In the machinery designed by this bureau for the navy, the governing principles have been fairness of parts; strict connexions without articulations; simplicity of combination, with such arrangement of the essential organs as to admit of easy access and constant observations; great extent of wearing surfaces, in journals, guides, &c., and a strength of parts insuring against fracture from bad materials, workmanship, bad management, and the greatest possible abnormal strains. The first object to be attained is mechanical success. The machine must be made durable, reliable, always ready for its work, and capable of performing it properly, even in the most unskilful hands. After those are secured economy of fuel is the desideratum.

The valve-gear for the screw-engine is the lap side-valve, fitted with Waddell's equilibrium plate, and mounted upon Bristol's rollers. It is worked by the Stephenson's link, and has a range of expansion momentarily variable from one-third to two-thirds of the stroke of the piston. By a judicious choice of proportions this valve-gear, in the simplest manner, effects the best possible practical distribution of the steam in the cylinder. It admits a variable expansion, and allows a much greater measure of it than is economical to employ, giving at the same time such release and cushioning to the steam as is found necessary to the economy and smooth working of the machine. As a mechanism, it is the simplest and most obvious ever devised for the purpose, and seems scarcely to admit of improvement or of being superseded.

Sewell's surface condenser is used in all cases, long experience having proved it to be the least bulky, most efficient and most reliable of any. It requires less skill and intelligence in those managing it than the common jet condenser.

Martin's vertical water-tube boiler has been principally built, though a great many steamers have been supplied with the horizontal fire-tube boiler. The choice for the naval service seems narrowed to those types, and the bureau has had them experimented on in every variety of size and proportion, in order to ascertain their relative merits in economy of fuel, quantity of steam furnished, and practical adaptability. The results of these experiments have in all cases been considerably in favor of the vertical water-tube boiler. A board, consisting of the principal steam-engine builders of the country and the chief of this bureau, is now experimenting with critical accuracy on two boilers of the respective types, for the purpose of definitively determining their relative merits for the

naval service under every variety of circumstance and of proportion. It is believed the results will be of the utmost importance to all engaged in the manufacture and use of steam machinery.

Another board, consisting of three members of the Franklin Institute, three of the Academy of Science, and three on the part of the department, are now experimenting with the utmost precision on machinery devised by Mr. Horatio Allen, of the Novelty Iron Works, New York city, one of the board, to determine by practical results the economy of using steam with different measures of expansion, under different conditions of mechanism, pressure, and back pressure. It is believed these experiments will give a correct practical solution to a very vexed problem, and be of incalculable benefit.

The bureau has availed itself of every opportunity, in the repair of steamers, to make with their machinery at the wharf lengthened experiments on the economy of using steam with different measures of expansion under all possible variations of condition and of mechanism. These experiments have been made on the grandest scale, with the utmost possible care and completeness, with every variety of type and proportion of machinery, and every known form of expansion gear. They have been made with superheated as well as with saturated steam; but under all conditions the general result proved the fallacy of expecting any economic gain to be derived from expanding steam beyond very moderate limits.

Experiments have also been made on superheated steam, which show a decided and important economy in its use over saturated steam. All boilers now made for the naval service are fitted with superheating apparatus.

Nearly all the various coals of the seaboard States have been the subject of careful experiment, to ascertain their relative value for naval purposes. A board of engineers has also experimented with petroleum as a substitute for coal in naval steamers; but while the results were very favorable, the further development of this important substance as a fuel has been prevented by the discovery that when exposed to the air of a confined space at summer temperature, it gives off, even through the open bung-hole of a barrel, a gas which, when mixed with atmospheric air, becomes explosive and detonates with the force of gun-powder. Until a practical remedy for this is found, it is manifestly useless to experiment upon the best form of apparatus for burning it.

In the steamers bought from the commercial navy of the country, and in the captured blockade runners now adopted for naval service, every variety of marine machinery is to be found, constructed either in America or Great Britain, both screw and paddle-wheel. So far as the exigencies of the war would permit, the different types have been subjected to careful experiment to ascertain their relative merits. Nearly every variety of boiler and of expansion-gear, of rate of expansion, and with both superheated and saturated steam, and of condenser, screw and paddle-wheel, has been made the subject of accurate experiment, and it is believed the files of the department contain the latest and most reliable information on this subject, compared with which the experience of parties outside the department must necessarily sink into insignificance.

The number of establishments in the United States capable of constructing marine machinery is very few, and in addition to the work offered by this bureau, they were extensively engaged on other for the War Department, for the merchant service, and for different bureaus of the navy. It is believed that under no possible pressure could this bureau have obtained another engine from them. Many of them were also extensively occupied with repairing as well as building machinery, and the repairs necessarily had the preference. The navy yard shops were at first almost exclusively occupied with repairs, but are now largely engaged in manufacturing steam machinery, and will probably be able to furnish it as fast as the wants of the department require.

For so large an amount of work thrown at once upon a very limited market, and to be executed in the least possible time, there existed neither skilled labor

nor materials ; both had to be created, and, as was inevitable, there was employed much of bad materials and worse workmanship. Neither did there exist a sufficient number of expert engineers to manage the machinery when furnished ; they, too, had to be educated ; and to these causes must be attributed the principal part of the accidents and deficiencies that have occurred. Those, however, have been wonderfully few in proportion to amount of machinery in constant use—as small a proportion, probably, as can be found at any time in any service.

All the screw machinery lately constructed and in progress lies well below the water line, and is entirely protected from shot, the hulls having been sufficiently lengthened to admit this arrangement, with such power as was necessary to give the higher speeds now found to be desirable.

All of which is respectfully submitted by, sir, your obedient servant,

B. F. ISHERWOOD, *Chief of Bureau.*

Hon. GIDEON WELLES,

Secretary of the Navy.

No. 1.

Estimate of amounts required for the expenditure of the Bureau of Steam Engineering for the fiscal year ending June 30, 1866.

For salary of chief of bureau,	\$3, 500 00
“ “ one chief clerk	1, 800 00
“ “ draughtsman	1, 400 00
“ “ clerk, (2d class)	1, 400 00
“ “ assistant draughtsman	1, 200 00

No. 2.

Estimates of the amounts required for the construction, repair, wear, tear, &c., for machinery of vessels for the fiscal year ending June 30, 1866	\$8, 045, 000 00
For replacing machinery of vessels destroyed in battle or by accident	1, 000, 000 00
For steam machinery of two fast spar-deck steamers, to be constructed in the navy yard	1, 500, 000 00
For steam machinery for eight fast steamers of small class, in progress at the navy yards	2, 500, 000 00
For steam machinery of one pair of 60 by 36 engines for United States steamer Pensacola, in progress at navy yard	400, 000 00
For steam machinery for new wood and iron-clad steamers on the western waters	800, 000 00
For completing steam machinery under contract	1, 500, 000 00
For stores, extra labor, oil, paint, tools, &c., for squadrons ..	1, 400, 000 00
	17, 145, 000 00

No. 3.

Estimate of amount required for incidental expenditures, or contingent, for the fiscal year ending June 30, 1866.

For transportation of materials, printing, stationery, experiments, advertising, books, drawings, models, postage, and incidental expenses	\$85,000 00
--	-------------

RECAPITULATION OF ESTIMATES.

Salaries and contingent expenses	\$13,520 00
--	-------------

Naval service.

Construction, repairs, &c., of machinery	\$17,145,000 00
Contingent expenses	85,000 00
	<u>17,230,000 00</u>

No. 7

Statement of contracts for steam machinery made by the Bureau of Steam Engineering since August 1, 1863.

Date.	Contractors.	Vessels.	Price.
1863.	<i>Machinery of paddle-wheel steamers of fifty-eight inches diameter of cylinder and eight feet nine inches stroke of piston.</i>		
Aug. 21	Harrison Loring, Boston	Winnepec	\$104,000
22	Donald McKay, Boston	Ashuelot	104,000
	A. & W. Denmead & Son, Baltimore	Monocacy	104,000
	<i>Machinery of screw steamers of forty-six and a half inches diameter of cylinder and fifty inches stroke of piston.</i>		
Dec. 1	Atlantic Works, Boston	Quinsigamond	580,000
1	C. H. DeLamater, New York	Passaconomy	590,000
1	do do	Kalamazoo	580,000
1	Pusey, Jones & Co., Wilmington, Del.	Shakamaxon	590,000
	<i>Machinery of screw steamers of sixty inches diameter of cylinder and thirty-six inches stroke of piston.</i>		
Oct. 25	Globe Works, Boston	Guerriere	400,000
26	Providence Steam Engine Co., Providence, R. I. .	Contoocook	400,000
26	do do	do	400,000
Nov. 1	Woodruff & Beach, Hartford, Conn	Piscataqua	400,000
1	do do	Minnetonka	400,000
1	do do	Manitou	400,000
Oct. 26	D. McLeod, Brooklyn, N. Y.	Morholu	400,000
25	do do	do	400,000
25	do do	do	400,000
26	John Roach, New York	Java	400,000
26	do do	Ontario	400,000
Nov. 13	do do	do	400,000
Oct. 25	Homer Ramsdell, Newburgh, N. Y.	do	400,000
25	do do	do	400,000
25	Morris, Towne & Co., Philadelphia	Antietam	400,000
25	do do	Pushmataha	400,000
26	Hazlehurst & Co., Baltimore	do	400,000
26	Poole & Hunt, Baltimore	do	400,000
25	Harrison Loring, Boston	Kewaydin	400,000
Nov. 13	Corliss Steam Engine Company, Providence, R. I. .	Illinois	400,000
	<i>Machinery of geared-screw engines of one hundred inches diameter of cylinder and four feet stroke of piston.</i>		
Sept. 24	John Roach, New York	Neshaminy	680,000
Oct. 26	Corliss Steam Engine Company, Providence, R. I. .	Pompanoosuc	700,000
	<i>Machinery of back-acting engines of eighty-four inches diameter of cylinder and forty-two inches stroke of piston.</i>		
23	Cramp & Sons, Philadelphia	Chattanooga	600,000
	<i>Machinery of vibrating lever engines of one hundred inches diameter of cylinder and four feet stroke of piston.</i>		
Nov. 5	John Ericsson, New York	Madawasca	700,000
	<i>Machinery of back-acting engines of sixty-eight inches diameter of cylinder and forty-two inches stroke of piston.</i>		
16	Atlantic Works, Boston	Franklin	440,000

Award of bid decided by lot in favor of A. V. Gray.

Schedule of materials required at the several navy yards for 1864.

WM. E. COFFIN & CO. DATE OF CONTRACT, APRIL 2, 1864.

Class No. 1, boiler iron, &c.

2,000 pounds Pembroke boiler rivets	\$0 09 per pound.
5,000 pounds best Pembroke rivet iron, from $\frac{1}{2}$ to 1 inch ..	07 $\frac{3}{4}$ per pound.
10,000 pounds best Pembroke iron, round	06 $\frac{1}{2}$ per pound.

To be delivered as required.

BANKER & CARPENTER. DATE OF CONTRACT, MARCH 30, 1864.

Class No. 8, metallic oil.

3,000 gallons metallic oil, for lubricating..... \$1 13½ per gallon.
To be delivered as required.

SMITH BROS. & Co. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 10, engineers' stores.

6 flasks mercury, (70 pounds each)..... \$1 10 per pound.
15 barrels pipe clay..... 2 00 per barrel.
800 pounds sheet brass, assorted..... 51 $\frac{97}{100}$ per pound.
10 pounds sheet mica, 4 by 6 inches..... 1 95 per pound.
25 pounds copper hose rivets, assorted..... 62 per pound.
600 pounds lag screws, $\frac{5}{8}$ to $\frac{7}{8}$ inch in diameter, 2½ inches
long..... 14 per pound.
1,000 pounds bolts and nuts, assorted..... 14 per pound.
12 breast drills, with set of drills, per sample..... 3 60 each.
To be delivered as required.

FREEMAN ORNE. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 15, tubing, &c.

800 pounds brass tubing, assorted sizes..... \$0 30 per pound.
500 pounds copper tubing, $\frac{5}{8}$ to 1 inch..... 30 per pound.
500 pounds brass tubing, (tinned,) $\frac{5}{8}$ inch in diameter, length
as required..... 30 per pound.
To be delivered as required.

MATHIAS ELLIS. DATE OF CONTRACT, MARCH 29, 1864.

Class No. 16, steel.

2,000 pounds round steel, assorted..... \$0 17 $\frac{25}{100}$ per pound.
To be delivered as required.

SMITH BROS. & Co. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 19, zinc.

2,000 pounds slab zinc..... \$0 12 $\frac{24}{100}$ per pound.
To be delivered as required.

SMITH BROS. & Co. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 1, boiler iron and rivets

100,000 pounds boiler iron, plate, from $\frac{3}{16}$ to $\frac{4}{8}$ inch thick.. \$0 09 $\frac{67}{100}$ per pound.
8,000 pounds boiler plate iron, from $\frac{7}{16}$ to $\frac{1}{2}$ inch thick.. 09 $\frac{67}{100}$ per pound.
2,000 pounds puddle plate iron, from 6 to 10 wire-gauge. 07 $\frac{53}{100}$ per pound.
25,000 pounds boiler rivets, $\frac{1}{2}$ to $\frac{3}{4}$ inch..... 09 $\frac{67}{100}$ per pound.
10,000 pounds sheet iron, Nos. 12 to 20..... 08 $\frac{60}{100}$ per pound.
To be delivered as required.

FREEMAN ORNE. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 2, pig iron.

100 tons No. 1 best cold blast, American, 2,240 pounds to
the ton..... \$60 00 per ton.
100 tons No. 2 American pig iron, 2,240 pounds to the ton. 50 00 per ton.
To be delivered as required.

BANKER & CARPENTER. DATE OF CONTRACT, MARCH 30, 1864.

Class No. 4, gum packing, rubber hose, &c.

2,000 pounds rubber packing.....	\$0 67	per pound.
1,000 pounds Tuck's packing.....	1 13	per pound.
1,000 pounds sheet rubber, for valves.....	1 07	per pound.
2,500 pounds rubber valves.....	1 09	per pound.
5,000 feet rubber hose, from $\frac{1}{2}$ to $2\frac{1}{2}$ inches in diameter.....	49	per foot.
1,000 pounds gum packing.....	65	per pound.
1,000 pounds rubber gaskets, per patterns.....	87	per pound.

To be delivered as required.

MULLET & BRADBURY. DATE OF CONTRACT, MARCH 26, 1864.

Class No. 5, sperm oil.

5,000 gallons winter-strained sperm oil.....	\$1 77	per gallon.
--	--------	-------------

To be delivered as required.

All applications for samples or information will be made to the commandant of the yard.

BANKER & CARPENTER. DATE OF CONTRACT, MARCH 30, 1864.

Class No. 6, linseed oil and turpentine.

500 gallons linseed oil, boiled.....	\$1 60	per gallon.
200 gallons spirits of turpentine.....	3 19	per gallon.

To be delivered as required.

BANKER & CARPENTER. DATE OF CONTRACT, MARCH 30, 1864.

Class No. 7, lard-oil.

2,000 gallons best quality lard-oil, for lubricating.....	\$1 18 $\frac{7}{8}$	per gallon.
---	----------------------	-------------

To be delivered as required.

MULLET & BRADBURY. DATE OF CONTRACT, MARCH 26, 1864.

Class No. 9, tallow and soap.

25,000 pounds pure beef tallow.....	\$0 12 $\frac{1}{2}$	per pound.
1,200 pounds brown soap.....	08 $\frac{1}{4}$	per pound.
20 boxes candles.....	10 00	per box.

To be delivered as required.

WM. A. WHEELER. DATE OF CONTRACT, APRIL 6, 1864.

Class No. 10, engineers' stores.

2,500 pounds Italian hemp packing yarn.....	\$0 25	per pound.
500 pounds packing cotton.....	50	per pound.
2,000 pounds anti-attrition metal.....	35	per pound.
20 balances, spring, to weigh 50 pounds.....	1 25	each.
20 beams, scales.....	3 50	each.
2,000 Bristol brick.....	08	each.
5,000 brick, fire.....	05	each.
1,000 brooms, corn.....	25	each.
600 brooms, hickory.....	25	each.
150 brushes, flue.....	1 25	each.
300 brushes, paint.....	75	each.
150 brushes, whitewash.....	1 00	each.
250 brushes, scrubbing.....	25	each.
200 pounds borax.....	35	per pound.
50 pounds chalk, white.....	03	per pound.
10 pounds chalk, red.....	08	per pound.
30 barrels clay, fire.....	2 00	per barrel.

20 drawing scales.....	\$0 50	each.
500 pounds emery, assorted numbers.....	15	per pound.
50 reams emery cloth, assorted numbers.....	25 00	per ream.
24 lamps, astral or solar.....	6 00	each.
300 lamps, globe, with fenders.....	2 50	each.
24 lamps, swivel.....	5 00	each.
600 pounds lampwick.....	80	per pound.
500 lamp chimneys.....	12	each.
10 flasks mercury, each containing 75 pounds.....	75 00	each.
30 barrels meal, oat, in half barrels.....	5 00	per barrel.
200 needles, sail.....	05	each.
1,000 pounds potash.....	14	per pound.
50 padlocks, brass.....	50	each.
50 palms, sewing.....	30	each.
50 pairs scissors, lampwick.....	25	each.
50 pairs scissors, common.....	25	each.
200 scrapers, common.....	30	each.
100 pounds rotten-stone.....	08	per pound.
500 pounds soap stone, pulverized.....	08	per pound.
250 pounds flour, sulphur.....	15	per pound.
50 pounds sal ammoniac.....	25	per pound.
100 pounds twine, sewing.....	75	per pound.
100,000 tacks, iron.....	08	per M.
50,000 tacks, copper.....	72	per M.
1,000 circular lampwicks.....	02	each.
100 pounds lamb's wool.....	50	per pound.
7,000 pounds cotton-waste.....	32	per pound.
150 pounds pulverized glass.....	08	per pound.
500 hand lamps, brass.....	50	each.

To be delivered as required.

FREEMAN ORNE. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 11, engineers' tools.

20 anvils, to weigh 140 pounds each.....	\$0 20	per pound.
50 axes, handled.....	1 12	each.
20 calipers.....	50	each.
20 compasses.....	30	each.
20 forges, blacksmiths'.....	20 00	each.
1,500 hand files, half-round, flat, square, round saw.....	15	each.
20 grindstones, mounted, 26 inches diameter.....	10 00	each.
48 hatchets, handled.....	06	each.
40 ladles, iron.....	30	each.
600 scoop shovels.....	1 50	each.
40 squares, iron, machinists', assorted.....	1 00	each.
40 stocks and dies, $\frac{3}{8}$ to $1\frac{1}{4}$ inch.....	6 00	each.
24 two-foot rules, "two-fold," brass-bound.....	50	each.
20 tinman's shears.....	6 00	each.
20 vices, one-half bench and one-half parallel jaw.....	8 00	each.
72 pawl wrenches, assorted sizes.....	5 50	each.
100 screw wrenches, assorted sizes, from 7 to 18 inches.....	2 00	each.
5,000 washers, assorted sizes, as required.....	01	each.
20 screw punches.....	25	each.
20 hand vices.....	50	each.
20 breast drill braces.....	2 50	each.
36 hack saws, assorted sizes.....	1 00	each.
250 hack saw blades, assorted sizes.....	50	each.

To be delivered as required.

WM. A. WHEELER. DATE OF CONTRACT, APRIL 6, 1864.

Class No. 12, engineers' instruments.

20 sets drawing instruments.....	\$15 00	per set.
200 hydrometers.....	1 00	each.
10 indicators.....	75 00	each.

25 steam gauges.....	\$25 00	each.
18 vacuum gauges.....	25 00	each.
100 thermometers.....	1 25	each.
300 thermometers for salinometers.....	1 00	each.

To be delivered as required.

SMITH BROS. & Co. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 16, steel.

6,000 pounds assorted steel.....	\$0 20 $\frac{40}{100}$	per pound.
----------------------------------	-------------------------	------------

To be delivered as required.

SMITH BROS. & Co. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 17, iron nails, bolts, and nuts.

2,000 pounds iron nails, assorted.....	\$0 05 $\frac{90}{100}$	per pound.
5,000 screw bolts.....	06	each.
20,000 pounds bar iron, flat, square, and round, as required	05 $\frac{85}{100}$	per pound.
200 pounds iron wire, assorted.....	10	per pound.

To be delivered as required.

SMITH BROS. & Co. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 18, copper.

10,000 pounds sheet copper, braziers', (sizes as required)---	\$0 50	per pound.
200 pounds copper wire, assorted.....	66	per pound.

To be delivered as required.

FREEMAN ORNE. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 19, tin and lead.

1,000 pounds pig lead.....	\$0 13	per pound.
50,000 pounds sheet lead.....	14	per pound.
1,000 pounds lead pipe, $\frac{1}{2}$ to 2 inch.....	15	per pound.
20 boxes sheet tin, sizes as required.....	30 00	per box.
600 pounds soft solder.....	50	per pound.
100 pounds spelter solder.....	33	per pound.

To be delivered as required.

BANKER & CARPENTER. DATE OF CONTRACT, MARCH 30, 1864.

Class No. 20, white lead.

8,000 pounds white lead, ground.....	\$0 08 $\frac{1}{2}$	per pound.
--------------------------------------	----------------------	------------

To be delivered as required.

BANKER & CARPENTER. DATE OF CONTRACT, MARCH 30, 1864.

Class No. 21, zinc paint.

5,000 pounds zinc paint.....	\$0 07 $\frac{65}{100}$	per pound.
------------------------------	-------------------------	------------

To be delivered as required.

BANKER & CARPENTER. DATE OF CONTRACT, MARCH 30, 1864.

Class No. 22, colored paints, dryers.

1,000 pounds black lead.....	\$0 06	per pound.
5,000 pounds red lead.....	13 $\frac{1}{2}$	per pound.
2,000 pounds black paint.....	06 $\frac{1}{2}$	per pound.
1,000 pounds lampblack.....	08	per pound.
2,000 pounds green paint.....	06	per pound.
1,000 pounds litharge.....	13 $\frac{1}{2}$	per pound.

To be delivered as required.

ABRAM E. CUTTER. DATE OF CONTRACT, ———.

Class No. 23, stationery.

60 account books.....	\$1 50	each.
500 memorandum books	50	each.
20 requisition books.....	3 00	each.
20 portfolios.....	1 50	each.
100 log slates.....	1 00	each.
25 pieces India ink	20	per piece.
24 bottles red ink, carmine.....	37½	per bottle.

10 brass syringes, large size.....	1 25	each.
50 bellows for forges, from 20 to 36 inches.....	20 00	each.
50 belt awls and punches.....	12	each.
50 claw hammers, per sample.....	1 00	each.
50 pairs dividers.....	50	per pair.
12 breast drills, with drills, complete.....	2 50	each.
20 dozen files, 16 inches, flat bastard.....	12 00	per dozen.
30 dozen files, 12 inches, flat bastard.....	8 00	per dozen.
20 dozen files, 12 inches, flat bastard.....	5 00	per dozen.
12 dozen files, 14 inches, half-round bastard.....	8 00	per dozen.

6 dozen files, 12 inches, half-round bastard	\$6 00	per dozen.
50 cast-steel hatchets	75	each.
50 handsaws, such as may be required.	2 00	each.
50 hack-saws, with frames, per sample.....	2 00	each.
150 hack-saws, blades to suit frames.....	50	each.
25 jack-planes	1 25	each.
25 smoothing planes	1 00	each.
25 fore planes.....	1 50	each.
3 dozen scroll saws, such as may be required.....	6 00	per dozen.
20 tinman's scrapers	20	each.
50 screwdrivers	50	each.
20 sets stocks, taps and dies, to cut from $\frac{3}{4}$ to $1\frac{1}{2}$ inch, with case, complete, taps to have wrenches to, as per sample.....	6 00	per set.
25 hand vices.....	50	each.
5 dozen screw wrenches, from 6 to 24 inches, best Ameri- can, such as may be required.....	18 00	per dozen.
To be delivered as required.		

WM. A. WHEELER. DATE OF CONTRACT, APRIL 6, 1864.

Class No. 12, engineers' instruments.

4 engine trip gongs, 12 to 16 inches, with 4 pulls and 16 cranks, each.....	\$28 00	each.
6 trip gongs, 6 to 9 inches, with 1 pull and 4 cranks, each	10 00	each.
6 vacuum gauges, 6 to $8\frac{1}{2}$ inches, such as may be required	25 00	each.
100 dozen oil syphons, glass, assorted.....	2 00	per dozen.
10 aneroid barometers.....	20 00	each.
500 saline hydrometers.....	1 00	each.
300 thermometers for hydrometers.....	1 50	each.
150 thermometers for engine-room.....	1 50	each.
To be delivered as required.		

FELIX CAMPBELL. DATE OF CONTRACT, APRIL 4, 1864.

Class No. 14, wrought iron pipe, valves, &c.

100 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, and 3-inch nipples.....	\$0 50	each.
50 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, and 3-inch unions	1 85	each.
50 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, and 3-inch ties.....	1 05	each.
100 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, and 3 inch elbows	85	each.
20 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, and 3-inch crosses	1 30	each.
50 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, and 3-inch couplings.....	50	each.
50 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, and 3-inch extra flanges..	1 05	each.
20 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, and 3-inch burlings.....	50	each.
20 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, and 3-inch plugs	50	each.
20 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, and 3-inch reduces.....	50	each.
10 brass globe valves, without flanges, $\frac{1}{2}$ inch	2 08	each.
10 brass globe valves, with flanges, $\frac{1}{2}$ inch.....	2 77	each.
10 brass globe valves, without flanges, $\frac{3}{4}$ inch.....	2 70	each.
10 brass globe valves, with flanges, $\frac{3}{4}$ inch.....	3 60	each.
15 brass globe valves, without flanges, 1 inch.....	3 87	each.
15 brass globe valves, with flanges, 1 inch.....	5 80	each.
12 brass globe valves, without flanges, $1\frac{1}{4}$ inch	5 63	each.
12 brass globe valves, with flanges, $1\frac{1}{4}$ inch.....	8 45	each.
12 brass globe valves, without flanges, $1\frac{1}{2}$ inch.....	7 20	each.
12 brass globe valves, with flanges, $1\frac{1}{2}$ inch	10 80	each.
20 brass globe valves, without flanges, 2 inches.....	10 80	each.
20 brass globe valves, with flanges, 2 inches.....	16 20	each.
20 brass globe valves, without flanges, $2\frac{1}{2}$ inches	18 00	each.
20 brass globe valves, with flanges, $2\frac{1}{2}$ inches.....	27 00	each.
12 brass globe valves, without flanges, 3 inches.....	30 00	each.
12 brass globe valves, with flanges, 3 inches.....	45 00	each.
12 brass globe valves, without flanges, $3\frac{1}{2}$ inches.....	44 00	each.
25 globe oil cups, No. 1 to 6, as may be required.....	9 00	each.

10 hose bibbs, screw-shank and shoulder, $\frac{1}{2}$ inch.....	\$2 10	each.
12 hose bibbs, screw-shank and shoulder, $\frac{3}{4}$ inch.....	3 00	each.
15 hose bibbs, screw-shank and shoulder, 1 inch.....	4 05	each.
12 hose bibbs, screw-shank and shoulder, $1\frac{1}{4}$ inch.....	5 75	each.
15 hose bibbs, screw-shank and shoulder, $1\frac{1}{2}$ inch.....	8 10	each.
10 angle valves, 1 inch, with bottom flanges.....	5 80	each.
10 angle valves, $1\frac{1}{2}$ inch, with bottom flanges.....	10 80	each.
10 steam stops, rough, 3 inches.....	25 00	each.
15 steam stops, single couplings, $2\frac{1}{2}$ inch.....	24 00	each.
10 steam stops, single couplings, $\frac{3}{4}$ inch.....	3 50	each.
10 air-cocks, No. 2.....	60	each.
10 air-cocks, No. 3.....	90	each.
1 proving pump, complete.....	75 00	each.
500 feet wrought iron pipe, $\frac{1}{2}$ inch inside.....	13	per foot.
800 feet wrought-iron pipe, $\frac{3}{4}$ inch inside.....	17	per foot.
1,200 feet wrought-iron pipe, 1 inch inside.....	22	per foot.
800 feet wrought-iron pipe, $1\frac{1}{4}$ inch inside.....	30	per foot.
800 feet wrought-iron pipe, $1\frac{1}{2}$ inch inside.....	39	per foot.
1,000 feet wrought-iron pipe, 2 inches inside.....	55 $\frac{1}{2}$	per foot.
1,000 feet wrought-iron pipe, $2\frac{1}{2}$ inches inside.....	1 00	per foot.
500 feet wrought-iron pipe, 3 inches inside.....	1 45	per foot.
800 feet wrought-iron pipe, $3\frac{1}{2}$ inches inside.....	1 80	per foot.
50 pieces, $\frac{3}{8}$ inch hydraulic pipe, each 10 feet long.....	1 00	per foot.

To be delivered as required.

FREEMAN ORNE. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 17, iron nails, bolts, nuts, &c.

500 pounds wrought iron bolts, $\frac{5}{8}$ inch by 4 inches.....	17	per pound.
500 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $3\frac{1}{2}$ inches.....	17	per pound.
1,000 pounds wrought-iron bolts, $\frac{5}{8}$ inch by 3 inches.....	17	per pound.
300 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $2\frac{3}{4}$ inches.....	17	per pound.
500 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $2\frac{1}{2}$ inches.....	17	per pound.
500 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $2\frac{1}{4}$ inches.....	17	per pound.
500 pounds wrought-iron bolts, $\frac{5}{8}$ inch by 2 inches.....	17	per pound.
1,000 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $1\frac{3}{4}$ inch.....	17	per pound.
1,000 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $1\frac{1}{2}$ inch.....	17	per pound.
500 pounds wrought-iron bolts, $\frac{3}{4}$ inch by 2 inches.....	17	per pound.
1,000 pounds wrought-iron bolts, $\frac{3}{4}$ inch by $2\frac{1}{2}$ inches.....	17	per pound.
1,000 pounds wrought-iron bolts, $\frac{3}{4}$ inch by 3 inches.....	17	per pound.
1,200 pounds wrought-iron bolts, $\frac{3}{4}$ inch by $3\frac{1}{2}$ inches.....	17	per pound.
1,000 pounds wrought-iron bolts, $\frac{7}{8}$ inch by $5\frac{1}{2}$ inches.....	17	per pound.
1,200 pounds wrought-iron bolts, $\frac{3}{4}$ inch by 4 inches.....	17	per pound.
1,000 pounds wrought-iron bolts, $\frac{3}{4}$ inch by 5 inches.....	17	per pound.
1,000 pounds wrought-iron bolts, $\frac{9}{16}$ inch by $1\frac{1}{2}$ inch.....	17	per pound.
500 pounds wrought-iron bolts, $\frac{1}{2}$ inch by $1\frac{1}{2}$ inch.....	17	per pound.
1,000 pounds wrought-iron bolts, $\frac{7}{8}$ inch by 3 inches.....	17	per pound.
1,000 pounds wrought-iron bolts, $\frac{7}{8}$ inch by 4 inches.....	17	per pound.
1,200 pounds wrought-iron bolts, 1 inch by $3\frac{1}{2}$ inches.....	17	per pound.
1,000 pounds wrought-iron bolts, 1 inch by $4\frac{1}{2}$ inches.....	17	per pound.
1,000 pounds wrought-iron bolts, $\frac{3}{8}$ inch by $\frac{3}{4}$ inch.....	17	per pound.
500 pounds Boonton hot-pressed square nuts, $\frac{5}{8}$ inch.....	15	per pound.
500 pounds Boonton hot-pressed hexagon nuts, $\frac{5}{8}$ inch.....	15	per pound.
500 pounds Boonton hot-pressed square nuts, $\frac{3}{4}$ inch.....	15	per pound.
500 pounds Boonton hot-pressed hexagon nuts, $\frac{3}{4}$ inch.....	15	per pound.
300 pounds Boonton hot-pressed square nuts, $\frac{1}{2}$ inch.....	17	per pound.
500 pounds Boonton hot-pressed hexagon nuts, $\frac{7}{8}$ inch.....	15	per pound.
600 pounds Boonton hot-pressed hexagon nuts, 1 inch.....	15	per pound.
500 papers iron finishing nails, $\frac{3}{4}$ inch to 2 inches.....	25	per paper.
200 papers iron brads, $\frac{3}{8}$ inch to 1 inch.....	25	per paper.
100 gross brass screws, gimlet points, $\frac{3}{8}$ inch to 4 inches...	2 00	per gross.
100 gross iron screws, gimlet points, $\frac{3}{8}$ inch to 4 inches...	1 00	per gross.

To be delivered as required.

FREEMAN ORNE. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 18, copper.

20,000 ingot copper.....	\$0 45	per pound.
100 pounds copper rivets, such as may be required.....	55	per pound.
5,000 pounds sheet copper, such as may be required.....	51	per pound.
To be delivered as required.		

FREEMAN ORNE. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 19, tin, zinc, &c.

5,000 pounds Banca tin.....	\$0 60	per pound.
2,500 pounds Silesian spelter.....	13	per pound.
500 pounds spelter solder.....	35	per pound.
5,000 pounds sheet lead, 3 to 6 pounds.....	14	per pound.
5 boxes tin plate, large and heavy.....	30 00	per box.
To be delivered as required.		

BANKER & CARPENTER. DATE OF CONTRACT, MARCH 30, 1864.

Class No. 20, white lead.

6,000 pounds white lead, in 25-pound kegs.....	\$0 08 $\frac{3}{4}$	per pound.
To be delivered as required.		

JOHN J. BINGHAM. DATE OF CONTRACT, APRIL 6, 1864.

Class No. 22, colored paints, dryers, &c.

300 pounds gum shellac.....	\$0 95	per pound.
300 pounds black varnish.....	10	per pound.
5,000 pounds red lead, dry.....	13	per pound.
To be delivered as required.		

WM. A. WHEELER. DATE OF CONTRACT, APRIL 6, 1864.

Class No. 23, stationery.

10 sets drawing instruments, not to exceed \$25 per set..	\$20 00	per set.
25 dozen lead pencils, drawing and assorted, Faber's....	50	per dozen.
25 gross steel pens, assorted.....	1 00	per gross.
3,000 slate pencils, best Rutland.....	6 00	per M.
15 gross American calcined chalk, Crayon's.....	50	per gross.
To be delivered as required.		

FREEMAN ORNE. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 25, hickory and ash plank and butts.

5,000 feet best 3-inch ash plank.....	\$80 00	per M feet.
60 white heart hickory butts, from 10 to 14 feet long....	6 00	each.
5,000 feet best 3-inch hickory plank.....	80 00	per M feet.
To be delivered as required.		

JOHN J. BINGHAM. DATE OF CONTRACT, APRIL 6, 1864.

Class No. 26, white pine.

20,000 feet best white pine lumber, from 1 to 6 inches thick, board measure.....	\$50 00	per M feet.
To be delivered as required.		

FREEMAN ORNE. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 29, lanterns.

300 globe lanterns, large or small, as may be required, per sample.....	\$1 50	each.
100 engine-room lamps, solar, with reflector, per sample....	9 00	each.
200 horn or mica lanterns, per sample.....	2 00	each.
600 lamp chimneys, such as may be required.....	18	each.
To be delivered as required.		

FREEMAN ORNE. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 30, lignumvitæ.

2 tons lignumvitæ, 10 to 16 inches diameter.....	\$100 00	per ton.
To be delivered as required.		

FREEMAN ORNE. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 1, boiler iron, &c.

25,000 pounds boiler iron, assorted, from $\frac{1}{4}$ to $\frac{1}{2}$ inch thick, length and breadth as required.....	\$0 09 $\frac{3}{4}$	per pound.
To be delivered as required.		

GEORGE ADAMS. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 3, boiler felting.

200 yards boiler felting.....	\$1 10	per yard.
To be delivered as required.		

FREEMAN ORNE. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 4, gum packing, rubber hose, &c.

2,000 pounds hemp packing.....	\$0 31	per pound.
300 pounds cotton packing.....	65	per pound.
1,000 pounds sheet rubber.....	90	per pound.
250 pounds Tuck's packing, assorted.....	90	per pound.
500 feet rubber hose, 2 $\frac{1}{2}$ inches.....	70	per foot.
300 feet rubber hose, from 1 to 2 inches.....	40	per foot.
To be delivered as required.		

SYLVANUS THOMAS. DATE OF CONTRACT, APRIL 4, 1864.

Class No. 5, sperm oil.

1,000 gallons sperm oil.....	\$1 80	per gallon.
To be delivered as required.		

BANKER & CARPENTER. DATE OF CONTRACT, MARCH 30, 1864.

Class No. 6, linseed oil and turpentine.

500 gallons linseed oil, raw.....	\$1 57	per gallon.
50 gallons turpentine.....	3 65	per gallon.
To be delivered as required.		

BANKER & CARPENTER. DATE OF CONTRACT, MARCH 30, 1864.

Class No. 7, lard-oil.

1,000 gallons lard-oil.....	\$1 19 $\frac{1}{4}$	per gallon.
To be delivered as required.		

Wm. F. SIMES & Co. DATE OF CONTRACT, APRIL 6, 1864.

Class No 9, tallow and soap.

7,000 pounds tallow.....	\$0 14	per pound.
50 pounds washing soda.....	03½	per pound.
24 boxes salt-water soap, 50 pounds each.....	13	per pound.
50 boxes fresh-water soap, 50 pounds each.....	08½	per pound.
To be delivered as required.		

Wm. A. WHEELER. DATE OF CONTRACT, APRIL 6, 1864.

Class No. 10, engineers' stores.

200 pounds anti-attrition metal.....	\$0 45	per pound.
100 pounds borax.....	40	per pound.
100 Bath brick.....	08	each.
10 pounds beeswax.....	75	per pound.
500 brick, fire.....	80 00	per M.
25 brushes, whitewash.....	1 00	each.
48 brushes, dusting, long handle.....	75	each.
48 brushes, dusting, short handle.....	40	each.
50 brushes, paint.....	75	each.
50 pounds brass, sheet, $\frac{1}{16}$	60	per pound.
200 pounds brass wire.....	55	per pound.
50 brooms, hickory.....	25	each.
100 brooms, corn.....	30	each.
1,000 pounds cotton-waste, white.....	30	per pound.
300 barrels charcoal.....	80	per barrel.
100 pounds copper wire.....	65	per pound.
48 hammer handles.....	20	each.
48 sledge handles.....	50	each.
150 pounds lampwick.....	75	per pound.
10 gross lampwick, circular.....	2 00	per gross.
1 gross lamp screws, $1\frac{1}{2}$ inch, with spiral plates.....	24 00	per gross.
100 lantern globes.....	75	each.
75 lamps, globe, with fenders.....	2 50	each.
3 gross lamp screws, $\frac{7}{8}$ inch, with two tubes.....	4 00	per gross.
2 gross squirt-can screws, $\frac{1}{2}$ inch.....	5 50	per gross.
1 gross feeder screws.....	15 00	per gross.
400 pounds lead, sheet.....	18	per pound.
200 pounds lead, pig.....	16	per pound.
200 pounds spelter solder.....	45	per pound.
6 sides sole leather.....	12 00	per side.
6 sides lacing leather.....	3 00	per side.
200 pounds mercury, in flasks.....	1 00	per pound.
200 pounds potash.....	15	per pound.
50 pounds rotten-stone.....	08	per pound.
3 barrels rosin.....	50 00	per barrel.
50 pounds iron wire.....	16	per pound.
50 papers iron tacks.....	06	per paper.
50 pounds sewing twine.....	75	per pound.
50 pounds sal ammoniac.....	20	per pound.
100 pounds soapstone, pulverized.....	08	per pound.
100 pounds sulphur flour.....	14	per pound.
25 sewing palms.....	50	each.
200 scrubbing brushes.....	25	each.
12 sand glasses, 60".....	1 00	each.
12 sand glasses, 30".....	1 00	each.
12 scissors, per sample.....	50	each.
500 pounds washers, assorted.....	15	per pound.
To be delivered as required.		

FREEMAN ORNE. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 11, engineers' tools.

250 pounds anvils.....	\$0 20	per pound.
12 belt awls and punches.....	12	each.
4 bellows for forges, 30 inches.....	20	each.
24 boxwood rules, four-fold, standard, 2 feet.....	50	each.
12 braces and bits, (36 bits each set).....	6 00	per set.
6 calipers, large, 24 to 36 inches.....	50	each.
6 calipers, small, 6 to 12 inches.....	25	each.
12 claw hammers.....	1 00	each.
6 grindstones, mounted.....	6 00	each.
6 engine-room clocks.....	5 00	each.
12 dozen files, assorted, from 12 to 16 inches.....	10 00	per dozen.
2 forges, with bellows, complete.....	25 00	each.
12 firmer chisels, assorted.....	25	each.
12 firmer gouges.....	25	each.
12 hatchets.....	50	each.
4 hydraulic jacks, to lift from foot 10 to 12 tons.....	100 00	each.
6 hand bellows.....	1 50	each.
6 hacksaws and frames, complete.....	2 00	each.
6 hack-saw blades, to suit frames.....	50	each.
6 hand saws.....	1 50	each.
12 hand vices.....	50	each.
12 plyers.....	20	each.
24 pincers.....	25	each.
12 screwdrivers.....	20	each.
24 shoe knives.....	20	each.
6 steel squares.....	50	each.
100 ship-scrapers.....	50	each.
6 stones, oil.....	50	each.
6 steel dividers.....	50	each.
6 screw plates and taps, complete.....	50	each.
12 cast steel wood axes.....	1 00	each.
3 stocks and dies and taps.....	5 00	per set.
150 steel coal shovels.....	1 00	each.
6 tinman's shears.....	6 00	each.
500 pounds vices.....	16	per pound.
6 wrenches, pawl.....	5 00	each.
12 wrenches, screw.....	1 50	each.
6 wrenches, pipe, assorted.....	1 00	each.
To be delivered as required.		

WILLIAM A. WHEELER. DATE OF CONTRACT, APRIL 6, 1864.

Class No. 12, engineers' instruments.

50 thermometers, for salinometers.....	\$1 25	each.
50 saline hydrometers.....	1 25	each.
6 steam gauges, from 6 to 8 inches, as may be required.....	25 00	each.
2 steam whistles.....	40 00	each.
6 scale beams, to weigh 500 to 800 pounds.....	10 00	each.
12 spring balances.....	3 00	each.
6 vacuum gauges, from 6 to 8 inches, as may be required.....	30 00	each.
3 metallic measuring lines, 100 feet.....	8 00	each.
To be delivered as required.		

FREEMAN ORNE. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 14, wrought-iron pipe, valves, &c.

100 feet $\frac{3}{8}$ -inch wrought-iron pipe.....	\$0 12	per foot.
250 feet $\frac{3}{4}$ -inch wrought-iron pipe.....	18	per foot.
250 feet 1-inch wrought-iron pipe.....	25	per foot.
100 elbows, from $\frac{3}{8}$ to 1 inch.....	25	each.
30 tees, from $\frac{3}{8}$ to 1 inch.....	30	each.
30 unions, from $\frac{3}{8}$ to 1 inch.....	30	each.
To be delivered as required.		

FREEMAN ORNE. DATE OF CONTRACT, MARCH 31, 1864.

Class No. 16, steel.

800 pounds octagon cast steel, from $\frac{1}{2}$ to 1 inch.....	\$0 26	per pound.
200 pounds round cast steel, from $\frac{1}{2}$ to $1\frac{1}{4}$ inch.....	26	per pound.
250 pounds square cast steel, from $\frac{1}{2}$ to $1\frac{1}{2}$ inch.....	26	per pound.
600 pounds square cast steel, from $\frac{1}{2}$ to 2 inches.....	20	per pound.
700 pounds flat cast steel, from $\frac{1}{4}$ to 4 inches wide, and from $\frac{1}{4}$ to $\frac{1}{2}$ inch thick.....	20	per pound.
To be delivered as required.		

HENRY WINDSOR & Co. DATE OF CONTRACT, MARCH 29, 1864.

Class No. 18, copper.

30 sheets copper, 20 pounds each, 30 by 60 inches.....	\$0 49	per pound.
40 sheets copper, 25 pounds each, 30 by 60 inches.....	49	per pound.
50 sheets copper, 30 pounds each, 30 by 60 inches.....	49	per pound.
40 sheets copper, 35 pounds each, 30 by 60 inches.....	49	per pound.
50 sheets copper, 45 pounds each, 30 by 60 inches.....	49	per pound.
30 sheets copper, 50 pounds each, 30 by 60 inches.....	49	per pound.
25 sheets copper, 60 pounds each, 30 by 60 inches.....	49	per pound.
20 sheets copper, 80 pounds each, 30 by 60 inches.....	49	per pound.
10 sheets copper, 100 pounds each, 30 by 60 inches.....	49	per pound.
5 sheets copper, 120 pounds each, 30 by 60 inches.....	49	per pound.
3 sheets copper, 145 pounds each, 36 by 72 inches.....	49	per pound.
20 rolls sheet brass.....	54	per pound.
To be delivered as required.		

WILLIAM A. WHEELER. DATE OF CONTRACT, APRIL 6, 1864.

Class No. 19, tin, &c.

60 pounds sheet zinc, No 10.....	\$0 20	per pound.
1,500 pounds Banca tin.....	60	per pound.
13 boxes tin, XX, 14 by 20.....	25 00	per box.
To be delivered as required.		

BANKER & CARPENTER. DATE OF CONTRACT, MARCH 30, 1864.

Class No. 20, white lead.

2,000 pounds white lead, in oil.....	\$0 08 $\frac{3}{4}$	per pound.
To be delivered as required.		

JOHN LEARY. DATE OF CONTRACT, APRIL 7, 1864.

Class No. 21, zinc paint.

1,500 pounds zinc paint, in oil.....	\$0 08	per pound.
To be delivered as required.		

BANKER & CARPENTER. DATE OF CONTRACT, MARCH 30, 1864.

Class No. 22, colored paints and dryers.

1,500 pounds red lead, dry.....	\$0 13 $\frac{1}{2}$	per pound.
200 pounds black paint, in oil.....	06 $\frac{1}{2}$	per pound.

5 quarts black sand.....	25	per quart.
6 penknives, 4 blades	2 20	each.
To be delivered as required.		

A. V. GRAY. DATE OF CONTRACT, MARCH 28, 1864.

Class No. 1, boiler iron, &c.

3,000 pounds of iron rivets, $\frac{5}{8}$ by $1\frac{1}{2}$ inch	\$0 10	per pound.
5,000 pounds of $\frac{5}{8}$ -inch round iron.....	07 $\frac{1}{8}$	per pound.
7,000 pounds of $\frac{7}{8}$ -inch round iron.....	07 $\frac{1}{8}$	per pound.
7,000 pounds of 2 by $\frac{1}{2}$ -inch flat iron.....	07 $\frac{1}{8}$	per pound.
To be delivered as required.		

A. V. GRAY. DATE OF CONTRACT, MARCH 28, 1864.

Class No. 17, bolts.

300 pounds $\frac{1}{2}$ -inch iron bolts, 2, $2\frac{1}{2}$, and 3 inches long...	\$0 18	per pound.
1,000 pounds $\frac{3}{4}$ -inch iron bolts, 2, $2\frac{1}{2}$, and 3 inches long...	18	per pound.
1,000 pounds $\frac{3}{4}$ -inch iron bolts, 2, $2\frac{1}{2}$ and 3 inches long...	18	per pound.
500 pounds $\frac{1}{2}$ -inch iron bolts, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4 inches long.....	18	per pound.
500 pounds 1-inch iron bolts, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4 inches long.....	18	per pound.
To be delivered as required.		

SCALE OF BIDS FOR MATERIALS FOR THE NAVY, UNDER BUREAU OF
STEAM ENGINEERING, UNDER ADVERTISEMENT OF JULY 10, 1864, FOR
THE NAVY YARD AT

Kittery, Maine.

[Bids marked thus (*) have been accepted.]

Class 1:

Charles C. Wentworth.....	\$21,360 00
Wm. E. Coffin & Co.	*16,655 00
Wm. A. Wheeler	30,495 00

Class 2:

Charles C. Wentworth.....	*3,650 00
James M. Shaw	4,202 50
Wm. A. Wheeler	5,150 00

Class 3:

Geo. Adams	*1,860 00
Wm. A. Wheeler.....	5,250 00
Lockwood & Collins	4,500 00

Class 4:

Boston Belting Co.....	*7,266 00
John H. Bailey	7,594 00
Wm. A. Wheeler.....	14,735 00
Lockwood & Collins	10,350 00

Class 5:

James M. Shaw	4,110 00
Wm. A. Wheeler.....	4,875 00
Southard, Herbert & Co....	*3,960 00
Sylvanus Thomas.....	4,485 00
Lockwood & Collins	6,000 00

Class 6:

Geo. Adams	712 00
Wm. A. Wheeler	1,212 50
Banker & Carpenter	*703 50
Lockwood & Collins	706 25

Class 7:

James M. Shaw	5,940 00
Wm. A. Wheeler.....	7,500 00
Southard, Herbert & Co....	*5,910 00

Class 8:

Wm. A. Wheeler.....	*5,000 00
Southard, Herbert & Co....	5,060 00

Class 9:

N. F. Mathes.....	1,335 00
Wm. A. Wheeler.....	1,650 00
Southard, Herbert & Co....	*1,295 00
Lockwood & Collins	1,625 00

Class 10:

No award; prices exorbitant.

Class 11:

No award; prices too high.

Class 12:

Wm. A. Wheeler.....	*\$1,108 00
Lockwood & Collins	1,042 00

Lockwood & Collins's bid rejected for refusing to execute previous contract with the bureau.

Class 14:

Charles C. Wentworth.....	2,364 25
John H. Bailey	*2,298 00
Wm. A. Wheeler.....	5,562 50

Class 15:

No award; prices too high.

Class 16:

Charles C. Wentworth.....	*9,210 00
Wm. A. Wheeler.....	13,500 00

Class 17:

Wm. A. Wheeler.....	*1,124 00
Lockwood & Collins	1,560 00

Class 18:

Baltimore & Cuba Smelting and Mining Co.....	*13,750 00
Revere Copper Co.	13,750 00
Chas. C. Wentworth	15,500 00
Wm. A. Wheeler.....	17,500 00
Lockwood & Collins	14,000 00

Awarded by lot to Baltimore & Cuba Smelting and Mining Co.

Class 19:

Charles C. Wentworth.....	3,800 00
John H. Bailey.....	*3,346 00
Wm. A. Wheeler.....	4,770 00
Lockwood & Collins	3,700 00

Class 20:

John H. Bailey	*\$285 00
Wm. A. Wheeler	480 00
Banker & Carpenter	360 00
Lockwood & Collins	375 00

Class 21:

John H. Bailey	240 00
Wm. A. Wheeler	360 00
Banker & Carpenter	*235 00
Lockwood & Collins	290 00

Class 22:

John H. Bailey	1,937 00
Wm. A. Wheeler	3,673 00
Banker & Carpenter	*1,379 00
Lockwood & Collins	2,641 00

Class 23:

Hall L. Davis	*890 80
Wm. A. Wheeler	1,973 00

Class 24:

J. M. Mather	\$720 00
A. J. Stimson	*514 40
W. A. Wheeler	1,120 00

Class 34:

Darius Allen	*2,466 10
Wm. A. Wheeler	4,718 50

Class 35:

Wm. A. Wheeler	*8,026 00
Lockwood & Collins	6,809 00

Lockwood & Collins's bid thrown out for having refused to execute previous contract with the bureau.

The bids from the following persons were received after the time advertised for opening bids, viz:

Henry W. Miller,
Spalding & Parrott.

Scale of bids for materials for the navy, under Bureau of Steam Engineering, under advertisement of July 10, 1864, for the navy yard at Charlestown, Mass.

Class 1:

Charles C. Wentworth	*\$15,004 00
Wm. A. Wheeler	21,028 00

Southard, Herbert & Co.	*\$20,880 00
Sylvanus Thomas	23,840 00

Class 2:

Charles C. Wentworth	*9,100 00
James M. Shaw	10,517 50
Wm. A. Wheeler	10,000 00

Geo. Adams	*3,945 00
Chas. C. Wentworth	4,252 50
Wm. A. Wheeler	5,150 00
Banker & Carpenter	4,145 00
Lockwood & Collins	3,850 00

Lockwood & Collins's bid thrown out for refusing to execute previous contract with the bureau.

Class 3:

Geo. H. Adams	40,500 00
Chas. C. Wentworth	*7,500 00
Wm. A. Wheeler	75,000 00

Awarded to Charles C. Wentworth, and withdrawn from his contract by order of the department.

Class 7:

Chas. C. Wentworth	5,970 00
James M. Shaw	5,880 00
Wm. A. Wheeler	7,500 00
Southard, Herbert & Co.	*5,790 00

Class 4:

Charles C. Wentworth	*16,200 00
Boston Belting Co.	16,260 00
Wm. A. Wheeler	30,750 00
Lockwood & Collins	23,150 00

Class 8:

Chas. C. Wentworth	*2,130 00
Wm. A. Wheeler	3,750 00
Banker & Carpenter	3,285 00

Class 5:

Geo. Adams	21,360 00
Chas. C. Wentworth	22,720 00
James M. Shaw	21,920 00
Wm. A. Wheeler	24,000 00

Class 9:

Geo. Adams	2,845 00
Wm. A. Wheeler	3,590 00
Southard, Herbert & Co.	*2,816 00
Lockwood & Collins	3,050 00

Class 10:

No award; prices exorbitant.

Class 11:

Wm. A. Wheeler *\$33,116 90
 Lockwood & Collins 43,546 65

Class 12:

Wm. A. Wheeler *6,705 00
 Lockwood & Collins 8,487 50

Class 13:

Wm. A. Wheeler *12,000 00

Class 14:

Chas. C. Wentworth *20,127 65
 Wm. A. Wheeler 45,420 50

Class 15:

Chas. C. Wentworth *7,376 00
 Wm. A. Wheeler 23,500 00

Class 16:

Chas. C. Wentworth *4,390 00
 Wm. A. Wheeler 6,750 00

Class 17:

Chas. C. Wentworth *2,083 25
 Wm. A. Wheeler 3,805 50

Class 18:

Baltimore & Cuba Smelting
 and Mining Co. *6,090 00
 Chas. C. Wentworth 6,664 00
 Wm. A. Wheeler 7,600 00
 Lockwood & Collins 6,135 00

Class 19:

Chas. C. Wentworth *17,641 00
 Wm. A. Wheeler 26,050 00
 Lockwood & Collins 21,650 00

Class 20:

Chas. C. Wentworth \$2,300 00
 Wm. A. Wheeler 3,000 00
 Banker & Carpenter *2,150 00
 Lockwood & Collins 2,300 00

Class 21:

Wm. A. Wheeler 700 00
 Banker & Carpenter *455 00
 Lockwood & Collins 500 00

Class 22:

Wm. A. Wheeler 3,510 00
 Banker & Carpenter *2,390 00
 Lockwood & Collins 2,705 00

Class 23:

Wm. A. Wheeler *5,133 10

Class 25:

Trickey & Jewett *1,086 00

Class 26:

Trickey & Jewett *140 00

Class 34:

Darius Allen *7,736 25
 Wm. A. Wheeler 12,801 25

Class 35:

Wm. A. Wheeler *9,254 25
 Lockwood & Collins 8,511 00

Lockwood & Collins's bid thrown out for
 refusing to execute previous contract
 with the bureau.

The bids from the following persons were re-
 ceived after the time advertised for opening
 bids, viz:

Henry W. Miller,
 Sewall & Cameron.

*Scale of bids for materials for the navy, under Bureau of Steam Engineering, under advertise-
 ment of July 10, 1864, for the navy yard at Brooklyn, New York.*

Class 1:

No bid accepted for this class.

Class 2:

Bingham & Anthony \$21,125 00

James M. Shaw *\$18,400 00
 Wm. A. Wheeler 21,875 00

Class 3:

Geo. Adams *4,170 00
 Bingham & Anthony 7,200 00
 Wm. A. Wheeler 8,250 00

Class 4:

Boston Belting Co.....	*\$47,945 00
Bingham & Anthony.....	55,610 00
Wm. A. Wheeler	75,375 00
Lockwood & Collins	71,650 00

Class 5:

James M. Shaw	*39,730 00
Wm. A. Wheeler	43,500 00
Banker & Carpenter	45,095 00
Sylvanus Thomas	43,210 00

Class 6:

Wm. Miller.....	13,545 00
Wm. A. Wheeler.....	14,587 50
Banker & Carpenter	*12,990 00
Lockwood & Collins	11,450 00

Lockwood & Collins's bid thrown out for refusing to execute previous contract with the bureau.

Class 7:

James M. Shaw.....	*39,000 00
Wm. A. Wheeler.....	40,000 00
Banker & Carpenter.....	43,600 00

Class 8:

Wm. H. Weed	*9,500 00
Wm. A. Wheeler	11,250 00

Class 9:

Bingham & Anthony.....	8,240 00
Wm. A. Wheeler	9,060 00
Southard, Herbert & Co....	*8,230 00
Lockwood & Collins	7,970 00

Lockwood & Collins's bid thrown out for refusing to execute previous contract with the bureau.

Class 10:

Bingham & Anthony.....	*49,551 50
Wm. A. Wheeler.....	52,375 00
Lockwood & Collins	60,520 00

Class 11:

Wm. A. Wheeler	*81,900 50
Lockwood & Collins	80,081 00

Lockwood & Collins's bid thrown out for refusing to execute previous contract with the bureau.

Class 12:

Wm. A. Wheeler	*39,495 00
----------------------	------------

Class 13:

Bingham & Anthony.....	*36,925 00
Wm. A. Wheeler	44,300 00
Lockwood & Collins	48,400 00

Class 14:

Bingham & Anthony.....	\$75,997 95
Felix Campbell	*55,272 95
Wm. A. Wheeler	97,311 35

Class 15:

Wm. A. Wheeler*	*48,200 00
-----------------------	------------

Class 16:

Bingham & Anthony.....	*24,720 00
Wm. A. Wheeler	31,150 00

Class 17:

Bingham & Anthony.....	26,424 00
Wm. A. Wheeler	*24,725 00
Lockwood & Collins	34,132 00

Class 18:

Baltimore & Cuba Smelting and Mining Co.	*29,625 00
Bingham & Anthony.....	33,775 00
Wm. A. Wheeler	35,750 00
Lockwood & Collins	31,100 00

Class 19:

Bingham & Anthony.....	*22,075 00
Wm. A. Wheeler.....	23,400 00
Lockwood & Collins	19,000 00

Lockwood & Collins's bid thrown out for refusing to execute previous contract with the bureau.

Class 20:

Wm. Miller	5,980 00
Wm. A. Wheeler.....	6,900 00
Banker & Carpenter	*5,290 00
Lockwood & Collins	5,750 00

Class 21:

Wm. Miller	*660 00
Wm. A. Wheeler	900 00
Banker & Carpenter	705 00
Lockwood & Collins	900 00

Class 22:

Wm. Miller	14,803 00
Wm. A. Wheeler	18,050 00
Banker & Carpenter	*11,996 50
Lockwood & Collins	13,980 00

Class 23:

No award of contract.

Class 24:

Wm. A. Wheeler	*3,000 00
----------------------	-----------

Class 25:

F. S. Bletz *\$1,460 00
 F. S. Bletz failed to execute contract.

Class 26:

Bingham & Anthony *5,062 50
 F. S. Bletz 5,100 00

Class 27:

F. S. Bletz *625 00
 F. S. Bletz failed to execute contract.

Class 28:

No bid received.

Class 29:

Wm. A. Wheeler 28,370 00
 Wm. Porter & Sons *9,727 00

Class 30:

Bingham & Anthony 2,250 00
 Wm. A. Wheeler *2,000 00
 Lockwood & Collins 4,990 00

Class 31:

No award.

Class 32:

No award; ambiguity in description on schedule.

Class 33:

Felix Campbell *\$10,000 00
 Wm. A. Wheeler 505,000 00

Class 34:

Darius Allen *14,027 50
 Bingham & Anthony 15,545 00
 Wm. A. Wheeler 23,100 00
 Lockwood & Collins 27,580 00

Class 35:

Bingham & Anthony *19,386 40
 Wm. A. Wheeler 27,071 50
 Lockwood & Collins 30,845 00

The bids from the following persons were received after the time advertised for the opening of bids, viz:

Henry W. Miller,
 Wm. H. Arthur,
 R. S. Aikman & Co.,
 Sewall & Cameron,
 Watson & Pettinger,
 Joseph W. Duryee,
 Richard Dudgeon.

Scale of bids for materials for the navy, under Bureau of Steam Engineering, under advertisement of July 10, 1864, for the navy yard at Philadelphia, Pennsylvania.

Class 3:

John K. Shoemaker 3,735 00
 Geo. Adams *2,235 00
 Charles M. Ghriskey 3,000 00
 Wm. A. Wheeler 4,500 00

Class 4:

John K. Shoemaker *18,590 00
 Wm. A. Wheeler 22,150 00
 Lockwood & Collins 18,400 00
 Lockwood & Collins's bid thrown out for refusing to execute previous contract with the bureau.

Class 5:

James M. Shaw *41,550 00
 Wm. A. Wheeler 45,000 00

Southard, Herbert & Co... \$44,250 00
 Banker & Carpenter 48,450 00
 Sylvanus Thomas 45,300 00

Class 6:

Wm. E. Spalding *6,215 00
 James M. Shaw 6,717 50
 Wm. A. Wheeler 7,900 00
 Banker & Carpenter 6,260 00
 Lockwood & Collins 6,800 00

Class 7:

James M. Shaw *9,750 00
 Wm. A. Wheeler 10,000 00
 Southard, Herbert & Co... 10,500 00
 Banker & Carpenter 12,150 00

Class 9:

John K. Shoemaker 5,727 50
 Wm. A. Wheeler 6,395 00
 Southard, Herbert & Co... *5,290 00
 Lockwood & Collins 6,850 00

Class 10:

John K. Shoemaker	*\$10,598 75
Charles M. Ghriskey	11,274 25
Wm. A. Wheeler	13,214 50
Lockwood & Collins	16,645 00

Class 11:

John K. Shoemaker	6,587 34
Charles M. Ghriskey	*5,440 10
Wm. A. Wheeler	7,791 90
Lockwood & Collins	8,999 20

Class 12:

John K. Shoemaker	*2,817 75
Wm. A. Wheeler	2,921 50
Lockwood & Collins	3,036 50

Class 14:

John K. Shoemaker	*4,191 50
Wm. A. Wheeler	6,559 00

Class 15:

John K. Shoemaker	*12,150 00
Wm. A. Wheeler	13,750 00

Class 16:

Wm. F. Potts	1,875 00
Charles M. Ghriskey	*1,837 50
Wm. A. Wheeler	2,812 50

Class 17:

John K. Shoemaker	1,400 00
Charles M. Ghriskey	1,600 00
Wm. A. Wheeler	*900 00

Class 18:

Baltimore & Cuba Smelt- ing and Mining Co.	73,045 00
Caswell, Perkins & Co. ..	69,914 50
Henry & W. D. Winsor..	*67,566 63
Wm. A. Wheeler	104,350 00
Lockwood & Collins	89,482 50

Class 19:

John K. Shoemaker	*2,917 50
Wm. A. Wheeler	3,665 00
Lockwood & Collins	2,630 00

Lockwood & Collins's bid thrown out for refusing to execute previous contract with the bureau.

Class 20:

Wm. E. Spalding	*\$1,987 50
Wm. A. Wheeler	3,000 00
Banker & Carpenter	2,300 00
Lockwood & Collins	2,300 00

Class 21:

Wm. E. Spalding	*600 00
Wm. A. Wheeler	900 00
Banker & Carpenter	675 00
Lockwood & Collins	900 00

Class 22:

Wm. E. Spalding	4,405 00
Wm. A. Wheeler	6,440 00
Banker & Carpenter	*3,289 00

Class 23:

Ferdinand Foster	*1,521 91
Wm. A. Wheeler	2,332 20

Class 24:

John K. Shoemaker	*1,195 00
Wm. A. Wheeler	1,200 00

Class 34:

John K. Shoemaker	7,875 00
Darius Allen	*5,706 25
J. Blakeley	9,322 50
Wm. A. Wheeler	9,862 50
Lockwood & Collins	10,725 00

Class 35:

John K. Shoemaker	3,068 71
Charles M. Ghriskey	*2,738 56
Wm. A. Wheeler	3,934 00
Lockwood & Collins	3,379 50
Wm. Porter & Sons	2,891 30

The bids from the following persons were received after the time advertised for opening bids, viz :

Henry W. Miller,

Watson & Pettinger.

The bids from the following persons were

Schedule of materials required at the several navy yards for 1864-'65.

WM. E. COFFIN & CO. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 1, boiler iron, &c.

30,000 pounds best American flange iron, dimensions as required.....	\$0 11½ per pound.
30,000 pounds best boiler iron, dimensions as required.....	11 per pound.
5,000 pounds Pembroke boiler rivets, as required	11¾ per pound.
5,000 pounds angle iron, 3 x 3	11 per pound.
4,000 pounds tee iron, 3 x 3	11 per pound.
8,000 pounds galvanized sheet iron	19 per pound.
5,000 pounds wrought iron punched nuts, hexagon, assorted	25 per pound.
12,000 pounds best Pembroke rivet iron, ½ to ⅝ inch.....	11¾ per pound.
15,000 pounds best Pembroke iron, round, 1 to 3 inches....	11 per pound.
500 pounds button head rivets, assorted	18½ per pound.
200 pounds iron tinned rivets, assorted.....	75 per pound.
500 pounds hoop iron, assorted	11 per pound.
10,000 pounds best Pembroke flat and square iron.....	11 per pound.
10,000 pounds smoke-pipe iron, ⅝ inch to ⅞ inch thick....	11 per pound.

To be delivered as required.

CHAS. C. WENTWORTH. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 2, pig iron.

25 tons best American anthracite pig iron	\$80 00 per ton.
15 tons best American charcoal pig iron	110 00 per ton.

To be delivered as required.

GEORGE ADAMS. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 3, boiler felting.

1,500 square yards boiler felting, 1 inch thick, wool backed, as required	\$1 24 per square yard.
---	-------------------------

To be delivered as required.

BOSTON BELTING CO. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 4, gum packing, &c.

2,000 pounds sheet rubber packing, with cloth insertion, assorted.....	\$1 50 per pound.
500 pounds tuck rubber packing, assorted	1 58 per pound.
1,500 feet 3-ply rubber hose, 2¼ inches diameter inside	1 35 per foot.
500 feet 2-ply rubber hose, 1½ inch diameter inside	65 per foot.
300 feet 2-ply rubber hose, 1 inch diameter inside.....	54 per foot.
200 feet 2-ply rubber hose, ¾ inch diameter inside	47 per foot.
300 pounds vulcanized rubber valves, as required.....	1 58 per pound.
200 pounds rubber gaskets, man-hole and hand-hole, as required.....	1 58 per pound.
10 gallons rubber cement	8 00 per gallon.

To be delivered as required.

SOUTHARD, HERBERT & Co DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 5, sperm oil.

1,500 gallons winter-strained sperm oil..... \$2 64 per gallon.
To be delivered as required.

BANKER & CARPENTER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 6, linseed oil, &c.

300 gallons linseed oil..... \$1 97 per gallon.
25 gallons alcohol, 95 per cent. proof 4 00 per gallon.
25 gallons benzine..... 50 per gallon.
To be delivered as required.

SOUTHARD, HERBERT & Co. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 7, lard oil.

3,000 gallons lard oil, for lubricating, per sample, equal to
E. G. Allen & Co.'s extra..... \$1 97 per gallon.
To be delivered as required,

WM. A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 8, metallic oil.

2,000 gallons metallic oil, for lubricating, per sample, equal
to De La Vergne's extra fine oil..... \$2 50 per gallon.
To be delivered as required.

SOUTHARD, HERBERT & Co. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 9, tallow and soap.

5,000 pounds best beef tallow..... \$0 24 per pound
500 pounds brown soap, per sample..... 19 per pound.
To be delivered as required.

WM A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 12, engineers' instruments.

6 sets drawing instruments, per sample..... \$40 00 per set.
4 salinometers, (Long's)..... 90 00 each.
10 dozen thermometers for salinometers..... 24 00 per dozen.
8 dozen hydrometers..... 20 00 per dozen.
36 thermometers, (copper backs)..... 3 00 each.
To be delivered as required.

JOHN H. BAILEY. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 14, wrought iron pipe, &c.

500 feet galvanized wrought iron steam pipe, 2 inches
diameter..... \$1 20 per foot.
500 feet galvanized wrought iron steam pipe, 1½ inch
diameter..... 80 per foot.
1,000 feet galvanized wrought iron steam pipe, 1 inch
diameter..... 50 per foot.
1,000 feet galvanized wrought iron steam pipe, ¾ inch
diameter..... 40 per foot.
300 feet galvanized wrought iron steam pipe, ½ inch
diameter..... 30 per foot.
300 feet galvanized wrought iron steam pipe, ⅜ inch
diameter..... 30 per foot.
75 feet galvanized wrought iron steam pipe, ¼ inch
diameter..... 30 per foot.

100 iron nipples, 2 inches.....	\$0 62	each.
100 iron nipples, 1½ inch.....	48	each.
100 iron nipples, 1 inch.....	26	each.
100 iron nipples, ¾ inch.....	20	each.
100 iron nipples, ½ inch.....	16	each.
100 iron nipples, ⅜ inch.....	12	each.
100 iron nipples, ¼ inch.....	11½	each.

To be delivered as required.

CHARLES C. WENTWORTH. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 16, steel.

6,000 pounds round steel, assorted.....	\$0 38	per pound.
4,000 pounds square steel, assorted.....	55	per pound.
3,000 pounds flat steel, assorted.....	63	per pound.
3,000 pounds octagon steel, assorted.....	78	per pound.
2,000 pounds spring steel.....	25	per pound.

To be delivered as required.

WM. A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 17, iron nails, bolts, and nuts.

1,000 pounds iron nails, 8d. to 20d., assorted.....	\$0 15	per pound.
300 pounds wrought iron washers, assorted.....	28	per pound.
3,000 pounds bolts and nuts, assorted.....	28	per pound.
200 pounds iron wire.....	20	per pound.
25 pounds steel wire.....	40	per pound.

To be delivered as required.

BALTIMORE & CUBA SMELTING & MINING COMPANY. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 18, copper.

25,000 pounds ingot copper.....	\$0 55	per pound.
---------------------------------	--------	------------

To be delivered as required.

JOHN H. BAILEY. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 19, tin, &c.

6 boxes sheet tin, D, common.....	\$31 00	per box.
3,000 pounds Streight's tin.....	80	per pound.
2,000 pounds slab zinc.....	24	per pound.
1,000 pounds lead pipe, 1 to 2 inches.....	28	per pound.

To be delivered as required.

JOHN H. BAILEY. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 20, white lead.

1,500 pounds white lead.....	\$0 19	per pound.
------------------------------	--------	------------

To be delivered as required.

BANKER & CARPENTER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 21, zinc paint.

1,000 pounds brown zinc.....	\$0 10	per pound.
1,000 pounds white zinc.....	13½	per pound.

To be delivered as required.

BANKER & CARPENTER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 22, colored paints.

2,000 pounds red lead.....	\$0 22	per pound.
500 pounds chrome green.....	10	per pound.
100 pounds litharge.....	21	per pound.

500 pounds black lead.....	\$0 12	per pound.
1,000 pounds black paint.....	09½	per pound.
100 pounds lamp black.....	13	per pound.
100 gallons coach varnish.....	5 50	per gallon.
200 gallons paraffine varnish.....	75	per gallon.
To be delivered as required.		

HALL L. DAVIS. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 23, stationery.

12 books, yearly, per sample, new pattern.....	\$6 00	each.
48 books, quarterly, per sample, new pattern.....	2 00	each.
12 books, expenditure, per sample, two quires.....	1 50	each.
48 books, account, per sample, one quire.....	75	each.
100 books, memorandum, calf, three quires.....	35	each.
6 books, requisition.....	8 00	each.
6 erasers.....	75	each.
6 pounds gum arabic.....	50	per pound.
12 bottles red ink, ½ pints.....	50	each.
6 bottles blue ink, ½ pints.....	50	each.
24 bottles black ink, pints.....	30	each.
24 inkstands, per sample.....	75	each.

2,000 pounds button-head rivets, assorted.....	19 per pound.
600 pounds sheet-iron rivets, assorted.....	19 per pound.
3,000 pounds sheet iron, assorted.....	19 per pound.
1,000 pounds hoop iron, assorted.....	19 per pound.
25,000 pounds best round iron, (Ulster,) from $\frac{1}{4}$ to 2 inches diameter.....	15 per pound.

To be delivered as required.

CHARLES C. WENTWORTH. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 2, pig iron.

50 tons No. 1 best cold blast American, 2,240 pounds to the ton.....	\$110 00 per ton.
50 tons No. 2 American pig iron, 2,240 pounds to the ton..	72 00 per ton.

To be delivered as required.

CHARLES C. WENTWORTH. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 4, gum packing, rubber hose, &c.

2,000 feet rubber hose, 3-ply, 2 inches in diameter.....	\$1 15 per foot.
1,000 feet rubber hose, 3-ply, 1½ inch in diameter.....	85 per foot.
1,000 feet rubber hose, 2-ply, 1½ inch in diameter.....	63 per foot.
1,000 feet rubber hose, 2-ply, 1 inch in diameter.....	52 per foot.
2,500 pounds round rubber packing, duck outside, assorted..	1 47 per pound.
2,500 pounds rubber valves, rings, &c., such as may be re- quired, per pattern.....	1 55 per pound.
3,000 pounds sheet rubber packing, such as may be required	1 45 per pound.
To be delivered as required.	

SOUTHARD, HERBERT & Co. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 5, sperm oil.

8,000 gallons winter-strained sperm oil.....	\$2 61 per gallon.
To be delivered as required.	

GEORGE ADAMS. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 6, linseed oil and turpentine.

1,000 gallons boiled linseed oil.....	\$1 95 per gallon.
300 gallons spirits turpentine.....	3 75 per gallon.
50 gallons neat's-foot oil.....	2 00 per gallon.
200 gallons alcohol, best quality, 95 per cent. proof.....	3 85 per gallon.
To be delivered as required.	

SOUTHARD, HERBERT & Co. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 7, lard oil.

3,000 gallons best quality lard oil, for lubricating	\$1 93 per gallon.
To be delivered as required.	

CHARLES C. WENTWORTH. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 8, metallic oil.

1,500 gallons white metallic oil	\$1 42 per gallon.
To be delivered as required.	

SOUTHARD, HERBERT & Co. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 9, tallow and soap.

10,000 pounds pure beef tallow	\$0 24 per pound.
1,000 pounds brown soap.....	19 per pound.
100 pounds Castile soap.....	26 per pound.
1,000 pounds salt water soap.....	20 per pound.
To be delivered as required.	

WM. A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 11, engineers' tools.

20 anvils, to weigh 75 to 150 pounds each, (averaging, say 112½ pounds each)	\$0 25 per pound.
75 axes, handled	2 50 each.
60 callipers, assorted.....	6 00 each.
20 compasses	1 25 each.
30 forges, blacksmiths', per pattern	100 00 each.
3,800 hand files, half round, flat, square, round, and saw..	1 50 each.
36 hatchets, handled.....	1 20 each.

30 ladles, iron, assorted	\$0 75	each.
50 squares, steel, machinists', assorted	4 00	each.
30 stocks, dies, and taps, with wrenches for taps $\frac{3}{8}$ to $1\frac{1}{4}$ inch, per pattern	125 00	each.*
36 two-foot rules, four-fold, brass bound	3 00	each.
24 tinmans' shears	14 00	each.
24 vices, one-half bench and one-half parallel jaw	35 00	each.
60 pawl wrenches, assorted sizes	35 00	each.
180 screw wrenches, assorted sizes, from 7 to 18 inches	5 00	each.
5,000 washers, assorted sizes, as required	05	each.
20 screw punches	35 00	each.
30 hand vices	2 00	each.
30 breast drill braces and bits	4 00	each.
30 hack saws, assorted sizes	4 00	each.
360 hack saw blades, assorted sizes	1 25	each.
60 five-inch double blocks, iron	15 00	each.
30 hydraulic jacks, 5 to 10 tons	150 00	each.
2 dozen pliers, square nose	5 00	per dozen.
2 dozen pliers, round nose	5 00	per dozen.
2 dozen pliers, cutting	18 00	per dozen.
3 dozen pincers	4 50	per dozen.
3 dozen pipe wrenches	6 50	per dozen.
1 dozen wire gauges	1 25	per dozen.
30 belt punches	50	each.
30 belt awls	50	each.
2 dozen pipe-cutters	20 00	per dozen.
36 brass oil syringes	1 00	each.
36 compass cutters for rubber	15 00	each.
12 hydraulic punches	250 00	each.
24 screw punches	35 00	each.
36 bellows for forges, from 20 to 36 inches	35 00	each.
36 claw hammers, per sample	1 10	each.
36 dividers	2 00	each.
36 jack planes	2 25	each.
36 smooth planes	2 10	each.
36 fore planes	3 00	each.
75 handsaws, cutting off and splitting	3 25	each.
36 tinman's scrapers	75	each.
75 screwdrivers	1 00	each.
36 compass saws	1 00	each.
40 braces and bits, complete, 48 bits each	25 00	each.
24 fifty-foot tape lines, best quality	12 00	each.

To be delivered as required.

WM. A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 12, engineers' instruments.

30 sets drawing instruments	\$40 00	per set.
30 aneroid barometers	40 00	each.
500 saline hydrometers	2 00	each.
300 thermometers for hydrometers	2 25	each.
150 thermometers for engine-room	2 50	each.
20 steam gauges, 6 inches to $8\frac{1}{2}$ inches, such as may be required	40 00	each.
20 vacuum gauges, 6 inches to $8\frac{1}{2}$ inches, such as may be required	40 00	each.
10 sand glasses, 60 seconds	3 50	each.
10 sand glasses, 30 seconds	3 50	each.
30 drawing scales	3 50	each.
24 engine-room clocks, with second hands	20 00	each.

To be delivered as required.

WM. A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 13, steam pumps.

12 steam pumps\$1,000 00 each.

To be delivered as required.

CHARLES C. WENTWORTH. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 14, wrought iron pipe, valves, &c.

300 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch nipples	\$0 36	each.
150 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch unions.....	1 46	each.
150 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch tees.....	69	each.
300 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch elbows	49	each.
60 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch crosses	66	each.
300 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch couplings.....	36	each.
150 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch extra flanges	75	each.
60 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch burlings	36	each.
60 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch plugs	36	each.
60 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch reducers.....	36	each.
15 brass globe valves, without flanges, $\frac{3}{4}$ inch	3 75	each.
15 brass globe valves, with flanges, $\frac{3}{4}$ inch.....	5 00	each.

75 dozen files, round, from 14 to 18 inches, assorted.....	\$50 00	per dozen.
75 dozen files, triangular saw, assorted.....	4 00	per dozen.
25 dozen files, assorted, such as may be required	22 00	per dozen.
25 forges, tinsmiths', per sample.....	5 00	each.
112 hatchets, cast steel, handled, per sample.....	1 25	each.
150 handsaws, per sample.....	3 00	each.
100 hacksaws, with frames, per sample.....	2 75	each.
400 hacksaw blades, to suit frames.....	1 25	each.
50 dozen gimlets, assorted	75	per dozen.
100 oilstones, say 150 pounds, set in wood, with cover, per sample	3 00	per pound.
100 pincers, wood, per sample.....	50	each.
200 plyers, cutting, assorted.....	1 75	each.
200 plyers, round-nosed, assorted	50	each.
200 pairs pipe tongs, assorted, to take from $\frac{1}{4}$ to 4-inch pipe	5 50	per pair.
20 dozen socket gouges, handled, assorted, per sample	27 00	per dozen.
15 dozen socket chisels, assorted, per sample.....	25 00	per dozen.
12 dozen turners' chisels, assorted, per sample	18 00	per dozen.
3 dozen scroll saws, (Wilmarth's make) such as may be required	6 50	per dozen.
105 steel squares, 2-feet, per sample	3 00	each.
105 shears, tinman's, large and small.....	8 00	each.
30 screw plates and taps, complete, per sample.....	12 00	each.
100 screwdrivers, assorted.....	75	each.
100 sets stocks, taps, and dies, large and small, with tap wrenches to suit, per sample.....	125 00	per set.
10 pairs stocks for cutting pipe, Nos. 1, 2, or 3, with such dies as may be required.....	60 00	per pair.
50 tinman's scrapers.....	75	each.
100 hand vices.....	2 00	each.
5 bench vices, iron.....	60 00	each.
250 wood axes, cast steel, best quality.....	2 25	each.
100 pipe wrenches, assorted, per sample.....	4 00	each.
150 dozen screw wrenches, from 6 to 24 inches, of such make as may be required.....	50 00	per dozen.
30 jackscrews, per sample	25 00	each.
50 trowels, best steel, per sample	2 00	each.
150 tube-expanders, top or bottom, such sizes or kinds as may be required	80 00	each.
50 rubber punches, such as may be required, per sample....	2 50	each.

To be delivered as required.

WILLIAM A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 12, engineers' instruments.

1 hydraulic pump, for testing boilers up to 300 pounds, with gauge.....	\$350 00.	
50 fresh water condensers, such as may be required.....	300 00	each.
80 engine-room clocks, per sample.....	15 00	each.
10 engine counters, such as may be required.....	175 00	each.
10 engine trip gongs, 12 to 16 inches, with 4 pulls and 16 cranks each.....	55 00	each.
10 trip gongs, 6 to 9 inches, with 1 pull and 4 cranks....	25 00	each.
15 vacuum gauges, all brass, 6 to 8 $\frac{1}{2}$ inches, such as may be required.....	50 00	each.
70 steam gauges, all brass, 6 to 8 $\frac{1}{2}$ inches, such as may be required.....	50 00	each.
1,050 saline hydrometers, per sample.....	1 50	each.
50 test hydrometers, per sample.....	20 00	each.
30 indicators, high or low pressure, or both, as may be required.....	100 00	each.
50 salinometer cases, per sample.....	90 00	each.
12 steam whistles, such as may be required.....	40 00	each.
800 thermometers for hydrometers, per sample.....	2 00	each.
550 thermometers for engine-room, per sample.....	2 50	each.

20 thermometers for hot well, per sample.....	\$50 00	each.
250 dozen oil syphons, glass.....	1 50	per dozen.
20 sets steel alphabet and figures.....	12 00	per set.
50 aneroid barometers, per sample.....	20 00	each.
To be delivered as required.		

BINGHAM & ANTHONY. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 13, steam pumps.

3 steam pumps, No. 1, such as may be required.....	\$225 00	each.
5 steam pumps, No. 2, such as may be required.....	325 00	each.
8 steam pumps, No. 3, such as may be required.....	475 00	each.
15 steam pumps, No. 4, such as may be required.....	625 00	each.
15 steam pumps, No. 5, such as may be required.....	750 00	each.
12 steam pumps, No. 6, such as may be required.....	850 00	each.
To be delivered as required.		

FELIX CAMPBELL. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 14, wrought iron pipes, valves, &c.

150 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch nipples..	\$0 86	each.
100 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch unions..	2 58	each.
100 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch tees.....	1 60	each.
250 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch elbows..	1 28	each.
50 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch crosses..	2 00	each.
100 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch couplings,	86	each.
75 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch return bends	53	each.
100 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch extra flanges	1 00	each.
50 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch bushings,	86	each.
50 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch plugs ...	86	each.
50 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch reducers,	86	each.
100 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4 inch locknuts..	86	each.
50 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch caps.....	86	each.
100 branch tees, with outlets, such as may be required...	1 03	each.
15 globe valves, brass, $\frac{1}{2}$ inch, without flanges.....	2 37	each.
15 globe valves, brass, $\frac{1}{2}$ inch, with flanges.....	3 57	each.
20 globe valves, brass, $\frac{3}{4}$ inch, without flanges	3 19	each.
20 globe valves, brass, $\frac{3}{4}$ inch, with flanges	4 80	each.
30 globe valves, brass, 1 inch, without flanges	4 60	each.
30 globe valves, brass, 1 inch, with flanges	6 90	each.
20 globe valves, brass, $1\frac{1}{4}$ inch, without flanges.....	6 60	each.
20 globe valves, brass, $1\frac{1}{4}$ inch, with flanges.....	9 95	each.
30 globe valves, brass, $1\frac{1}{2}$ inch, without flanges	8 50	each.
30 globe valves, brass, $1\frac{1}{2}$ inch, with flanges.....	12 75	each.
50 globe valves, brass, 2 inches, without flanges.....	12 75	each.
50 globe valves, brass, 2 inches, with flanges.....	20 40	each.
40 globe valves, brass, $2\frac{1}{2}$ inches, without flanges	21 45	each.
50 globe valves, brass, $2\frac{1}{2}$ inches, with flanges.....	32 30	each.
30 globe valves, brass, 3 inches, without flanges.....	31 45	each.
40 globe valves, brass, 3 inches, with flanges	46 75	each.
20 globe valves, brass, $3\frac{1}{2}$ inches, without flanges.....	46 75	each.
40 globe valves, brass, $3\frac{1}{2}$ inches, with flanges.....	63 75	each.
10 globe valves, brass, 4 inches, without flanges	59 50	each.
12 globe valves, brass, 4 inches, with flanges	76 50	each.
30 angle valves, 1 inch, with bottom flange.....	6 89	each.
30 angle valves, $1\frac{1}{2}$ inch, with bottom flange.....	12 75	each.
30 angle valves, 2 inches, with bottom flange.....	20 40	each.
30 hose-bibs, $\frac{1}{2}$ -inch screw-shanks and shoulder, with nut at bottom	2 34	each.
30 hose-bibs, $\frac{3}{4}$ -inch screw-shanks and shoulder, with nut at bottom	3 83	each.
40 hose-bibs, 1-inch screw-shanks and shoulder, with nut at bottom.....	4 89	each.

40 hose-bibs, $1\frac{1}{4}$ -inch screw-shanks and shoulder, with nut at bottom	\$7 44	each.
30 hose-bibs, $1\frac{1}{2}$ -inch screw-shanks and shoulder, with nut at bottom	10 20	each.
15 steam stop-cocks, 3 inches, rough	32 40	each.
30 steam stop-cocks, $\frac{5}{8}$ inch, single coupling	4 05	each.
30 steam stop-cocks, $\frac{3}{4}$ inch, single coupling	5 22	each.
30 steam stop-cocks, 1 inch, single coupling	6 53	each.
30 steam stop-cocks, $\frac{5}{8}$ inch, double coupling	5 40	each.
30 steam stop-cocks, $\frac{3}{4}$ inch, double coupling	6 30	each.
30 steam stop-cocks, 1 inch, double coupling	9 00	each.
2 dozen air-cocks, No. 2	18 90	per dozen.
2 dozen air-cocks, No. 3	21 60	per dozen.
2 dozen air-cocks, No. 4	27 00	per dozen.
2 dozen cylinder-cocks, No. 11	27 00	per dozen.
2 dozen cylinder-cocks, No. 12	32 40	per dozen.
2 dozen cylinder-cocks, No. 14	36 00	per dozen.
2 dozen cylinder-cocks, No. 16	40 50	per dozen.
2 dozen gauge-cocks, No. 17	68 40	per dozen.
2 dozen gauge-cocks, No. 18	63 00	per dozen.
2 dozen tallow oil cups, lever handle	108 00	per dozen.
2 dozen oil cups, with stop-cocks, lever handle, No. 14 ..	31 50	per dozen.
2 dozen oil cups, with stop-cocks, lever handle, No. 16 ..	40 50	per dozen.
2 dozen oil cups, with stop-cocks, lever handle, No. 18 ..	67 50	per dozen.
2 dozen plain oil cups, No. 34	16 20	per dozen.
2 dozen plain oil cups, No. 36	22 50	per dozen.
2 dozen plain oil cups, No. 37	31 50	per dozen.
2 dozen plain oil cups, No. 38	43 20	per dozen.
1 dozen globe oil cups, No. 1	85 50	per dozen.
1 dozen globe oil cups, No. 2	94 50	per dozen.
2 dozen globe oil cups, No. 3	108 00	per dozen.
2 dozen globe oil cups, No. $3\frac{1}{2}$	162 00	per dozen.
1 dozen globe oil cups, No. 4	194 40	per dozen.
1 dozen globe oil cups, No. 6	324 00	per dozen.
800 feet wrought-iron pipe, $\frac{1}{2}$ inch	19	per foot.
1,200 feet wrought-iron pipe, $\frac{3}{4}$ inch	24	per foot.
2,000 feet wrought-iron pipe, 1 inch	33	per foot.
1,500 feet wrought-iron pipe, $1\frac{1}{4}$ inch	45	per foot.
1,500 feet wrought-iron pipe, $1\frac{1}{2}$ inch	58	per foot.
2,000 feet wrought-iron pipe, 2 inch	84	per foot.
2,000 feet wrought-iron pipe, $2\frac{1}{2}$ inch	1 51	per foot.
1,500 feet wrought-iron pipe, 3 inch	2 19	per foot.
1,000 feet wrought-iron pipe, $3\frac{1}{2}$ inch	2 70	per foot.
1,000 feet wrought-iron pipe, 4 inch	3 38	per foot.
200 pieces hydraulic pipe, $\frac{3}{8}$ inch diameter inside, $\frac{7}{8}$ inch diameter outside, 10 feet long	1 38	per foot.

To be delivered as required.

WILLIAM A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 15, tubes.

10,000 feet boiler tubes, iron, from $1\frac{1}{2}$ inch to 3 inches diameter	\$1 00	per foot.
5,000 feet boiler tubes, iron, from $3\frac{1}{4}$ inches to 6 inches diameter	3 75	per foot.
4,000 pounds drawn brass tubes, such sizes as may be required	1 25	per pound.
17,000 pounds drawn brass tubes, for condensers, such sizes as may be required, and to be galvanized if necessary	85	per pound.

To be delivered as required.

BINGHAM & ANTHONY. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 16, steel.

21,000 pounds cast steel, extra, octagon, such sizes as may be required	\$0 58	per pound.
19,000 pounds cast steel, extra, square or flat, such sizes as may be required	59	per pound.
1,000 pounds blister steel, such as may be required	25	per pound.
1,500 pounds German steel, such as may be required	28	per pound.
2,000 pounds spring steel, such as may be required	33	per pound.
To be delivered as required.		

WM. A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 17, iron nails, bolts, nuts, &c.

1,000 pounds wrought-iron bolts, $\frac{5}{8}$ inch by 4 inches	\$0 30	per pound.
1,000 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $3\frac{1}{2}$ inches	32	per pound.
2,500 pounds wrought-iron bolts, $\frac{5}{8}$ inch by 3 inches	32	per pound.
1,000 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $2\frac{3}{4}$ inches	32	per pound.
1,500 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $2\frac{1}{4}$ inches	34	per pound.
1,500 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $2\frac{1}{4}$ inches	36	per pound.
1,800 pounds wrought-iron bolts, $\frac{5}{8}$ inch by 2 inches	36	per pound.
2,000 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $1\frac{3}{4}$ inch	33	per pound.
2,000 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $1\frac{1}{2}$ inch	38	per pound.
1,000 pounds wrought-iron bolts, $\frac{3}{4}$ inch by 2 inches	38	per pound.
1,500 pounds wrought-iron bolts, $\frac{3}{4}$ inch by $2\frac{1}{2}$ inches	36	per pound.
1,800 pounds wrought-iron bolts, $\frac{3}{4}$ inch by 3 inches	34	per pound.
2,500 pounds wrought-iron bolts, $\frac{3}{4}$ inch by $3\frac{3}{4}$ inches	32	per pound.
2,000 pounds wrought-iron bolts, $\frac{3}{4}$ inch by 4 inches	32	per pound.
1,500 pounds wrought-iron bolts, $\frac{3}{4}$ inch by 5 inches	30	per pound.
1,000 pounds wrought-iron bolts, $\frac{7}{8}$ inch by 3 inches	30	per pound.
1,000 pounds wrought-iron bolts, $\frac{7}{8}$ inch by $3\frac{1}{2}$ inches	30	per pound.
1,500 pounds wrought-iron bolts, $\frac{7}{8}$ inch by 4 inches	30	per pound.
1,500 pounds wrought-iron bolts, $\frac{7}{8}$ inch by $4\frac{1}{2}$ inches	26	per pound.
1,500 pounds wrought-iron bolts, $\frac{7}{8}$ inch by 5 inches	26	per pound.
1,000 pounds wrought-iron bolts, $\frac{7}{8}$ inch by $5\frac{1}{2}$ inches	26	per pound.
1,500 pounds wrought-iron bolts, 1 inch by $3\frac{1}{2}$ inches	26	per pound.
1,500 pounds wrought-iron bolts, 1 inch by $4\frac{1}{2}$ inches	26	per pound.
1,500 pounds wrought-iron bolts, 1 inch by 6 inches	26	per pound.
1,000 pounds wrought-iron bolts, $\frac{3}{8}$ inch by $\frac{3}{4}$ inch	70	per pound.
1,500 pounds wrought-iron bolts, $\frac{1}{2}$ inch by $1\frac{1}{2}$ inch	45	per pound.
2,000 pounds wrought-iron bolts, $\frac{9}{16}$ inch by $1\frac{1}{2}$ inch	38	per pound.
1,000 pounds Boonton hot-pressed nuts, square, $\frac{5}{8}$ inch	30	per pound.
2,500 pounds Boonton hot-pressed nuts, hexagon, $\frac{5}{8}$ inch	30	per pound.
1,200 pounds Boonton hot-pressed nuts, square, $\frac{3}{4}$ inch	30	per pound.
2,000 pounds Boonton hot-pressed nuts, hexagon, $\frac{3}{4}$ inch	30	per pound.
1,000 pounds Boonton hot-pressed nuts, hexagon, $\frac{7}{8}$ inch	30	per pound.
1,500 pounds Boonton hot-pressed nuts, hexagon, 1 inch	30	per pound.
800 pounds Boonton hot-pressed nuts, square, $\frac{1}{2}$ inch	30	per pound.
1,000 pounds Boonton hot-pressed nuts, hexagon, $\frac{1}{2}$ inch	32	per pound.
8,500 pounds iron cut nails, of the best American manufacture, from 4d. to 20d., as may be required	16	per pound.
1,000 papers iron finishing nails, from $\frac{3}{4}$ to 2 inches	25	per paper.
800 papers iron brads, from $\frac{3}{8}$ to 2 inches	15	per paper.
500 gross brass screws, gimlet points, $\frac{3}{8}$ to 4 inches	8 00	per gross.
1,000 gross iron screws, gimlet points, $\frac{3}{8}$ to 4 inches	2 00	per gross.
To be delivered as required.		

BALTIMORE AND CUBA SMELTING AND MINING CO. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 18, copper.

40,000 pounds ingot copper	\$0 56	per pound.
2,000 pounds bolt copper	70	per pound.

5,000 pounds rod copper, $\frac{1}{2}$ inch to 3 inches, assorted.....	\$0 71	per pound.
2,500 pounds sheet copper, from $\frac{1}{16}$ inch to $\frac{3}{8}$ inch thick..	71	per pound.
500 pounds copper rivets.....	1 00	per pound.
To be delivered as required.		

BINGHAM & ANTHONY. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 19, tin, zinc, lead, &c.

12,000 pounds Banca tin.....	\$1 19	per pound.
500 pounds zinc, pig.....	20	per pound.
5,000 pounds Silesian spelter.....	25	per pound.
2,500 pounds spelter solder.....	65	per pound.
13,000 pounds sheet lead, 3 to 6 pounds.....	30	per pound.
2,000 pounds "B" lead pipe, $\frac{1}{2}$ inch to 2 inches.....	33	per pound.
13 boxes tin plate, large and heavy.....	45 00	per box.
To be delivered as required.		

BANKER & CARPENTER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 20, white lead.

23,000 pounds white lead, in oil, in 25-pound kegs.....	\$0 23	per pound.
To be delivered as required.		

WM. MILLER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 21, zinc paint.

3,000 pounds brown zinc paint, in oil, in 25-pound kegs...	\$0 10	per pound.
3,000 pounds white zinc paint, in oil, in 25-pound kegs...	12	per pound.
To be delivered as required.		

BANKER & CARPENTER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 22, colored paints, dryers, &c.

300 pounds pulverized black lead.....	\$0 13	per pound.
100 pounds lampblack.....	15	per pound.
2,500 pounds best chrome green, in 4-pound cans.....	20	per pound.
1,000 pounds bright, clear gum shellac.....	1 45	per pound.
2,500 pounds litharge, in 5-pound cans.....	23 $\frac{1}{2}$	per pound.
4,000 pounds black paint, best, ground in oil, in 25-pound kegs.....	12	per pound.

50 dozen reflectors, for lamps, such as may be required..	6 00	per dozen.
1,700 lamp chimneys, such as may be required.....	6	each.
To be delivered as required.		

WM. A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 30, lignumvitæ.

10 tons lignumvitæ, 10 to 16 inches diameter.....	\$200 00	per ton.
To be delivered as required.		

FELIX CAMPBELL. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 33, patented articles.

1,000 Clark's patent ferules.....	\$2 50	each.
50 sets Haight's springs.....	150 00	per set.
To be delivered as required.		

DARIUS ALLEN. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 34, cotton and hemp packing, &c.

25,000 pounds cotton waste wiping stuff, per sample.....	\$0 32	per pound.
11,000 pounds Italian hemp packing, per sample.....	40	per pound.
2,000 pounds cotton packing, per sample.....	60	per pound.
250 pounds sewing twine.....	75	per pound.
300 flax fishing lines, for indicators, per sample.....	80	each.
To be delivered as required.		

BINGHAM & ANTHONY. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 35, engineers' stores.

75 augers, from $\frac{1}{2}$ to 2 inches.....	\$1 00	each.
100 pairs brass butt hinges, cast from 1 to 4 inches.....	60	per pair.
12 dozen chest locks, 1 to 4.....	6 00	per dozen.
150 shoe knives.....	20	each.
150 putty knives.....	18	each.
300 coal barrows.....	4 50	each.
100 iron ladles.....	1 50	each.
150 pairs lamp scissors, per sample.....	70	each.
100 dozen brass lamp hooks, per sample.....	1 75	per dozen.
50 oil pumps, per sample.....	5 00	each.
380 brass padlocks.....	1 00	each.
800 pounds sheet brass, assorted.....	85	per pound.
1,000 pounds soft solder.....	68	per pound.
20 reams sandpaper, assorted.....	4 25	per ream.
100 papers sail needles.....	4 00	each paper.
100 scale beams, to weigh 500 pounds.....	7 50	each.
5 scale beams, to weigh 2,000 pounds.....	25 00	each.
125 spring balances, per sample.....	8 00	each.
800 ship scrapers, per sample.....	80	each.
317 dozen first quality steel scoop shovels, per sample...	25 00	per dozen.
50 dozen first quality steel flat shovels, per sample.....	19 00	per dozen.

22,000 copper tacks, assorted.....	\$1 20 per M.
300 papers iron tacks.....	10 per paper.
250 pounds steel wire, assorted.....	60 per pound.
600 pounds copper wire, assorted.....	95 per pound.
300 pounds brass wire, assorted.....	85 per pound.
300 pounds iron wire, assorted.....	18 per pound.
1,500 feet wire rope, from $\frac{1}{4}$ to $\frac{7}{8}$ diameter.....	50 per foot.
100 hand bellows, per sample.....	1 50 each.
80 solder pots, per sample.....	4 00 each.
50 wire gauges, per sample.....	2 50 each.
20 pounds best German silver.....	5 00 per pound.
2,500 feet small lap-welded chain, per sample.....	16 per foot.
4 Fairbanks's platform scales, from 200 to 1,000 pounds.....	50 00 each.
26 dozen gutta-percha squirt cans.....	7 00 per dozen.
50 bung borers, per sample.....	90 each.
10 dozen brass hand lamps, $\frac{1}{2}$ pint.....	7 00 per dozen.
20 swivel lamps, brass, $\frac{1}{2}$ pint.....	50 each.
To be delivered as required.	

PHILADELPHIA, PENNSYLVANIA.

WM. F. POTTS. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 1, boiler iron, &c.

12,000 pounds boiler iron, assorted, from $\frac{1}{4}$ to $\frac{1}{2}$ inch thick, length and breadth as required.....	\$0 13 $\frac{1}{2}$ per pound.
10,000 pounds boiler iron, assorted, from $\frac{1}{8}$ to $\frac{5}{16}$ inch thick, for bunkers.....	13 $\frac{1}{2}$ per pound.
4,000 pounds round iron, assorted, from $\frac{1}{2}$ to 3 inches.....	13 per pound.
4,000 pounds flat iron, hammered, from 1 to 6 inches wide, and from $\frac{1}{4}$ to 1 inch thick.....	14 per pound.
6,000 pounds sheet iron, from No. 6 to No. 14.....	13 per pound.
200 pounds iron rivets, from $\frac{1}{8}$ to $\frac{3}{8}$ inch thick, and from $\frac{1}{4}$ to 1 inch long.....	15 per pound.
1,500 pounds iron rivets, from $\frac{1}{2}$ to $\frac{3}{4}$ inch, and from 1 $\frac{1}{4}$ to 2 $\frac{1}{2}$ inches long, as required.....	15 per pound.
1,000 pounds angle iron, assorted sizes.....	13 per pound.
1,000 pounds T iron, assorted sizes, as required.....	12 per pound.
To be delivered as required.	

GEO. ADAMS. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 3, boiler felting.

1,500 square yards boiler felting.....	\$1 49 per yard.
To be delivered as required.	

JOHN K. SHOEMAKER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 4, gum packing, rubber hose, &c.

3,000 pounds gum packing.....	\$1 85 per pound.
3,000 pounds sheet rubber.....	2 15 per pound.
1,000 pounds Tuck's packing, assorted.....	2 25 per pound.
1,200 feet rubber hose, 2 $\frac{1}{2}$ inches.....	2 45 per foot.
1,000 feet rubber hose, from 1 to 2 inches.....	1 40 per foot.
To be delivered as required.	

JAMES M. SHAW. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 5, sperm oil.

15,000 gallons sperm oil.....	\$2 77 per gallon.
To be delivered as required.	

WM. E. SPALDING. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 6, linseed oil, turpentine, &c.

2,500 gallons linseed oil, raw	\$2 00 per gallon.
300 gallons spirits turpentine	3 75 per gallon.
50 gallons neat's-foot oil	1 80 per gallon.
To be delivered as required.	

JAMES M. SHAW. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 7, lard oil.

5,000 gallons lard oil	\$1 95 per gallon.
To be delivered as required.	

SOUTHARD, HERBERT & Co. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 9, tallow, soap, &c.

250 pounds washing soda	\$0 15 per pound.
14,000 pounds tallow	26 per pound.
100 boxes salt-water soap, (50 pounds each)	18 per pound.
75 boxes fresh-water soap, (50 pounds each)	19 per pound.
To be delivered as required.	

JOHN K. SHOEMAKER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 10, engineers' stores.

500 pounds anti-attrition metal	\$0 35 per pound.
100 pounds borax	75 per pound.
25 pounds beeswax	1 20 per pound.
500 Bath brick	13 each.
200 brushes, flue, for Martin boilers, as per sample	2 50 each.
200 brushes, whitewash	1 35 each.
600 brushes, scrubbing	35 each.
100 brushes, dusting, long handle	1 10 each.
50 brushes, dusting, short handle	1 00 each.
300 brushes, paint	85 each.
200 brooms, hickory	44 each.
500 brooms, corn	44 each.
2,000 bricks, fire	65 00 per M.
75 pounds chalk, white	06 per pound.
15 pounds chalk, red	15 per pound.
600 barrels charcoal	95 per barrel.
250 chimneys, lamp	16 each.
100 pounds emery, assorted	25 per pound.
50 reams emery cloth	60 00 per ream.
350 pounds lampwick	1 30 per pound.
20 gross lampwick, circular	4 00 per gross.
15 sides sole leather	12 50 per side.
12 sides lacing leather	4 00 per side.
500 feet leather belting, rivetted, and from 5 to 10 inches wide	1 38 per foot.
800 pounds mercury, in flasks	2 50 per pound.
1,200 pounds potash	24 per pound.
150 pounds rottenstone	13 per pound.
3 barrels rosin	55 00 per barrel.
150 pounds sal ammoniac	47 00 per pound.
350 pounds soapstone, pulverized	05 per pound.
400 pounds sulphur, flour	18 per pound.
50 sewing palms	50 each.
24 sand glasses, 60-seconds	75 each.
24 sand glasses, 30-seconds	75 each.
2,500 pounds washers, assorted	25 per pound.
To be delivered as required.	

CHARLES M. GHRISKEY. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 11, engineers' tools.

1,000 pounds anvils.....	\$0 31 per pound.
36 bet awls and punches.....	60 each.
24 axes, wood, cast-steel, with handles.....	2 25 each.
8 bellows, for forges, 30 inches.....	20 00 each.
36 boxwood rules, 4-fold, standard, 2 feet.....	1 50 each.
24 sets braces and bitts, (36 bitts each set).....	12 00 per set.
10 calipers, 24 to 36 inches.....	5 00 each.
12 calipers, 6 to 12 inches.....	1 25 each.
12 clocks, engine-room.....	10 00 each.
6 forges, with bellows complete.....	50 00 each.
36 firmer chisels, assorted.....	65 each.
36 firmer gouges.....	1 00 each.
48 dozen files, assorted, from 12 to 16 inches.....	21 00 per dozen.
12 grindstones, mounted.....	11 00 each.
24 hammers, claw.....	1 25 each.
24 hatchets.....	85 each.
6 hydraulic jacks, to lift from foot, 10 to 15 tons.....	130 00 each.
12 hand-bellows.....	2 00 each.
18 hack-saws, and frames complete, 12 inch.....	3 00 each.
36 hack-saw blades, to suit frames.....	1 00 each.
18 handsaws.....	2 50 each.
18 hand-vices, 5-inch.....	1 20 each.
30 plyers.....	75 each.
36 pincers.....	1 00 each.
24 screwdrivers.....	50 each.
36 shoeknives.....	15 each.
12 steel squares.....	1 35 each.
300 ship scrapers.....	60 each.
18 stones, oil.....	50 each.
18 steel dividers, 9-inch.....	1 00 each.
6 screw plates and taps, complete.....	4 00 each.
9 stocks, and dies and taps.....	15 00 each.
300 steel coal shovels.....	2 00 each.
12 tinman's shears.....	6 00 each.
1,000 pounds vices.....	25 per pound.
18 wrenches, pawl.....	15 00 each.
48 wrenches, screw.....	3 00 each.
18 wrenches, pipe, assorted.....	3 50 each.
To be delivered as required.	

JOHN K. SHOEMAKER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 12, engineers' instruments.

6 indicators.....	\$130 00 each.
6 metallic measuring lines, 100 feet.....	16 00 each.
12 steam gauges, from 6 to 8 inches, as may be required ..	37 50 each.
4 steam whistles.....	36 00 each.
12 scale beams, to weigh from 5 to 800 pounds.....	10 00 each.
24 spring balances, (with basins attached,) to weigh 24 pounds	1 00 each.
75 thermometers, for engine-rooms.....	2 75 each.
225 thermometers, for salinometers.....	1 30 each.
225 saline hydrometers.....	1 00 each.
12 vacuum gauges, from 6 to 8 inches, as may be required.	40 00 each.
To be delivered as required.	

JOHN K. SHOEMAKER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 14, wrought-iron pipe, valves, &c.

300 feet $\frac{3}{8}$ -inch wrought-iron pipe.....	\$0 27 per foot.
800 feet $\frac{1}{2}$ -inch wrought-iron pipe.....	40 per foot.
800 feet 1-inch wrought-iron pipe.....	54 per foot.

WM. A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 13, steam pumps.

12 steam pumps\$1,000 00 each.

To be delivered as required.

CHARLES C. WENTWORTH. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 14, wrought iron pipe, valves, &c.

300 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch nipples	\$0 36	each.
150 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch unions	1 46	each.
150 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch tees	69	each.
300 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch elbows	49	each.
60 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch crosses	66	each.
300 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch couplings	36	each.
150 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch extra flanges	75	each.
60 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch burlings	36	each.
60 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch plugs	36	each.
60 each, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch reducers	36	each.
15 brass globe valves, without flanges, $\frac{3}{4}$ inch	3 75	each.
15 brass globe valves, with flanges, $\frac{3}{4}$ inch	5 00	each.
20 brass globe valves, without flanges, 1 inch	5 37	each.
20 brass globe valves, with flanges, 1 inch	7 16	each.
12 brass globe valves, without flanges, $1\frac{1}{4}$ inch	7 80	each.
12 brass globe valves, with flanges, $1\frac{1}{4}$ inch	10 40	each.
20 brass globe valves, without flanges, $1\frac{1}{2}$ inch	10 00	each.
20 brass globe valves, with flanges, $1\frac{1}{2}$ inch	13 33	each.
10 brass globe valves, without flanges, 2 inches	15 00	each.
15 brass globe valves, with flanges, 2 inches	20 00	each.
5 brass globe valves, without flanges, $2\frac{1}{2}$ inches	25 00	each.
10 brass globe valves, with flanges, $2\frac{1}{2}$ inches	33 33	each.
10 brass globe valves, with flanges, 3 inches	43 75	each.
30 globe oil cups, No. 1 to 6, as may be required	1 00	each.
2,000 feet wrought-iron pipe, $\frac{3}{4}$ inch inside	27	per foot.
3,000 feet wrought-iron pipe, 1 inch inside	36	per foot.
4,000 feet wrought-iron pipe, $1\frac{1}{4}$ inch inside	50	per foot.
5,000 feet wrought-iron pipe, $1\frac{1}{2}$ inch inside	65	per foot.
2,500 feet wrought-iron pipe, 2 inches inside	93	per foot.
1,500 feet wrought-iron pipe, $2\frac{1}{2}$ inches inside	1 68	per foot.
600 feet wrought-iron pipe, 3 inches inside	2 43	per foot.

To be delivered as required.

CHARLES C. WENTWORTH. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 15, tubes.

1,200 pounds brass tubes, $\frac{5}{8}$ inch, drawn, $24\frac{1}{8}$ to $30\frac{1}{4}$ inches long	\$0 85	per pound.
800 pounds brass tubes, drawn, such as may be required ..	82	per pound
6,000 feet iron lap-welded boiler tubes, such as may be required	95	per foot.

To be delivered as required.

CHARLES C. WENTWORTH. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 16, steel.

4,000 pounds cast steel, extra, octagon, such as may be required	55	per pound.
3,000 pounds cast steel, extra, square, such as may be required ..	55	per pound.
2,000 pounds spring steel, extra, square, such as may be required	27	per pound.

To be delivered as required.

CHARLES C. WENTWORTH. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 17, iron nails, bolts, nuts, &c.

250 pounds wrought-iron bolts, $\frac{5}{8}$ inch by 4 inches.....	\$0 33	per pound.
200 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $3\frac{1}{2}$ inches.....	33	per pound.
350 pounds wrought-iron bolts, $\frac{5}{8}$ inch by 3 inches.....	33	per pound.
150 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $2\frac{3}{4}$ inches.....	33	per pound.
250 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $2\frac{1}{2}$ inches.....	33	per pound.
200 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $2\frac{1}{4}$ inches.....	33	per pound.
200 pounds wrought-iron bolts, $\frac{5}{8}$ inch by 2 inches.....	33	per pound.
200 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $1\frac{1}{2}$ inch.....	33	per pound.
150 pounds wrought-iron bolts, $\frac{3}{4}$ inch by 2 inches.....	33	per pound.
250 pounds wrought-iron bolts, $\frac{3}{4}$ inch by $2\frac{1}{2}$ inches.....	29	per pound.
250 pounds wrought-iron bolts, $\frac{3}{4}$ inch by 3 inches.....	29	per pound.
300 pounds wrought-iron bolts, $\frac{3}{4}$ inch by $3\frac{1}{2}$ inches.....	29	per pound.
250 pounds wrought-iron bolts, $\frac{7}{8}$ inch by $5\frac{1}{2}$ inches.....	29	per pound.
200 pounds wrought-iron bolts, $\frac{3}{4}$ inch by 4 inches.....	29	per pound.
200 pounds wrought-iron bolts, $\frac{3}{4}$ inch by 5 inches.....	29	per pound.
250 pounds wrought-iron bolts, $\frac{9}{16}$ inch by $1\frac{1}{2}$ inch.....	24	per pound.
200 pounds wrought-iron bolts, $\frac{1}{2}$ inch by $1\frac{1}{2}$ inch.....	33	per pound.
300 pounds wrought-iron bolts, $\frac{7}{8}$ inch by 3 inches.....	24	per pound.
250 pounds wrought-iron bolts, $\frac{7}{8}$ inch by 4 inches.....	24	per pound.
200 pounds wrought-iron bolts, 1 inch by $3\frac{1}{2}$ inches.....	24	per pound.
300 pounds wrought-iron bolts, 1 inch by $4\frac{1}{2}$ inches.....	24	per pound.
250 pounds wrought-iron bolts, $\frac{3}{8}$ inch by $\frac{3}{4}$ inch.....	24	per pound.
300 pounds Boonton hot-pressed square nuts, $\frac{5}{8}$ inch.....	23	per pound.
300 pounds Boonton hot-pressed hexagon nuts, $\frac{5}{8}$ inch.....	26	per pound.
200 pounds Boonton hot-pressed square nuts, $\frac{3}{4}$ inch.....	23	per pound.
200 pounds Boonton hot-pressed hexagon nuts, $\frac{3}{4}$ inch.....	26	per pound.
75 pounds Boonton hot-pressed square nuts, $\frac{1}{2}$ inch.....	23	per pound.
200 pounds Boonton hot-pressed hexagon nuts, $\frac{7}{8}$ inch.....	26	per pound.
200 pounds Boonton hot-pressed hexagon nuts, 1 inch.....	26	per pound.
250 papers iron-finishing nails, $\frac{3}{4}$ inch to 2 inches.....	22	per paper.
200 papers iron brads, $\frac{3}{8}$ inch to 1 inch.....	30	per paper.
100 gross brass screws, gimlet points, $\frac{3}{8}$ inch to 4 inches....	50	per gross.
100 gross iron screws, gimlet points, $\frac{3}{8}$ inch to 4 inches.....	50	per gross.

To be delivered as required.

BALTIMORE & CUBA SMELTING AND MINING COMPANY. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 18, copper.

600 pounds sheet copper, such as may be required.....	70	per pound.
100 pounds copper rivets, such as may be required.....	70	per pound.
10,000 pounds ingot copper.....	56	per pound.

To be delivered as required.

CHARLES C. WENTWORTH. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 19, tin, zinc, &c.

4,000 pounds Banca tin.....	\$1 07	per pound.
2,000 pounds Silesian spelter.....	20	per pound.
250 pounds spelter solder.....	62	per pound.
50,000 pounds sheet lead, such as may be required.....	25	per pound.
20 boxes sheet tin, sizes as may be required.....	30	per box.
1,000 pounds sheet zinc, such as may be required.....	30	per pound.

To be delivered as required.

BANKER & CARPENTER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 20, white lead.

10,000 pounds white lead, ground, in 25-pound kegs.....	\$0 21 $\frac{1}{2}$	per pound.
---	----------------------	------------

To be delivered as required.

BANKER & CARPENTER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 21, zinc paint.

3,000 pounds white zinc paint.....	\$0 13½	per pound.
500 pounds brown zinc paint.....	10	per pound.
To be delivered as required.		

BANKER & CARPENTER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 22, colored paints, dryers, &c.

1,000 pounds black lead.....	\$0 12	per pound.
5,000 pounds red lead.....	21	per pound.
2,000 pounds black paint.....	09½	per pound.
2,000 pounds green paint.....	20	per pound.
1,000 pounds litharge.....	21	per pound.
300 pounds gum shellac.....	1 40	per pound.
To be delivered as required.		

WM. A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 23, stationery.

60 account books.....	\$3 00	each.
400 memorandum books.....	50	each.
30 requisition books.....	6 00	each.
30 portfolios.....	3 00	each.
200 log slates.....	2 00	each.
36 pieces India ink.....	50	per piece.
36 bottles red ink, carmine.....	75	per bottle.
144 bottles black ink, pints.....	50	per bottle.
36 ink saucers.....	50	each.
72 ink-stands.....	1 00	each.
6 reams envelope paper.....	8 00	per ream.
6 reams cartridge paper.....	10 00	per ream.
36 reams ruled letter paper.....	5 50	per ream.
36 reams cap paper.....	6 50	per ream.
30 reams cap paper, regulation.....	8 00	per ream.
600 sheets drawing paper, double elephant.....	1 50	per sheet.
500 sheets tracing paper, double elephant.....	1 50	per sheet.
10 rolls tracing linen.....	50 00	per roll.
40 dozen drawing pencils, Faber's octagon, assorted.....	2 00	per dozen.
2,000 slate pencils, best Rutland.....	7 50	per M.
20 gross steel pens.....	2 00	per gross.
1,000 quills, No. 80.....	20 00	per M.
5 pounds wafers, in ¼ pound packages.....	1 50	per pound.
150 pieces sealing wax.....	10	per piece.
30 letter stamps.....	50	each.
10 pounds India-rubber.....	2 50	per pound.
12,000 official envelopes.....	12 00	per M.
12,000 letter envelopes.....	6 50	per M.

48 flat rulers.....	1 00	each.
15 gross American calcined chalk crayons.....	50	per gross.
To be delivered as required.		

TRICKEY & JEWETT. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 25, hickory and ash plank and butts.

12,000 feet best 3-inch ash plank.....	\$68 00	per M feet.
60 white-heart hickory butts, from 10 to 14 feet long---	4 50	each.

To be delivered as required.

TRICKEY & JEWETT. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 26, white pine.

2,000 feet best white pine lumber, from 1 to 6 inches thick, board measure	\$70 00	per M feet.
---	---------	-------------

To be delivered as required.

DARIUS ALLEN. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 34.

10,000 pounds Italian hemp packing yarn.....	\$0 45	per pound.
800 pound cotton packing	65	per pound.
8,000 pounds cotton waste.....	32	per pound.
75 pounds sewing twine.....	75	per pound.
30 fish-lines, flax, (240 feet).....	80	each.
240 chalk lines.....	15	each.
2 dozen sea-grass lines.....	20 00	per dozen

To be delivered as required.

WM. A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 35, engineers' stores, &c.

20 balances, spring, with scale-pan, to weigh 50 pounds	\$2 50	each.
20 beams, scale, to weigh 500 pounds.....	10 00	each.
400 lamps, globe, with feeders.....	6 00	each.
50 lamps, swivel	12 00	each.
50 papers needles, sail	5 00	per paper.
100 padlocks, brass	1 50	each.
50 pairs scissors, lamp-wick.....	1 50	each.
50 pairs scisors, common.....	1 50	each.
200 scrapers, common.....	75	each.
100,000 tacks, iron.....	20	per M.
50,000 tacks, copper.....	1 50	per M.
50 hand lamps, brass.....	1 50	each.
20 reams sand paper, per sample.....	6 50	per ream.
12 dozen steel flat shovels, first quality	24 00	per dozen.
50 dozen scoop shovels, first quality.....	30 00	per dozen.
75 pounds steel wire, assorted.....	35	per pound.
100 pounds copper wire, assorted.....	1 50	per pound.
150 ponuds brass wire, assorted.....	1 25	per pound.
100 pounds iron wire, assorted.....	20	per pound.
50 hand bellows, per sample.....	3 50	each.
50 solder pots, per sample.....	5 00	each.
20 pounds best German silver.....	3 50	per pound.
1,500 feet small lap-welded chain, such as may be re- quired.....	35	per foot.
50 dozen file handles.....	75	per dozen.
150 pair brass butt hinges, cast from 1 to 3 inches.....	50	per pair.
4 dozen chest locks, brass, 1 to 4 inches.....	10 00	per dozen.
75 shoe knives.....	20	each.
30 dozen brad awls, handled.....	1 50	per dozen.
20 sets steel figures.....	6 00	per set.
20 sets steel alphabets.....	12 00	per set.
30 dozen lamp hooks, brass, per sample.....	1 50	per dozen.
3 dozen box lanterns.....	50 00	per dozen.

10 dozen rubber oil squirts.....	\$7 50	per dozen.
1,200 feet chain, brass, small and assorted.....	35	per foot.
25 oilstones.....	5 00	each.
25 whetstones.....	5 00	each.
30 glue pots.....	10 00	each.

To be delivered as required.

JAMES M. SHAW. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 2, pig iron.

100 tons best anthracite pig iron.....	\$94 00	per ton.
75 tons best charcoal pig iron.....	120 00	per ton.

To be delivered as required.

GEO. ADAMS. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 3, boiler felting.

3,000 square yards boiler felting, such as may be required..	\$1 39	per yard.
--	--------	-----------

To be delivered as required.

BOSTON BELTING CO. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 4, gum packing, rubber hose, &c.

10,000 feet rubber hose, 4-ply, 2½ inches in diameter.....	\$1 62	per foot.
2,500 feet rubber hose, 4-ply, 2½ inches in diameter.....	1 80	per foot.
1,000 feet rubber hose, 3-ply, 1½ inch in diameter.....	90	per foot.
2,000 feet rubber hose, 2-ply, 1½ inch in diameter.....	65	per foot.
2,000 feet rubber hose, 2-ply, 1 inch in diameter.....	54	per foot.
1,000 feet rubber hose, 2-ply, ¾ inch in diameter.....	44	per foot.
1,000 pounds metallic packing, (assorted).....	1 50	per pound.
2,500 pounds round rubber packing, (assorted).....	1 58	per pound.
5,500 pounds sheet rubber packing, such as may be re- quired.....	1 50	per pound.
1,000 pounds clear gum, assorted, ¾ to 1 inch, prepared for air-pumps.....	1 58	per pound.
1,500 pounds rubber man and hand hole gaskets, (per pat- terns).....	1 58	per pound.
3,500 pounds pure vulcanized rubber valves, rings, &c., (per patterns).....	1 58	per pound.
2,000 rubber grummets, for condenser tubes, per sample..	10 00	per hundred.
500 feet rubber tubing, such as may be required.....	35	per foot.

To be delivered as required.

JAMES M. SHAW. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 5, sperm oil.

14,500 gallons pure winter-strained sperm oil.....	\$2 74	per gallon.
--	--------	-------------

To be delivered as required.

BANKER & CARPENTER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 6, linseed oil, turpentine, alcohol, &c.

2,100 gallons linseed oil, (boiled).....	\$2 29	per gallon.
1,500 gallons best spirits of turpentine.....	4 20	per gallon.
250 gallons neat's-foot oil.....	1 62	per gallon.
360 gallons alcohol, best quality, 95 per cent. proof.....	4 10	per gallon.

To be delivered as required.

JAMES M. SHAW. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 7, lard oil.

20,000 gallons best lard oil..... \$1 95 per gallon.
 To be delivered as required.

WM. H. WEED. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 8, lubricating or metallic oils

5,000 gallons lubricating or metallic oil, such as may be
 required..... \$1 90 per gallon.
 To be delivered as required.

SOUTHARD, HERBERT & Co. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 9, tallow and soap.

3,000 pounds best hard brown soap \$0 19 per pound.
 3,000 pounds best salt-water soap 19 per pound.
 10 barrels soft soap..... 9 00 per barrel.
 28,000 pounds pure beef tallow..... 25 per pound.
 To be delivered as required.

BINGHAM & ANTHONY. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 10, engineers' stores.

250 lights, glass, assorted, up to 18 and 24 inches \$0 60 each.
 3,500 pounds anti-attrition metal 70 per pound.
 230 pounds borax, in 3-pound tin cans 65 per pound.
 1,500 Bath bricks 06 each.
 10,500 fire bricks..... 95 00 per M.
 1,000 paint brushes, 0 to 000000 1 90 each.
 1,200 hand scrubbing brushes..... 35 each.
 600 whitewash brushes, (all white hair, Nos. 8 to 10)..... 1 50 each.
 50 oval varnish brushes, (extra, 1 to 6) 80 each.
 50 glue brushes, (assorted)..... 30 each.
 500 flue brushes, whalebone or wire, as required 4 00 each.
 100 hand dusting brushes, (extra, 1 to 5) 60 each.
 2 dozen sable hair marking brushes..... 2 00 per dozen.
 200 dozen corn brooms..... 4 00 per dozen.
 66 dozen hickory brooms..... 2 25 per dozen.
 20 barrels Roman cement..... 8 00 per barrel.
 1,000 pounds coarse animal charcoal..... 10 per pound.
 300 bushels hard wood charcoal 40 per bushel.
 600 coal baskets, bound with hide..... 3 00 each.
 1,000 coal bags 3 50 each.
 50 water buckets, oak, iron bound..... 80 each.
 500 pounds white chalk..... 03 per pound.
 150 pounds red chalk 18 per pound.
 1,500 pounds candles, (best sperm)..... 48 per pound.
 220 reams emery cloth, (assorted) 58 00 per ream.
 500 pounds emery, (assorted,) in cans, per sample 20 per pound.
 105 grindstones, (Ohio,) 120 pounds each, mounted..... 10 50 each.
 600 pounds ground glass, (assorted,) in tin cans, per
 sample..... 16 per pound.
 500 pounds best white glue 40 per pound.
 1,600 glasses for water gauges, annealed, such as may be
 required..... 45 each.
 520 pounds lampwick yarn 95 per pound.
 100 gross lampwicks, (circular,) such as may be required 1 95 per gross.
 2,500 feet leather belting, single, 2 to 6 inches..... 68 per foot.
 800 feet leather belting, double riveted, 4 to 12 inches.. 1 65 per foot.

50 metallic tape lines, (Chesterman's,) 50 feet each	\$6 50	each.
100 barrels slacked lime	1 75	per barrel.
1,500 pounds mercury, in flasks	2 40	per pound.
50 mouth-pieces, per sample	3 00	each.
20,000 pounds pure sweet oatmeal, in 20-pound cans, (hermetically sealed)	10	per pound.
1,300 pounds potash, in jars	18	per pound.
900 pounds pulverized rotten-stone, in 5-pound cans	15	per pound.
200 pounds sal ammoniac	34	per pound.
2,700 pounds pulverized sulphur, in 10-pound cans	20	per pound.
1,000 pounds soap stone, in 10-pound cans	10	per pound.
130 sewing palms, mounted	75	each.
80 sixty-second glasses	1 00	each.
100 pounds worsted yarn, for wicks, per sample	3 50	per pound.
200 barrels fire clay	2 50	per barrel.
100 sides lacing leather, (best quality)	4 50	per side.
100 sides pump leather, (best quality)	18 50	per side.
300 pounds resin	15	per pound.
150 manilla mats, such as may be required	3 50	each.
80 mops, with handles, per sample	75	each.
200 tons smiths' coal	14 50	per ton.
3,000 address tags, such as may be required	8 00	per M.
300 white glass bottles, with velvet taper corks, per sample	16	each.
100 pounds copperas	81	per pound.
To be delivered as required.		

WM. A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 11, engineers' tools.

85 anvils, from 75 to 200 pounds, say 10,000 pounds in all	\$0 22	per pound.
20 sets braces and bits, complete, 48 assorted bits each	22 00	per set.
80 bench vices, 3½ to 7-inch jaws, say 12,000 pounds, such as may be required	45	per pound.
170 boxwood rules, (standard,) per sample	2 00	each.
10 brass syringes	10 00	each.
105 bellows for forges, from 20 to 36 inches	16 00	each.
100 belt awls and punches	40	each.
50 chests carpenters' tools, per sample	100 00	per chest.
105 Paris callipers, 6 to 24 inches, per sample	6 50	per pair.
100 claw hammers, per sample	1 00	each.
105 pairs dividers, assorted, per sample	2 00	per pair.
150 ratchet drills, such as may be required, best manufacture	10 00	each.
30 breast drills, with drills, complete	4 00	each.
50 dozen files, 16-inch, flat, bastard	30 00	per dozen.
100 dozen files, 14-inch, flat, bastard	20 00	per dozen.
50 dozen files, 12-inch, flat, bastard	13 00	per dozen.
30 dozen files, 10-inch, flat, bastard	10 00	per dozen.
20 dozen files, 8-inch, flat, bastard	6 50	per dozen.
50 dozen files, 16-inch, half round, bastard	32 00	per dozen.
75 dozen files, 14-inch, half round, bastard	23 00	per dozen.
50 dozen files, 12-inch, half round, bastard	16 00	per dozen.
25 dozen files, 10-inch, half round, bastard	10 00	per dozen.
15 dozen files, 8-inch, half round, bastard	7 50	per dozen.
10 dozen files, 16-inch, flat, smooth	42 00	per dozen.
50 dozen files, 14-inch, flat, smooth	25 00	per dozen.
50 dozen files, 12-inch, flat, smooth	18 00	per dozen.
15 dozen files, 10-inch, flat, smooth	12 50	per dozen.
15 dozen files, 16-inch, half round, smooth	40 00	per dozen.
55 dozen files, 14-inch, half round, smooth	30 00	per dozen.
30 dozen files, 12-inch, half round, smooth	25 00	per dozen.
20 dozen files, 10-inch, half round, smooth	13 50	per dozen.
75 dozen files, square, from 8 to 10 inches, assorted	9 00	per dozen.
50 dozen files, square, from 14 to 18 inches, assorted	30 00	per dozen.
50 dozen files, round, from 6 to 12 inches, assorted	10 00	per dozen.

75 dozen files, round, from 14 to 18 inches, assorted.....	\$50 00	per dozen.
75 dozen files, triangular saw, assorted.....	4 00	per dozen.
25 dozen files, assorted, such as may be required.....	22 00	per dozen.
25 forges, tinsmiths', per sample.....	5 00	each.
112 hatchets, cast steel, handled, per sample.....	1 25	each.
150 handsaws, per sample.....	3 00	each.
100 hacksaws, with frames, per sample.....	2 75	each.
400 hacksaw blades, to suit frames.....	1 25	each.
50 dozen gimlets, assorted.....	75	per dozen.
100 oilstones, say 150 pounds, set in wood, with cover, per sample.....	3 00	per pound.
100 pincers, wood, per sample.....	50	each.
200 plyers, cutting, assorted.....	1 75	each.
200 plyers, round-nosed, assorted.....	50	each.
200 pairs pipe tongs, assorted, to take from $\frac{1}{4}$ to 4-inch pipe.....	5 50	per pair.
20 dozen socket gouges, handled, assorted, per sample.....	27 00	per dozen.
15 dozen socket chisels, assorted, per sample.....	25 00	per dozen.
12 dozen turners' chisels, assorted, per sample.....	18 00	per dozen.
3 dozen scroll saws, (Wilmarth's make) such as may be required.....	6 50	per dozen.
105 steel squares, 2-feet, per sample.....	3 00	each.
105 shears, tinman's, large and small.....	8 00	each.
30 screw plates and taps, complete, per sample.....	12 00	each.
100 screwdrivers, assorted.....	75	each.
100 sets stocks, taps, and dies, large and small, with tap wrenches to suit, per sample.....	125 00	per set.
10 pairs stocks for cutting pipe, Nos. 1, 2, or 3, with such dies as may be required.....	60 00	per pair.
50 tinman's scrapers.....	75	each.
100 hand vices.....	2 00	each.
5 bench vices, iron.....	60 00	each.
250 wood axes, cast steel, best quality.....	2 25	each.
100 pipe wrenches, assorted, per sample.....	4 00	each.
150 dozen screw wrenches, from 6 to 24 inches, of such make as may be required.....	50 00	per dozen.
30 jackscrews, per sample.....	25 00	each.
50 trowels, best steel, per sample.....	2 00	each.
150 tube-expanders, top or bottom, such sizes or kinds as may be required.....	80 00	each.
50 rubber punches, such as may be required, per sample....	2 50	each.

To be delivered as required.

WILLIAM A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 12, engineers' instruments.

1 hydraulic pump, for testing boilers up to 300 pounds, with gauge.....	\$350 00.	
50 fresh water condensers, such as may be required.....	300 00	each.
80 engine-room clocks, per sample.....	15 00	each.
10 engine counters, such as may be required.....	175 00	each.
10 engine trip gongs, 12 to 16 inches, with 4 pulls and 16 cranks each.....	55 00	each.
10 trip gongs, 6 to 9 inches, with 1 pull and 4 cranks....	25 00	each.
15 vacuum gauges, all brass, 6 to 8 $\frac{1}{2}$ inches, such as may be required.....	50 00	each.
70 steam gauges, all brass, 6 to 8 $\frac{1}{2}$ inches, such as may be required.....	50 00	each.
1,050 saline hydrometers, per sample.....	1 50	each.
50 test hydrometers, per sample.....	20 00	each.
30 indicators, high or low pressure, or both, as may be required.....	100 00	each.
50 salinometer cases, per sample.....	90 00	each.
12 steam whistles, such as may be required.....	40 00	each.
800 thermometers for hydrometers, per sample.....	2 00	each.
550 thermometers for engine-room, per sample.....	2 50	each.

20 thermometers for hot well, per sample.....	\$50 00	each.
250 dozen oil syphons, glass.....	1 50	per dozen.
20 sets steel alphabet and figures.....	12 00	per set.
50 aneroid barometers, per sample.....	20 00	each.
To be delivered as required.		

BINGHAM & ANTHONY. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 13, steam pumps.

3 steam pumps, No. 1, such as may be required.....	\$225 00	each.
5 steam pumps, No. 2, such as may be required.....	325 00	each.
8 steam pumps, No. 3, such as may be required.....	475 00	each.
15 steam pumps, No. 4, such as may be required.....	625 00	each.
15 steam pumps, No. 5, such as may be required.....	750 00	each.
12 steam pumps, No. 6, such as may be required.....	850 00	each.
To be delivered as required.		

FELIX CAMPBELL. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 14, wrought iron pipes, valves, &c.

150 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch nipples..	\$0 86	each.
100 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch unions..	2 58	each.
100 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch tees.....	1 60	each.
250 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch elbows..	1 28	each.
50 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch crosses..	2 00	each.
100 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch couplings,	86	each.
75 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and 2-inch return bends	53	each.
100 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch extra flanges	1 00	each.
50 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch bushings,	86	each.
50 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch plugs ...	86	each.
50 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch reducers,	86	each.
100 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch locknuts..	86	each.
50 each, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4-inch caps.....	86	each.
100 branch tees, with outlets, such as may be required...	1 03	each.
15 globe valves, brass, $\frac{1}{2}$ inch, without flanges.....	2 37	each.
15 globe valves, brass, $\frac{1}{2}$ inch, with flanges.....	3 57	each.
20 globe valves, brass, $\frac{3}{4}$ inch, without flanges	3 19	each.
20 globe valves, brass, $\frac{3}{4}$ inch, with flanges	4 80	each.
30 globe valves, brass, 1 inch, without flanges.....	4 60	each.
30 globe valves, brass, 1 inch, with flanges.....	6 90	each.
20 globe valves, brass, $1\frac{1}{4}$ inch, without flanges.....	6 60	each.
20 globe valves, brass, $1\frac{1}{4}$ inch, with flanges.....	9 95	each.
30 globe valves, brass, $1\frac{1}{2}$ inch, without flanges	8 50	each.
30 globe valves, brass, $1\frac{1}{2}$ inch, with flanges.....	12 75	each.
50 globe valves, brass, 2 inches, without flanges.....	12 75	each.
50 globe valves, brass, 2 inches, with flanges.....	20 40	each.
40 globe valves, brass, $2\frac{1}{2}$ inches, without flanges	21 45	each.
50 globe valves, brass, $2\frac{1}{2}$ inches, with flanges.....	32 30	each.
30 globe valves, brass, 3 inches, without flanges.....	31 45	each.
40 globe valves, brass, 3 inches, with flanges	46 75	each.
20 globe valves, brass, $3\frac{1}{2}$ inches, without flanges.....	46 75	each.
40 globe valves, brass, $3\frac{1}{2}$ inches, with flanges.....	63 75	each.
10 globe valves, brass, 4 inches, without flanges	59 50	each.
12 globe valves, brass, 4 inches, with flanges	76 50	each.
30 angle valves, 1 inch, with bottom flange.....	6 89	each.
30 angle valves, $1\frac{1}{2}$ inch, with bottom flange.....	12 75	each.
30 angle valves, 2 inches, with bottom flange.....	20 40	each.
30 hose-bibs, $\frac{1}{2}$ -inch screw-shanks and shoulder, with nut at bottom	2 34	each.
30 hose-bibs, $\frac{3}{4}$ -inch screw-shanks and shoulder, with nut at bottom.....	3 83	each.
40 hose-bibs, 1-inch screw-shanks and shoulder, with nut at bottom.....	4 89	each.

40 hose-bibs, $1\frac{1}{4}$ -inch screw-shanks and shoulder, with nut at bottom	\$7 44	each.
30 hose-bibs, $1\frac{1}{2}$ -inch screw-shanks and shoulder, with nut at bottom	10 20	each.
15 steam stop-cocks, 3 inches, rough	32 40	each.
30 steam stop-cocks, $\frac{5}{8}$ inch, single coupling	4 05	each.
30 steam stop-cocks, $\frac{3}{4}$ inch, single coupling	5 22	each.
30 steam stop-cocks, 1 inch, single coupling	6 53	each.
30 steam stop-cocks, $\frac{5}{8}$ inch, double coupling	5 40	each.
30 steam stop-cocks, $\frac{3}{4}$ inch, double coupling	6 30	each.
30 steam stop-cocks, 1 inch, double coupling	9 00	each.
2 dozen air-cocks, No. 2	18 90	per dozen.
2 dozen air-cocks, No. 3	21 60	per dozen.
2 dozen air-cocks, No. 4	27 00	per dozen.
2 dozen cylinder-cocks, No. 11	27 00	per dozen.
2 dozen cylinder-cocks, No. 12	32 40	per dozen.
2 dozen cylinder-cocks, No. 14	36 00	per dozen.
2 dozen cylinder-cocks, No. 16	40 50	per dozen.
2 dozen gauge-cocks, No. 17	68 40	per dozen.
2 dozen gauge-cocks, No. 18	63 00	per dozen.
2 dozen tallow oil cups, lever handle	108 00	per dozen.
2 dozen oil cups, with stop-cocks, lever handle, No. 14 ..	31 50	per dozen.
2 dozen oil cups, with stop-cocks, lever handle, No. 16 ..	40 50	per dozen.
2 dozen oil cups, with stop-cocks, lever handle, No. 18 ..	67 50	per dozen.
2 dozen plain oil cups, No. 34	16 20	per dozen.
2 dozen plain oil cups, No. 36	22 50	per dozen.
2 dozen plain oil cups, No. 37	31 50	per dozen.
2 dozen plain oil cups, No. 38	43 20	per dozen.
1 dozen globe oil cups, No. 1	85 50	per dozen.
1 dozen globe oil cups, No. 2	94 50	per dozen.
2 dozen globe oil cups, No. 3	108 00	per dozen.
2 dozen globe oil cups, No. $3\frac{1}{2}$	162 00	per dozen.
1 dozen globe oil cups, No. 4	194 40	per dozen.
1 dozen globe oil cups, No. 6	324 00	per dozen.
800 feet wrought-iron pipe, $\frac{1}{2}$ inch	19	per foot.
1,200 feet wrought-iron pipe, $\frac{3}{4}$ inch	24	per foot.
2,000 feet wrought-iron pipe, 1 inch	33	per foot.
1,500 feet wrought-iron pipe, $1\frac{1}{4}$ inch	45	per foot.
1,500 feet wrought-iron pipe, $1\frac{1}{2}$ inch	58	per foot.
2,000 feet wrought-iron pipe, 2 inch	84	per foot.
2,000 feet wrought-iron pipe, $2\frac{1}{2}$ inch	1 51	per foot.
1,500 feet wrought-iron pipe, 3 inch	2 19	per foot.
1,000 feet wrought-iron pipe, $3\frac{1}{2}$ inch	2 70	per foot.
1,000 feet wrought-iron pipe, 4 inch	3 38	per foot.
200 pieces hydraulic pipe, $\frac{3}{8}$ inch diameter inside, $\frac{7}{8}$ inch diameter outside, 10 feet long	1 38	per foot.

To be delivered as required.

WILLIAM A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 15, tubes.

10,000 feet boiler tubes, iron, from $1\frac{1}{2}$ inch to 3 inches diameter	\$1 00	per foot.
5,000 feet boiler tubes, iron, from $3\frac{1}{4}$ inches to 6 inches diameter	3 75	per foot.
4,000 pounds drawn brass tubes, such sizes as may be required	1 25	per pound.
17,000 pounds drawn brass tubes, for condensers, such sizes as may be required, and to be galvanized if necessary	85	per pound.

To be delivered as required.

BINGHAM & ANTHONY. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 16, steel.

21,000 pounds cast steel, extra, octagon, such sizes as may be required	\$0 58	per pound.
19,000 pounds cast steel, extra, square or flat, such sizes as may be required	59	per pound.
1,000 pounds blister steel, such as may be required	25	per pound.
1,500 pounds German steel, such as may be required	28	per pound.
2,000 pounds spring steel, such as may be required	33	per pound.
To be delivered as required.		

WM. A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 17, iron nails, bolts, nuts, &c.

1,000 pounds wrought-iron bolts, $\frac{5}{8}$ inch by 4 inches	\$0 30	per pound.
1,000 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $3\frac{1}{2}$ inches	32	per pound.
2,500 pounds wrought-iron bolts, $\frac{5}{8}$ inch by 3 inches	32	per pound.
1,000 pounds wrought-iron bolts, $\frac{3}{4}$ inch by $2\frac{3}{4}$ inches	32	per pound.
1,500 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $2\frac{1}{2}$ inches	34	per pound.
1,500 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $2\frac{1}{4}$ inches	36	per pound.
1,800 pounds wrought-iron bolts, $\frac{5}{8}$ inch by 2 inches	36	per pound.
2,000 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $1\frac{3}{4}$ inch	33	per pound.
2,000 pounds wrought-iron bolts, $\frac{5}{8}$ inch by $1\frac{1}{2}$ inch	38	per pound.
1,000 pounds wrought-iron bolts, $\frac{3}{4}$ inch by 2 inches	38	per pound.
1,500 pounds wrought-iron bolts, $\frac{3}{4}$ inch by $2\frac{1}{2}$ inches	36	per pound.
1,800 pounds wrought-iron bolts, $\frac{3}{4}$ inch by 3 inches	34	per pound.
2,500 pounds wrought-iron bolts, $\frac{3}{4}$ inch by $3\frac{3}{4}$ inches	32	per pound.
2,000 pounds wrought-iron bolts, $\frac{3}{4}$ inch by 4 inches	32	per pound.
1,500 pounds wrought-iron bolts, $\frac{3}{4}$ inch by 5 inches	30	per pound.
1,000 pounds wrought-iron bolts, $\frac{7}{8}$ inch by 3 inches	30	per pound.
1,000 pounds wrought-iron bolts, $\frac{7}{8}$ inch by $3\frac{1}{2}$ inches	30	per pound.
1,500 pounds wrought-iron bolts, $\frac{7}{8}$ inch by 4 inches	30	per pound.
1,500 pounds wrought-iron bolts, $\frac{7}{8}$ inch by $4\frac{1}{2}$ inches	26	per pound.
1,500 pounds wrought-iron bolts, $\frac{7}{8}$ inch by 5 inches	26	per pound.
1,000 pounds wrought-iron bolts, $\frac{7}{8}$ inch by $5\frac{1}{2}$ inches	26	per pound.
1,500 pounds wrought-iron bolts, 1 inch by $3\frac{1}{2}$ inches	26	per pound.
1,500 pounds wrought-iron bolts, 1 inch by $4\frac{1}{2}$ inches	26	per pound.
1,500 pounds wrought-iron bolts, 1 inch by 6 inches	26	per pound.
1,000 pounds wrought-iron bolts, $\frac{3}{8}$ inch by $\frac{3}{4}$ inch	70	per pound.
1,500 pounds wrought-iron bolts, $\frac{1}{2}$ inch by $1\frac{1}{2}$ inch	45	per pound.
2,000 pounds wrought-iron bolts, $\frac{9}{16}$ inch by $1\frac{1}{2}$ inch	38	per pound.
1,000 pounds Boonton hot-pressed nuts, square, $\frac{5}{8}$ inch	30	per pound.
2,500 pounds Boonton hot-pressed nuts, hexagon, $\frac{5}{8}$ inch	30	per pound.
1,200 pounds Boonton hot-pressed nuts, square, $\frac{3}{4}$ inch	30	per pound.
2,000 pounds Boonton hot-pressed nuts, hexagon, $\frac{3}{4}$ inch	30	per pound.
1,000 pounds Boonton hot-pressed nuts, hexagon, $\frac{7}{8}$ inch	30	per pound.
1,500 pounds Boonton hot-pressed nuts, hexagon, 1 inch	30	per pound.
800 pounds Boonton hot-pressed nuts, square, $\frac{1}{2}$ inch	30	per pound.
1,000 pounds Boonton hot-pressed nuts, hexagon, $\frac{1}{2}$ inch	32	per pound.
8,500 pounds iron cut nails, of the best American manufacture, from 4d. to 20d., as may be required	16	per pound.
1,000 papers iron finishing nails, from $\frac{3}{4}$ to 2 inches	25	per paper.
800 papers iron brads, from $\frac{3}{8}$ to 2 inches	15	per paper.
500 gross brass screws, gimlet points, $\frac{3}{8}$ to 4 inches	8 00	per gross.
1,000 gross iron screws, gimlet points, $\frac{3}{8}$ to 4 inches	2 00	per gross.
To be delivered as required.		

BALTIMORE AND CUBA SMELTING AND MINING CO. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 18, copper.

40,000 pounds ingot copper	\$0 56	per pound.
2,000 pounds bolt copper	70	per pound.

5,000 pounds rod copper, $\frac{1}{2}$ inch to 3 inches, assorted.....	\$0 71	per pound.
2,500 pounds sheet copper, from $\frac{1}{16}$ inch to $\frac{3}{8}$ inch thick..	71	per pound.
500 pounds copper rivets.....	1 00	per pound.
To be delivered as required.		

BINGHAM & ANTHONY. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 19, tin, zinc, lead, &c.

12,000 pounds Banca tin.....	\$1 19	per pound.
500 pounds zinc, pig.....	20	per pound.
5,000 pounds Silesian spelter.....	25	per pound.
2,500 pounds spelter solder.....	65	per pound.
13,000 pounds sheet lead, 3 to 6 pounds.....	30	per pound.
2,000 pounds "B" lead pipe, $\frac{1}{2}$ inch to 2 inches.....	33	per pound.
13 boxes tin plate, large and heavy.....	45 00	per box.
To be delivered as required.		

BANKER & CARPENTER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 20, white lead.

23,000 pounds white lead, in oil, in 25-pound kegs.....	\$0 23	per pound.
To be delivered as required.		

WM. MILLER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 21, zinc paint.

3,000 pounds brown zinc paint, in oil, in 25-pound kegs....	\$0 10	per pound.
3,000 pounds white zinc paint, in oil, in 25-pound kegs....	12	per pound.
To be delivered as required.		

BANKER & CARPENTER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 22, colored paints, dryers, &c.

300 pounds pulverized black lead.....	\$0 13	per pound.
100 pounds lampblack.....	15	per pound.
2,500 pounds best chrome green, in 4-pound cans.....	20	per pound.
1,000 pounds bright, clear gum shellac.....	1 45	per pound.
2,500 pounds litharge, in 5-pound cans.....	23½	per pound.
4,000 pounds black paint, best, ground in oil, in 25-pound kegs.....	12	per pound.
500 gallons patent dryers, in 5-gallon cans.....	2 25	per gallon.
18,000 pounds red lead, dry, in 50 and 100-pound kegs....	22	per pound.
100 pounds vermilion, in 1-ounce papers, in $\frac{3}{4}$ -pound packages.....	2 75	per pound.
4,000 pounds whiting, dry.....	3½	per pound.
200 gallons copal varnish, in 3-gallon cans.....	5 25	per gallon.
500 gallons black Japan varnish, in 3-gallon cans.....	4 75	per gallon.
To be delivered as required.		

WM. A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 24, firewood.

250 cords pine wood.....	\$12 00	per cord
To be delivered as required.		

BINGHAM & ANTHONY. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 26, white pine.

75,000 feet best white pine lumber, from 1 to 6 inches thick, board measure.....	\$67 50	per M feet.
To be delivered as required.		

WM. PORTER & SONS. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 29, lanterns.

1, 100 globe lanterns, large or small, as may be required, per sample.....	\$4 00	each.
160 engine-room lamps, solar, with reflectors, per sample..	9 00	each.

1, 700 lamp chimneys, such as may be required.....	6	each.
To be delivered as required.		

WM. A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 30, lignumvitæ.

10 tons lignumvitæ, 10 to 16 inches diameter.....	\$200 00	per ton.
To be delivered as required.		

FELIX CAMPBELL. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 33, patented articles.

1, 000 Clark's patent ferules	\$2 50	each.
50 sets Haight's springs.....	150 00	per set.
To be delivered as required.		

DARIUS ALLEN. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 34, cotton and hemp packing, &c.

25, 000 pounds cotton waste wiping stuff, per sample.....	\$0 32	per pound.
11, 000 pounds Italian hemp packing, per sample.....	40	per pound.
2, 000 pounds cotton packing, per sample	60	per pound.
250 pounds sewing twine.....	75	per pound.
300 flax fishing lines, for indicators, per sample.....	80	each.
To be delivered as required.		

BINGHAM & ANTHONY. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 35, engineers' stores.

75 augers, from $\frac{1}{2}$ to 2 inches.....	\$1 00	each.
100 pairs brass butt hinges, cast from 1 to 4 inches	60	per pair.
12 dozen chest locks, 1 to 4.....	6 00	per dozen.
150 shoe knives.....	20	each.
150 putty knives.....	18	each.
300 coal barrows.....	4 50	each.
100 iron ladles.....	1 50	each.
150 pairs lamp scissors, per sample.....	70	each.
100 dozen brass lamp hooks, per sample.....	1 75	per dozen.
50 oil pumps, per sample.....	5 00	each.
380 brass padlocks.....	1 00	each.
800 pounds sheet brass, assorted.....	85	per pound.
1, 000 pounds soft solder	68	per pound.
20 reams sandpaper, assorted.....	4 25	per ream.
100 papers sail needles.....	4 00	each paper.
100 scale beams, to weigh 500 pounds	7 50	each.
5 scale beams, to weigh 2, 000 pounds.....	25 00	each.
125 spring balances, per sample	8 00	each.
800 ship scrapers, per sample.....	80	each.
317 dozen first quality steel scoop shovels, per sample...	25 00	per dozen.
50 dozen first quality steel flat shovels, per sample.....	19 00	per dozen.

22,000 copper tacks, assorted.....	\$1 20 per M.
300 papers iron tacks.....	10 per paper.
250 pounds steel wire, assorted.....	60 per pound.
600 pounds copper wire, assorted.....	95 per pound.
300 pounds brass wire, assorted.....	85 per pound.
300 pounds iron wire, assorted.....	18 per pound.
1,500 feet wire rope, from $\frac{1}{4}$ to $\frac{7}{8}$ diameter.....	50 per foot.
100 hand bellows, per sample.....	1 50 each.
80 solder pots, per sample.....	4 00 each.
50 wire gauges, per sample.....	2 50 each.
20 pounds best German silver.....	5 00 per pound.
2,500 feet small lap-welded chain, per sample.....	16 per foot.
4 Fairbanks's platform scales, from 200 to 1,000 pounds.....	50 00 each.
26 dozen gutta-percha squirt cans.....	7 00 per dozen.
50 bung borers, per sample.....	90 each.
10 dozen brass hand lamps, $\frac{1}{2}$ pint.....	7 00 per dozen.
20 swivel lamps, brass, $\frac{1}{2}$ pint.....	50 each.
To be delivered as required.	

PHILADELPHIA, PENNSYLVANIA.

WM. F. POTTS. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 1, boiler iron, &c.

12,000 pounds boiler iron, assorted, from $\frac{1}{4}$ to $\frac{1}{2}$ inch thick, length and breadth as required.....	\$0 13 $\frac{1}{2}$ per pound.
10,000 pounds boiler iron, assorted, from $\frac{1}{8}$ to $\frac{5}{16}$ inch thick, for bunkers.....	13 $\frac{1}{2}$ per pound.

1,500 pounds iron rivets, from $\frac{1}{2}$ to $\frac{3}{4}$ inch, and from 1 $\frac{1}{4}$ to 2 $\frac{1}{2}$ inches long, as required.....	15 per pound.
1,000 pounds angle iron, assorted sizes.....	13 per pound.
1,000 pounds T iron, assorted sizes, as required.....	12 per pound.
To be delivered as required.	

GEO. ADAMS. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 3, boiler felting.

1,500 square yards boiler felting.....	\$1 49 per yard.
To be delivered as required.	

JOHN K. SHOEMAKER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 4, gum packing, rubber hose, &c.

3,000 pounds gum packing.....	\$1 85 per pound.
3,000 pounds sheet rubber.....	2 15 per pound.
1,000 pounds Tuck's packing, assorted.....	2 25 per pound.
1,200 feet rubber hose, 2 $\frac{1}{2}$ inches.....	2 45 per foot.
1,000 feet rubber hose, from 1 to 2 inches.....	1 40 per foot.
To be delivered as required.	

JAMES M. SHAW. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 5, sperm oil.

15,000 gallons sperm oil.....	\$2 77 per gallon.
To be delivered as required.	

WM. E. SPALDING. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 6, linseed oil, turpentine, &c.

2,500 gallons linseed oil, raw.....	\$2 00 per gallon.
300 gallons spirits turpentine.....	3 75 per gallon.
50 gallons neat's-foot oil.....	1 80 per gallon.
To be delivered as required.	

JAMES M. SHAW. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 7, lard oil.

5,000 gallons lard oil.....	\$1 95 per gallon.
To be delivered as required.	

SOUTHARD, HERBERT & CO. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 9, tallow, soap, &c.

250 pounds washing soda.....	\$0 15 per pound.
14,000 pounds tallow.....	26 per pound.
100 boxes salt-water soap, (50 pounds each).....	18 per pound.
75 boxes fresh-water soap, (50 pounds each).....	19 per pound.
To be delivered as required.	

JOHN K. SHOEMAKER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 10, engineers' stores.

500 pounds anti-attrition metal.....	\$0 35 per pound.
100 pounds borax.....	75 per pound.
25 pounds beeswax.....	1 20 per pound.
500 Bath brick.....	13 each.
200 brushes, flue, for Martin boilers, as per sample.....	2 50 each.
200 brushes, whitewash.....	1 35 each.
600 brushes, scrubbing.....	35 each.
100 brushes, dusting, long handle.....	1 10 each.
50 brushes, dusting, short handle.....	1 00 each.
300 brushes, paint.....	85 each.
200 brooms, hickory.....	44 each.
500 brooms, corn.....	44 each.
2,000 bricks, fire.....	65 00 per M.
75 pounds chalk, white.....	06 per pound.
15 pounds chalk, red.....	15 per pound.
600 barrels charcoal.....	95 per barrel.
250 chimneys, lamp.....	16 each.
100 pounds emery, assorted.....	25 per pound.
50 reams emery cloth.....	60 00 per ream.
350 pounds lampwick.....	1 30 per pound.
20 gross lampwick, circular.....	4 00 per gross.
15 sides sole leather.....	12 50 per side.
12 sides lacing leather.....	4 00 per side.
500 feet leather belting, rivetted, and from 5 to 10 inches wide.....	1 38 per foot.
800 pounds mercury, in flasks.....	2 50 per pound.
1,200 pounds potash.....	24 per pound.
150 pounds rottenstone.....	13 per pound.
3 barrels rosin.....	55 00 per barrel.
150 pounds sal ammoniac.....	47 00 per pound.
350 pounds soapstone, pulverized.....	05 per pound.
400 pounds sulphur, flour.....	18 per pound.
50 sewing palms.....	50 each.
24 sand glasses, 60-seconds.....	75 each.
24 sand glasses, 30-seconds.....	75 each.
2,500 pounds washers, assorted.....	25 per pound.
To be delivered as required.	

CHARLES M. GHRISKEY. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 11, engineers' tools.

1,000 pounds anvils.....	\$0 31 per pound.
36 bet awls and punches.....	60 each.
24 axes, wood, cast-steel, with handles.....	2 25 each.
8 bellows, for forges, 30 inches.....	20 00 each.
36 boxwood rules, 4-fold, standard, 2 feet.....	1 50 each.
24 sets braces and bitts, (36 bitts each set).....	12 00 per set.
10 calipers, 24 to 36 inches.....	5 00 each.
12 calipers, 6 to 12 inches.....	1 25 each.
12 clocks, engine-room.....	10 00 each.
6 forges, with bellows complete.....	50 00 each.
36 firmer chisels, assorted.....	65 each.
36 firmer gouges.....	1 00 each.
48 dozen files, assorted, from 12 to 16 inches.....	21 00 per dozen.
12 grindstones, mounted.....	11 00 each.
24 hammers, claw.....	1 25 each.
24 hatchets.....	85 each.
6 hydraulic jacks, to lift from foot, 10 to 15 tons.....	130 00 each.
12 hand-bellows.....	2 00 each.
18 hack-saws, and frames complete, 12 inch.....	3 00 each.
36 hack-saw blades, to suit frames.....	1 00 each.
18 handsaws.....	2 50 each.
18 hand-vices, 5-inch.....	1 20 each.
30 plyers.....	75 each.
36 pincers.....	1 00 each.
24 screwdrivers.....	50 each.
36 shoeknives.....	15 each.
12 steel squares.....	1 35 each.
300 ship scrapers.....	60 each.
18 stones, oil.....	50 each.
18 steel dividers, 9-inch.....	1 00 each.
6 screw plates and taps, complete.....	4 00 each.
9 stocks, and dies and taps.....	15 00 each.
300 steel coal shovels.....	2 00 each.
12 tinman's shears.....	6 00 each.
1,000 pounds vices.....	25 per pound.
18 wrenches, pawl.....	15 00 each.
48 wrenches, screw.....	3 00 each.
18 wrenches, pipe, assorted.....	3 50 each.

To be delivered as required.

JOHN K. SHOEMAKER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 12, engineers' instruments.

6 indicators.....	\$130 00 each.
6 metallic measuring lines, 100 feet.....	16 00 each.
12 steam gauges, from 6 to 8 inches, as may be required ..	37 50 each.
4 steam whistles.....	36 00 each.
12 scale beams, to weigh from 5 to 800 pounds.....	10 00 each.
24 spring balances, (with basins attached,) to weigh 24 pounds	1 00 each.
75 thermometers, for engine-rooms.....	2 75 each.
225 thermometers, for salinometers.....	1 30 each.
225 saline hydrometers.....	1 00 each.
12 vacuum gauges, from 6 to 8 inches, as may be required.	40 00 each.

To be delivered as required.

JOHN K. SHOEMAKER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 14, wrought-iron pipe, valves, &c.

300 feet $\frac{3}{8}$ -inch wrought-iron pipe.....	\$0 27 per foot.
800 feet $\frac{1}{2}$ -inch wrought-iron pipe.....	40 per foot.
800 feet 1-inch wrought-iron pipe.....	54 per foot.

250 elbows, from $\frac{3}{8}$ to 1 inch.....	\$0 40	each.
100 tees, from $\frac{3}{8}$ to 1 inch.....	57	each.
100 unions, from $\frac{3}{8}$ to 1 inch.....	1 50	each.
100 nipples, from $\frac{3}{8}$ to 1 inch.....	29	each.
100 cast-iron flanges, assorted.....	72	each.
24 finished steam stop-cocks, double coupling, from $\frac{1}{4}$ to 1 inch.....	10 20	each.
24 finished steam stop cocks, double coupling, from $1\frac{1}{4}$ to $2\frac{1}{2}$ inches.....	28 00	each.
6 globe valves, $\frac{3}{8}$ inch, with or without flanges.....	2 95	each.
15 globe valves, $\frac{1}{2}$ inch, with or without flanges.....	3 75	each.
15 globe valves, 1 inch, with or without flanges.....	7 05	each.
15 globe valves, $1\frac{1}{4}$ inches, with or without flanges.....	9 90	each.
15 globe valves, 2 inches, with or without flanges.....	20 70	each.
15 globe valves, $2\frac{1}{2}$ inches, with or without flanges.....	37 50	each.
15 globe valves, 3 inches, with or without flanges.....	55 50	each.
To be delivered as required.		

JOHN K. SHOEMAKER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 15, tubes.

3,000 feet iron boiler tubes, from $1\frac{3}{4}$ to 4 inches, as may be required.....	\$1 80	per foot.
5,000 pounds drawn brass tubes, for condensers, $\frac{3}{8}$ to $1\frac{1}{4}$ inches in diameter, of such lengths as may be required, and to be galvanized, if necessary.....	1 35	per pound.
To be delivered as required.		

CHARLES M. GHRISKEY. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 16, steel.

1,200 pounds octagon cast-steel, from $\frac{1}{2}$ to 1 inch.....	\$0 49	per pound.
250 pounds round cast-steel, from $\frac{1}{2}$ to $1\frac{1}{4}$ inch.....	49	per pound.
1,600 pounds square cast-steel, from $\frac{1}{2}$ to 2 inches.....	49	per pound.
500 pounds flat cast-steel, from $\frac{1}{4}$ to 4 inches wide, and from $\frac{1}{4}$ to $\frac{1}{2}$ inch thick.....	49	per pound.
200 pounds flat shear steel, from $\frac{1}{4}$ to 4 inches wide, and from $\frac{1}{4}$ to $\frac{1}{2}$ inch thick.....	49	per pound.
To be delivered as required.		

WILLIAM A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 17, iron nails, bolts, and nuts.

1,000 pounds nails, assorted.....	\$0 15	per pound.
3,000 pounds bolts and nuts, assorted.....	25	per pound.
To be delivered as required.		

H. & W. D. WINSOR. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 18, copper.

30 sheets copper, 20 pounds each, 30 by 60 inches.....	\$0 64 $\frac{3}{4}$	per pound.
40 sheets copper, 25 pounds each, 30 by 60 inches.....	64 $\frac{3}{4}$	per pound.
100 sheets copper, 35 pounds each, 30 by 60 inches.....	64 $\frac{3}{4}$	per pound.
100 sheets copper, 40 pounds each, 30 by 60 inches.....	64 $\frac{3}{4}$	per pound.
400 sheets copper, 45 pounds each, 30 by 60 inches.....	64 $\frac{3}{4}$	per pound.
400 sheets copper, 50 pounds each, 30 by 60 inches.....	64 $\frac{3}{4}$	per pound.
300 sheets copper, 60 pounds each, 30 by 60 inches.....	64 $\frac{3}{4}$	per pound.
200 sheets copper, 80 pounds each, 30 by 60 inches.....	64 $\frac{3}{4}$	per pound.
100 sheets copper, 100 pounds each, 30 by 60 inches.....	64 $\frac{3}{4}$	per pound.
50 sheets copper, 120 pounds each, 30 by 60 inches.....	64 $\frac{3}{4}$	per pound.
50 sheets copper, 145 pounds each, 36 by 72 inches.....	64 $\frac{3}{4}$	per pound.
To be delivered as required.		

JOHN K. SHOEMAKER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 19, tin, &c.

100 pounds sheet zinc, No. 10	\$0 30	per pound.
1,500 pounds Banca tin	1 20	per pound.
25 boxes tin, XX, 14 by 20	43 50	per box.

To be delivered as required.

WM. E. SPALDING. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 20, white lead.

10,000 pounds white lead, in oil, equal to Lewis's pure, (50 and 100-pound kegs)	\$0 19 $\frac{1}{2}$	per pound.
--	----------------------	------------

To be delivered as required.

WM. E. SPALDING. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 21, zinc paint.

5,000 pounds zinc paint, equal to Lewis's pure, (50 and 100-pound kegs)	\$0 12	per pound.
---	--------	------------

To be delivered as required.

BANKER & CARPENTER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 22, colored paints and dryers.

3,000 pounds red lead	\$0 22	per pound.
1,200 pounds black paint, in oil	09 $\frac{1}{2}$	per pound.

1,500 pounds round iron, $\frac{3}{8}$ inch	12 $\frac{1}{2}$ per pound.
500 pounds round iron, $\frac{5}{16}$ inch	13 per pound.
1,000 pounds round iron, $\frac{1}{2}$ inch	14 per pound.
5,000 pounds rivets, $\frac{1}{2}$ to $\frac{1}{16}$ inch diameter, and from 1 $\frac{1}{2}$ to 2 inches long	14 per pound.
250 pounds rivets, $\frac{3}{8}$ by $\frac{1}{2}$ inch long	18 per pound.
250 pounds rivets, $\frac{3}{8}$ by $\frac{5}{8}$ inch long	18 per pound.
250 pounds rivets, $\frac{3}{8}$ by $\frac{3}{4}$ inch long	18 per pound.
250 pounds rivets, $\frac{3}{8}$ by $\frac{7}{8}$ inch long	18 per pound.
500 pounds sheet iron, from No. 14 to No. 22, wire gauge ..	15 per pound.
10,000 pounds T iron, 3 $\frac{1}{2}$ by 3 $\frac{1}{2}$, 16 feet long	13 per pound.
To be delivered as required.	

JAMES M. SHAW. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 2, pig iron.

300 tons anthracite pig iron, No. 1, (American)	\$96 00 per ton.
100 tons charcoal pig iron, No. 1, (American)	123 50 per ton.
100 tons charcoal pig iron, No. 2, (American)	113 50 per ton.
50 tons sterling pig iron	98 50 per ton.
To be delivered as required.	

GEORGE ADAMS. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 3, boiler felting, &c.

3,000 square yards boiler felting, 1 $\frac{1}{2}$ inch thick, made on strong felt or canvas backing	\$1 50 per square yard.
25 pounds beeswax	96 per pound.
130 bolts canvas, bag stuff	2 10 per yard.
100 pounds hemp sewing twine	95 per pound.
To be delivered as required.	

E. WHEELER & SON. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 4, gum packing, rubber hose, &c.

500 feet 1-inch gum hose, leading, 3-ply	\$0 90 per foot.
500 feet 1 $\frac{1}{4}$ -inch gum hose, leading, 3-ply	1 00 per foot.
500 feet 1 $\frac{1}{2}$ -inch gum hose, leading, 3-ply	1 25 per foot.
500 feet 1 $\frac{3}{4}$ -inch gum hose, leading, 4-ply	1 50 per foot.
500 feet 2-inch gum hose, leading, 4-ply	1 75 per foot.
500 feet 2 $\frac{1}{4}$ -inch gum hose, leading, 4-ply	2 00 per foot.
24 hose pipes, (brass,) to fit each size leading hose.	5 00 each.
24 hose couplings, (brass,) to fit each size leading hose. .	5 00 per pair.
500 pounds pure gum, $\frac{1}{2}$ to 1 inch thick, as ordered	2 25 per pound.
2,000 pounds vulcanized gum, with cloth inserted, from $\frac{1}{32}$ to $\frac{1}{2}$ inch thick, as ordered	2 00 per pound.
To be delivered as required.	

JAMES M. SHAW. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 5, sperm oil.

4,000 gallons sperm oil, winter-strained	\$2 79 per gallon.
To be delivered as required.	

BANKER & CARPENTER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 6, linseed oil and turpentine.

500 gallons linseed oil, boiled, in 10-gallon cans	\$2 15 per gallon.
200 gallons spirits turpentine, pure, in 5-gallon cans	4 25 per gallon.
To be delivered as required.	

JAMES M. SHAW. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 7, lard oil.

3,000 gallons lard oil, for lubricating, equal to E. G. Alden's
extra lard oil \$2 19 per gallon.
To be delivered as required.

E. WHEELER & SON. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 9, tallow and soap.

100 pounds castile soap \$0 40 per pound.
5,000 pounds tallow, pure. 20 per pound.
To be delivered as required.

E. WHEELER & SON. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 10, engineers' stores.

2,000 bags coal.....	\$2 50	each.
500 baskets coal.....	1 25	each.
1,200 bath brick.....	10 00	per 100.
25 dozen brushes, flue, whalebone, 2 to 9 inches diameter...	50 00	per dozen.

4 gauges, pannel.....	1 00	each.
4 dozen gimlets, assorted sizes.....	75	per dozen.
36 hack saws, framed with iron.....	2 50	each.
72 hack-saw blades.....	75	each.
24 handsaws.....	3 00	each.
36 hammers, steel, boiler making, rivetting.....	1 50	each.
36 hammers, steel, chipping and ball, rivetting.....	2 00	each.
36 hammers, tack.....	25	each.
12 hammers, claw.....	75	each.
50 hatchets, medium size.....	1 00	each.
1 set hollow and rounds, plane bits, assorted.....	15 00	per set.
2 hydraulic jacks, 10 tons.....	150 00	each.
2 hydraulic jacks, 10 tons, suspending.....	150 00	each.
1 dozen keyhole saws.....	3 00	per dozen.
1 dozen mallets.....	6 00	per dozen.

6 masons' trowels	\$2 00	each.
6 dozen mauls, pin, steel-faced, for breaking coal.....	18 00	per dozen.
2 dozen nippers, cutting	12 00	per dozen.
1 dozen punchers, for belts, assorted numbers	12 00	per dozen.
2 dozen punchers, for $\frac{5}{8}$ hole in $\frac{1}{2}$ -inch boiler iron	12 00	per dozen.
3 punchers, for nails.....	12	each.
4 planes, fore, double iron	2 50	each.
4 planes, fore, single iron	2 00	each.
4 planes, jack,	1 50	each.
4 planes, smoothing	1 25	each.
1 pair planes, tongue and groove, $\frac{7}{8}$ inch	2 50	per pair.
1 pair planes, tongue and groove, $\frac{1}{2}$ inch.....	2 50	per pair.
1 pair planes, tongue and groove, 1 inch.....	3 00	per pair.
5 planes, rabbet, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{2}$, and 2 inches	1 00	each.
2 dozen plyers, assorted sizes.....	6 00	per dozen.
2 dozen plyers, assorted sizes, round noses.....	6 00	per dozen.
30 ratchets, for drilling, assorted sizes	12 00	each.
6 dozen rules, boxwood, brass bound, 4-fold, 1 foot	12 00	per dozen.
6 dozen rules, boxwood, brass bound, 4-fold, 2 foot	24 00	per dozen.
1 dozen rules, steel, 24 inches long	18 00	per dozen.
1 dozen rules, steel, 12 inches long.....	12 00	per dozen.
1 dozen squares, for cog-wheels.....	12 00	per dozen.
2 dozen pair scissors, lamp.....	9 00	per dozen.
3 dozen screwdrivers, assorted.....	6 00	per dozen.
1 dozen screw-plates and taps, $\frac{1}{16}$ to $\frac{3}{8}$ inch.....	60 00	per dozen.
30 pairs shears, steel, tinners', assorted sizes.....	6 00	per pair.
20 dozen shovels, steel scoop.....	24 00	per dozen.
1 dozen snips, tinners', assorted sizes.....	24 00	per dozen.
1 dozen spokeshaves	12 00	per dozen.
15 sets stocks, taps, and dies, complete, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$, $\frac{7}{8}$, and 1 inch, each size to have 3 taps.....	10 00	per set.
1 dozen sash saws.....	18 00	per dozen.
1 dozen tenon saws.....	18 00	per dozen.
15 tape lines, metallic, 50 feet in length.....	4 00	each.
1 dozen tape lines, metallic, spring, pocket, 8 to 10 feet long ..	24 00	per dozen.
1 dozen try squares, 6 to 8 inch blade, for machinists.....	36 00	per dozen.
36 vices, bench, steel-faced, parallel, assorted sizes.....	10 00	each.
24 vices, hand, steel-faced, assorted sizes.....	1 25	each.
24 wire gauges.....	2 00	each.
12 wood horses and saws.....	2 00	each.
12 dozen wrenches, pipe, adjustable, assorted sizes.....	30 00	per dozen.
12 dozen wrenches, ratchet, large, (see sample).....	120 00	per dozen.
20 dozen wrenches, screw, 9 inch.....	15 00	per dozen.
20 dozen wrenches, screw, 12 inch.....	18 00	per dozen.
20 dozen wrenches, screw, 15 inch.....	30 00	per dozen.
10 dozen wrenches, screw, 18 inch.....	40 00	per dozen.
10 dozen wrenches, screw, 24 inch.....	48 00	per dozen.

To be delivered as required.

E. WHEELER & SON. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 12, engineers' instruments.

36 marine clocks, 6 and 8 inches face.....	\$10 00	each.
6 sets drawing instruments, mathematical, in small boxes, with scales, (see sample).....	15 00	per set.
30 gongs, for engine-room, (see sample).....	6 00	each.
30 gauges, steam, as per sample.....	30 00	each.
30 gauges, vacuum, as per sample.....	30 00	each.
3 dozen gingle bells, for engine-room.....	12 00	per dozen.
10 gauges, mercurial assorted sizes.....	50 00	each.
24 dozen hydrometers, (see sample).....	24 00	per dozen.
4 indicators, steam-engine, in boxes, (see sample).....	150 00	each.
6 platform scales, 500 pounds.....	30 00	each.
6 registers, steam-engine, with eight-day clocks combined, with the words United States navy yard, Washington, engraved on the face.....	450 00	each.

12 salinometer pots, with thermometers and hydrometers attached, all complete.....	\$100 00	each.
12 spring balances, 300 pounds.....	20 00	each.
2 dozen thermometers, for condenser, (see sample).....	18 00	per dozen.
24 dozen thermometers, in brass cases, (see sample).....	24 00	per dozen.
24 dozen thermometers, for salinometer vats.....	7 50	per dozen.

To be delivered as required.

J. W. THOMPSON & Co. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 14, wrought-iron pipe, valves, &c.

1,000 pounds fittings, malleable iron, assorted, to fit pipes $\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, 3, $3\frac{1}{2}$, and 4 inches diameter	\$0 45	per pound.
50 globe valves, $\frac{1}{4}$ inch, for steam pipes.....	2 25	each.
100 globe valves, $\frac{1}{2}$ inch, for steam pipes.....	3 00	each.
100 globe valves, $\frac{3}{4}$ inch, for steam pipes.....	4 50	each.
100 globe valves, 1 inch, for steam pipes.....	5 37	each.
50 globe valves, $1\frac{1}{4}$ inch, for steam pipes.....	6 25	each.
50 globe valves, $1\frac{1}{2}$ inch, for steam pipes.....	7 50	each.
25 globe valves, 2 inch, for steam pipes.....	10 75	each.
25 globe valves, $2\frac{1}{2}$ inch, for steam pipes.....	18 00	each.
12 globe valves, 3 inch, for steam pipes.....	27 00	each.
12 globe valves, $3\frac{1}{2}$ inch, for steam pipes.....	33 00	each.
12 globe valves, 4 inch, for steam pipes.....	40 00	each.
300 feet steam pipe, (wrought-iron,) $\frac{1}{4}$ inch diameter.....	18	per foot.
300 feet steam pipe, (wrought-iron,) $\frac{1}{2}$ inch diameter.....	25	per foot.
300 feet steam pipe, (wrought-iron,) $\frac{3}{4}$ inch diameter.....	33	per foot.
300 feet steam pipe, (wrought-iron,) 1 inch diameter.....	43	per foot.
300 feet steam pipe, (wrought-iron,) $1\frac{1}{4}$ inch diameter.....	60	per foot.
200 feet steam pipe, (wrought iron,) $1\frac{1}{2}$ inch diameter.....	75	per foot.
200 feet steam pipe, (wrought-iron,) 2 inches diameter....	1 20	per foot.
200 feet steam pipe, (wrought-iron,) $2\frac{1}{2}$ inches diameter...	2 00	per foot.
100 feet steam pipe, (wrought-iron,) 3 inches diameter...	3 00	per foot.
100 feet steam pipe, (wrought-iron,) $3\frac{1}{2}$ inches diameter...	4 00	per foot.
100 feet steam pipe, (wrought-iron,) 4 inches diameter...	5 00	per foot.

To be delivered as required.

WILLIAM A. WHEELER. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 15, tubes, &c.

60 boiler tubes, (lapwelded,) $2\frac{1}{2}$ inches diameter, Nos. 8, 9, and 10, wire gauge, as ordered.....	\$2 00	per foot.
60 boiler tubes, (lapwelded,) 3 inches diameter, Nos. 8, 9, and 10, wire gauge, as ordered.....	2 50	per foot.
60 boiler tubes, (lapwelded,) $3\frac{1}{2}$ inches diameter, Nos. 8, 9, and 10, wire gauge, as ordered.....	2 75	per foot.
60 boiler tubes, (lapwelded,) 4 inches diameter, Nos. 8, 9, and 10, wire gauge, as ordered.....	3 50	per foot.
30 boiler tubes, (lapwelded,) 6 inches diameter, Nos. 8, 9, and 10, wire gauge, as ordered.....	7 50	per foot.

To be delivered as required.

E. WHEELER & SON. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 16, steel.

250 pounds cast steel, 3 inches, round.....	\$0 50	per pound.
200 pounds cast steel, $2\frac{1}{2}$ inches, round.....	50	per pound.
200 pounds cast steel, $2\frac{1}{4}$ inches, round.....	50	per pound.
150 pounds cast steel, 2 inches, round.....	50	per pound.
100 pounds cast steel, $1\frac{3}{4}$ inch, round.....	50	per pound.
2,500 pounds cast steel, $\frac{7}{8}$ inch, octagon.....	50	per pound.
500 pounds cast steel, $\frac{3}{4}$ inch, octagon.....	50	per pound.
700 pounds cast steel, $1\frac{1}{4}$ inch, square.....	50	per pound.

500 pounds cast steel, $1\frac{1}{2}$ inch, square.....	\$0 50	per pound.
300 pounds spring steel, 4 by $\frac{1}{4}$ inch.....	50	per pound.
300 pounds spring steel, $3\frac{1}{2}$ by $\frac{3}{16}$ inch.....	50	per pound
To be delivered as required.		

E. WHEELER & SON. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 17, iron nails, bolts, nuts, &c.

500 pounds bolts, $\frac{1}{2}$ -inch iron, 2, $2\frac{1}{2}$, and 3 inches long...	\$0 25	per pound.
2,000 pounds bolts, $\frac{5}{8}$ -inch iron, 2, $2\frac{1}{2}$, and 3 inches long...	25	per pound.
2,000 pounds bolts, $\frac{3}{4}$ -inch iron, 2, $2\frac{1}{2}$, 3, and $3\frac{1}{2}$ inches long.	25	per pound.
2,000 pounds bolts, $\frac{7}{8}$ -inch iron, 2, $2\frac{1}{2}$, 3, and 4 inches long.	25	per pound.
2,000 pounds bolts, 1-inch iron, 2, $2\frac{1}{2}$, 3, and 4 inches long.	25	per pound.
1,000 pounds bolts, $1\frac{1}{8}$ -inch iron, 3, $3\frac{1}{2}$, 4, and $4\frac{1}{2}$ inches long.	25	per pound.
1,000 pounds bolts, $1\frac{1}{4}$ -inch iron, 3, $3\frac{1}{2}$, 4, and $4\frac{1}{2}$ inches long.	25	per pound.

The bolts to have six (6) sided heads, without threads, and equal to Knapp, Wood & Co.'s. of Pittsburg, make.

500 pounds $\frac{3}{8}$ -inch nuts, (hot-punched,) 6-sided.....	25	per pound.
500 pounds $\frac{1}{2}$ -inch nuts, (hot-punched,) 6-sided.....	25	per pound.
1,000 pounds $\frac{5}{8}$ -inch nuts, (hot-punched,) 6-sided.....	25	per pound.
1,000 pounds $\frac{3}{4}$ -inch nuts, (hot-punched,) 6-sided.....	25	per pound.
1,000 pounds $\frac{7}{8}$ -inch nuts, (hot-punched,) 6 sided.....	25	per pound.
1,000 pounds 1-inch nuts, (hot-punched,) 6-sided.....	25	per pound.
1,000 pounds $1\frac{1}{8}$ -inch nuts, (hot-punched,) 6-sided.....	25	per pound.
1,000 pounds $1\frac{1}{4}$ -inch nuts, (hot-punched,) 6-sided.....	25	per pound.
1,000 pounds $1\frac{1}{2}$ -inch nuts, (hot-punched,) 6-sided.....	25	per pound.
200 pounds nails, (cut,) 20-penny.....	12	per pound.
200 pounds nails, (cut,) 12-penny.....	12	per pound.
200 pounds nails, (cut,) 10-penny.....	12	per pound.
200 pounds nails, (cut,) 8-penny.....	12	per pound.
400 pounds nails, (cut,) 6-penny, finishing.....	12	per pound.
300 pounds washers, $\frac{3}{8}$ -inch, wrought-iron.....	25	per pound.
500 pounds washers, $\frac{1}{2}$ -inch, wrought-iron.....	25	per pound.
500 pounds washers, $\frac{5}{8}$ inch, wrought-iron.....	25	per pound.
250 pounds washers, $\frac{3}{4}$ inch, wrought-iron, $\frac{1}{8}$ inch thick..	25	per pound.
250 pounds washers, $\frac{3}{4}$ -inch, wrought-iron, $\frac{1}{4}$ -inch thick..	25	per pound.
250 pounds washers, $\frac{7}{8}$ -inch, wrought iron, $\frac{1}{8}$ -inch thick..	25	per pound.
250 pounds washers, $\frac{7}{8}$ -inch, wrought-iron, $\frac{1}{4}$ -inch thick..	25	per pound.
250 pounds washers, 1 inch, wrought-iron, $\frac{1}{8}$ -inch thick..	25	per pound.
250 pounds washers, 1 inch, wrought-iron, $\frac{1}{4}$ -inch thick..	25	per pound.
250 pounds washers, $1\frac{1}{4}$ -inch, wrought-iron, $\frac{1}{8}$ -inch thick..	25	per pound.
250 pounds washers, $1\frac{1}{4}$ -inch, wrought-iron, $\frac{1}{4}$ -inch thick..	25	per pound.
250 pounds washers, $1\frac{1}{2}$ -inch, wrought-inch, $\frac{1}{8}$ -inch thick..	25	per pound.
250 pounds washers, $1\frac{1}{2}$ -inch, wrought-iron, $\frac{1}{4}$ -inch thick..	25	per pound.

To be delivered as required.

BALTIMORE AND CUBA SMELTING AND MINING CO. DATE OF CONTRACT, AUGUST 26, 1864.

Class No. 18, copper.

25,000 pounds ingot copper, best quality.....	\$0 55	per pound.

250 papers spriggs, from ¾ to 2 inches, assorted.....	25	per paper.
3 reams sandpaper, Nos. 1, 2, and 3.....	6 00	per ream.
To be delivered as required.		

No. 8.

BUREAU OF PROVISIONS AND CLOTHING.

Abstract of annual report, dated October 25, 1864. Transmits estimates with abstracts; recommends establishments for provisions, clothing and small-stores exclusively; increase of pay corps; clothing fund; appropriations for provisions.

BUREAU OF PROVISIONS AND CLOTHING,
October 25, 1864.

SIR: I have the honor to enclose estimates, marked A, B, C, and D, with abstracts marked from E to M, inclusive.

The magnitude of our naval operations during the last three years has caused the enlargement of the navy till it compares favorably in all respects with those of the great naval powers of Europe; and it is now manifest that while providing for a temporary emergency this country has created a powerful navy, of which it has good reason to be proud.

The suddenness with which the necessity came for building, arming, and providing so many ships, caused the resort to many expedients for meeting emergencies as they occurred, and gave but little time to prepare, or even to plan for its future requirements. In the department of the service which comes within the supervision of this bureau, and of which it is especially my province to speak, the want of expansion and reform, in some essential particulars, is very apparent.

NEW ARRANGEMENT OF STOREHOUSES.

The extensive victualling establishments for the navies of Great Britain and France are entirely separate from all other departments, and the experience of a long series of years has fully demonstrated the advantages of the plan.

The inconveniences of the location of the storehouses for provisions and clothing in our different navy yards was not seriously felt while the navy was small; but the disadvantages under which its current operations are conducted now daily show the necessity of a radical change in this regard. Supplies of ships have little to do with the building, equipping, and arming them. Provisions and clothing could be furnished to ships fitting out, and to squadrons abroad, with much greater convenience, economy and despatch, if separate establishments for their preparation and distribution were provided at one or two of the principal yards, with wharves, cooperages, &c., exclusively appropriated to their use.

In this connexion it may be remarked that this bureau has several times in past years recommended the erection of one or more bakeries for the navy; but the recommendations were not acted upon until the last year, and then only partially, by authorizing the flour for navy bread to be purchased and baked under naval inspection. The result has shown the very great advantage of this system over the old one of procuring bread by contracts given to the lowest bidders, and I cannot doubt that a still further improvement would be made by having within our own premises, and under our exclusive control, two or more bakeries with ovens and machinery of the best kind.

The preserved meats and desiccated vegetables which form part of the navy ration might with advantage be prepared in or near some of the navy yards. The buildings and machinery for the purpose would not be expensive, and the work would be done in the best manner, and with the certainty of securing the best materials.

INCREASE OF THE PAYMASTER'S CORPS.

The list of pay-officers in the regular service is not proportionate to those of other corps in the navy, nor is it, in my opinion, adequate to the requirements of the service. The number of paymasters remains the same as in 1842, though there has been so great an increase of large vessels and of important shore stations, which require paymasters of experience, as well as those who have given the highest bonds. And the many smaller vessels, for which pay-officers of a lower grade are adequate, call for a large addition to the list of assistant paymasters, of whom but 36 are now allowed by law. There are in the regular service 64 paymasters, 36 assistant paymasters, 405 acting assistant paymasters. Many of these last have shown themselves competent, faithful, and valuable officers, and are deserving of permanent places in the corps for which they are so well fitted. It would seem wise to reward the most meritorious of these officers, while securing to the regular service men of tried capacity and worth. The best of these young officers will probably soon leave the navy for other occupations, if not retained by permanent appointments with the prospect of promotion.

I would also recommend that the intermediate grade of passed assistant paymaster be created, to make the corps assimilate more nearly in rank to the medical and engineer corps, and to give to its officers the additional encouragement which more frequent promotions offer.

CLOTHING FUND.

When the rebellion commenced, the clothing fund was \$570,000, and the number of men in the navy was limited to 8,500. More than six times as many men are now employed, but the fund has been increased less than four fold. The average prices of different kinds of navy clothing are more than double what they were before the war, and consequently, to keep a given quantity of clothing on hand, requires twice as large a fund as formerly. And the waste and losses by casualties must always be much greater in time of war. It is therefore necessary to ask for a further appropriation under this head.

PROVISIONS.

The extraordinary rise in the prices of provisions during the past year, and the increased number of men in the navy, will require another appropriation to meet the wants of the current fiscal year, and for the same reasons the estimates for the next year are necessarily much larger than heretofore.

I am, very respectfully, sir, your obedient servant,

H. BRIDGE, *Chief of Bureau.*

Hon. GIDEON WELLES,
Secretary of the Navy.

Schedule of the papers accompanying the report of the Chief of the Bureau of Provisions and Clothing to the Secretary of the Navy, dated October 25, 1864.

- A.—Estimate of the expenses of the bureau for the fiscal year.
- B.—Estimate for provisions for the navy for the fiscal year.
- C.—Estimate for clothing for the navy for the fiscal year.
- D.—Estimate for contingent for the navy for the fiscal year.
- E.—Statement showing the value of shipments made by the bureau to foreign stations.

- F.—Statement showing the value of provisions, clothing, small-stores, and contingent on hand.
 G.—Statement showing the cost of provisions, clothing, small-stores, and contingent condemned.
 H.—Abstract of proposals received for naval supplies.
 I.—Abstract of proposals received for clothing.
 K.—Abstract of proposals received for small-stores.
 L.—Abstract of proposals received for fresh beef and vegetables.
 M.—Statement of contracts made by the bureau during the fiscal year.

A.

Estimate of the expenses of the Bureau of Provisions and Clothing during the fiscal year ending June 30, 1866.

For the salary of chief of the bureau.....	\$3, 500 00
For the salary of one chief clerk.....	1, 800 00
For the salary of four clerks, at \$1,400 per annum.....	5, 600 00
For the salary of one clerk.....	1, 200 00
For the salary of one messenger.....	1, 000 00
For the salary of one laborer.....	720 00
(Per act of Congress of July 5, 1862, vol. 12, page 511.)	
For the salary of two clerks, at \$1,400 per annum.....	2, 800 00
For the salary of two clerks, at \$1,200 per annum.....	2, 400 00
(Per act of Congress of February 25, 1863, vol. 12, page 695.)	
For the salary of two clerks, at \$1,600 per annum.....	3, 200 00
For the salary of two clerks, at \$1,200 per annum.....	2, 400 00
(Per act of Congress of July 2, 1864, vol. —, page 373.)	
	24, 620 00

CONTINGENT.

For blank books, stationery, and miscellaneous items.....	1, 500 00
	26, 120 00
Appropriated for the fiscal year ending June 30, 1865.....	\$19, 740 00
Asked to be appropriated for the fiscal year ending June 30, 1866.....	26, 120 00

The excess over last year arises from the addition of the salary of two clerks of the 3d class and two clerks of the 1st class, increased pay of messenger and laborer, and additional \$500 for the contingent of the bureau.

H. BRIDGE, *Chief of Bureau.*

NAVY DEPARTMENT,

Bureau of Provisions and Clothing.

B.

Estimate from the Bureau of Provisions and Clothing for that portion of the naval service coming under its cognizance for the fiscal year ending June 30, 1866.

One ration per day for 55,000 men would be for the year	
20,075,000 rations, at fifty cents each.....	\$10, 037, 500 00

One ration per day for 5,000 commissioned and warrant officers attached to vessels for sea service would be 1,825,000 rations, at fifty cents each	\$912, 500 00
One ration per day for 4,375 officers and marines attached to vessels for sea service would be 1,596,875 rations, at fifty cents each	798, 437 00
To be added for commutation of the spirit ration for 64,275 officers, non-commissioned officers, men, and marines for the year, at five cents per day, will be (per act of Congress, July 14, 1862)	1, 174, 843 75
	12, 923, 280 75
Appropriated for the year ending June 30, 1865	\$6, 415, 605 00
Asked to be appropriated for the year ending June 30, 1866 ..	\$12, 923, 280 75

The excess over the estimate of last year arises from the increased number of men employed, and the great rise in every article composing the ration.

H. BRIDGE, *Chief of Bureau.*

NAVY DEPARTMENT,

Bureau of Provisions and Clothing.

C.

Estimate of the sum which will be required for clothing for the navy, for the fiscal year ending June 30, 1866.

For clothing for the navy	\$1, 000, 000 00
---------------------------------	------------------

H. BRIDGE, *Chief of Bureau.*

NAVY DEPARTMENT,

Bureau of Provisions and Clothing.

D.

Estimate of the sum which will be required by the Bureau of Provisions and Clothing, under the head of contingent, for the fiscal year ending June 30, 1866.

To meet the demand upon the bureau for candles, freight to foreign stations, transportation from station to station within the United States, cooperage, pay of assistant to inspectors, advertising for proposals, printing, paymasters' blanks, and stationery for cruising vessels	\$600, 000 00
---	---------------

The increase over last year is caused by the increase of men and vessels to the navy.

H. BRIDGE, *Chief of Bureau.*

No. 9.

NAVY DEPARTMENT,

Bureau of Medicine and Surgery, November 4, 1864.

SIR: In compliance with your instructions of the 26th September ultimo, I have the honor to submit estimates of the amount required for the support of the Bureau of Medicine and Surgery, and the medical department of the navy, (with the exception of hospitals,) for the fiscal year ending June 30, 1866.

The condition of the medical department is represented as follows:

Balance of former appropriation for "surgeons' necessities and appliances," remaining in the treasury June 30, 1864.....	\$62,148 97
Appropriation for "surgeons' necessities and appliances" for the fiscal year ending June 30, 1865, per act of Congress approved May 21, 1864.....	210,000 00
Amount of hospital fund in the treasury June 30, 1864.....	122,264 10
Amount required for the support of the Bureau of Medicine and Surgery for the year ending June 30, 1866, (schedule A)...	11,340 00
Amount required for the medical department of the navy, on shipboard and all naval stations, with the exception of hospitals, for the year ending June 30, 1866, (schedule B).....	227,500 00
Contingent.....	75,000 00

Pursuing the system adopted last year of per capita estimates, instead of taking the nominal ratings of vessels as a standard, and assuming the number to be employed during the term covered by the estimates to be 65,000, an appropriation of \$227,500 will be required upon the basis of expenditures during the year, viz: about \$3 50 per man, for all causes involving the disbursement of our funds.

The estimate for contingent expenses is increased to \$75,000 in consequence of the general advanced cost of every article to which this appropriation is applied.

I submit tabular statements of sick, &c., compiled from the reports of sick from the different naval stations within the United States, and from vessels in commission on home and foreign service, for the year ending December 31, 1863.

The squadron in the Pacific ocean is the only one maintained in the customary manner during the whole of the year 1863.

Statement of sick, compiled from reports of sick from the naval stations in the United States, and from vessels in commission on home and foreign stations, for the year ending December 31, 1863.

	Average number on board during the year 1863.	Remaining sick December 30, 1862.	Admitted in 1863.	Discharged in 1863.	Died in 1863.	Total treated in 1863.	Remaining sick December 30, 1863.	Percentage of deaths to the whole number of cases treated.

RECAPITULATION.

	Aggregate number of officers and men on board of vessels in 1863.	Remaining sick December 31, 1862.	Admitted in 1863.	Discharged in 1863.	Died in 1863.	Total treated in 1863.	Remaining sick December 31, 1863.	Proportion of cases to number of persons on board vessels.	Proportion of deaths to whole number of persons on board vessels.	Percentage of deaths to whole number of cases treated.
Hospitals		694	6,914	6,268	410	7,608	930			.054
Navy yards		66	2,158	2,099	14	2,224	111			.006
Receiving ships	2,613	28	2,107	2,053	14	2,135	68	.817	.005	.006
Vessels in commission at sea	30,374	953	48,309	47,650	610	49,262	1,002	1.621	.021	.012
	32,987	1,741	59,488	58,070	1,048	61,229	2,111	1.558	.018	.017

At the close of the year 1862 there remained under treatment 1,741 patients; during the year 1863 there occurred 59,488 cases of disease, injury, &c., making a total of 61,229 cases treated during the year. Of this number 1,048 died, 58,070 were returned to duty or discharged the service, leaving 2,111 under treatment on the 30th December, 1863.

Total number of deaths from all causes reported at the Navy Department from October 1, 1863, to September 30, 1864, is 1,560.

The average force of the navy (officers, seamen, marines, engineer service, coast survey, &c.) for the year was about 40,000.

The proportion of cases to the whole number in service was about 1.50, or each person was on the sick list $1\frac{50}{100}$ times during the year.

The proportion of deaths to the whole number in service was about $\frac{2}{100}$, and the percentage of deaths to the whole number of cases treated is 1.71.

Summary of prevalent forms of disease, on foreign and home service, for the year 1863.

Forms of disease.	Blockading squadron, 22,218 men.	Special service, 4,059 men.	Pacific squadron, 1,097 men.
Febrile diseases.....	11,735	483	480
Diseases of digestive system.....	8,486	870	311
Diseases of respiratory system.....	5,056	681	357
Diseases of circulatory system.....	466	101	26
Diseases of brain and nervous system.....	945	201	98
Diseases of cutaneous and cellular system....	2,015	445	229
Diseases of fibrous, osseous, and muscular system.	2,720	393	182
Diseases of genito-urinary system.....	1,904	484	210
Diseases of eye and ear.....	722	263	29
Wounds and injuries.....	1,952	599	246

The foregoing tabular statements of sick do not include the whole strength of the navy for the year 1863. They embrace only the naval stations, and vessels to which medical officers were attached, and from which reports of sick were received.

During the year 1863 many small vessels in the blockading squadron, and the Potomac and Mississippi flotillas, were without medical officers, and from which no sick reports were received; therefore, neither the number admitted on the sick list, nor the number of deaths, can be definitely stated; but by assuming the same ratio of diseases and deaths or board these vessels as from those from which reports have been received, the proportions will be very nearly correct for the whole strength of the navy.

The following casualties are reported to this office as having occurred on ship-board from the 1st of October, 1863, to the 30th ultimo:

	Killed.	Wounded
North Atlantic blockading squadron.....	29	82
South Atlantic blockading squadron.....	40	29
East Gulf blockading squadron.....	4	5
West Gulf blockading squadron.....	62	195
Mississippi squadron.....	32	34
Detached duty.....	4	6
Making	171	351

Total casualties reported, 522.

Considering the nature of the service performed, the protracted exposure of ships' companies to unhealthy climates or localities, the novel character of many of the vessels, the unremitted vigilance and labor imposed by blockading duty, it is a subject of earnest congratulation that I am enabled to present such a satisfactory exhibit of the sanitary condition of the service, and such ample evidence of the efficiency and devotion of the medical corps, to which those happy results, in part at all events, are due.

Scurvy, that "old scourge of the sea," is almost unknown, even on board the most ill-contrived vessels, after months of continuous cruising; and were it not for the many modifications and improvements in the food of the men, and the facilities for frequent changes of diet afforded by the system of supply vessels, it is much to be doubted whether our extensive blockade could be maintained with such unsurpassed activity and vigilance.

During the past summer yellow fever prevailed somewhat extensively in the East Gulf blockading squadron, especially in the neighborhood of Key West; but the wise system adopted by the department of ordering infected vessels at once to the north, both for the advantages of quarantine establishments and change of climate, prevented the disasters which must have followed a season of unprecedented heat, if the opportunity of escaping the limits of the disease had not been provided.

The *Tioga* and *De Soto*, infected vessels from the East Gulf blockading squadron, reached Portsmouth, New Hampshire, in June, and owing to some informality or accident, the latter was permitted to reach the navy yard.

Numerous cases of fever occurred among the employés of the yard, traceable, it is believed, in nearly every instance to imprudent visits on board ship. The precise number cannot be ascertained, though so novel and fatal an infection was well calculated to excite much apprehension and perhaps exaggeration. The surgeon of the station believes that scarce an instance of personal infection occurred, and that a large portion of those who suffered owed their misfortune to indiscretion.

NAVAL HOSPITAL FUND.

The condition of this fund is represented as follows :

Balance on hand June 30, 1863.....	\$116,155 00
Transferred to the fund by the Fourth Auditor in settlement of accounts, &c., during the year ending June 30, 1864.....	109,760 13
Transferred to the fund on account of supplies from the naval laboratory to vessels and navy yards, during the year ending June 30, 1864.....	91,246 78
Total amount of fund for the year ending June 30, 1864.....	317,161 91
Deduct amount expended during the year ending June 30, 1864.....	194,897 81
Balance on hand June 30, 1864.....	122,264 10

The act of Congress approved March 3, 1851, directs "that the rations of officers and others of the navy sent to hospitals on shore shall be credited to the hospital fund at the *cost only* thereof;" but as this fund, devoted exclusively to support and maintenance of hospitals, is made up of a monthly deduction upon the pay of officers and men of the navy, and of the cost value of rations stopped on account of sick in hospitals, it is respectfully recommended that the act above referred to be so amended as to credit the hospital fund with the commutation value of the ration.

The government contributes little or nothing directly to the support of hos-

pitals or their inmates, and in order to prevent the results which must obviously ensue, from receiving for the maintenance of each man, in the shape of the contract value of the ration, about one-half or two-thirds as much as it costs to support him, viz: the diminution of the fund, so as to make appropriation by Congress essential, it is believed that the proposed change of the law would be most advantageous, though the commutation value of the ration would hardly defray the daily cost per man, while provisions, fuel, and other articles of necessity rule at present prices.

The average expense per week of hospital patients for the year ending June 30, 1864, has been about \$2 50.

NAVAL LABORATORY.

When this establishment was formally organized in November, 1853, the navy consisted of some forty vessels, and perhaps about 8,000 men. An unoccupied wing of the naval hospital, New York, was found sufficient to accommodate the machinery, apparatus, manufacturing department, store-rooms, packing, dispensing rooms, &c. But the progression and late rapid increase of the navy from such small beginnings to its present vast proportions render new and better arrangements necessary to this important establishment.

It is found nearly impossible to conduct properly the daily operations in its present contracted limits; the demands of the service are such, that it is imperative to keep large stocks of various articles and appliances on hand for immediate calls; and the manufacturers' department is constantly kept in the greatest activity.

The increased number of patients renders the room occupied by the laboratory essential to its original hospital purposes. Some more appropriate arrangements are desirable, if not necessary.

After ten years of trial, and I think I may say with highly successful results, the laboratory can no longer be considered an experiment: it has become an established fact, creditable alike to the department and to those intrusted with its management. It has received on many occasions the most favorable notices in professional publications, in various parts of the country, as well as flattering reports from scientific committees, who have made special visits and examinations.

The War Department, after trying various other expedients, has lately instituted similar establishments, mainly, it is stated, because of the successful issue of the one connected with the Navy Department. The uncertainties of the medical profession are somewhat proverbial; but the navy is, happily, divested of one of no small importance to both patient and physician, by being well assured of the quality of the articles by which disease is combated or health preserved.

It is proper I should add, that, while the mere clerical duties of such an establishment, furnishing an extensive variety of articles to 600 vessels and stations, involving an extensive and laborious system of accounts and correspondence, making elaborate analyses and examinations for other departments of the navy, thereby guarding against fraud and imposture, not one cent has ever been expended by the department for pay of clerks or writers. This additional work is always performed by the officers of the laboratory.

Amount purchased for the laboratory during the year ended June

30, 1864	\$120, 076 10
Value of issues from laboratory	111, 074 96
Value of stock on hand, machinery, appliances, &c., June 30, 1864	64, 395 42

The amount of issues during the year ending June 30, 1864, it will be seen was \$111,074 96. These were prepared and delivered direct to 315 different vessels and

stations ; a large proportion of which was specially arranged for distribution to the different squadrons and flotillas, in small packages, for greater convenience of distribution. If these indirect packages be added, the number issued from the laboratory during the year will exceed 5,000.

INSANE OF THE NAVY.

On the 30th September, 1863, five officers, nine seamen, one fireman, and one pensioner, eighteen in all, remained under treatment in the government hospital for the insane, near this city.

During the year ending September 30, 1864, there were admitted two officers, five seamen, one marine, three firemen, two landsmen, one coal-heaver, one pensioner, and one boy ; total, sixteen : the whole number under treatment during the year, thirty-four.

The discharges in the course of the year were, by recovery, two ; by death, seven ; by desertion, one ; removal by friends, three : leaving in the institution on the 30th September, 1864, five officers, nine seamen, one marine, one fireman, one pensioner, two landsmen, one coal-heaver, and one boy ; total, twenty-one.

The act of Congress of July 2, ultimo, authorizing the Secretary of the Navy to assign a portion of the pay of an officer, confined in the institution by mental disease, to provide such comforts and indulgences as its funds proper cannot furnish, will greatly add to the well-being, and perhaps contribute somewhat to the ultimate recovery of the unfortunate class of patients for which the government has founded this most admirably conducted asylum.

NAVY HOSPITALS.

Pursuant to your order, this bureau assumed charge of the construction, improvement, repairs of hospitals and appendages, on the 1st July, ultimo, and such progress has been made with the various works as time and circumstances permitted.

Portsmouth, N. H.—A brief summary of the legislation in regard to the erection of a hospital at this station may not be without interest.

For many successive years prior to the war, the chief of the Bureau of Yards and Docks had brought to the notice of the honorable Secretary of the Navy the necessity of some better accommodation for the sick and wounded than was afforded by a very contracted and inconvenient frame-house that had stood on or near its present position since the establishment of the navy yard.

It had originally been an humble private residence, and had received no more than such occasional repair as was necessary to preserve it from the effects of time or the elements. I had ventured to add to the suggestions of the Bureau of Yards and Docks such considerations as were derived from my more direct relations with the class of persons most interested in the improvement.

The war and consequent increase of the navy making our deficiencies at the station too manifest to be passed over, a proposition was submitted to Congress to appropriate \$20,000 for this object.

But as the bill finally passed, it diverted \$14,500 for the purchase of property on Seavey's island, which had not been recommended by the department, which had never been examined with reference to its adaptability to this special purpose, though the buildings on the land were notoriously unsuitable for a hospital. Difficulties arose from time to time, to which it is unnecessary to refer, that resulted in postponing action as far as the main object was concerned.

On the 14th March, 1864, Congress appropriated \$25,000 for the hospital, leaving its location entirely to the judgment of the department. In order to reach the most prudent conclusions upon a subject which has acquired a very undue importance, from the early desire to control it manifested by persons having no apparent connexion with it, it was deemed judicious to devolve the se-

lection of the site upon a board of officers, some of whom had much familiarity with the navy yard from frequent or long residence therein.

Desirous to observe as much economy as possible, it was decided to adopt a site within the yard, if one could be found without detriment to other interests; if not, then to examine any contiguous property. The board thought, with entire unanimity, that such a site could be found within the yard, offering beside the advantage of a new building, that would make a large part of an edifice well suited to our occasions.

The honorable Secretary approved the action of the board, and orders were about to issue to commence the work, with the assurance of completing it early this fall, when proceedings were suspended in consequence of a protest on the part of senators and members of the House of Representatives; and finally, on the 1st July, 1864, nearly three years after the project was started, the appropriation of March 14, 1864, of \$25,000, was repealed, and things resumed their original forlorn condition.

Whether the impotent conclusions attained, after the loss of so much time, and some labor, will satisfy public expectation, or whether the antagonism to the views of the department will be justified, by the failure to effect a sale of a certain twenty-seven acres of land, are not perhaps appropriate subjects of remark.

I desire to add that the department has no other interest in the location of the building, if it shall ever be undertaken, beyond securing the best site, wherever it may be found; though, for my own part, I aim to avoid the unnecessary expenditure of a dollar for any one's benefit. Hence, if economy can be secured without detriment to other interests, by erecting a building within the limits of the yard, I am in favor of so doing. It has been recently said by a distinguished statesman, "that at a time like the present, when taxes are so high, and the burdens of the war fall so heavily on the people, they have a right to expect and demand from those intrusted with the disbursement of public money fidelity, vigilance, and economy;" and this principle has been steadily held in view, by striving to avoid making the work at Portsmouth more costly than need be, by the purchase of land upon the exclusive valuation of its owner or owners, or until such purchase was found to be absolutely necessary.

It is now hoped the ample arrangements which the department has been enabled to provide elsewhere will render the work at Portsmouth, that has elicited so much opposition, in a great measure unnecessary.

Boston, Mass.—The extension of the edifice is so nearly completed as to justify the expectation that it will be fit for occupation during the early part of winter. The most improved heating culinary and laundry works are now in course of erection, with a prospect of soon being in readiness for use. The hospital has generally been filled to its utmost capacity, and recently we have had one hundred patients in the adjacent hospital under charge of the Treasury Department, to the great inconvenience of those for whom it is specially designed. Upon the completion of our building, we shall be able to dispense with the accommodations so courteously granted by the honorable Secretary of the Treasury since the commencement of the war.

For various repairs, improvements, furniture, &c., there will be required the sum of \$8,500.

New York.—The accommodations provided last year have proved sufficient, though not more than sufficient, for the large number of invalids from the blockading vessels constantly sent to this station. The daily average, during the year 1863, has been about 262, and the whole number treated nearly 3,000.

There will be required for the various incidental repairs, renovations of buildings, grounds, roads, cemetery, laboratory, &c., the sum of \$14,000.

The Ridgewood water is being introduced into the establishment, hitherto dependent upon cisterns and pumps.

Naval Asylum, Philadelphia.—There is obviously a great want of additional accommodation at this establishment, as well on account of the progressive increase of beneficiaries as of hospital cases.

The admissions to the hospital department, during the year 1860, were but 179, while during the year 1863 they amounted to nearly 1,000. It is not probable that either patients or beneficiaries will diminish in number, certainly not the latter, for years to come; on the contrary, it may be reasonably expected the number will increase.

The sum of \$75,000 was appropriated by act of Congress, approved March 14, 1864, to extend the building, but the derangement of business, and enormous increase in the price of labor, material, and everything necessary for the prompt execution of the work, rendered it inexpedient to commence operations with such limited means; and rather than have the grounds defaced and disfigured by undertaking what there was no certainty of soon completing, I have abstained from commencing operations until further appropriations are made. I have not asked for additional means, because of the inopportuneness of the times; but still, believing that our necessities will not diminish, I submit to the department whether it may not find it proper to ask for the further sum of \$100,000, which I have not included in the estimates.

A system of transferring patients from one naval hospital to another has enabled us thus far to meet the want of accommodation at Philadelphia; but this is an uncertain reliance, especially in view of the continued growth of the navy and the casualties of war.

Norfolk, Virginia.—The large force employed in the North Atlantic blockading squadron has thoroughly taxed the capacity of this establishment, and recently it has been filled in every part. The hospital was reoccupied by the navy about the 1st of September, 1862. During the ensuing year about 1,000 patients were received, while nearly the same number has been admitted between January and July of the present year.

The building and appendages require considerable repair and renovation, especially in the culinary and laundry departments; while the bridges, wharves, enclosures, &c., are in a condition of much dilapidation.

For these various purposes there will be required the sum of \$12,500.

Pensacola.—The large fleet operating in the Gulf of Mexico has required extensive hospital accommodations at this port, and I am happy to state that sufficient progress had been made with improvements authorized by Congress, May 21, 1864, to afford accommodations for the invalids of the fleet, as well as for the wounded in the attack upon the forts at Mobile. Much is still required to be done, as our appropriations are speedily exhausted by the difficulty of obtaining labor at this remote point, as well as by the high price paid for it, and for materials of all kinds. The hospital was opened, in part, in the commencement of 1863, and received during the year 500 patients, while quite as many have been admitted between January and July of the present year.

For the completion of the hospital and the various works appurtenant thereto, there will be required the sum of \$10,500.

Memphis, Tenn.—The hospital at this place has been a most important auxiliary of the Mississippi squadron. During the year 1863, 1,650 patients were here treated; and between the months of January and July of the present year, 852 persons have been received from the numerous vessels comprising this extensive squadron.

The hospital steamer attached to the squadron renders valuable service, because the small vessels constituting so large a portion of the naval force employed, afford no accommodations for sick or wounded.

There will be required for repairs and various incidentals connected with preservation and care of buildings, &c., &c., the sum of \$7,000.

New Orleans, La.—This hospital was opened in December, 1863, and has

afforded many comforts and conveniences for the sick not to be found on board the numerous small vessels operating on the lower Mississippi, its tributaries, and adjacent bayous.

To keep the buildings in proper condition, make ordinary repairs to building, furniture, &c., there will be required the sum of \$5,000.

Key West, Fla.—The Treasury Department generously continues to the navy the use of the marine hospital at this place, which, with the frequent visits of the supply steamers, meet all the medical wants of the East Gulf blockading squadron.

Port Royal, S. C.—The accommodations for sick and wounded on board the New Hampshire proving entirely inadequate to the necessities of the increased force of the South Atlantic blockading squadron, as well as unsuited to the many casualties consequent upon the operations of the squadron, a conveniently arranged and sufficiently spacious modern building has been erected upon a public reservation at St. Helena's island, which is about ready for use. It will properly receive from 150 to 175 patients, and will cost, when prepared in all respects for its uses, some \$13,758. The building was constructed, after plans furnished by the medical officers of the South Atlantic blockading squadron, by Mr. Geo. H. Davis, of East Cambridge, Mass.

Washington, D. C.—As early as practicable, after the transfer of the subject to this bureau, preparations were begun for erecting the hospital at this place authorized at the last session of Congress. The site proposed, bounded by Pennsylvania avenue, 10th street east, E street south, and 9th street east, already belongs to the government; and though many delays, altogether unavoidable, have occurred, measures are now in progress to complete the building at the earliest possible date. The necessity for this improvement is urgent; the large force employed in the Potomac river and tributaries, the increased strength of the marine corps, the many vessels arriving at the navy yard for repairs, &c., have no other resource for the sick than the limited accommodations at the government Asylum for the Insane in the neighborhood of the city, which we have occupied since the beginning of the war, through the courtesy of the Interior Department and the superintendent, Dr. C. H. Nichols, to the great inconvenience of the asylum.

It is full time we ceased to encumber the Asylum for the Insane with an entirely different class of patients whose presence interferes with the harmony and order of the asylum, and encroaches upon room absolutely required for other purposes.

The further sum of \$30,000 will be required to furnish and put the hospital in working order; the former appropriation of \$25,000, for reasons connected with the high price of labor, material, &c., proving totally insufficient.

The building is a plain brick structure, devoid of ornament or other unnecessary and costly features.

I respectfully recommend that Congress be asked to authorize the purchase of lots 3 and 4, westerly, part of square 948, Washington, D. C., in order that the government may have entire control of the plat of land upon which the building will stand; they comprise some 14,000 feet. It is quite important the department should possess the entire area, to guard against improper intrusion.

San Francisco, California.—As soon as the appropriation of \$75,000 by Congress at its recent session for a hospital at this station became available, measures were taken to secure the prompt erection of a plain brick building to meet the general wants of the service at this remote station. But it was soon ascertained that, owing to the derangement of the currency and the low value of government funds in California, the actual amount applicable to the object was reduced considerably more than one-half; and no one could be found there

willing to undertake the work either by contract or days' labor, in view of the means of payment.

The work is necessarily postponed till the department shall determine the fitness of prosecuting it, even under existing pecuniary disadvantages; and if it be decided to commence it, another appropriation of \$75,000 at least will be required. I have not inserted this additional amount in the estimates. While fully impressed with the imperfect and temporary character of the provision for our sick, I desire to observe all reasonable and practicable economy in this department of the public service.

MEDICAL CORPS OF THE NAVY.

I ventured to bring to the notice of the honorable Secretary of the Navy in my last annual report some considerations having reference to a reorganization of the medical department of the navy, so as to place it in better harmony with the growth and expansion of other branches of the service, and to adapt it more efficiently to the vast and peculiar responsibilities which a state of war imposes.

I am impelled to renew the subject, under a sense of what is due to the faithful, zealous officers whom it devolves upon me to represent, as well as upon a review of the action of Congress, which has in many instances acknowledged the value of efficient service in staff departments, by higher rank and more liberal compensation.

I believe I may add to what I have hitherto stated, that the medical corps of the navy is now about the only, if not the only, branch of either navy or army that retains the organization of peaceful times, when occasions were few or rare to demand the highest order of professional attainment, or the prompt exercise of the qualities of mind and character, upon which life, or even the successful issue of military enterprises, may in a measure depend.

The deplorable experiences of recent European wars brought about a general reorganization of the medical department of the various governments by absolutely compelling attention to a service which, though it has not the showy achievements of the sword to attract the public gaze, yet in its silent ministrations of humanity and usefulness is so powerful to maintain the military forces in the efficiency which insures fame and promotion to those who wield them. War has been described by one of no small experience, as a "problem of sanitary science," because it is well known that disease kills and disables more than shot and shell; if this be true, the men who bring to the public service, at their own expense, the qualities and attainments to conduce to great results, ought surely not to be ignored in the distribution of honors and rewards.

The subject of assimilated rank of staff corps in military organizations has been worn threadbare by profitless discussion, more frequently betraying more sentiment or personal feeling than reason. The practice of the civilized world in this particular is more conclusive of its propriety, if not necessity, than any appeal to passion for or against the principle. The fallacy, that rank and command are necessary sequences, is sufficiently exposed by the action of Congress in repeated instances.

The judge advocate general, created by an act of the present Congress, is a brigadier general in rank, pay, and emoluments; and his assistant is a colonel in the same relations. It would require sharper acumen than has exercised itself upon the vexed question to maintain the connexion between this judicial office and military command, or to seek to ignore the law because no provision is made for command, which many contend to be an absolute corollary.

Various grades of army medical officers have the rank, pay, and emoluments of brigadier general, colonel, lieutenant colonel, major, &c., without any allusion to the right or otherwise of command. Indeed, it is believed that no branch of the army now exists which has not been harmonized into a general system by

investing its members with military position. And although promotion in some staff corps is apparently limited by law, exalted service has earned for zealous and efficient incumbents the honors of higher preferment by brevet.

The system of equally rewarding staff service by promotion and pay must have its advantages, or it would not have been adopted, or continued in such an enlightened organization as the army; and if it has advantages, the navy should not hesitate to adopt the same means to secure the same results.

And though the army practice has been marked with considerable liberality, its military efficiency and spirit are not, apparently, in the slightest degree impaired by its recognition of merit, as conducive to public results, without any reference to the sphere or calling of the individual who exhibits this merit.

And while it may not increase the skill of a professional man, that he is assimilated in pay and position to a general, it certainly inspires him with more zeal and energy to find that his government not only exacts no sacrifice of professional pride, or status, in accepting its service, but that it offers equally to him as to others all the honors, and rewards which capacity, industry, and fidelity should command.

And as a signal illustration of the reward that follows efficient staff service in the army, the medical profession has hailed with pleasure a recent official announcement that a medical purveyor, with the rank of major, had been advanced to the rank and emoluments of brigadier general for the diligent and zealous discharge of his duties.

His less fortunate brethren of the navy rejoice at the compliment so gracefully paid to the profession, and labor not the less earnestly in their vocation, because they still hopefully await some similar evidence that the laborer may be found worthy of his hire.

The highest rank attained by a medical officer of the navy is reached in less than half the period of service by members of other staff corps; and the pay that attaches to a medical officer in charge of a fleet inures to members of other staff corps, upon similar advantageous terms. The office of "surgeon of the fleet" brings with it no additional rank, because every officer holding such appointment is entitled to his rank by seniority, and not by his temporary office.

It can hardly be necessary to refer to the complicated and arduous duties of a medical officer, charged with the many and grave responsibilities of a squadron of 80 or 100 vessels, in a time of war, where so much of his assistance is made up of the inexperienced persons whom our necessities compel us to employ.

The mere clerical duties of a fleet surgeon, or hospital surgeon, with 350 or 400 patients under daily charge, are nearly as great as those incident to the accounting department of a frigate; and yet they are only additions to other weighty responsibilities; for no provisions for clerks or writers is made, under any circumstances, for medical service.

The medical service, for some reason not well perceived, is apparently made the standard of rank for other staff corps, without reference to the widely dissimilar duties, acquirements, or trusts; and I believe our navy presents the only instance of such a distribution of rank or pay. The more systematically organized navies of Europe are certainly exempt from this peculiarity.

The position and pay of medical officers of the navy must have much to do with the difficulty experienced in obtaining the number adequate to our necessities.

Though a medical board has been in continuous session for a year, the permanent corps at this day presents ten vacancies; and while the opportunities for temporary appointments are offered by facilities for examination at Portsmouth, N. H., Boston, New York, Philadelphia, Washington, Chicago, Cairo, and in the various squadrons, we cannot find enough qualified persons to accept appointments.

The army offers such greater inducements, that, as a general rule, it appropriates nearly all the available medical talent.

This should not be so; for in a time of war, when the chances of continued conflict are superadded to the risks of climate and exposure, it should be the endeavor of the government to confide the life and health of those upholding its honor to no doubtful or improper hands.

While the army offers pecuniary inducements of from 33 to 50 per cent., perhaps, greater than is awarded to similar service in the navy, it is not to be expected that the latter will attract the character and attainments which are so desirable, and indeed so necessary; and the only plan that suggests itself to me, to remedy a pressing difficulty, is to equalize the inducements of the respective services, so as to give the navy a fairer opportunity for competition.

So long as the rates of pay of the medical officers of the navy are hardly more, if indeed as much, as mechanical or clerical pursuits now command, it would be unreasonable to expect that a man would give his education and time to the navy for such disproportioned compensation and position.

It is to be borne in mind, that in time of war, or during a battle, medical officers are called upon to decide promptly, upon their sole responsibility, grave questions involving life or limb; such questions as in private life are made the theme of much study and learned consultation, as it often happens the medical officer is far removed from all opportunity of assistance.

It is not the mere act performed, but the judgment and knowledge that determine the wisdom and fitness of the act, which attest the usefulness and value of the surgeon.

To illustrate the difficulties we have to meet, in providing for the medical service of the navy, I submit the following statements:

Between January 1, 1861, and the close of the year 1863, permits issued to candidates for appointment in the regular service.....	270
Approved for appointment.....	99
Withdrew and rejected.....	171

Since January 1, 1862:

Acting assistant surgeons examined for permanent appointment.....	55
Approved for appointment.....	16
Withdrew and rejected.....	39

Since January 1, 1862:

Candidates examined for acting appointment.....	188
Approved.....	86
Rejected.....	102

As I have previously stated, these latter have been examined at various points, from Portsmouth, N. H., to Cairo, and in the different squadrons.

Acting assistant surgeons offered the opportunity of examination for permanent appointment since June 15, 1864.....	36
Declined.....	32
Examined and appointed.....	3
Examined and rejected.....	1

All of those declining, assigning pretty much the same reason, that they are willing to serve as a matter of principle or duty, during the war, but desire no permanent place under the government.

Persons applying for examination as acting assistant surgeons, and offered the opportunity of examination for permanent service.....	30
Declined.....	30

The examination for acting appointments is necessarily below the standard for permanent appointment, though it covers the same grounds—a fair knowledge of business, sufficient educational attainments, and professional knowledge enough to discharge the ordinary duties of a medical officer.

Casualties in medical corps since January 1, 1864.

Surgeons died, disease originating on duty.....	4	
Surgeons resigned.....	1	
	—	5
Passed and other assistant surgeons resigned.....	13	
Dead, disease originating on duty.....	2	
Drowned in service.....	2	
	—	17
Total.....		22
Acting assistant surgeons resigned.....	38	
Died in service.....	5	
Drowned in service.....	2	
Dismissed.....	7	
	—	52
Total.....		74

There are now ten additional resignations before the department, which are not accepted because of the existing impossibility of supplying the vacancies.

A common reason for resignation is to accept the more eligible service of the army.

No application for appointment, either in the permanent or temporary service, is now before the department; nor has any such application been received during the past six weeks. It cannot be said that medical men manifest any special desire for office, if the ordinary inferences are to be deduced from these facts.

Naval pensions.

The act of Congress approved July 14, 1862, regulating naval pensions, makes no provisions for the new grades of the navy authorized by the act of Congress of July 16, of the same year.

The highest rank recognized in the pension bill is that of captain, while it is well known the latter act creates the new grades of rear-admiral, commodore, lieutenant commander, &c.

The pension awarded to the family of a captain is now the same as that to the family of a master commanding, thirty dollars per month, thus reducing the pension of the former twenty dollars per month below the allowance under the earlier law. The same inequalities are found in other instances, in which

REPORT OF THE SECRETARY OF THE NAVY.

a hitherto moderate allowance is reduced with as little reason, perhaps, as it is increased in other instances.

It occurs to me that the law might be advantageously revised, so as not only to provide for the new grades, but also to make some better adaptation of the pension to the responsibilities and services of the officer.

I am of opinion, also, that some discrimination should be made between the cases of officers killed in battle, or by casualty incident to battle, and those who die of disease at indefinite periods, after exposure to any of the ordinary vicissitudes of naval life.

Pensions are granted only in cases wherein it is satisfactorily established that death has resulted from exposure in the line of duty; but there ought to be some distinction between loss of life in actual conflict, and when death results in advanced age, from exposure to climatic or other influence on some past occasion.

And again, while in any event our pension system will be so moderate as to contribute inadequately to the support of those who have yielded their natural protectors to the cause of the nation, it would be a grateful recognition of faithful and honorable service, if during lifetime some provision were made for the maimed and mutilated officer whose body bears honorable evidence that he has stood in the breach when his example was essential to the triumph, or that his flag was not struck till he had been borne down in the strife.

The pay of officers on the retired list is certainly very moderate; two thousand dollars for an admiral of more than half a century, or sixteen hundred dollars for a captain of thirty or forty years' service, is truly no very large compensation, when, as is so generally the case, a family looks to this sum as a sole support.

I think a system of pensions for wounds might be established with great benefit to the officer, and with little detriment to the treasury, as so large a portion of the pension expenditures will be made up of captures, &c., during the war.

It would be a grateful boon to the mutilated officer to know that his service and loss were thus appreciated and rewarded, as honorable to the government to make the award as to the recipient.

In like manner, I think the pension should be regulated by the more or less immediate death of the officer, consequent upon exposure, as in the case in some foreign services.

The pension should not, perhaps, be the same in case of a person taken sick in a foreign or insalubrious climate, who reaches his home to die in a few months, and of another who may survive such exposure for years, in the enjoyment of his pay.

By an act of Congress of July 4, 1864, section 5, it is provided that all persons now entitled to a less pension, "who shall have lost both feet in the military service, shall be entitled to a pension of \$20 per month; and those who, under the same conditions, have lost both hands, shall be entitled to a pension of \$25 per month."

If this law is construed in accordance with its phraseology, as I believe it is, it dooms to painful inequality many persons of the navy, who, having suffered equal loss, receive under the naval pension bill of July 14, 1862, but ten or eight dollars per month.

It cannot be supposed such distinction was intended; and perhaps it may require but a notice of the fact to secure for the sailor the same reward as is granted to the soldier. Though the subject does not fall within the province of this bureau, yet from the fact that its relations with the Pension Office are so intimate, I have ventured to bring the defects of the law to your notice, in the hope that some modifications may be effected in its existing provisions.

CONCLUSION.

I deem it due to the few employés of this office to testify how cheerfully and faithfully they discharge the great and varied increase of duty which the present condition of the navy imposes. Sharing all the causes which have led to the multiplication of clerical force throughout the Navy Department, as indeed of all departments of the government, this office still retains the organization and force of peaceful times. It is only by constant and unremitting industry that the work is performed; and that so much is performed justly demands some recognition. I may add the further remark, that while this office maintains its former number of employés, the medical department, in all its ramifications, at hospitals, navy yards, and receiving ships, &c., has never cost the government a dollar for pay of clerks or writers.

Letters written during the year ending September 30, 1864, pressed and copied.....	8,845
Letters received during the year, keyed and filed.....	8,038

No. 10.

HEADQUARTERS UNITED STATES MARINE CORPS,
Washington, October 22, 1864.

SIR: I have the honor to report that during my recent visit of inspection to the several marine posts, I was gratified to find that, notwithstanding quite a proportion of each command was composed of recruits, the evidences of care and attention on the part of the officers to bring them into a proper state of discipline were very decided, and the results of their efforts, as witnessed in the condition of their commands, were creditable and satisfactory.

At Portsmouth, New Hampshire, the barracks are in process of reconstruction, and when finished will give more ample and comfortable accommodation to the men.

It would be desirable, however, if an appropriation for the purpose could be obtained, to improve the construction of the outbuildings to the barracks, which, being old and of wood, are deemed unsafe and unsuitable. I have not thought it advisable, however, at this time, to direct an estimate for the purpose to be submitted.

At Boston the quarters for officers and men are in good preservation, and will require only the usual attention to wear and tear. At Brooklyn the men's quarters were in good condition, and the barrack grounds gave evidence of much care and labor having been bestowed upon them, but the site being on reclaimed ground, and the original grading imperfect, it will require time and some expense before it can be made all that is desirable. Certain changes suggested by the commanding officer, so as to permit free ingress and egress without injury to the grounds, are decidedly approved, and the authority of the department for that purpose will in due time be asked.

The officers' quarters need some attention, which can be done, however, from the regular annual appropriation for repairs. At Philadelphia the barracks, though small, afford suitable accommodation for a limited number of men, and, being in good repair, meet the wants of the service at this time.

At Norfolk the building occupied by the troops, though of a temporary character, is very well suited for the present, and needs no special attention.

The barracks at Mare island, California, have been completed since the date of last annual report from this office, and are now occupied by the troops, but, as the appropriation for the construction of officers' quarters, guard-house, &c., asked for during the last session of Congress, was not passed, it is to be hoped that this subject will, at a proper time, be again brought to the notice of Congress, so that all may be done possible to give to officers serving at so isolated a point as Mare island one of the comforts of a home, a proper house to live in. The present arrangement of quartering the officers in the same building with the men militates against the decorum important to be observed between rank and command, and, upon the ground of discipline alone, should be corrected as soon as circumstances will allow. The recruiting for the corps, since, by legislation bounties, &c., have been allowed, has been very successful, and, though its strength is now fully equal to the number authorized, I am still unable to

comply with all the requisitions for guards for vessels going to sea. A small increase in the rank and file would not only enable me to meet these requirements, but, what is of equal importance, allow of sufficient time and concentration of troops at the several stations, to give guards, before going to sea, the instruction and drill necessary to make them good soldiers, so that from the start, being thoroughly instructed in their military duties, they could impart a tone and bearing to the ship's company in harmony with the efforts of the officers of the ship to organize and discipline their commands.

During the past year a large portion of the corps has been actively employed in service aboard many of the ships composing the several squadrons, and the reports which have reached headquarters from officers of the corps, and officers commanding ships, bear evidence that in the gallant deeds done by our navy the marines have borne an honorable part.

In closing this brief report of the condition and wants of the corps which I have the honor to command, I trust I will be pardoned for referring, with some pride, to the near relations which it has always sustained in the service of our country to the navy of which it is a part.

From the time of the intrepid Decatur, at Tripoli, to that of our day under the daring Farragut, at New Orleans and Mobile, the corps has been so closely allied with the navy in its glorious achievements, that the praise bestowed upon the latter has naturally reflected upon the former; and through all this time the corps has continued to receive, from those whose gallant deeds in the past and to-day must adorn our naval history, that meed of praise which tells of the worth and the usefulness of the corps as a part of the navy.

May I not, then, with confidence point to the record of the corps and the testimony of the heroes of the navy for that evidence which commends it to the continued encouragement and support of a generous government?

Respectfully submitted, by your obedient servant,

J. ZEILIN, *Colonel Commandant.*

Hon. GIDEON WELLES,

Secretary U. S. Navy, Washington, D. C.

HEADQUARTERS MARINE CORPS,

Paymaster's Office, October 19, 1864.

SIR: I enclose herewith estimates, in triplicate, for pay and subsistence of officers, and pay of non-commissioned officers, musicians, and privates of the United States marine corps, for the fiscal year ending June 30, 1866.

The estimates now presented exhibit an increase of two hundred and forty-nine thousand seventy-nine dollars and sixty-five cents over those submitted for the present fiscal year, as follows:

Increase in pay, &c., of officers placed on the retired list, but retained on duty	\$10,068 00
Increase in pay of enlisted men, per act of June 20, 1864	138,576 00
Increase in pay of messenger to commandant and staff, authorized by the Hon. Secretary of the Navy	435 65
Increase in bounty for enlistment, per act of July 1, 1864	100,000 00
Total increase	249,079 65

I am, very respectfully, your obedient servant,

J. C. CASH,

Paymaster Marine Corps.

Colonel JACOB ZEILIN,

Commandant U. S. Marine Corps, Headquarters.

Detailed estimate of pay and subsistence of officers, and pay of non-commissioned officers, musicians, and privates of the United States marine corps, from July 1, 1865, to June 30, 1866.

Total				967,611 45		73,254 00	1,040,865 45

*The servant allowance of staff officers is \$23 50 per month.

Respectfully submitted:

J. C. CASH, Paymaster Marine Corps.

HEADQUARTERS MARINE CORPS, Paymaster's Office, October 19, 1864.

HEADQUARTERS MARINE CORPS,
Quartermaster's Office, Washington, October 18, 1864.

SIR: I have the honor to transmit herewith triplicate estimates for the support of the quartermaster's department (marine corps) for one year, commencing July 1, 1865, and ending June 30, 1866.

These estimates show an increase of those submitted last year, as follows :

For provisions.....	\$33,981 50
For clothing.....	16,290 00
For fuel.....	1,196 00
For military stores.....	1,000 00
For transportation, &c.....	3,000 00
For contingencies.....	15,000 00
For repair of barracks.....	7,000 00
Making an aggregate of.....	77,467 50

The above increase is occasioned by the advance in cost of food, labor, and material, and is believed to be as low as the necessities of the service will allow.

I also transmit the following schedules, in triplicate, of proposals for supplies for the year 1864:

- Of proposals for rations for the year 1864.
- Of proposals for fuel during the fiscal year ending June 30, 1865.
- Of proposals for rations for part of the year 1864.
- Of existing contracts for supplies for the year 1864.
- Of existing contracts for rations for the year 1864.
- Of existing contracts for fuel during the fiscal year ending June 30, 1865.
- Of existing contracts for rations for part of the year 1864.

I am, very respectfully, your obedient servant,

W. B. SLACK,

Quartermaster Marine Corps.

Colonel JACOB ZEILIN,

Commandant U. S. Marine Corps, Headquarters.

Estimate of the expenses of the quartermaster's department of the marine corps for one year, from July 1, 1865, to June 30, 1866.

There will be required for the support of the quartermaster's department of the marine corps for one year, commencing on the 1st of July, 1865, in addition to the balances then remaining on hand, the sum of five hundred and fifty-eight thousand two hundred and twenty-two dollars and twenty-five cents.

For provisions.....	\$169,907 50
For clothing.....	239,688 00
For fuel.....	32,626 75

For military stores, viz :

Pay of mechanics, repair of arms, purchase of accoutrements, ordnance stores, flags, drums, fifes, and other instruments....	16,000 00
For transportation of officers, their servants, troops, and for expense of recruiting.....	25,000 00
For repair of barracks and rent of offices where there are no public buildings.....	15,000 00
For contingencies, viz : freight, ferriage, toll, cartage, wharfage, purchase and repair of boats, compensation to judges advocate, per diem for attending courts-martial, courts of inquiry, and for constant labor ; house rent in lieu of quarters, burial of deceased marines, printing, stationery, postage, telegraphing, apprehension of deserters, oil, candles, gas, repairs of gas and water fixtures, water rent, forage, straw, barrack furniture, furniture	

for officers' quarters, bed sacks, wrapping paper, oil-cloth, crash, rope, twine, spades, shovels, axes, picks, carpenters' tools, keep of a horse for the messenger, pay of matron, washerwoman and porter at hospital headquarters, repairs to fire-engine, purchase and repair of engine hose, purchase of lumber for benches, mess tables, bunks, &c., repairs to public carry-all, purchase and repair of harness, purchase and repair of hand-carts and wheel-barrows, scavengering, purchase and repair of galleys, cooking stoves, ranges, &c., stoves where there are no grates, gravel, &c., for parade grounds, repair of pumps, furniture for staff and commanding officers' offices, brushes, brooms, buckets, paving, and for other purposes..... \$60,000 00

Amount required..... 558,222 25

Respectfully submitted:

W. B. SLACK,
Quartermaster Marine Corps.

Letter of the Secretary of the Navy, recommending an increase in the number of officers in the several grades of the navy, &c.

NAVY DEPARTMENT, May 20, 1864.

SIR: I have the honor to acknowledge the receipt of your letter of May 18, enclosing the memorial of certain commanders and lieutenant commanders in the United States navy, asking that the grades of captain and commander may be increased, and soliciting the views of the department upon the subject-matter thereof. The vessels of the navy are divided by law into four classes and designated 1st, 2d, 3d, and 4th rates, to be commanded, respectively, by commodores, captains, commanders, and lieutenant commanders, and the latter grade may also be assigned as first lieutenants of naval stations and of vessels not commanded by lieutenant commanders. Of first rates government possesses 26, and 18 commodores on the active list to command them; of second rates 58, and 36 captains; of third rates 153, and 72 commanders; of fourth rates 369, and 144 lieutenant commanders. In addition, there are numerous shore stations, most of which are now filled, as intended, by officers on the retired list. This exhibit would, in my opinion, justify a small increase, and I would respectfully suggest the grades upon the active list shall stand as follows: Commodores, 25, (18;) captains, 50, (36;) commanders, 100, (72;) lieutenant commanders, 150, (144;) lieutenants, 150, (144;) masters, 150, (144;) ensigns, 150, (144.)

This increase would afford an opportunity to introduce upon the active list of the regular navy such volunteer officers as have merited this reward by zeal, ability, and service during the war, and I earnestly invite the attention of the committee to this subject.

In connexion with the question of promotion in the navy, I respectfully call the attention of the committee to section seven of the law approved July 16, 1862, entitled "An act to equalize the grades of line officers of the navy," which requires that in time of peace the vacancies in the grade of rear-admiral upon the active list shall be filled by seniority. If peace had been declared on the first day of last January, the three senior commodores would have been entitled to promotions to rear-admirals. In a very short time they would go on the retired list as rear-admirals, ranking though junior all the retired commodores, and the next three commodores would have been made rear-admirals by seniority, to be similarly retired in a few years, and thus giving place to others. To remedy this defect in the law before peace occurs, I have the honor to submit the enclosed draft of a law, which also covers the points presented by yourself.

Very respectfully,

GIDEON WELLES.

Secretary of the Navy.

HON. JOHN P. HALE,
Naval Committee.

Be it enacted by the Senate and House of Representatives in Congress assembled, That in time of peace the number of rear-admirals on the active list shall be reduced by any removal of an officer or officers from that list which may take place by death or otherwise, and such removal shall not be considered as creating a vacancy.

Be it further enacted, That the active list of line officers of the navy shall not exceed nine rear-admirals, twenty-five commodores, fifty captains, one hun-

dred commanders, one hundred and fifty lieutenant commanders, one hundred and fifty lieutenants, one hundred and fifty masters, one hundred and fifty ensigns, and the number of midshipmen now allowed by law, and such acting master's mates, to be hereafter styled mates, as the exigency of the service requires.

Be it further enacted, That of the above number five lieutenant commanders, twenty lieutenants, fifty masters, and seventy-five ensigns shall be made from the volunteer service for the regular service by nomination to the Senate, after such examination as shall be prescribed by the Secretary of the Navy.

Be it further enacted, That promotions to the grade of rear-admiral upon the retired list shall be made in the following manner: A board of not less than three rear-admirals, to be appointed by the Secretary of the Navy; shall select and recommend for promotion three commodores as most worthy by character, ability, and honorable service, from the retired list, one of whom shall be selected by the President and sent to the Senate for confirmation as rear-admiral.

No. 17.

Report of the examination of the graduating class of midshipmen at the Naval Academy in steam engineering.

NAVY DEPARTMENT, BUREAU OF STEAM ENGINEERING,

November 26, 1864.

SIR: In obedience to your order of the 17th instant I proceeded to the Naval Academy at Newport, R. I., for the purpose of witnessing the proficiency of the graduating class of thirty-five midshipmen in practical steam engineering.

The machinery of the United States screw gunboat Marblehead having been placed in the hands of the class, they performed with it, during a run of about forty miles, all the functions of coal-heavers, firemen, oilers, and watch-engineers; exhibiting quite as high a degree of skill in its manipulation and as much knowledge of the uses of its various contrivances as is ordinarily shown by third assistant engineers on their first entrance into naval service. All the manœuvres of which the machinery was susceptible were performed by the young gentlemen of the class, and in the most prompt and intelligent manner. They evinced great interest in these duties, and showed an aptitude hardly to be expected from the brief experience they had had in so exclusively practical a subject. When, in succeeding classes, this experience is extended over the full length of the term, and with the advantage of special instructions in the purely mechanical action and uses of the various elementary parts of marine steam machinery, it is believed that the graduates of the academy will take with them into the naval service a sufficient degree of knowledge and skill in practical steam engineering to make them competent watch-engineers, and after further experience with the more extensive machinery of the large cruisers, on board of which they will serve, they will be qualified to discharge any duty that may be required afloat of a naval engineer.

As the navy has become, and must inevitably continue to be, almost exclusively a steam navy, sails being used as auxiliary only, it is scarcely necessary to enlarge on the great advantages that would follow from the thorough education of its officers in practical steam engineering. In the origin of navies, the officers were not even sailors, but landmen, wholly destitute of nautical experience, and placed on board as police, soldiers and artillerists, while everything relating to the sailing of the vessel was with the hands of a distinct organization of sea officers; experience soon demonstrated the disadvantages of so incongruous a system, and the officers, in addition to their duties of soldiers and

artillerists, were instructed in seamanship, and became the navigators as well as the combatants of their vessels. On the introduction of steam machinery, it was necessary to provide a corps of engineer officers for its management, for the same reason that it was formerly necessary to place sailor officers on board, and the locomotion of the vessel fell again into the hands of one organization, while another had control of its battery and police. There seems no reason why on this, as on the previous occasion, the entire duties of the vessel should not be performed by one set of officers, and it is believed the economy and efficiency of the service would be greatly promoted by such a system. It is clearly no more difficult to instruct intelligent and well educated young men in the manipulation of machinery, than in that of sails and rigging. If the addition of seamanship to the other knowledge required in a naval officer could be made, surely a sufficient expertness in practical steam engineering can be added to enable the officer to properly perform the duties of a watch-engineer, especially as the practice of seamanship is, in a great measure, in abeyance on board of steamers when that thorough knowledge of it required with purely sailing vessels can neither be obtained nor is necessary. Again, although the sea officer should never have occasion to put his skill in engineering to practical use, yet it is evident his abilities to perform other duties connected with his profession, as well as his confidence in himself, will be much increased by such knowledge. Under the present system, the sea officer, in a great degree, must feel himself a mere passenger on board a steamer, his deck duties requiring but slight experience, and being of little importance compared with those of the engine-room, besides requiring really less ability for their discharge. By the present system as many engineers as sea officers are required, and with about equal rates of pay. Could the duties of both be combined by one organization of officers, more space would be available in the vessel for military purposes, and the cost of maintaining the navy be considerably lessened.

I would take this occasion to make a few suggestions regarding the course of instruction to be pursued at the academy in steam engineering.

1st. A small workshop should be provided, with lathes, planing machines, vice benches, forges, &c., where some knowledge of the use of tools could be acquired. This should be under the management of a competent mechanic.

2d. A steamer of not less than 700 tons should be attached to the academy, with screw machinery of the best design, and the midshipmen should be exercised in its manipulation, including taking it apart and reconstructing it as frequently and as thoroughly as they are now similarly taught in seamanship. For this purpose there should be specially provided at least two of the best practical and scientific engineers of much sea experience in the management of such machinery. It should be their sole duty to instruct, not only in the uses of the different elementary parts of the machinery, but in the reasons for their particular form and proportions, pointing out the advantages and disadvantages of their various modifications and combinations, and aiming to impart the knowledge in such manner that it may be applied with intelligence and not by parrot-like routine.

3d. There should also be attached a department, under a competent engineer, of mechanical draughting, in which the midshipmen should be taught to properly delineate the elementary parts of machinery, and to make a working drawing of anything his judgment enables him to devise.

4th. A good set of working models of the various elementary parts of marine steam machinery and of instruments should be collected and properly arranged in the academy.

5th. The board of examiners should contain two or more engineers, and the midshipman should be required to be at least as proficient in steam engineering as in seamanship and navigation, to enable him to pass.

6th. The physical sciences of chemistry and metallurgy, and the science of

applied mechanics, should be taught with the greatest care, as essential to sound engineering.

7th. Certain petty officers should be appointed for each steamer, consisting of first rate mechanics, sufficient in number to do all the repairs upon its machinery that are ordinarily practicable at sea with the means on board. They should be distributed in regular watches, as oilers, &c., and their appointment should be permanent, and their pay sufficient to command the best men.

If it be necessary to somewhat lengthen the academic term to embrace the additional studies sketched above, it is believed the result would amply warrant it in the benefit that would result to the country and to the officers personally.

All of which is respectfully submitted by, sir, your obedient servant,

B. F. ISHERWOOD,

Chief of Bureau.

Hon. GIDEON WELLES,

Secretary of the Navy.

No. 18.

*Report on the dock yards and iron works of Great Britain and France by
Chief Engineer J. W. King, U. S. Navy.*

NEW YORK, November 23, 1864.

SIR: While performing the duties of inspector of the construction of all the iron-clad steamers building west of the Alleghanies I received, at Pittsburg, Pa., on the 3d of August last, the following order:

NAVY DEPARTMENT,

Washington, July 25, 1864.

SIR: The Naval Committee of the House of Representatives having recognized the necessity of establishing a navy yard for the construction of iron vessels, the fabrication of steam machinery and the manufacture of armor plates, the department has deemed it advisable to send you to Europe. * *

* * * * * You will accordingly take steam as early as practicable and visit and examine the best dock yards, engine factories, rolling mills and iron-clads in Great Britain and the north of France, and in Belgium if your time will permit. The want of a proper establishment in the United States has become a national misfortune, and to enable the government to act advisedly in the appropriation for so great a work, you will furnish the department, * * * * * embracing, among other things, the arrangement and conveniences of the public and private establishments for carrying on work of this kind, and a description of all the machinery and tools necessary for an establishment such as our government would need. Upon these points it is desirous to have full information.

Very respectfully,

GIDEON WELLES.

Chief Engineer J. W. KING,

U. S. Navy, New York.

In obedience to this order, I sailed from New York in the British North American mail steamer Scotia, August 10, and arrived at Liverpool August 20. Immediately after my arrival in England I put myself in communication with our ministers and consuls, from whom I required assistance.

Soon after my arrival in London, the Hon. Charles F. Adams, minister plenipotentiary and envoy extraordinary to the court of St. James, received in reply to his request for my admission into the dock-yards of Great Britain the following letter:

The Secretary of the Admiralty presents his compliments to his excellency Mr. Adams, and begs to acquaint his excellency that, agreeably with the request contained in his note of the 27th instant, the necessary orders have been given for permitting Chief Engineer J. W. King, of the United States navy, to view her Majesty's dock-yards and other works and manufactories at Woolwich, Sheerness, Deptford, Chatham, Pembroke, Portsmouth and Devonport.

ADMIRALTY, August 29, 1864.

On presenting this letter to the officer stationed at the gate of each dock-yard visited, I was escorted to the office of the commanding officer, and at his office was found the order from the admiralty to admit me.

I was then informed that every facility would be afforded for my examination of the yard and all the works within it. It is proper to add that this order was executed fully, and that much time was devoted by the chief officers of the several yards in showing and explaining to me the details of the various branches of employment. It is also proper to say that my intercourse with all the dock-yard officials I met was exceedingly pleasant.

The day after my arrival in Paris, the Hon. William L. Dayton, minister, &c., at the court of the Emperor of the French, made application to the minister of marine to admit me into the imperial dock-yards of France. Seven days after this application the following permit was received :

[L. S.] CABINET DU MINISTRE.—MOUVEMENTS.—ANNÉE, 1864.—MOIS DE 7
ET DE 8.

Marine et Colonies.

Monsieur King, Chief Ingénieur Américain, est autorisé à visiter les établissements de la Marine à Cherbourg, Brest, Lorient, Rochefort et Toulon.

Signature de Porteur.

Le Ministre Secrétaire d'Etat de la Marine et des Colonies,
DE LA RONAIRE LE NOWSY.

J. W. KING,

Chief Engineer United States Navy.

NOTA.—Sur la presentation de cette carte il sera delivré par les prefets maritimes ou par les directeurs hors des ports les permissions nécessaires pour visiter les établissements de la marine.

Access to the private establishments visited was gained by means of introductory letters from gentlemen known to the proprietors or managers of them. I have further to add that my intercourse with the parties I met at these establishments was in every instance pleasant.

From the date of my arrival in Europe until November 1st, the day I left for home, no time was lost, unnecessarily, in discharging the duties assigned me, as will be apparent from the following named public and private establishments visited in different parts of the kingdom of Great Britain and in France, viz :

IN FRANCE.

The Cherbourg dock-yard, engine factories of M. Mazeline and M. Nillus ; the ship-building yard and engine factory of M. Normand, and the Paris Locomotive Works.

IN GREAT BRITAIN.

The dock-yards of Portsmouth, Devonport, Keyham, Chatham, Woolwich, Sheerness, and Deptford.

PRIVATE ESTABLISHMENTS.

The Mill Wall iron ship-building, iron manufacturing, and engine factory establishment; the Thames iron ship-building, iron manufacturing, and engine factory establishment, both located on the river Thames; the several engine factories of Messrs. John Penn & Son, Greenwich, Messrs. Maudslay & Sons and Messrs. Jackson & Watkins, London; and Messrs. Humphrey & Tennant, Deptford; Captain Blakely's gun factory, Blackfriar's Bridge, London; the Armor Plate Mills, forge iron and steel works of Messrs. John Brown & Co.; the Cyclops Works of the same character; the engine works and steam hammer manufacturing establishment of Messrs. Davy Brothers, and the steel works of Mr. Bessimer, all at Sheffield; the gun and tool manufacturing establishment of Messrs. Joseph Whitworth & Co.; the engine and bridge-building works of Mr. Fairbairn, and the Atlas engine factory, all located at Manchester; the hydraulic works, engine and gun factories, of Sir Wm. G. Armstrong; the Gates Head rolling mills, and the iron ship-building yard of Messrs. John Rogerson & Co., all on the river Tyne; the iron ship-building yard and engine factory of Messrs. Napier & Son; the engine factory of Messrs. Todd and McGregor; engine factory and iron ship-building yard of Messrs. Randolph and Elder; the Park Head forge and armor-plate mill; the Lancefield forge; Hyde Park foundry and the smithery of the Messrs. McLelland, all on the river Clyde; the iron ship-building yard and engine factory of Messrs. Laird Brothers, at Birkenhead; the Mersey steel and iron works; the Vauxhall engine works, and the steel ship-building yard of Messrs. Jones, Quiggin & Co., Liverpool.

The following iron-clad ships-of-war were visited:

IN FRANCE.

The Couronne and Magenta.

IN GREAT BRITAIN.

The Minotaur, Northumberland, Agincourt, Achilles, Caledonia, Lord Warden, Pallas, Prince Albert, Royal Alfred, and Valiant; besides three Turkish iron-armored ships building by Messrs. Napier and Son, Glasgow, one Italian iron-armored vessel, and a Prussian of a similar character.

The time occupied in obtaining, through the proper channels, letters to influential parties, and in travelling to the different establishments, located as they are at distant points, and widely apart, reduced the very limited time, named in the order, that I was to remain in Europe, for the examination of the several works, to a minimum. Hence full and detailed descriptions of all the works, although very desirable, is found to be impossible.

The report will, therefore, embrace a brief description of each dock-yard visited, and a description of a few important private establishments, with the names of others.

The description of the machinery, tools and appliances necessary for such an establishment as we need, can only be made clear and comprehensive by drawings of the buildings accompanying. This will be noticed in the conclusion of the report.

DOCK-YARDS OF FRANCE.

The imperial dock-yards of France are five in number, viz: Cherbourg, on the English channel; Brest, near the channel; Lorient and Rochefort, on the Bay of Biscay; and Toulon, on the Mediterranean.

Cherbourg being the most important, it was chosen for examination, time not permitting others to be visited.

CHERBOURG.

The first French port of war and most important dock-yard of France is located on the English channel, nearly opposite Portsmouth. It is an artificial dock-yard, with roads formed by the construction of a great breakwater. The area covered within the walls can be measured from the plans.

The works within and the fortifications without occupied the French fifty-five years, from 1803 until 1858, when the present Emperor opened the basin which bears his name.

The works within the yard consist of three great basins and two minor ones, eight dry docks, eleven building-slips, and twenty-eight substantial stone buildings.

The docks and basins have been excavated from slate quartz of the same formation as that from which the Keyham docks (noticed hereafter) have been excavated. The first or outer basin, known as the "Avant Port Militaire," or Dock Napoleon I, with entrance from the roads, and outlets to the other basins, covers an area of 224,250 square feet. The second or inner basin, known as the "Basin de Flôt," has an area of 218,933 square feet; and the third, known as the "Arrière Basin de Flôt," or Dock Napoleon III, covers an area of 273,000 square feet. The three are connected by locks and gates. Contiguous to the basins are the dry docks; the Avant Port Militaire possessing one, and the Arrière Basin seven. Round the basins are distributed the building-slips, work-shops and storehouses.

At an enormous cost, said on the best authority to amount to 200,000,000 francs for the works of the yard, and 100,000,000 francs for the defences, Cherbourg has been constructed, and it is to be observed that these outlays were made at a period and place when and where the wages of labor were insignificant in comparison to the wages of labor in this country; moreover, convict labor was employed to a great extent. The defences are believed to be the most successful effort of French engineering skill; numerous forts and batteries not only encircle the yard, but also the breakwater; and every other commanding point, both to seaward and in the rear, has been turned to the best account.

Accompanying this report are two ground plans, each drawn to a scale, with explanations; one shows the location of the dock-yard, and the other shows the basins, dry docks, building-slips and buildings.

The basins first claim attention. After the excavations from the slate quartz, they are formed throughout, bottoms and walls, with heavy blocks of granite. In the same manner are the dry docks and building-slips constructed, and the whole are beautiful specimens of masonry.

The Avant Port has no gates or caissons at the entrance from the roads, and into it all vessels first enter, passing afterwards to the inner docks or basins at pleasure. On the south side of the entrance to this basin are the smitheries, the forges, and the machine works, a location and arrangement found to be inconvenient at the present time, as regards the transportation of material to the shops or of machinery to and from the vessels in the basins and in the docks. On the south side of the basin are four building slips, covered with substantial ship-houses—but of ancient date—and one dry dock, smaller in capacity than those attached to the Arrière basin. The ship-houses are 117 metres long by 27 metres high, having ordinary roofs supported by granite columns, some seven feet square and thirty-five feet from centre to centre. Neither on the west nor on the southwest are there any shops in close proximity to the Avant Port.

The smitheries and machine works, shown No. 6 on the plan, are under one

roof, separated by a cross wall; this building is 750 feet long by 70 wide. In the south end are forty-eight smithery fires, ranged on either side with the necessary cranes; four steam-hammers and two tilt-hammers, with four ordinary heating furnances and a crane to each. All the appliances in the smithery are behind the best improvements found in such shops recently constructed. The north end contains the machinery and tools for repairing and fitting the steam machinery of the vessels in the port. The machines and tools embrace the usual kind found in such shops, and are the productions of Whitworth and Rigby, of England, and Mazeline, of France. With one or two exceptions, the exceptions being those of Mazeline, it may be said that they are of a date anterior to the improved machines in the best English engine factories. The dimensions of this shop on the ground floor are: length, 320 feet; breadth 70 feet.

Adjoining this building and at the north end are the iron and brass foundries, under one roof. The iron foundry contains four cupolas, two drying ovens, four ordinary cranes, and other appliances.

At a short distance from the machine works, No. 14 on the plan, is the machine erecting shop. Here all the heavy machinery for the vessels is fitted and put together previous to being placed on board. The building is one story high and 180 feet long by 80 feet wide. It contains one travelling crane, movable on wheels over a floor rail track; one very large lathe, and several large boring, slotting, and drilling machines, besides the erecting attachments. Like the machines in the other shops, they are from patterns prior to recent improvements.

The inconvenient location of these steam factories, as a whole, together with the necessity for more extensive works, containing improved machinery and tools to meet recent changes in vessels-of-war, have led to the erection of other factory buildings on the south side of the Arriere basin de Flôt, which will be noticed presently.

The basin de Flôt is of the following dimensions in round numbers: 945 feet long by 706 feet wide, with a lock-gate entrance of 80 feet.

On the east side of this basin is the ordnance building, containing the small arms and stores, and on the south side are the mast-houses, spar-houses, mould-lofts, sail-lofts, and galleys.

The Arriere basin de Flôt is the great work of the dock-yard; its construction commenced in 1836, and having only been completed in 1858, it was twenty-two years in hand. Its dimensions in round numbers are: length, 1,365 feet; breadth, 650 feet. On the east side of this basin, No. 3 shown on the plan, are the storehouses and offices. On the north side are four dry docks, two of the largest class each, at the bottom 600 feet long by 70 feet wide, and two smaller ones. To the east of the dry docks, No. 15 on the plan, are the boiler-making and copper and tin shops, all under one roof, and separated by longitudinal and cross divisions. The building is one story high, 320 feet long by 118 feet wide. One portion divided into two, longitudinally, is devoted to boiler making, and has an overhead travelling crane in each division to facilitate the movement of heavy weights. Parallel with the boiler making section, and convenient to it, are the heavy boiler making tools, consisting of rolls, punching, shearing, and drilling machines. None of these tools are of the best varieties, besides the shops are minus the steam rivetting machines, boiler-plate planing machines, and many other improved machines of this period, found in the English dock-yards and best English engine factories. In the centre of the building, at the extreme south end of the yard, are the pumping engines and their boilers, for removing the water from the Arriere basin de Flôt and the docks belonging to it. These engines are of short stroke, and geared by means of cogwheels, so as to reduce the velocity of the pumps below that of the engines—an arrangement for pumping water not advisable to be copied.

At both ends of the same building are wood work-shops. The hydraulic works and model rooms are No. 5 on the plan. In the former all work appertaining to pumps and pump gear are manufactured. In the model-room is a plan of the dock-yard and a complete model of it on a large scale, showing all the buildings, basins, docks, and building slips. West a little, No. 32 on the plan, is the reservoir for supplying the yard and the vessels of war in the port with fresh water. The water is received from the same source as that from which the supply of the town is drawn. The west side of the *Arrière basin de Flôt* is occupied with seven building slips and one small dry dock. The slips are formed like those previously named, and are of sufficient capacity to allow the building of any class of vessels, but they have no ship-houses over them. The vessels built on these slips launch into the basin and are brought to rest before reaching the opposite walls by means of rafts pushed before them.

The south side of the basin is occupied by two dry docks of the largest class, capable of taking in any vessel now afloat, besides timber, storehouses, and the steam factories now in course of construction. The new factories are intended to supply the deficiencies before named, but they are not laid out on a scale commensurate with the demands that would necessarily be made on so great a dock-yard as Cherbourg, in these days of steam navigation and armored ships, if the French had not other extensive works. The buildings of the new factories, now nearly completed, embrace those for the machine works, the smithery, and forge, and are doubtless intended for immediate necessities. No new foundry has been commenced. The smithery building is in form of a right angle with legs of equal length, each of which is 175 feet long by 70 feet in width. It is one story high, and, like all the other Cherbourg dock-yard buildings, is constructed of the peculiar soft stone of the locality. It is covered with a metal roof; is properly ventilated, and lighted both from the top and sides. In the centre longitudinal line of the building are judiciously arranged in iron frames the smithery fires, 88 in number, so that the anvils on either side of the building are brought directly under the light of the windows. In one angle of the building are to be erected the steam hammers, furnaces, and other appliances.

The building for the machine works forms an opposite right angle to the smithery, and is of the same dimensions. As yet no machinery or tools have been placed in it.

At the extreme southwest end of the dock-yard are the sailors', marine, and gendarme barracks.

The joiner's shops (No. 9 on the plan) are west of the ship-houses.

The steam saw-mills are No. 10 on the plan. This branch of employment has proved to be one of the most useful and economical belonging to the dock-yard. The dimensions of the building are 850 feet long by 105 feet wide, divided into two parts by a cross wall; one end containing the stores of timber, and the other all the machinery necessary for sawing and working wood into any and all the shapes required in wood ship-building, including the formation of the frames of ships. Many of these machines are the invention of, and were constructed by, the celebrated French engineer M. Normand.

At the extreme south end of the yard are the bakery and provision stores. The bakery is extensive; the building is two stories high, and 685 feet long by 64 feet wide; one of the peculiarities of the French system being that all the bread for the use of their vessels of war is baked in the dock-yards.

No. 33, shown on the plan, is a hydrometer; it measures the rise and fall of the tides continuously, and there is a clear and complete daily record kept of it, from beginning to end of each year. This instrument is the invention of an Egyptian.

Conveniently arranged on either side of the entrance to the *Avant Port* are

coal storages, admitting of coaling vessels without interfering with other work, this can be seen at No. 26 on the plan.

The streets and avenues of the Cherbourg dock-yard are paved throughout with blocks of stone, and rail tracks traverse all avenues leading to or from the workshops, basins, docks, and building slips.

The basins and docks are not provided with steam cranes to facilitate the movement of heavy weights. An imperfect substitute is supplied by a floating derrick within the basins. It is, however, in contemplation to erect cranes and shares in sufficient number and power.

No. 1 on the plan is the quarters of the major general, and number 37, the dock-yard entrance gate and guard-house. Admission to the dock-yard is given to natives by the prefect maritime only. A foreigner cannot pass within the gate without authority from the minister of marine, at Paris, on the presentation of which, with his signature to the prefect maritime, a second written permit passes him over the yard under an escort of a gendarme, unless in unusual cases like my own, when the United States consul was in company.

Cherbourg, in short, is a dock-yard of great engineering skill, and shows what may be accomplished in those cases where nature has done little more than trace the outline and furnish an abundant supply of water. The basin accommodation is very extensive, and the largest basin, the *Arrière de Flôt*, with all the docks attached to it, is designed for the sinking of a small fleet. When the necessity for sinking has passed, the water may be pumped out at pleasure.

It will be seen that there are eight dry docks and eleven building slips, and all of them are available for the simultaneous building of wooden vessels. Altogether, a force of 10,000 to 11,000 men could be advantageously employed within the dock-yard walls. Recent improvements, when completed, will make room for more men, so that it may be said, without exaggeration, that the capabilities of the yard for building, repairing, and equipping vessels-of-war exceed those of our four northern navy yards combined.

The land approaches of Cherbourg, in addition to the redoubts and forts shown on the plan, possess features of an interesting kind. An enemy landing near the place for the purpose of its reduction by siege would have a task before him not offering the faintest hope of success. His every step for miles would be impeded even by a numerically smaller force from behind successive natural field-works, which there would be no carrying by assault. Cherbourg, when created, was regarded by the first engineers of France as a stronghold, both to seaward and in the rear, frowning defiance to the world; but in those days there were no rifled guns, no heavy ordnance, and none of the destructive projectiles of the present day, nor were there any armored ships-of-war. Such changes in naval warfare places Cherbourg dock-yard, at the present period, in the greatest danger when approached by an enemy from the sea. The heavy iron-clads of the British navy could, in a few days after declaration of war between the two countries, steam up to within three or four miles of the works, lay without the breakwater, and leisurely plant shells, from their 600-pounder rifled guns, into the yard, until its buildings would be reduced to heaps of ruins. This dilemma was never thought or dreamed of during the long years of patient study and toil in its construction; but the facts are before them now, and were frankly admitted by the French naval officers I had the pleasure to meet in France. "The best," said they, "that can now be done, is to mount heavy guns in the forts and incur additional expenditure for floating roadstead batteries, but even after that the works within the yard cannot be considered secure, if approached by a powerful enemy from the sea."

TOULON.

In name and tradition Brest has hitherto taken rank next to Cherbourg, but Toulon is now the second imperial dock-yard of France. As before stated, it was not visited under the order, but some years ago I passed three weeks in the town of Toulon, and had access to the dock-yard daily. It differs from Cherbourg in the fact of being formed on a natural harbor and in a more secure position from bombardment. It has three basins, and, at the time of my visit, there were but three dry-docks and as many building slips; but I was informed at Cherbourg that now the dry-docks are nine in number, and the building slips sixteen in number, all of the largest class, besides others contemplated for iron ship building; also, that new steam factories have recently been erected, including a smithery containing 300 fires. Doubtless the greater security felt in the position of Toulon over that of Cherbourg decided the question of placing new and extensive works in the former.

LORIENT.

Lorient takes third rank; and, as a construction yard, it may now be considered nearly equal to any other in France. It is easily approached from the bay of Biscay, and its position on the projecting land between the two rivers—the Scorff and the Blavet—gives it natural advantages that have been recognized and are now being turned to account. Additional factory works have been recently erected, including facilities for iron ship building; and in this yard the two French iron ships were constructed. Some heavy guns have recently been manufactured at the government foundry at Ruelle for the sea defences.

ROCHEFORT.

Rochefort ranks fifth and last, both as a port of war and a yard of construction; yet its capabilities are large. It has no basins, but there are three dry-docks and as many as seventeen building slips. Two of the docks are of large class and one of small class.

The five imperial dock-yards of France, great as their capabilities are, do not comprise all the establishments under the orders of the French government. The private ship-yards at Bordeaux, Nantes, La Seyne, and Havre, the extensive iron mills at Crusôt, the forges de la Basse Indré, the Indret factory, and all the engine factories in France, can be commanded by the minister of marine at a day's notice. He can either take charge of the establishments, order work to be done in them at prices fixed by himself, or at pleasure conscript men from them into the imperial dock-yards.

HAVRE.

The most important marine engine manufactory establishment in France is that of M. Mazeline, at Havre, and the chief productions of the establishment have been the steam machinery for the following iron-clads of the imperial navy: the iron-clads are the Couronne, Normandie, Magenta, Solferino, Flandre, and Héroïne. The Couronne and Héroïne, it may be stated, are iron ships, and the only iron ships of the imperial navy, except some batteries, transports, and despatch vessels. In addition to the steam machinery of those iron-clads, M. Mazeline has furnished the engines and boilers of the imperial yacht L'Aigle, and the engines and boilers of the Amazone, Impetueuse, and Audacieuse of the imperial navy. At present there are in hand, in the establishment, the engines for a large frigate building at Brest, and the engines of several small screw vessels.

M. Mazeline's facilities for the manufacture of steam machinery are considerable. Several buildings, detached from each other, cover an area of twelve acres; and, in addition, there is a boiler-making shop in a different locality from the other works. The works, as in like establishments, embrace the machine and erecting shops, foundries, smithery and forge, pattern shop and boiler shop. Of these, the only ones of note at the present time are the machine and erecting shops. These are combined in one building, which is capacious and convenient for active operations, and are economical in structure. It is, moreover, a form of building which admits of a good distribution of the machinery and appliances, and gives the foreman a better oversight of the workmen and everything within than is afforded in any similar dock-yard building. The cross-section view that is to follow this report will best exemplify its peculiarity. The walls are brick, the roof and framework wood, covered with slate, and the structure one story high. It will be seen that the end walls are carried to the full height and the side walls to the lower elevation of the hanging roof. The lighting is from the lower and upper roofs and from the upper vertical part of the main building. The whole of the central or main part of the roof and framework is supported on two rows of columns longitudinally, and the columns divide the building internally into three separate divisions. They also support the travelling cranes which carry all the heavy weights from end to end of the building. On either side of the columns there is a line of shafting, from which all the machines are driven. The centre division of the building is the erecting shop proper, with the heavy lathes, boring machines, planing and slotting machines, &c., near the columns; the space between these columns, the whole length of the building, is available for putting the engines and other heavy work together. The arrangement is one of great convenience for the moving of heavy shafts, forgings, and castings from the machines, or *vice versa*, by means of the overhead travelling cranes. In the side divisions, under the hanging roofs, are grouped together all the small machinery and tools, and there all the light parts of the engines are fitted and finished. The machinery, tools, and appliances are of good descriptions, and the work executed is of a high character. Many of the tools are the production of Whitworth and Rigby, of England, but several are the invention and manufacture of M. Mazeline. Among the latter may be named two vertical planing machines, with moving tools, worked by screws, having seven feet stroke. Each of these machines is operated by a small engine built in the machine frame vertically, so that the machines are not dependent for driving on the other machinery of the establishment. This is a contrivance admitting of application to all heavy lathes, boring mills, planing, slotting, and other heavy engine factory machines. The advantages are, first, the speed of the machine is directly under the control of the workman; second, in the event of any of the machines being operated after the usual working hours, the main engine, together with the whole shafting of the establishment, do not require to be kept in motion; third, accident to the main engine does not interfere with the working of the detached machines. This last advantage will be best appreciated by those who have witnessed the machinery of an entire establishment standing idle for a whole hour, while a main belt was undergoing repairs. One of the chief machines in the erecting shop is a great lathe manufactured by M. Mazeline at a cost of 87,000 francs. This lathe is geared to move at a speed of from three to fourteen revolutions in the minute, and in it at present is an immense three-throw crank shaft for the engines of the large frigate now building. Those engines, it may be stated, have three side-by-side horizontal back-acting cylinders, the middle one being used solely for expanding the steam from the outside ones. Of the other machines worthy of note is one for turning the wrists of crank shafts of any dimensions by placing the shaft in a fixed position and revolving movable cutters round the wrists. This arrangement obviates the use of immense costly machines for the work, and saves the power

and inconvenience of revolving such great weights from the centres of huge lathes. The dimensions of the building, roughly measured, are 290 feet long by 180 feet wide.

The next building to be noticed is the pattern shop. It is a two-story brick building, very properly located near the drawing-rooms and offices, but separate and distinct from the other buildings, that in case of fire it should not spread unduly. It differs from other pattern shops in having the wood-working machines and pattern-making tools and appliances on the ground floor, and the pattern storage rooms above.

The foundry is badly located, and deficient in capacity and all modern appliances. To remedy these, and meet the demands of increasing trade, the erection of a new foundry has been commenced. The new foundry is to be peculiar in its ground plan and general arrangements, as will be seen from the drawing that is to follow this report. It may be termed two foundries, parallel with each other, and connected by a central passage. Outside of the central passage, on one side, in a house are the cupolas, three in number, and on the other side are the air-furnaces, two in number. Along the central passage the molten metal will be carried from the cupolas to the parallel foundries. The smithery contains four steam-hammers, with the necessary furnaces and cranes. There is also a sufficient number of smithery fires. Neither the building nor its appliances can be said to be up to the requirements of the times.

The boiler shop is really antiquated in respect to fixtures; it does not at all harmonize with the machine and erecting shops. There is no steam-riveting machine, and no appliances to facilitate the movement of weights, such as are found in the best engine factories of England. In short, there is nothing beyond the ordinary boiler-making tools, and the buildings, and the merest sheds. Such is the engineering establishment of M. Mazeline, the first marine-engine builder of France, and member of the Imperial Senate. Near the works of M. Mazeline, and on the same street, are the engine-works of M. Nillus, the second in name and tradition in Havre. They, as near as can be judged by a superficial examination, are on one half the scale of M. Mazeline's. In the total absence of recent improvements, description is superfluous.

There being no more engineering works of note in Havre, a visit to the wood-ship building yard of M. Normand was thought of, and proved instructive. M. Normand is the most celebrated scientific ship-builder in France, and his reputation is acknowledged throughout Europe. He is the inventor of the diagonal system of planking vessels. Unlike our wood-ship building yards, there is attached, on a moderate scale, to M. Normand's yard a machine shop, a smithery, and a foundry. These additions are, however, the work of M. Normand's son, a mechanic and a mechanical engineer, of almost as great celebrity as his father is in ship-building. M. Normand, jr., is the inventor of the wood converting machinery in use in all the French dock-yards, Rochefort alone excepted. That machinery saws ships' frames to any desired curve, and wood-work of all kinds into all shapes, in an efficient, expeditious, and simple manner. Some five years ago the British admiralty sent a commission of dock-yard engineers and others to report on the efficiency of M. Normand's sawing machines in the Brest dock-yards. The commission unanimously recommended their adoption in all the British dock-yards.

In the yard there is at present an aviso on the stocks, planked diagonally inside. On some smaller vessels the system is carried out to the utmost, there being one course of diagonal frame inside, and a course outside without frame. M. Normand has tested boats built in that manner, and thinks he gains as much as fifty per cent. in strength.

The other engine factories in France of repute are M. Armand's at Bordeaux, M. Gouin at Nantes, the Ciotat Company, and the La Seyne Company.

BRITISH DOCK-YARDS.

The dock-yards of Great Britain are seven in number, viz :

Portsmouth, on the Channel; Devonport and Keyham, on the west coast; Woolwich and Deptford, on the river Thames; Chatham, on the river Medway; Sheerness, at the junction of the Thames and Medway; and Pembroke, on the Welsh coast.

PORTSMOUTH.

Portsmouth dock-yard is located on the English Channel, nearly opposite Cherbourg. It is fortified, and the approaches to it well covered. It possesses a capacious natural harbor, and in respect to position, extent of ground covered, and number and capacity of buildings, has hitherto occupied the foremost place among English dock-yards. The area within the walls is greater than any one of the old yards; still the ideas and wants of the present day point, as in the case of other English dock-yards, to indefinite expansion.

The ground plan accompanying this report will give a clear view of the general arrangement of the basins, docks, ship-houses, and buildings now existing, and also of the new works, which are not merely in contemplation, but for the carrying on of which the first votes were sanctioned during the last session of Parliament. The dock-yard has been one of the chief seats of manufactures for the royal navy, and a brief description of its principal workshops will be found instructive.

On the northeast side of the dock-yard is the steam basin, the basin in which steam machinery is put into or taken out of vessels, or where general machinery repairs are carried on. The entrance to the steam basin is from the harbor, through the camber or dry-dock No. 7, hereafter to be mentioned. On the eastern end of the basin is located a pair of box wrought-iron, steam-operating shears, 145 feet high, designed chiefly for hoisting and lowering boilers out of or into vessels. The shears have two main purchases and one crab, with engines to each; these, together with the boiler, are located at a convenient distance from the basin. On the same side of the basin there is, in addition, one large Fairbairn steam crane, having the boiler and engines attached. Besides these appliances for raising and lowering weights, there are on the borders of the basin five Fairbairn cranes, operated by manual labor. On the east side of the basin are the dry-docks, No. 8 and No. 11 on the plan, the first three hundred feet and the second nearly four hundred feet long, measured on the bottoms. On the west side of the basin, and parallel with its greatest length, are the machine, boiler, erecting and copper shops, in one building, under one roof. The building, like the others in Portsmouth dock-yard, is of brick. It is seven hundred and twenty feet long by forty feet wide, measured inside, and two stories high. Entering the first or lower story, the height of which is twenty-eight feet, it is found divided, by cross walls, into five equal compartments.

The boiler shop and boiler-making machines occupy three of the north divisions. The divisions are conveniently arranged and well stocked with a variety of the most superior machinery, tools, and appliances of the present day. It may be briefly stated that there are three wrought-iron over-head travelling cranes; one direct-acting steam-riveting machine; a machine for boring tube sheets, several holes at a time, mathematically correct; a machine for drilling angle irons, six holes at a time; angle iron cutters; radial drilling machines, besides the usual shearing, punching, and bending machines. The machines are all accessible to the boilers under construction. The floor is paved with wood blocks, on end, and under it small blast pipes pass from the fans, with outlets arranged at convenient points for attaching rivet heaters.

The division adjoining the boiler shops is occupied exclusively as a machine

erecting shop; it has but one travelling crane, a few heavy machines, and the usual mechanical appliances. The next or north division, on the ground floor, is the machine shop for heavy work; it is provided with two travelling cranes, and stocked with heavy machinery and tools of the best kind.

Ascending to the second floor of the building, the machine shop is first reached, which is provided with the usual machinery and tools for fitting and finishing light work; and afterwards the coppersmiths' shop, the chemical and store rooms. The coppersmiths' shop contains several tools and appliances not usually found in such places; among them are a circular sawing machine for sawing off, correctly, the ends of pipes, a longitudinal radial drilling machine for drilling holes in the flanges of pipes and cylinders without removing them, and several small overhead railway cranes and other minor appliances. It may be added that the building containing the various shops just named was built originally for a storehouse, and is, therefore, not altogether such a building as would have been designed for the various purposes.

On the south side of the basin are the iron and brass foundries, the pattern shops, the chief engineer's offices, and the drawing rooms. The iron foundry is two hundred feet long by forty-five feet wide, with thirty feet height from the floor to the bottoms of the overhead cranes.

The building is of brick, with an iron frame roof, slated. It is well lighted, and the internal arrangements and appliances are complete in all respects. There are three wrought-iron travelling cranes and three wall cranes, with cast-iron uprights, wrought-iron jibs and tube braces, and three cupolas ranged in the centre of one of the side walls. Convenient to the cupolas are hydraulic lifts for raising the pig-metal and coal to the platforms. At right angles with the building is another of equal dimensions, two stories high. On the lower floor are the foundry cleaning rooms and the foundry store-room. On the upper floor are the pattern shop and pattern store-room, in separate divisions. The pattern shop proper occupies the larger portion of the floor, and is the most perfect, in its detail arrangement, of any shop of the kind I ever entered. A complete and sufficient number of wood-working machines are ranged on one side of the room, and the work benches are on the opposite side. Unlike other pattern shops, there are no tool chests, but each bench contains the workman's tools in its drawers, and to each bench is a parallel vice and a planing spring catch.

The pattern shop storage room has a most perfect distribution of patterns, and the room, and everything in it, are models of cleanliness. The patterns are contained in cases, with iron frames and supports, each case having its special patterns so marked, and each pattern its special mark in plain letters. All the cases are neatly painted and varnished. One man has charge; he remains constantly in the room, keeps a record, and notwithstanding the patterns are millions in number, any one of them can be reached at any desired moment.

The brass foundry is also excellent. It is one story high, one hundred and five feet long by eighty-five feet wide, divided, longitudinally, by a wall with a centre opening, in which are located two cupolas and two air furnaces arranged to discharge the metal into the division prepared for making the heaviest castings. In the opposite divisions are the crucible furnaces, twelve in number. This foundry is the largest and most complete, of its kind, in any of the dock-yards, and in it are made all the heavy brass castings for the other royal dock-yards.

On the west side of the machine and boiler shops are the smithery and forge. These occupy a large brick building, with a metal roof, which is unusually well lighted from the sides; nearly two-thirds of the side area consist of glass. It contains one hundred and ten smithery fires, ranged in a quadrangle, with separate pipes from each pair of fires, discharging the smoke and gas into one common, overhead horizontal pipe, and afterwards into the chimneys at either corner of the building. There are six steam hammers, five of Naysmith's and

one of Morrison's, the largest of these being of sufficient weight to make a shaft fourteen inches in diameter. The hammers are all provided with the necessary furnaces and iron cranes; the cranes supported by and revolving round underground central shafts. The largest one of the hammers is provided with two furnaces opposite each other, the hammer being between them, and there is a steam travelling crane extending from one furnace to the other, directly over the hammer. The furnaces discharge their smoke into an underground tunnel, and thence to a central chimney. In addition to these facilities there are numerous small cranes and other appliances common to such places. Besides this smithery there is another small one on the south side of the basin, not shown on the plan. It contains two small steam hammers and thirty ordinary smithery fires, ranged on both sides of the building, the hammers and anvils between them.

No. 8, on the plan, is the building in which armor plates are prepared for vessels, after delivery from the contractors. It is one story high, one hundred feet long by forty feet wide. It contains one peculiarly constructed heating furnace, which, together with the appliances for handling the heavy plates with the least possible labor, is worth copying. All the work done in the building to the armor plates is that of bending them to fit the required curves of the vessels, and drilling and countersinking the bolt holes. For the latter work radial drilling machines are employed.

This concludes the works denominated steam factories, and no more need be said of them beyond the fact that they are of insufficient capacity, and that the location of the foundries, smitheries, and pattern shops is exceedingly objectionable.

It is proper, however, to add, that rail tracks extend from all the buildings to the basins, and from one building to another, so that weights are readily moved, on carriages, to or from any desired point. The time and money saved by this arrangement are very great. In our navy yards there are no railway facilities, but weights are dragged about by cattle and manual labor.

The insufficient capacity of the steam factories, together with the inconvenient location of some of the buildings, is acknowledged, and it is in contemplation to erect new factories on the location marked No. 11 on the plan.

Leading from the steam basin to the harbor, in a southwesterly direction, is the camber, the large dry-dock spoken of before. It is 644 feet long on the bottom, and has three gates, one at the harbor entrance, one in the centre, and one at the basin outlet. This arrangement admits of the dock being used as two, or one, as may be desired.

No. 9, on the plan, is the saw-mills, which are two stories high. The lower floor contains all the usual heavy sawing machines, while the upper floor is used for other work.

No. 5 is the building containing the block-making machinery invented by the celebrated engineer J. K. Brunel. This machinery is complete and perfect, in detail and in combination, and by it the blocks for all the vessels of the royal navy have been made for more than thirty years.

The only other basin in the dock-yard, besides the one named, is the ship basin, south of the camber, with an outlet directly from the harbor. It is used chiefly for placing vessels in to be fitted out for sea or to be docked. Attached to it are four dry-docks, namely Nos. 2', 3', 4', and 5', shown on the plan. These docks were constructed in the days when ships of war were of short dimensions. They are of the following lengths, all measured on the bottoms. No. 2' is 220 feet 1 inch; No. 3', 270 feet 8 inches; No. 4', 285 feet 4 inches, and No. 5', 208 feet 9 inches. South of the basin is dry-dock No. 1', with inlet from the harbor; its length on the bottom is 229 feet 4 inches. North of the basin is dry-dock No. 6', also with inlet from the harbor; its length on the bottom is 192 feet 8 inches. Dry-dock No. 9' is in the northwest corner of the dock-yard;

its length is 253 feet 4 inches, measured on the bottom. All the docks, building-slips and basins are, as before stated, formed of granite blocks, and are constructed in the most substantial manner.

Between dry-dock No. 9' and the camber are the building-slips, which are five in number. They are in a group, covered with substantial and well-lighted ship-houses. The spaces between the building-slips, under the ship-houses, are paved with wooden blocks on end, and between some of them, in a line with the vessels building, are overhead travelling cranes and steam-hoisting appliances for raising timber to the vessels under construction.

Having now briefly described the buildings and appliances in which the principal mechanical operations are carried on, it will only be necessary to name the other buildings, and to add that all of them have heavy walls and are capacious, and sufficiently substantial to endure for centuries.

These buildings may be best mentioned in the arbitrary order of the plan: No. 1, boiler-house, and No. 3, chief engineer's office; No. 7, engine-house, containing engines and boilers for pumping out the docks; No. 10, guard and store-houses, and No. 12, police station; Nos. 13 and 14, storehouses, and Nos. 15, 16 and 17, timber sheds and wood-work shops; No. 18, officers' houses, in which reside all the principal officers of the yard; and No. 19, admiral superintendent's house; Nos. 20 and 21, storehouses, and No. 22, the building for the officers of the different departments; No. 23, tar-making house; No. 24, water tank, and No. 25, rope-making house; No. 26, mast-making house; No. 27, boat pond or water area, in which ships' boats are floated; No. 28, storehouses; No. 29, rigging and sail loft; No. 30, chain and cable store; and No. 33, gate entrance to the dock-yard.

Such is a brief description of the Portsmouth dock-yard of the present day. What its future is to be, will be best seen from the plan showing the proposed extension.

The following paragraph on the subject will be found instructive:

"A select committee having been appointed, with Lord C. Paget as chairman, to take into consideration the basin and dock accommodation of the United Kingdom, an opportunity is offered for testing the merits of the plans proposed for the extension and improvement of Portsmouth dock-yard, plans of a more comprehensive character than any which have before been submitted to the consideration of the admiralty on that or any similar subject. The projector of this great scheme has not only submitted elaborate designs showing what is required, but he has also explained fully all the difficulties that beset this important question, and the method by which those difficulties may be surmounted. The works for the extension of the Chatham dock-yard, which were designed by the same hands and are now fast progressing, comprise a large amount of work, but the scheme for the proposed extension and improvement of Portsmouth yard is more difficult to deal with, and unless the plans and reports are printed in full for the information of the committee, it will be utterly impossible for the members to comprehend the subject so clearly as they should in justice to its importance. The condensed plan shows the extension in two parts, what is proposed to be done for the present being shown in full red lines, and a portion, which is marked as for "possible future extension," being shown in dotted lines. The entire design as shown on the plan referred to commences at the present steam basin, at the north end of the dock-yard, and extends thence four thousand five hundred feet in a northerly direction, over the narrow water-ways and mud lands of the harbor, including Great and Little Whale islands. At its widest part the plan is upwards of three thousand feet in width. The first part of the plan, shown in full red lines, consists of a tidal basin with an area of nineteen acres, and a depth of water of thirty feet at low spring tides. This basin adjoins the present steam basin and timber ground, and will have a communication with the former through its present north wall. At the head of the basin are shown three

docks, each five hundred feet in length and of commensurate depth. West adjoining this tidal basin is shown a repairing basin, having thirty feet depth of water at high water spring tides, with an area of twenty-two and a half acres, in which vessels could lie afloat during the time they are under repair. At the head of this basin are four berths or slips for ships, with hydraulic lift and its accompanying engines and valves. In front of these two basins and their docks and repairing slips is a channel, leading from the main channel of the harbor, which will have thirty feet depth of water at low-water spring tides. The second part of the plan, shown in dotted lines, consists of a basin of sixty-two acres, containing on its eastern side two docks and four slipways of the largest description, and next to this magnificent basin the plan shows fifty docks or ways for holding vessels high and dry out of the water, to a size reaching three thousand tons.

"The importance of this latter part of the scheme is obvious, when it is considered that, however perfectly an iron ship may be rigged, stored and prepared for commission, when in the first-class steam reserve, she can never go to sea after being commissioned until she has been placed in dock and had her bottom cleaned. A wide deep channel is shown past the front of the new works, from the north end of the dock-yard to Little Whale island, communicating between the deep water channels of Portsmouth main harbor and Porchester lake."

DEVONPORT AND KEYHAM.

The dock-yards of Devonport and Keyham are situated in the west of England, and constitute the western dock-yards of Great Britain.

Devonport dock-yard has existed for more than a century, and it was supposed to answer all the requirements of the line-of-battle sailing-ship period. But, after the introduction of steam, it was thought desirable to create an entirely new dock-yard, namely, Keyham, which is three-quarters of a mile distant from Devonport. Both dock-yards are connected under ground by tunnel, and one general superintendence controls the two. As Devonport is chiefly the department of wood-ship building, storage, &c., whilst Keyham is the department of steam machinery repairs and manufactures, the latter only invites attention. Besides, as Keyham is a modern dock-yard, established not more than ten years, its factories are for that reason greater in extent, and more complete in detail, than those of any other dock-yard in England or France. The ground plan of both dock-yards will show the connecting tunnel, together with the basins, dry docks, building-slips, buildings, and steam factories.

Keyham dock-yard contains two basins and three dry docks, excavated from slate quartz, not unlike that at Cherbourg. These also, like the dry docks and basins at Cherbourg, have their side walls and bottoms formed throughout of granite blocks. The north basin, represented on the plan No. 1, is of sufficient depth to take in vessels of any size afloat. It is now in course of enlargement, at the north end, and when completed will possess all the accommodation that is likely to be required. Around the basin are all the needful mechanical appliances for raising weights to or from the vessels that may be within. These consist of a pair of wrought-iron shears, operated by steam, an iron steam crane, and several cranes worked by manual labor. They are all precisely of the same type as those described as existing around the steam basin of Portsmouth dock-yard.

The south basin, No. 2, is entered from the harbor and also from the north basin. It possesses three attached dry docks. The one shown on the north side, No. —, has recently been enlarged and is six hundred feet in length. As a matter of convenience, to facilitate the movement of weights to and from the vessels in dock, rail tracks extend parallel with either side of the dock, while travelling steam cranes, with boilers and engines attached, pass up and down

the tracks, and perform the work of carrying material to or from the vessels under repair or fitting out. One of the rails of this either side track is laid directly on the edge of the top surface of the dock, and the other on beams projecting over the edge and supported by uprights. The cranes are thus brought within reaching distance of the vessels. The other two dry docks differ only in length, and in the absence of mechanical facilities for raising weights.

The machine works, foundries, smitheries, boiler-making and pattern shops, copper-making and tin-shops, (which in Great Britain are denominated steam factories,) are the chief features of Keyham dock-yard. They are grouped together in a quadrangle, 890 feet long by 580 feet wide. The centre area of the group is a substantially covered space with a slate roof, supported on massive cast-iron columns, and lighted from the top. The roof only differs from the roofs of the principal London railway stations (plans of several accompany this report) in there being vertical projections for ventilation. The covered centre area is formed into divisions by seven longitudinal rows of columns. Rail tracks extend through two of the divisions of the buildings, and provision exists for steam travelling cranes. The whole of the covered centre area admits of being appropriated for workshops, and some of it has been partitioned off and so appropriated. Within these appropriations are the smithery and forge, the coppersmiths' shop, and the boiler-making smiths' shop, the smithery and forge occupying a division at the south end, containing one heavy steam hammer, three small steam hammers, the usual heating furnaces for the hammers, and about sixty smithery fires. The ordinary iron cranes abound, and the smoke and gases from the furnaces and fires are discharged into horizontal overhead pipes, and thence carried to the chimneys. In another division, adjoining the boiler shop and convenient to it, is another smithery, used solely for boiler-making purposes. It contains a small steam hammer, and the usual facilities for such work. In another adjoining division are all the boiler-making tools, machines, furnaces, &c., except the heavy shears, heavy punching machines, and steam riveting machines, which are in the boiler shop. The boiler-making machines are of superior character, and those most worthy of notice are a machine for planing the edges of boiler sheets, (all boiler sheets being planed, not chipped, after riveting;) a machine for cutting several holes at the same time, out of a tube sheet, mathematically correct; a machine for drilling six holes simultaneously in angle irons; a machine for punching holes in boiler sheets, by gauges, mathematically correct; a self-acting shearing machine; superior radial drilling machines, besides all the other machines and tools used in boiler-making.

The coppersmith's shop contains all the usual facilities found in such shops.

Around the covered centre area are located the machine and erecting shops, boiler-making shop, foundries, pattern and woodwork shops, hydraulic works, storehouses, and offices. The machine and erecting shop, represented on the plan at the south side of the group No. 3, is a granite structure, 345 feet long by 65 feet wide. It is divided in the centre by a cross wall, one end, one story high, forming the machine-erecting department, and the other end, two stories high, forming the machine shop. The building is of the same elevation its whole length. In the erecting shop there are three overhead travelling cranes, operated by steam, from the side wall line of shafting, pulleys and belts being used. Here are also the heaviest machinery, a boring mill, a vertical slotting machine, and a machine for planing armor plates. The machine for planing armor plates has four cutters, two to plane the edges and two to plane the top surfaces. There are, besides, several heavy lathes and drilling machines. The machine shop, as before stated, is two stories high. On the lower floor is placed all the heavy machinery, and there all the heaviest work, not prepared in the erecting shop, is fitted and finished. The upper floor contains all the machinery for light work. Both floors are well stocked with machinery, which is of the most improved description found in the engineering establishments of the present day, but there are

no peculiarities in any of the machines or appliances, unless in the armor-plate planing machine. Steam travellers and hydraulic lifts are applied wherever there are weights to be raised from one floor to another.

On the north side of the group is the boiler shop; the building is of brick, one story high, and of the same dimensions as the building just described. It is admirably lighted and the internal arrangements are excellent in all respects. It contains five overhead travelling cranes, two of which are operated by steam; one direct-acting steam riveting machine and heavy shears and punches—all the other machinery being in the covered centre area before mentioned. The heavy machines in the boiler shop are on one side of the building, and the boilers are put together on the other. Rail tracks enter the building for the convenience of placing boilers on trucks, for removal to the vessels or to the covered centre if not required for present use. The foundries are on the east side of the group, and the iron foundry is 180 feet long by 160 feet wide. It is in two longitudinal divisions under one roof; the roof supported up the centre, as shown in the plan accompanying this report. In each division there are two overhead travelling cranes, operated by steam, from a line of shafting. There are also eight wrought-iron cranes, four on each side. Four of the cranes, on the same side as the cupolas, are worked with steam power by means of two vertical engines attached to each crane; the steam is received through pipes carried down the top central bearing; the cupolas, two in number, and one air furnace, are situated in the opening of one of the side walls, so as to be supplied with metal and coal from a house with special accommodations without the foundry; the drying ovens are located on either side of the cupolas. Hydraulic lifts raise all the coal and pig metal to the platforms of the cupolas. Extending through the foundry are overhead railway carriages for the purpose of removing heavy castings from the moulding rooms; the foundry is well lighted both from the roof and sides; the internal and external appliances and conveniences for carrying on the work embody all the recent improvements; and, as a whole, it is one of the most complete iron foundries for promiscuous work existing, that of Sir William Armstrong's excepted. Near the iron foundry is the brass foundry, but, in comparison with that at Portsmouth, it is unworthy of notice. East of the brass foundry is the building which contains the machinery for operating all the hydraulic lifts of the factories. On the west side of the group, No. 4 on the plan, is a granite building 680 feet long by 65 feet wide, and two stories high with loft above. It is the most capacious and beautiful building belonging to the steam factories, and it is unwisely arranged to receive the spare machinery, materials, and stores of various kinds, except the central portion, which is occupied as offices and drawing-rooms. All the works of the factories are operated by a beam engine, driving overhead line shafting for the outside buildings, and underground line shaftings for the buildings comprised in the covered centre area.

It is to be observed that the facilities for moving weights from any or all the buildings around the covered centre area, from those buildings to the covered centre area, and from any of them to the vessels in the basins or docks, or *vice versa*, are of a most convenient character; so complete are the rail-track arrangements and so readily managed the steam cranes, that the heaviest boiler made can be removed from the boiler shop and placed in the hold of a vessel in a single hour. Throughout the dock-yard is an admirable system of road-making; the avenues are all laid with small broken stone mixed with coal tar, which is afterwards pressed down by heavy iron rollers moved by horse power; the mixture is cheap and the travel over it easy and comfortable.

While such are the advantages possessed by the steam factories of Keyham dock-yard, the important fact must not be overlooked that there are some serious defects in the general arrangements of the buildings. In the first place, the granite building facing the north basin, which, it will be remembered, is a store, should obviously have been the erecting shop and machine works; it was

necessary, not only on the ground of the inconvenience of the present arrangement, but because such shop and works are the most important branch, and should have occupied the most capacious building. This acknowledged defect necessitates the building of a new erecting shop, parallel with the present machine works, and between them and the covered centre area. The location of the foundries is also objectionable in consequence of being so far removed from the machine works. In short, notwithstanding the possession of admirable machinery, tools, and appliances of all kinds, the disposition of the buildings has not received the consideration which convenience and economy suggest.

Of the Devonport dock-yard but little need be said. The ground plan shows its single basin, its four dry-docks and its five building-slips. Over one of the docks and over one of the building-slips there are substantially built, well lighted ship-houses; there is also a very good smithery for ship-work, a saw-mill, and the usual workshops and storehouses. The two dock-yards in full operation would provide constant employment for 12,000 men, and with the remainder of the covered centre area, appropriated to the steam-factory department, the number of men might be considerably increased. When Keyham was laid out, the idea was, that its steam factories, unassisted, would provide sufficiently for the wants of a disabled fleet in machinery, while Devonport made good the defects of the ships—*i. e.*, of the wooden ones.

CHATHAM.

This dock-yard is situated on the river Medway, about twelve miles from the mouth of the Thames. It was formerly of the Elizabethan order, but is soon to become the greatest naval establishment of modern times. The old dock-yard proper has a large river frontage, and the several docks, ship-houses, and buildings, together with the necessary avenues, cover an area of eighty-nine acres. All the works are of a substantial kind, and in this country the establishment, as at present, would be extensive, but there, has always been considered second rate.

By a recent act of Parliament, St. Mary's island, adjoining the old dock-yard, and containing three hundred acres, has been appropriated, and new works are now being constructed. The new Chatham dock-yard will, therefore, cover an area of three hundred and eighty-nine acres.

It was after the introduction of iron-armored ships-of-war, and the certainty that the wooden walls of the British navy would be replaced by those of iron, that the admiralty decided to create a great iron constructive dock-yard, having extensive steam factories, docks of greater capacity than previously constructed, and basin accommodations on a large scale. It was also after the introduction of heavy guns, capable of throwing destructive projectiles several miles, that the new works were determined on; therefore, in considering the subject, the first and most important question to decide was that of location. After the examination of many places, Chatham was selected for enlargement because it offered advantages possessed by no other dock-yard or available position. In the first place, Chatham not being on the coast, but far up the river Medway, to be reached by any hostile vessels the defences of Sheerness must first be passed. Secondly, the Medway from Sheerness to Chatham has the natural protection of high land on both sides, readily convertible into positions of defence. Thirdly, on an emergency the river can be blocked; and fourthly, an island in a river affords facilities for wharfage not attainable on the main land—an important feature when fleets are being fitted out.

In describing the old works of the Chatham dock-yard, as at present existing, it may be premised there are no basins or works denominated steam factories, but for the construction of wooden vessels there is ample provision. Fronting the river are four dry-docks and seven building-slips. The first and largest is

of sufficient capacity to take in a vessel three hundred and ninety feet long, and the second one of two hundred and ninety-five feet; the third and fourth are comparatively small. The dry docks and slips are excavated from soft ground, but piled, and then built throughout with granite blocks in a similar manner to those in the other British dock-yards.

The building-slips are all covered with substantial ship-houses, four of which are grouped side by side, having the appearance of one building, roofed in four spans; they are constructed solely of iron and glass, are beautiful specimens of architecture, affording ample light, and will endure for generations, there being no danger of destruction by fire.

In the intermediate spaces from slip to slip is a sufficient area to prepare materials for vessels building, the whole of which is neatly paved or laid with wooden blocks, making a dry, hard, and comfortable floor, both to work on and travel over.

One of the ship-houses is provided with two overhead travelling carriages, sufficiently elevated to be above the largest vessel constructed. These carriages travel from end to end of the building, and are adapted to pick up timber from the ground, and carry it to and place it in any part of the vessel. There is also a travelling carriage between two of the slips adjoining that last mentioned, used for the purpose of moving timber, which has been or is to be prepared. There are, in addition, minor facilities for the purpose of carrying materials to or from the vessels under construction. The want of basins in the Chatham dock-yard has always been a great inconvenience, the fitting and repairing of vessels taking place in the river where the rise and fall of the tides are considerable, and the room insufficient.

As before stated, there are, as yet, no steam factories in the yard, but there is an old ordinary machine shop, two stories high, and containing a few good machines; there is also a small ordinary iron foundry, containing two medium-sized and one small cupola, a small brass foundry, pattern shop, and boiler-repairing shop. All these shops are used merely for jobbing purposes, and their capacity may be judged by those familiar with the history of our yards, when it is stated that they are about equal to similar shops in existence in the New York navy yard seven years ago. The ship smithery, constructed many years ago, is a brick building, in the form of a quadrangle, with an open middle court, each of its sides being about two hundred and fifty feet in length; its interior floor is paved with cast-iron blocks; the plant consists of one two-turn condir steam-hammer, three small ordinary steam-hammers, and fifty smithery single fires, with necessary cranes and appliances; the smoke is discharged through separate pipes from each of the fires. The plan of the building is good, and if properly lighted and ventilated, with a simple plan of carrying off the smoke and gas, the shop would be unexceptionable. The various other buildings and workshops in this dock-yard are, with two exceptions, nearly identical with those named or described as existing in the other royal dock-yards, the exceptions being a copper-rolling mill and saw-mill; attached to the latter building is an oar-making machine, which turns out all the oars for the vessels of the British navy. The copper-rolling mill contains the furnaces, machinery, and appliances for the manufacture of sheathing and bolts; it has turned out all the sheathing for the bottoms of the vessels of the British navy. In addition to the copper-rolling machinery, &c., there are rolls and facilities for the manufacture of small-sized angle and bar irons. As all this machinery is inferior to similar machinery at present found in the copper-rolling mill of the Washington navy yard, details of it are unnecessary, but it may be instructive to mention that for some years the quality of the British copper sheathing had deteriorated, until it was found to endure only four or five years. To ascertain the cause was the subject of investigation by engineers and chemists for a long period;

and finally the defect was found to be in the quality of the ore used, which was remedied by a more judicious selection and mixture.

The most noteworthy feature at present in connexion with this dock-yard is the construction of a large iron and armored ship in a dry dock. This vessel, the *Achilles*, which has been recently completed, and is now in the Channel fleet, was the first iron ship built in a British dock-yard, and with the exception of the two French iron frigates, *Couronne* and *Heroine*, is the only iron ship built in any public yard. Three ends were in view in the construction of the *Achilles*: first, to determine the relative economy of iron ship-building in royal dock-yards, or by contract; second, to ascertain the mechanical advantages obtained in construction by the position in a dry dock; and thirdly, to obviate the necessity of launching. The dry dock selected for the purpose was the largest one; on one side of the dock, fifty feet from its edge, and extending its whole length, was erected a corrugated iron building, forty feet wide, and one story high; in one end of this building are the furnaces, fires and other appliances for shaping and preparing the frames of the vessels, and in the other end nearest the river are all the machinery and tools for preparing the sheets beams, &c.; the machinery and tools are of the varieties usually found in iron ship-building yards, but of a superior order. The only very heavy machine is the one for bending rolls; the rolls are twenty-six inches in diameter, and sixteen feet long between the journals. On the floor a small hand carriage, with crane attached, traverses over rail tracks, through the centre of the building, carrying materials to the machines and into and from the building; this arrangement saves the labor of many men. The want of sufficient room in the building prevents easy access to the machinery, and it is the only acknowledged defect in connexion with the constructive facilities.

Parallel with the dock in which the *Achilles* was built is an auxiliary workshop, built over a dry dock, the same being floored over; in this improvised shop is the hydraulic machine and appliances for bending and shaping the armor plates, also a large machine for planing their edges; the former machine is similar to that used in all British yards where armored vessels are constructed; a copy of which machine will soon be in use in one of our yards; the latter is of the ordinary moving-table planing machine variety, but is sufficiently large to take in, at the same time, two of the heaviest armor plates; it is provided also with two cutting tools.

Returning to the dock in which the *Achilles* was built: In addition to the mechanical facilities previously named there are as follows: parallel with the greatest length of dock, and on either side, are rail tracks laid similarly to those at the large Keyham dock, and described under the head of that dock-yard; mounted on these rail tracks are four steam carriages, two on either side of the vessel, each of them being provided with a crane-boiler and two engines, all in one frame, and affixed to the carriage; therefore the same power that propels the carriage up and down the tracks revolves the cranes and lowers or raises the weights into or out of the vessel; one of these carriages on either side is adapted for lifting the heavy weights, such as frames, beams, and armor plates, and the other the light weights; the propelling, hoisting, and revolving power is rapid and easy.

The advantages gained by building a vessel in dock, rather than on the slips, are as follows:

1. No weights are required to be raised to elevated positions—an important item in the construction of heavy vessels.
2. All the workmen within and without the vessels come more directly under the eye of the foreman; for, from the edge of the dock, he can, previous to the decks being laid, view all of them.
3. In building the vessel she lies on an even keel; all the work therefore can be fitted to correspond with plumb lines.

4. And most important of all, the severe strain to which long and heavy vessels are subjected in launching is avoided.

In connexion with this subject it is proper to add that the Achilles is an iron-armored vessel of 6,079 tons, and 380 feet long. She has been afloat ten months, and during that time, I am informed on reliable authority, not as much as a wine-glass of water has leaked into her; this is a circumstance unparalleled in the history of ship-building, and, unless she should be run on a hard bottom, there is no reason why she should not remain tight for many years. The perfection of construction is to be attributed to the following facts: that all the frames were accurately shaped, that every sheet in the whole formation was planed on the edges and accurately punched to gauges, so that all holes required to correspond met mathematically correct, every rivet was put in with care and afterwards inspected, and all the metal was of the best refined iron; no ordinary ship plates were used.

Such perfection in materials and workmanship is only to be obtained through good mechanical judgment, and perseverance and patience on the part of the inspectors. The Achilles was the first vessel built by the admiralty in dry dock, and I am particular in mentioning the case because the value of the experience is of the utmost importance in iron ship-building. The strength and endurance of iron ships over wooden ones is acknowledged; it only remained to be proved that they could, of any dimensions, be built perfect: the Achilles is the proof.

Immediately after the Achilles was removed from the dock, a second iron vessel, the Bellerophon, was laid down, and is now well advanced towards completion. So much for the Chatham dock-yard of the present day; what the future of this naval establishment will be may be understood from the accompanying ground plan, where, in that part showing the location of the new works, it will be seen that the whole of St. Mary's island, containing 300 acres, is appropriated; there are to be three great basins; the first, on the west side, being 1,850 feet long and 700 feet wide, with a water area of $30\frac{1}{2}$ acres; the second, or eastern basin, 1,550 feet at its greatest length, with an area of 22 acres; and the third, or middle one, 700 feet long, by 430 feet wide, with an area of 7 acres; all to have a depth of 30 feet at neap tides. Attached to the eastern basin are to be five dry docks—three, each, 500 feet long, and two, each, 400 feet long. The steam factories are to be located on the south side of the basins, and within convenient reach of them, and are projected to cover an area of 504,125 square feet. All the docks will doubtless have ship-houses over them, and be prepared in all respects for iron ship-building. The steam factories are intended to be the greatest of modern times.

Estimated cost of the extension of Chatham dock-yard.

For completing the river wall and embankment to the extent shown on plan, including coffer-dams for executing the work within free from water, and for hired labor necessarily required and superintendence.....	£85, 000
For the materials to be purchased for constructing the locks, basins and docks, including the hired labor necessarily required and superintendence.....	500, 000
For the purchase of materials for factory buildings, including hired labor necessarily required and superintendence, but omitting factory machinery and tools of every description.....	180, 000
For caissons or bridges, bollards, capstans, foundations for shears, penstocks, culverts and wharves.....	82, 000

For the purchase of tools, plants, &c., for the works generally . . .	£10, 000
Add probable cost of dredging the river below the entrance locks to a mean depth of twenty-seven feet at half tides, and a width of six hundred feet	45, 000
Total	<u>902, 000</u>

WOOLWICH.

Woolwich dock-yard is complete in itself for building, repairing, and equipping wooden vessels. It is situated on the river Thames, about ten miles below London bridge, and covers an area of $56\frac{1}{4}$ acres within the walls. Possessing the great river frontage of 4,200 feet, it is necessarily a strip on the river side, the principal thoroughfare of the town of Woolwich being directly in its rear, and on entering the dock-yard gateway, from which an avenue leads, in a straight line, across the dock-yard to the offices of the officials, which are very properly located in the centre. On the left hand, or western side, are the basins, the dry dock, and the steam factories, and on the right hand, or eastern side, are the building slips, dry docks, ship smitheries, armor plate preparing houses, and the usual wooden ship building shops, as in the other dock-yards.

The basins are two in number, an inner and outer one. The outer basin is on the river's edge, and is entered from it; the inner basin, in the rear of the outer, is only accessible through it. The areas of the outer and inner basins are about $3\frac{3}{4}$ and $2\frac{1}{2}$ acres respectively. To the outer basin is attached one dry dock, and around both basins are cranes and appliances similar to those in the other dock-yards.

Parallel with the inner basin, some eighty or ninety feet from it, are the machine and erecting shops. The building is 440 feet long by 47 feet wide, measured inside, divided by a central cross wall having a door in the middle.

One of the divisions, one story high, is the erecting shop, and the other, two stories high, the machine and fitting shop. The erecting shop is similar to that at Keyham, before described, with this difference, that this is less abundantly supplied with machines. Two overhead travelling cranes move weights, as may be required; the machines are grouped together in a corner, the vacant space is therefore available for setting up heavy work. The machine and fitting shop is well stocked with machinery and, tools; but, unlike those at Keyham, these are of old pattern. There has not been any new machinery introduced for some time.

Parallel again with the machine and erecting shops are the smithery, brass foundry, and coppersmiths shop. The smithery is 240 feet long by 80 feet wide, roofed by two spans of iron on cast iron columns. The forge, occupying one end, contains four ordinary steam-hammers, and the accompanying furnaces; the other end is appropriated to the smithery fires, 44 in number, which are arranged in a double row up the centre and single rows under the windows along the sides; the fires discharge their smoke and gases into underground flues and thence to one chimney, and, as is the case in all similar arrangements, the smithery is always filled with smoke; this arrangement, for removing smoke from the building at Woolwich and elsewhere, is a failure. The brass foundry and coppersmiths' shop are situated in a building close to the east end of the smithery, and at right angles to it, divided longitudinally by a wall; at the west end of the smithery is the engine-house, from which the factory machinery is driven.

The area between the machine erecting shop and the smithery, a space of 440 feet long by 60 feet wide, is covered with an iron and glass roof. This area, in case of necessity, admits of appropriation for shops, and at present is used as a store for spare heavy machinery, such as propellers, shafts, &c.; there is an overhead travelling crane for the convenient and ready movement of weights.

The boiler shop, situated sixty and eighty feet west and south of the brass foundry, is a building 230 feet long by 60 feet wide, well lighted and a convenient height for the travelling cranes; the walls are heavy, like those of the other buildings in Woolwich and indeed of all the dock-yards. In addition to one pair of heavy rolls, one steam riveting machine and one rivet-making machine, the shop contains the ordinary boiler-making tools; outside the building, 65 feet from, and facing it, are the furnaces and appliances for heating and bending the boiler plates and angle irons.

Adjoining the boiler shop, on the north side, is the iron foundry. It is 80 feet long by 60 feet wide, of ancient date, and contains nothing of any note; there is an overhead travelling crane, but the revolving cranes, as exceptions to those in the other dock-yards, are, as in the smithery and machine shop, cast iron.

The building slips, six in number, situated at the east end of the dock-yard, are ranged on the bank of the river, having ship-houses over them, which are built in a superior manner; four of iron and glass only, the roofs being of galvanized iron, on wrought iron frames, supported by cast-iron columns. The houses are properly lighted from the roof and sides. The slips are arranged to launch the vessels building on them into the river. At this end of the dock-yard are also two dry docks having entrance from the river, and situated in convenient proximity to the slips, on the south of which are the ship's smithery and armor plate building. The smithery is a fine building, very high, and roofed in three spans, by an iron roof supported on cast iron columns; it contains two small steam-hammers, and fifty-two ordinary smithery fires, ranged in four parallel rows. The smoke and gases are discharged into overhead horizontal pipes. Adjoining the smithery is a small machine shop for ship work exclusively, adjoining which is a small forge containing two medium-sized steam-hammers, with their furnaces and cast iron cranes, supported and revolved on central shafts extending a considerable distance under ground. None of the cranes in Woolwich dock-yard are supported from the top.

The armor plate building is parallel with that last named, and on the side of a convenient avenue; it is one story high, of low elevation, built of corrugated iron and in the form of a right angle; here all the armor plates for the armored vessels building are prepared after delivery by the contractors, the preparation consisting chiefly of heating and bending them to fit the sides of the vessels, drilling and countersinking the bolt holes, and in some cases planing the edges, the planing taking place when the plates do not joint accurately.

Why there is so little to be done to the armor plates in the dock-yard is owing to the contractors planing the edges before delivery, which process, and indeed their whole manufacture, takes place in the presence of government inspectors, stationed where the plates are rolled; there is also a heating furnace into which a carriage passes with an armor plate. When the plate is heated to the extent required, the carriage is removed from the furnace and the armor plate laid hold of by a crane and swung to the press for bending, which is worked by hydraulic power, and is similar to those previously mentioned. The machine for planing the armor plates is not unlike the ordinary planing machines; it has movable tables worked by rack and pinion, with four cutting tools lengthwise and one crosswise. Two of the cutters are placed as in an ordinary planing machine with moving tables, while the other two are attached to the vertical standards to plane the ends of the armor plates, which are secured to stationary plates on the machine. The cutting heads with cutting tools attached are fixed to the table and travel with it. None of the machines and appliances for preparing armor plates differ materially from those in use elsewhere. The heating furnace is inferior to the one at Portsmouth, the furnace carriage there being mounted on rails, and the furnace itself is a miniature foundry drying oven, the only inconvenience being that the carriage stands in need of renewing frequently.

It would be superfluous to enumerate the other buildings in this dock-yard, as they resemble the buildings in the other dock-yards, previously described.

Rail tracks are not laid in the avenues or through the buildings; weights are moved from place to place on trucks propelled by steam-traction carriages—an arrangement found inferior to the railway system in force at the Portsmouth and Keyham dock-yards.

SHEERNESS.

This dock-yard is situated on the river Medway, and on that side of its junction with the river Thames; it is fortified, and its defences, together with those on the opposite side, were, when originated, intended to protect the entrance to the river.

This dock-yard has been always exclusively employed repairing vessels and fitting them for sea; there are not any extensive steam factories and but one building slip, which is of the second class. There are, however, three basins and five dry docks. The water areas of the basins are, respectively, 3 acres, 2 rods, 5 perches; 1 acre, 23 perches; and 1 acre, 1 rod, 7 perches.

The dimensions of the dry docks are as follows:

Name or number of dock.	Length in blocks at bottom of dock.	Length at top of dock.	Width of entrance.	Depth of water on sill at O. W. H. spring tides.	Depth of water at O. H. M. neap tides.
	<i>Ft. in.</i>	<i>Ft. in.</i>	<i>Ft. in.</i>	<i>Ft. in.</i>	<i>Ft. in.</i>

No. 5 dock.....	154 4	196 1	58 7	14 8	10 2

There are a machine shop, iron and brass foundries, boiler shop, and smithery. The machine shop is in a building one story high, two hundred and fifty feet long by ninety feet wide, (roughly measured,) with an interior gallery extending all the way round.

The centre area of this building is appropriated for erecting purposes, and has an overhead travelling crane; the heavy machines are ranged along either side, while under the galleries the lighter machines are placed; the gallery floors are appropriated to small machine work and pattern making.

The iron foundry is about one hundred and fifty feet long by sixty-five feet wide; the plant in it consists of one travelling crane, three iron revolving cranes, three cupolas, and two pits.

The boiler shop is similar in architectural design to M. Mazeline's engine and erecting shop, an overhead travelling crane traversing the centre, whilst the boiler-making machines are distributed along the side passages.

The smithery is of the ordinary kind, and contains two steam-hammers, two heating furnaces, and forty smithery fires.

The saw-mill, wood-work shops, storehouses, and other buildings are similar to those previously mentioned as existing in the other royal dock-yards.

DEPTFORD.

Deptford dock-yard is situated in the outskirts of London, on the river Thames. The entire area, within the walls, is seventy-two and a half acres,

but twenty-five and a half acres are appropriated to the victualling department. For many years the rating of the dock-yard has been third rate, although recently the *Enterprise* and the *Favorite*, two small iron-clads designed by Mr. G. J. Reed, were launched from its slips. It is divided into two parts by a small canal, leading from the river to the boat-pond, where ships' boats are floated; that on one side the canal, covering forty-seven acres, is known as the dock-yard proper; the other side, covering twenty-five and a half acres, is, as before mentioned, the victualling department.

The dock-yard proper contains one small basin, having a water area of one acre, one rod, and eight perches; two small building slips, arranged to launch vessels into the basin; two larger building slips, fronting the river Thames; one large dry dock, and all the workshops, storehouses, and other buildings suitable for the simultaneous construction of four ordinary wooden ships.

The dry dock is three hundred and eighty-eight feet in length on the bottom, and it having a central gate division, two distinct docks of small capacity are at all times available; when so divided, they respectively measure one hundred and ninety-seven feet eight inches and one hundred and ninety feet four inches in length on the bottom. The dock has a substantial and well-lighted ship-house over it.

The building slips are of the following dimensions: Those fronting the river two hundred and ninety-six feet long by sixty-two feet wide, and two hundred and eighty feet long by fifty-two and a half feet wide, respectively; one of those fronting the basin is two hundred feet long by forty-five feet wide. The first two form a pair; the others are detached; all are covered with ship-houses built wholly of iron and glass.

There are neither steam factories, machine shop nor foundries for the repair of steam machinery in the dock-yard. There is, however, a tolerable ship smithery and a fine saw-mill, which, like those in all other British dock-yards, is of two stories—the ground floor being for the heavy and the upper for light work; below, in a range parallel to each other, are six vertical and one circular sawing machines, each possessing from four to six saws; on the second story the machines are not worth particularizing.

The facilities for moving timber into the saw-mill by means of trucks on rails are superior to those of our dock-yards, but the wood-working machines inferior, and far behind the wood-converting machines of M. Normand, of Havre.

The engines and pumps of Sir William Armstrong's hydraulic machinery are located in a central position in the yard, and water-pipes are conveyed under ground to the buildings and cranes; the number of cranes and lifts operated by this machinery being thirty-six, and the convenience of the arrangement is complete. It is to be regretted that time did not permit of examination for detailed description.

The victualling department is conveniently laid out for the preparation of and packing food and clothing for the royal navy. The branches are, first, the mills for the preparation of flour and oatmeal; second, the bakery, in which machinery is employed for baking purposes; third, the chocolate mills, where the berries are prepared for use; fourth, the coffee mills; fifth, the mustard mills; sixth, packing-rooms; seventh, buildings in which meats are prepared and packed; eighth, provision stores; ninth, clothing and packing stores; and, tenth, cooperage. The last mentioned covers a considerable area, with various buildings, and casks, barrels and boxes are there manufactured to contain the provisions. At present, the cooperage work, with the exception of the sawing, is performed by hand, but machinery for this purpose is under construction.

This concludes the list of dock-yards visited, embracing all belonging to Great Britain, except Pembroke, which is located on the coast of Wales, and is, as I was informed, on authority, exclusively a wooden ship-building yard.

In connexion with the subject, it may be mentioned that all the principal

officers of the dock-yards of Great Britain have residences provided for them within the walls.

These officers are, in all cases—1st, the admiral or commodore superintendent; 2d, the master attendant; 3d, chief engineer; 4th, surgeon; 5th, master shipwright; 6th, storekeeper; and 7th, accountant. In all the dock-yards the chief engineer and master shipwright preside over distinct departments; the chief engineer has all the machinery of the yard and the steam factories under his charge, and the master shipwright all the wooden ships under construction and shops, &c., appertaining to wooden ship-building, inclusive of the ship-smithery and machine tools for smiths' work. The chief engineer is selected from the list of the regular engineers of the royal navy, and when placed on dock-yard duty is never again required to serve afloat; his pay is £650 per annum, with house rent and repairs allowed, and at a fixed age a liberal retiring pension.

Briefly described, such are the dock-yards of the British navy; all of them are well worthy of careful inspection, and in some the "*tout ensemble*" is very imposing.

At present the total area of ground covered by the several dock-yards exceeds 500 acres, possessing basin accommodation of $36\frac{1}{4}$ acres water area; 32 stone dry docks and 31 building slips, having substantial ship-houses over them—all exclusive of Pembroke.

When the yards now in process of enlargement are completed, the total area of ground covered by them will exceed 1,000 acres, having $137\frac{1}{4}$ acres water area of basins, 44 stone dry docks, and as many building slips as may be required. All other preparations for building and equipping fleets are proportionate and comparatively gigantic. The steam factories have been, and are, employed to keep in repair, and in some cases to remodel, the steam machinery of the fleets. At present, as hitherto, the ships of the British navy are engined by the extensive private factories of Messrs. Penn & Sons, Messrs. Mauldsley & Son, Messrs. Humphrey & Tennant, and Messrs. G. Rennie & Son. The armor plates are produced at the following extensive iron works, viz: the Mill Wall, Thames, Cyclops, Mersey, Park Head, and Park Gate Companies, all of whom compete for the government contracts. The iron ships, with two exceptions, viz., the Achilles, built, and the Bellerophon, building at the Chatham dock-yard, have been and are constructed by the Mill Wall iron ship-building and iron manufacturing establishment, the Thames Company, Messrs. Napier & Sons, and Messrs. Laird Brothers. All these works are very extensive, and such as are not to be found out of Great Britain.

The ordinary constructive capabilities of either the Mill Wall or Thames Company are above 25,000 tons of the largest vessels, in hand and progressing simultaneously.

At the time of my visit to the Mill Wall yard there were ten heavy iron vessels on the stocks; the largest being her Britannic Majesty's ship Northumberland, 6,621 tons, on which 1,200 men were then employed; 4,500 men being the number at work in the yard. These four establishments represent, however, but a very small proportion of the vast resources of the kingdom in iron ship-building, iron manufacture and engine making; in the event of war the British admiralty could have at command and employed in the construction of iron ships more than forty extensive iron ship-building yards, and as many engine factories, besides any number of iron rolling mills. Yet, notwithstanding the number of private works at command, and the facilities afforded by them for the construction of iron vessels and manufacture of steam machinery, the British government do not intend to rely solely on them for their future iron-armored ships-of-war.

Chatham dock-yard will be kept continuously employed in the construction

but twenty-five and a half acres are appropriated to the victualling department. For many years the rating of the dock-yard has been third rate, although recently the *Enterprise* and the *Favorite*, two small iron-clads designed by Mr. G. J. Reed, were launched from its slips. It is divided into two parts by a small canal, leading from the river to the boat-pond, where ships' boats are floated; that on one side the canal, covering forty-seven acres, is known as the dock-yard proper; the other side, covering twenty-five and a half acres, is, as before mentioned, the victualling department.

The dock-yard proper contains one small basin, having a water area of one acre, one rod, and eight perches; two small building slips, arranged to launch vessels into the basin; two larger building slips, fronting the river Thames; one large dry dock, and all the workshops, storehouses, and other buildings suitable for the simultaneous construction of four ordinary wooden ships.

The dry dock is three hundred and eighty-eight feet in length on the bottom, and it having a central gate division, two distinct docks of small capacity are at all times available; when so divided, they respectively measure one hundred and ninety-seven feet eight inches and one hundred and ninety feet four inches in length on the bottom. The dock has a substantial and well-lighted ship-house over it.

The building slips are of the following dimensions: Those fronting the river two hundred and ninety-six feet long by sixty-two feet wide, and two hundred and eighty feet long by fifty-two and a half feet wide, respectively; one of those fronting the basin is two hundred feet long by forty-five feet wide. The first two form a pair; the others are detached; all are covered with ship-houses built wholly of iron and glass.

Rennie & Son. The armor plates are produced at the following extensive iron works, viz: the Mill Wall, Thames, Cyclops, Mersey, Park Head, and Park Gate Companies, all of whom compete for the government contracts. The iron ships, with two exceptions, viz., the Achilles, built, and the Bellerophon, building at the Chatham dock-yard, have been and are constructed by the Mill Wall iron ship-building and iron manufacturing establishment, the Thames Company, Messrs. Napier & Sons, and Messrs. Laird Brothers. All these works are very extensive, and such as are not to be found out of Great Britain.

The ordinary constructive capabilities of either the Mill Wall or Thames Company are above 25,000 tons of the largest vessels, in hand and progressing simultaneously.

At the time of my visit to the Mill Wall yard there were ten heavy iron vessels on the stocks; the largest being her Britannic Majesty's ship Northumberland, 6,621 tons, on which 1,200 men were then employed; 4,500 men being the number at work in the yard. These four establishments represent, however, but a very small proportion of the vast resources of the kingdom in iron ship-building, iron manufacture and engine making; in the event of war the British admiralty could have at command and employed in the construction of iron ships more than forty extensive iron ship-building yards, and as many engine factories, besides any number of iron rolling mills. Yet, notwithstanding the number of private works at command, and the facilities afforded by them for the construction of iron vessels and manufacture of steam machinery, the British government do not intend to rely solely on them for their future iron-armored ships-of-war.

Chatham dock-yard will be kept continuously employed in the construction

of iron vessels, and when the enlargement of the yard and the new docks and factories are completed, the construction of five iron vessels of the Warrior class, with all the necessary machinery for them, can go on simultaneously.

THE IRON SHIP-BUILDING YARDS OF GREAT BRITAIN.

These yards are located on the rivers Thames, Clyde, Mersey, Tyne, Wear, Tees, Avon, &c.

On the Thames there are several extensive yards, but the two most important are the Mill Wall and Thames Companies. The annual productions from the Thames yards are, in the aggregate, 117,000 tons of iron vessels.

The yards on the Clyde are 33 in number, and the productions from them, during the year 1863, were 170 iron vessels, with an aggregate of 120,700 tons.

On the Mersey, iron vessels are turned out to the aggregate of 80,000 tons annually; on the Tyne, 51,236 tons; the Wear, 25,000 tons; and the Tees, 15,000 tons—making a total annual aggregate of 408,996 tons constructed on the above-named rivers. Iron vessels are also built at Bristol, Belfast, and other places. The total tonnage of iron vessels built this year, 1864, in Great Britain, cannot fall short of 500,000 tons.

The yards visited have previously been named, and brief statements of them will now follow.

THE MILL WALL COMPANY.

The company existing under the above name is the most extensive in England; ships are not only built, but the iron, including rolled armor plates, for their construction, and the steam machinery to be placed in them, is chiefly manufactured on the spot. A full description of so important an establishment would be desirable if the general plan of the works were good, and the detail arrangements complete; but both are faulty. Formerly, the establishment was owned and carried on by Scott Russell, esq., and in it the Great Eastern was built. Since that time many alterations and additions have been made, partly originating in necessity consequent upon different varieties of employment, and partly from different views of the requirements entertained by the respective managers; so that at present it is, in common with many establishments, grown large from small beginnings, made up of permanent and make-shift additions; therefore a brief statement will suffice.

As previously stated, the works are situated on the river Thames, nearly opposite the Deptford dock-yard, cover an area of 27 acres, have a frontage on the river of 1,900 feet, employ 4,500 men within the walls of the yard, and the capital of the company is £500,000.

A public street divides the establishment into two almost equal parts; one division of which (that on the river side) is devoted principally to ship-building, and the other to manufacturing purposes.

In the former, the ships under construction are built on launching-ways pointing to the river, the largest being built in an excavation, and in their rear are the several shops and sheds containing the machinery and tools common to iron ship-building; the machine and erecting shops; foundry and copper shops; wood-work shops, for preparing the decks, cabin and joiners' work; and the armor-plate bending and preparing shop. In the latter, on the opposite side of the street, are the rolling mills, the forge, the armor-plate mills, boiler shop, armor-plate planing shop, and smithery.

In this yard, as with a few exceptions in all the private yards of Great Britain, the vessels are built in the open air, having no houses or covers over them. The machine and erecting shops are two in number, one of similar architectural design to that of M. Mazeline, at Havre, the interior arrangements

being identical, and it is well stocked with the heaviest and best description of machinery and tools. The foundry is old-fashioned, and in its present state crowded, but a new one is in contemplation. The forge is in a building, having an iron frame and slate roof, supported on iron columns, containing six heavy steam-hammers, with the necessary furnaces, and iron cranes to each, all revolved around central shafts. In this forge all the heavy shafts and other forgings are made for the machinery and the vessels constructed by the company. Besides the steam-hammers in the forge, the smithery contains several smaller ones and 97 smithery fires, all of which were in active operation at the time of my visit. The rolling mills are divided into four compartments: 1st. The roughing mill, in which the scrap and puddled bars are worked up and prepared for the other mills and steam-hammers. 2d. That for the manufacture of angle and bar iron. 3d. For armor plates.

In these mills the armor plates, frames, beams and plates of all dimensions used in iron ship-building are rolled. There are no peculiarities in the construction of the works belonging to these mills, neither do they differ from other iron mills except in the absence of puddling furnaces. The productions of the mills are manufactured chiefly from scrap, but puddled bars enter into the mixture for a variety of work, and, when used, is purchased for the purpose.

THE THAMES COMPANY.

These are also most important works, ranking next to the Mill Wall Company, and are distinguished by the same peculiarity; both being iron works, iron ship-building yards, and steam-engine manufactories. From the pig metal, scrap and bar iron entering the gates, steamships of any class are produced; first making the material, and from it the ships—a combination peculiar to these great yards, and not to be found elsewhere either in Great Britain, on the continent, or in this country. On their own rolling mills, forges, foundries, machine and other works, they can at all times rely for material.

The only difference between the organization of the Mill Wall and Thames Works is, that the latter are not prepared to roll armor plates. This company built the *Warrior*, the first British iron-clad; since then, the *Minotaur*, one of the largest and most powerful vessels afloat, and the *Valiant*, both British iron-clads; the Russian battery, *Pervenetz*, 2,800 tons; and are now building the Spanish iron-clad frigate *Victoria*, of 4,860 tons, and a Turkish iron-clad, of 4,222 tons. The armor plates for the *Warrior* were forged by the Thames Company's Works; after the construction of that vessel the admiralty decided to receive only rolled plates, so that the company is depending on other mills in this regard only. These works are located on the river Thames, near the Victoria and East India docks. A small creek very conveniently divides the work into two parts, and into this creek the ships built on the upper slips are launched, whilst those on the lower ones are launched into the river Thames.

Seven or eight heavy ships under construction, with all work belonging to them progressing simultaneously, is not unusual in the yards of either the Thames or Mill Wall Companies.

MESSRS. LAIRD BROTHERS.

This ship-building yard and engine factory, located at Birkenhead, is compact and complete. It covers an area of about 15 acres, and has a frontage to the river of some 900 feet; in it at the time of my visit were six vessels on the stocks, one of which was her Britannic Majesty's iron-clad frigate *Agincourt*, of 6,621 tons. The peculiar feature of this yard, and one rarely to be found in private establishments of the like nature, is the attachment to it of two large, permanent stone dry docks for the construction of or repairing vessels. These

docks are each 410 feet long inside, and 85 feet wide, and of sufficient depth to take in the largest class of vessel afloat. In one of them the Agincourt is under construction, and over this dock a handsome and well-built ship-house, constructed entirely of iron and glass, and roofed with galvanized, corrugated iron, longitudinally, by ten semicircular spans of $20\frac{1}{2}$ feet radius each; under each of these, extending across the dock, is a beam, and under the beams, central and longitudinally, is a girder, all of wrought iron, and joined together; the whole weight, including roof and all attachments, is supported on cast iron columns resting on stone foundations inside and close to the side walls of the dock. The house is lighted from the top and from either side; secured to the supporting columns on both sides are projecting arms, on which rail tracks are laid, several feet above the vessel, and on these rails two wrought iron travellers, each of 90 feet span, travel from end to end of the dock, and on these travellers are carriages to accommodate movements across the vessel as desired, so that all possible facilities are at command, to move and place frames, beams, plates or armor blocks of any weight to any desired position in or about the vessel with the least possible labor. Altogether, the arrangements and facilities for building a heavy iron ship are of the most superior order, and have advantages over similar arrangements in Chatham dock-yard, in the addition of a well-built, properly lighted, and fire-proof building, to protect the vessel and the workmen either from storms or the heat of the sun.

Parallel with this dock, and near it, is the building in which the machines for shearing, punching, drilling and preparing the plates, frames, &c., are situated; they are of the class usually found in such yards, with one exception, viz: a very large machine for planing the edges of ships' plates; it is 36 feet long, has a moving and revolving tool, which cuts both going ahead and back, and is capable of planing a plate 33 feet in length. There is also an immense pair of rolls operated by steam power, the barrels being 18 feet in length by 28 inches in diameter.

The building slips occupied are of the following respective lengths: 230 feet, 240 feet, 250 feet, and 400 feet. The extreme left of the works is a timber yard, behind which, and near the docks and building slips, are grouped the erecting, fitting, millwright, pattern, smith's and boiler shops, rigging and mould lofts, the sheds containing the armor-plate bending, planing and drilling machinery, and the furnaces and tools for preparing the materials for the vessels building on the stocks.

The principle of, and which is carried out by this firm is, that iron ships, on a great scale, should be constructed in docks—such to have strong, well-built, and properly lighted and ventilated ship-houses over them; also all appliances requisite for moving weights, the advantages of which have heretofore been shown in description of Chatham dock-yard.

MESSRS. NAPIER & SON.

This iron ship-building yard and engine factory, situate at Glasgow, has been established many years, and possesses a world-wide reputation. The establishments are distinct, and two miles apart, the yard being on the river Clyde, the factories in the city; the latter comprising two machine shops in different streets, adjoining one of which is the boiler shop; the smithery and foundry in another and separate localities. These several shops having been established at various times to meet the increased demands are, as a combination, necessarily not such as would be constructed at the present time. The ship-yard is, however, in many respects, a superior one. It is in the form of a parallelogram, is surrounded by brick walls, and possesses sufficient river frontage to admit of the simultaneous construction of four large vessels. Parallel with the river, and fronting the bows of the vessels under construction, is a build-

ing 250 feet by 200 feet, containing the ship-building machinery, which is roofed in four spans, and is well lighted and ventilated; it contains one heavy machine for planing the edges of ships' plates, and another for planing butts, both provided with moving tools; two pairs of heavy rolls, and all the improved shearing, punching and drilling machines, and other appliances.

Near this last-mentioned building is a properly arranged and well-lighted smithery, containing one small steam-hammer and forty smithery fires. The other buildings containing the various machinery and appliances, including the usual amor-plate bending machines, are judiciously placed. The firm is now engaged in the construction of three iron-clad vessels for the Turkish government, of the same type and class as the British iron-clad Valiant.

The iron ship-building yard of Messrs. Thomson adjoins the Messrs. Napier's, and not far distant is that of Messrs. Randolph & Elder's, both occupying prominent positions in the trade. The engine factory of the latter-named firm is located in the city of Glasgow; the machine and erecting shops belonging to it are both in design of building and in character of machinery and appliances, superior to others on the Clyde, but, in common with nearly all the Clyde establishments, there is no foundry attached to it; the foundry business on the Clyde being a separate and distinct branch. This firm are noted for their *spécialité* in constructing double-cylinder expansive engines, both cylinders being steam-jacketed, the steam from the boiler superheated and received directly into the jackets.

MESSRS. JOHN ROGERSON & CO.

The yard of this firm is situated at Newcastle-upon-Tyne, and the rolling mills at Consett, thirteen miles distant from the former. The company's mills are employed principally in manufacturing bar and plate iron, and are more extensive than any other of the kind in England.

The iron ship-building yard covers a considerable portion of ground, and has a large frontage to the river Tyne. It is well provided with all constructive facilities, and, as an exception to the general rule in England, is provided with several substantial, well-built, and properly lighted ship-houses.

At the time of my visit there were seven screw steamers on the stocks, and four others alongside the wharf—making, in all, eleven under construction.

STEEL SHIP-BUILDING YARD OF MESSRS. JONES, QUIGGIN & CO.

This yard, located at Liverpool, is, as its name implies, devoted almost exclusively to steel ship-building, and is the only one of the kind existing; the vessels built in it are, with very few exceptions, constructed entirely of steel; the frames, plates, beams and masts all being rolled steel, manufactured chiefly from the Bessimer process and by the extensive works of Messrs. Brown & Co., and Cammell & Co., Sheffield; also works located in Germany. The yard is compact, forming nearly a square, covers an area of eight acres, and has a river frontage on the Mersey of 500 feet. The machinery and tools employed in the construction of the vessels are, in all respects, identical with iron ship-building yards.

This firm was the first to adopt steel for the rigging of vessels, and to make steel masts and spars for vessels of any class. The firm have turned out a large number of steel vessels, and at the time of my visit to the yard, in August last, there were on the stocks building five steel paddle-wheel steamers, each of from 500 to 1,200 tons burden, besides one vessel of large dimensions having iron frames planked with wood. It may be added that the quality of steel used in the vessels building was tested in my presence, the same being selected from the pile by myself, and was found to possess ductility and homogeneity not found in iron ship plates.

ARMOR-PLATE ROLLING MILLS.

The iron rolling mills of Great Britain are numerous, and in various parts of the kingdom. The mills prepared to roll armor plates, four to six inches thick, and of the usual dimensions, (15 feet by 4 feet,) are six in number, hereinbefore mentioned; they are, with one or two exceptions, of recent date, and all are additions to previously existing iron works. In England and France all armor plates for casing iron-clad vessels are made solid, *i. e.*, each plate or block is formed in one solid piece, not laminated or made up of several sheets bolted together. The first armor plates rolled were manufactured by the Park Gate Iron Works, situated near Rotherham, in the west riding of Yorkshire, on the borders of Derbyshire, for a number of batteries constructed for the English government during the Russian war period; those plates were four inches thick, but of comparatively small dimensions. The first iron-clad sea-going ship built for the British navy (the *Warrior*) was cased with plates four and a half inches thick, manufactured by the Thames Iron Works Company, under the hammered process, and as follows: scrap-iron of the best description was selected, piled and hammered into blooms, then rolled into bars six inches wide by one inch thick; these bars were cut up, piled, and again hammered into slabs; several of these slabs were then put together and heated and hammered to the required width, the process being repeated until the plate had attained the necessary thickness and length. Nine hundred and fifty tons of these plates cover the armored portion of the *Warrior's* sides, and of the same quantity used for the armoring of the *Black Prince*; 100 tons were rolled, the balance forged as before. For the *Defence and Resistance*, all but six plates were rolled.

Subsequently the plate committee, appointed by the British government for the purpose, caused a series of experiments to be made with plates fabricated both by the rolling and hammering process, which fully demonstrated the superiority of the former. An order, consequent upon this deduction, was immediately issued from the admiralty condemning all the hammered plates made for iron-clads then under construction, since which time all plates for the British iron-clads have been rolled.

The largest armor-plate mill, and the one most successful in the manufacture of heavy plates, is that of Messrs. J. Brown & Co.

In all the mills the same method of manufacture is observed and the same type of machinery employed; the only difference being in their capacity. Messrs. J. Brown & Co.'s mills embrace four sets of rolls and eight furnaces, none of the other mills possessing more than one or two sets of rolls and two to four furnaces. The machinery and appliances will be noticed under the head of the Mersey Steel and Iron Works.

The process of the fabrication of rolled armor plates is as follows: Bars of about twelve inches wide and one inch thick are first rolled; five of these are then piled and rolled into a rough slab; two of these slabs rolled into a plate; four of these plates then rolled into another plate; and finally four of these last-mentioned plates are piled and rolled into the finished plate; in very thick plates the piling is carried still further.

STEEL AND IRON WORKS OF MESSRS. J. BROWN & CO.

These works, located at Sheffield, are the most extensive and important of their kind in Great Britain. An idea of their capacity may be formed from the following statistics, taken on the spot: area covered by the principal works, 18 acres, besides additional ground occupied in another locality; number of men employed, 3,024; quantity of coal consumed weekly, 3,600 tons. There are 60 puddling furnaces and 42 steam-hammers, the weight of drop of the largest being 20 tons, with a fall of 8 feet; weight of anvil block being 161

tons; the frame of this hammer is of wrought iron; the weight of drop of second sized hammers is 12 tons, the hammers decreasing in weight until they reach the smallest size in common use. Armor-plate rolls, two preparatory and two finishing sets; the latter are of the following dimensions: 1st set, 8 feet length of barrel, between the journals, by 32 inches diameter; 2d set, the same length by 30 inches diameter.

The establishment is divided into several departments, the principal of which are the steel converting department, the Bessemer process steel department, steel rolling mills, rail mills, railway buffer manufactory, steel forge employed making steel shots and other steel forgings, iron forge armor-plate mills, iron rolling mills, and machine and armor-plate planing and slotting shop.

This establishment is prepared to roll heavier plates than any other existing. One plate for the embrasure of a fortification, measuring $13\frac{1}{2}$ inches thick by 14 feet long and 6 feet wide, was just completed at the time of my visit; there were also many others for Russian fortifications, measuring $7\frac{1}{2}$ inches thick, 4 feet wide, and varying in length from 24 to 34 feet. The two sets of rolls in which these plates were made are situated on a plane and in a straight line with each other, but separated some 25 feet; they are driven by the same machinery, and are connected in the usual manner of working trains of rolls in iron mills. It is in consequence of the long connexion between the two sets of rolls that one set can accommodate plates of such extreme thickness.

MERSEY STEEL AND IRON WORKS.

These works are located at Liverpool, and have long occupied a prominent place in the iron trade. They were originated about the year 1810 by the father of the present able manager and scientific iron master, Mr. William Clay.

At present the works constitute five several departments, viz., the forge, the armor-plate mills, the steel works, the iron rolling mills, and the machine works.

The ground occupied forms an irregular parallel gram, measuring about 700 feet in length by 500 feet in width; it is divided into three unequal portions by two public streets running north and south and east and west, respectively, but direct communication is maintained between the divisions by means of tunnels under the streets. The space appropriated to the forge covers an area of about 42,140 square feet. It contains eleven steam-hammers, eight of which are Rigby's and two Morrison's; the largest of these hammers is of the following dimensions: width between the upright supporting columns, 25 feet; weight of hammer and piston, fifteen tons; diameter of piston-rod 20 inches, and length 15 feet 2 inches, with a fall of 9 feet. The frame is of wrought iron. The anvil-block is $10\frac{1}{2}$ feet square on the base, $6\frac{1}{2}$ feet in height, and weighs 62 tons. The total weight of this instrument, including bed-plates, frame, and anvil-block, is 130 tons. The second sized hammer has a weight of piston and hammer of eight tons, with a fall of nearly 7 feet; width between upright supports, 14 feet 6 inches; diameter of piston-rod, 15 inches, and 7 feet 6 inches long; height of hammer and frame, 23 feet. The anvil-block is 9 feet square at its base, and weighs $32\frac{1}{4}$ tons. Total weight of metal in the apparatus, including bed-plate, framing, and anvil-block, upwards of 70 tons. Besides these, there are nine other steam-hammers in the forge department, weighing, respectively, three, six tons each; one, five tons; one, $2\frac{1}{2}$ tons; one, $1\frac{1}{2}$ ton, and two of smaller proportions. The furnaces belonging to the hammers are of the usual types; the largest 17 feet, or, including the neck, 24 feet in length and 8 feet wide, with a draught flue 56 feet in height. The cranes are of wrought iron, and unsupported from the top, and, as usual in such forges, there are two to each large hammer. One crane is 24 feet in height above ground; but, being sunk 12 feet in solid foundation below ground, the entire height of the upright shaft is 36 feet. This crane is a double, rectangular, tubular one, constructed entirely of plate iron, each entire side of the tube be-

ing one sheet; on the upper side of the horizontal arm there are two travelling carriages to move the mass of metal held in suspension forwards or backwards. By a combination of these independent motions, all of which may be applied simultaneously, the largest mass of metal can be rotated with the whole fabric and swung round from the furnace under the hammer, and *vice versa*, lifted, poised, or laid down at any desired spot with accuracy. Immediately adjoining the forge department is the building in which the heavy shafts, forgings, and armor plates are turned, planed, and prepared for service. It forms a parallelogram, the dimensions of which are about 200 feet long by 54 feet wide, and is a one-story building of lofty elevation.

As an instrument of application in the way of lifting and carrying, common to such establishments, a high level railway, supported on lofty pillars, runs from end to end of the building, on which a self-acting, travelling crane, capable of lifting thirty tons, traverses the whole length. The entire floor of the building is occupied by heavy machinery and the work appertaining to it. In the central portion of the floor stands a gigantic planing machine, having a travelling table 40 feet long. The southeastern portion of the shop is devoted to the working accommodation of two immense lathes, which are of sufficient length to take in a shaft 65 feet long; they are geared and worked in the usual manner, and in them the heavy crank and other shafts are turned.

This establishment has not any machine for turning pins or wrists of crank-shafts like those in the establishment of Messrs. Pen, Mauclslay & Mazeline. The southwestern or opposite portion of the shop is occupied by lathes of a similar kind, but of less power and smaller dimensions, although still of such magnitude as to entitle them to the appellation of large.

Immediately to the north of the vast planing machine is one of recent construction, adapted for planing and turning armor plates. This machine is capable of taking in armor plates 20 feet long by 4 feet wide, and of any thickness. The remaining portions of the shop are supplied with smaller lathes, drilling, and slotting machines, and other necessary instruments.

THE ARMOR-PLATE MILL.

As previously stated, the machinery employed in the British armor-plate mills is identical, and the furnaces and appliances similar. A brief description of one suffices for all. The rolls employed and the housings containing them differ from those usual in ordinary plate and sheet-iron mills only in dimensions. The mode of rolling the plates differs in the fact, that instead of the rolls revolving continually in one direction, they are reversed every time the plate is passed between them. This is accomplished, not by reversing the engine that drives them, but by shifting a clutch and throwing out of gear one set of driving wheels to stop the revolutions of the rolls, and again throwing in another set of wheels to produce an opposite motion. To effect this five cog spur wheels are employed, the largest of which is 12 feet diameter by 18 inches broad on the face; the next, 3 feet 6 inches diameter by 18 inches broad, and the rest near the dimensions of the last-named, but varying. The rolls employed in this mill are 30 inches in diameter and 8 feet long in the barrel. The foundations for them are built from a considerable depth of solid stone. On this foundation is a framing of oak, on which is laid a cast-iron bed-plate bolted to the stone foundation; on this bed-plate are secured the housings. The total weight of metal in the whole apparatus, including fly-wheel and shafts, is estimated at 300 tons. The machinery is driven by two short stroke, badly proportioned engines geared at right angles to each other; altogether the whole arrangement is complex, heavy, and unscientific, and so far inferior to the simple, light, and comparatively cheap arrangement introduced by Mr. William McLain into the armor-plate rolling mill of Mr. M. Moorhead, of Pittsburg, Pennsylvania, that any detailed de-

scription would be simply superfluous. The furnaces for heating the plates, situated on either side the rolls, are of ordinary construction, but of large dimensions, the interior area being 14 feet by 9 feet. The plates, after being heated, are conveyed from the furnaces to the rolls on long iron trucks, which travel on grooved tramways on an inclined plane descending to the rolls. The works contain forty-two puddling furnaces, and that portion of them devoted to the manufacture of bar, rod, angle, and plate iron is similar in all respects to other mills of the kind, the only peculiarity being a steam travelling crane, having engine and boiler attached, mounted on rail tracks laid on the surface of the ground through the mill; this is found convenient to pick up, carry, and deposit weights from, to, and at any desired position.

Having thus glanced at what may be termed the plant of the establishment, it may be added that so long ago as 1845 these works forged a wrought-iron gun of 12-inch bore for the United States steamer Princeton, which gun is now lying in the Brooklyn dock-yard. They also, in 1856, fabricated the "Horsfall gun," which, after lying unused for several years, was recently again brought into notoriety by target practice at Shoeburyness. This gun is a smooth-bore muzzle-loader, of the following dimensions: length, 15 feet 10 inches; length of bore, 13 feet 4 inches; diameter over chamber, 3 feet 7 inches; diameter of bore, 13 inches; weight, 53,846 pounds. They have recently forged the Mackay guns, having 8-inch bore. These guns are forged hollow by means of bending broad plates to the proper curve, laid and welded upon a barrel made of rolled staves, and after being turned they are banded with hoops forged hollow and bored out.

FORGES IN GLASGOW.

In this city are two extensive forge establishments, the Lancefield and the Parkhead; the latter comprises also iron and armor plate mills, and may be briefly noticed as follows:

The establishment covers about twelve acres of ground, and is divided into three departments, viz: the forge, armor-plate, sheet and bar iron mills, and that for planing and turning heavy forgings and armor-plates.

The forge possesses thirteen steam hammers, most of which are of Rigby's pattern, the heaviest of them being seven tons weight of drop; the heavy cranes are of wrought iron, and operated by two small steam engines to each. The armor-plate and iron mills under one roof occupy a building three hundred feet long by one hundred and sixty feet in width; the armor-plate rolls are eight feet long in the barrel by twenty-six inches diameter; there are three larger pairs of rolls, and these, together with all other appliances, are of the usual variety found in mills of a like nature. These works turn out a large amount of heavy forgings and armor-plates for the British navy, foreign navies, and commercial purposes, and, when so ordered, turn, plane and finish the plates.

ELSWICK WORKS.

The works under the above name, situated at Newcastle-upon-Tyne, constitute the engine, hydraulic and gun factories of Sir William G. Armstrong. They cover a large area of ground, and occupy many extensive and magnificent buildings.

Through the kindness of Mr. John Rogerson, a highly respected and wealthy iron-master and ship-owner of Newcastle, who accompanied me, I had the privilege rarely accorded strangers of inspecting the whole of the works, and also the benefit derived from the explanation of every peculiarity, in the machinery or otherwise, incident to the manufacture of those particular guns and projectiles. Then and now it was and is a matter of regret that my limited

time in Europe prohibited my remaining in Newcastle sufficiently long to make descriptions, necessarily valuable, of works so interesting and important.

The foundry, but recently completed, is regarded in its entirety as the most perfect in England, or indeed in Europe; the building, by observation about three hundred and twenty feet long and two hundred feet broad, is lighted from the roof and sides during the day, and at night from above by gas.

Three cupolas in a separate building are located centrally outside the rear walls. The cranes from Sir William Armstrong's designs are unsupported by top-bearings, and, together with the lifts, are operated wholly by hydrostatic action; a single boy attendant on each can, by the mere movement of a lever, with accuracy and a rapidity unknown in ordinary foundries, revolve from the cupolas to the pits, lift, poise or lay down any weights the cranes are capable of lifting.

The next noticeable feature is the forge, where all the steel used for the barrels or interior cylinders of the heavy guns is rehammered after it has been received from the steel works. Several steam hammers are contained in this forge, nearly all of the Morrison type and manufacture, the largest having ten tons weight of drop, with a fall of nine feet, to which additional force is given by the admission of steam above the piston, causing a weight of blow of sixty-five tons, an excess of force over any other hammer in Europe, except, perhaps, in the steel works of Herr Krupp, at Essen, in Prussia.

A peculiarity in this forge is a recently constructed furnace of considerable dimensions, in which the heat generated is entirely from gas; the forgings consequently are here brought to welding heats without sustaining injury from the action of sulphur and other deleterious matter contained in coal. The gas for this furnace is manufactured in the works, but the economy of the process at the time of visit my was undetermined; the experiment is, however, considering the difficulty of procuring perfect materials for wrought-iron or steel guns, of considerable importance.

The erecting shop, boiler shop, and ordnance department of this establishment are all superior, and the machinery in them of the best description. The guns manufactured at these works known as the Armstrong guns have frequently been described in books especially devoted to such subjects; also the peculiarities of these and all guns manufactured are known to our ordnance officers; still it may not be uninteresting to mention that now quite a number of guns, denominated six hundred pounders, have already been made, and more are under construction. In these guns the distinctive feature of the Armstrong principle only is retained, viz: the system of banding by cylinders made of wrought-iron coils shrunk on the barrels. These guns are muzzle-loaders, and rifled on the shunt principle; the inner barrel is made from one solid ingot of *cast steel*, rehammered at these works; it is then turned, hooped with cylinders, and trunnioned in the same manner as other Armstrong guns; the bore is 13.3 inches in diameter, and is the entire length of the gun; then closed at the breech by a wrought-iron plug, behind which is a wrought-iron disk, faced with steel and screwed into the breech-piece.

The weight of the gun is 51,296 pounds, and the maximum charge of powder 90 pounds.

THE TOOL AND GUN MANUFACTORY OF MESSRS. J. WHITWORTH & CO.

This establishment, so long noted for the superiority of its machine tools, and recently for the manufacture of ordnance, is situated at Manchester.

It forms two distinct departments, viz: that for the manufacture of machines, and the gun factory, which departments are again divided into others.

The tool factory.

These works occupy several buildings, viz: the foundry, which is unimportant; the smithery, which, as regards appliances, is singular in containing two sawing machines for the purpose of cutting red-hot bars and rods of iron; and also two forging machines; it has one small steam hammer, and the requisite number of smithery fires.

The erecting shop, or building in which machinery under construction is put together, is a one-story building, about 180 feet by 45 feet, and is lighted from the roof; it contains one overhead traveller, supported on cast-iron columns next the wall; this traveller and its carriage is worked either way by power from a shaft extending the whole length of the building, along which a feather moves, and by it the wheels giving motion to the carriage are turned; there are also two revolving cranes. Another building contains planing machines exclusively.

The machine shop proper: it is about 200 feet long by 50 feet in width, five stories high, and stocked on every story with machines and tools of various types, all of them being, it need scarcely be observed, of the very best description.

The chief feature of this department and what has distinguished it from others in Great Britain is, as before mentioned, the superior character in design, material, and accuracy of workmanship of the machine tools there manufactured. Mr. Whitworth is a celebrated mechanical engineer, and the workmanship at his establishment has attained a state of perfection seldom found elsewhere.

The gun factory.

The Whitworth guns are now manufactured to a considerable extent. The principles of construction of this gun and its distinguishing features may be briefly noted as follows: 1. It is constructed entirely of homogeneous mild cast-steel. 2. The inner barrel is cast hollow and afterwards hammered in that form; then turned and bored. 3. It is hooped with short cylinders, fabricated in the same manner as the barrel, over which at the breech other hoops or cylinders, of a higher quality and harder metal than that composing the barrel, are placed, the trunnions being attached. 4. The cylinders are not shrunk, but forced on cold by hydraulic pressure.

The largest guns are rifled muzzle-loaders, the bore hexagonal, and 9 inches in diameter, extending throughout; the breech is closed by a plug, screwed not only into the inner tube, but also into the hoop or cylinder covering it, and in some instances into the end of three distinct cylinders. The outer cylinders being placed on slightly tapering, and all joined by the plug, it is not possible to blow the latter out.

The materials for these guns are furnished chiefly by the steel works of Herr Krupp, at Essen, Prussia, and great care is exercised in their selection. The guns are fitted and finished with great accuracy, and should bear the strain of the heaviest charges and constant firing for years; if not, the cause will be found either in the form of bore or imperfection in the metal used, or both; for guns manufactured on this plan, having cylindrical bores and from perfect metal, should, if the combined cylinders are respectively of their proper tension, fulfil all requirements.

ENGINE ESTABLISHMENT OF MESSRS. JOHN PENN & SONS.

These works occupy in the marine engineering much the same position as the Millwall company do in iron ship-building, and are the earliest in tradition and first in name and magnitude, not only in England but in Europe.

The works form two separate establishments: one at Greenwich, comprising

the engine factory foundries, and smithery, whilst the boiler manufactory, forming the other, is at Deptford.

I was indebted to the attention of a gentleman connected with the establishment, who accompanied me through the works, for explanations of its peculiarities, but time again prevented my making such close inspection as to enable me to record detailed, correct descriptions of objects of interest in an establishment of such magnitude.

The works at Greenwich cover about nine acres of ground, having within the last few years been greatly extended and partially reconstructed.

The departments, as in like establishments, embrace drawing-rooms and offices, pattern shops, foundries, smitheries, machine shops, and erecting shops. Of these the most noteworthy are the machine and erecting shops, which are located in a one-story brick building, of lofty elevation, roofed in four spans; three rows of columns divide the building into four compartments, each 250 feet long by 50 feet wide; total dimensions of the building, 250 feet by 200 feet. Light is admitted by windows in the side walls, but principally through glass in the roof. Each row of columns supports a line of shafting extending the entire length, from which the driving power is transmitted to all the machines in the building.

In each of the compartments is an overhead railway, supported by the columns and walls, on which carriages travel conveying weights to or from any position. The building is replete with the very best and most approved machinery and tools designed, and on the largest scale. There is also a second machine shop, two stories high, furnished with machinery and tools of the best description for fitting and finishing all detailed parts pertaining to steam machinery. So complete are the number and variety of machines in both these shops that the use of files becomes unnecessary, and they are never used in the construction or completion of heavy or light engines. In a similarly constructed building is the smithery, which is admirably arranged and supplied with all the latest and best appliances and conveniences. The foundry is of ancient date, and, in convenience, far behind many others in England, yet the large castings turned out from it are, in soundness, smoothness, and perfectness, superior to any that ever came under my notice. In fact, all work done in the establishment is of superior order.

The boiler manufactory at Deptford is laid out on a similar plan to the buildings at Greenwich; it is, very justly, considered to be the best private establishment of its kind in Great Britain. The arrangements are in all respects superior, and it is amply provided with mechanical facilities of the best class; among others are machines for planing the edges of boiler sheets and self-acting shearing and punching machines. As an exception to the rule in boiler-making, the edges of all boiler sheets are here planed prior to riveting.

The works of Mr. John Penn were originated in the early part of this century, and about the year 1830 the manufacture of the steam engine was commenced; but the establishment did not in any way distinguish itself until 1840, when the admiralty decided on using the screw as the propelling power for British ships of war. Designs were sought from engine makers, with a view to construct a direct-acting engine, capable of attaining the high speed required, all parts of which should be under the water-line.

Among others, Messrs. Penn & Son responded and presented the design of the trunk engine, which was approved, and engines in accordance with it ordered for the *Arrogant* and *Encounter*. Soon afterwards the line-of-battle ship *Agamemnon* was supplied with the same variety of engines, and up to the present time the trunk engines have been applied to no less than one hundred and thirty vessels in the royal navy, including the iron-cased frigates *Warrior*, *Black Prince*, *Resistance*, *Defence*, *Achilles*, *Minotaur*, and *Northumberland*, the two latter having cylinders 113 inches in diameter and 4 feet stroke, and are denominated 1,350 nominal horse-power.

These trunk engines are almost exclusively used for vessels of the Spanish and Italian navies, built in England.

The type of engine employed by Messrs. Penn & Son to operate the screw is inferior in design, especially as regards radiating surface; but they have been and are constructed in such a superior manner, both as regards material and workmanship, and so often duplicated, that the parts found troublesome have from time to time been so altered and improved as to remedy former evils.

There are many other establishments engaged in the manufacture of marine steam machinery, some of them prominent and important; but the purpose has been to notice only those works engaged in the manufacture of iron or steel, or the construction of machinery having the best existing facilities.

SHIPS OF THE BRITISH NAVY.

According to a recent parliamentary return the strength of the British navy, on the 1st of January, 1864, was 975 ships of all classes; of these 72 are line-of-battle ships, mounting from 74 to 121 guns; 42 ships mounting from 60 to 74 guns; 94 ships of tonnage nearly equal to line-of-battle ships, but mounting only from 22 to 46 guns; 25 are corvettes, mounting 21 guns; and 500 vessels of all classes, including iron-clads, mounting from four to twenty-one guns. Not included in the above list are 185 screw gunboats, mounting two guns each.

The navy list or register shows only a total of 550 vessels, and the discrepancy is not accounted for. All the above-mentioned vessels, except the iron-clads and a few others, mount very small guns and have low rate of speed, and a large number of them are dismantled and laid up in the steam reserve at the several dock-yards.

The following list, which in reality comprises the strength of the British navy at the present time, carry their batteries in broadside, with the exception of four cupola vessels and five vessels constructed on the plan of Mr. Reed, the chief constructor of the navy, to carry their batteries amidships. The cupola vessels are regarded as floating batteries; there are also a number of other floating batteries, some of which were constructed during the Crimean war:

List of the iron and wooden armored vessels in the British navy.

* Were built by Messrs. Laird Bros. for the rebels, and afterwards purchased by the admiralty.

Plans and drawings exemplify the form, construction, and general arrangements, but structural peculiarities and many details worthy of notice can only be understood by inspection.

My limited stay admitted but of one visit to each of the vessels named; therefore descriptions cannot be expected, but a few general remarks may not be uninteresting.

The ships of the Minotaur and Achilles class are remarkable for fine lines, strength of construction, excess of motive-power, excellence of mechanical execution in workmanship, completeness of arrangements for the convenience of the officers and crews, ventilation of each vessel throughout, and in outfits.

The materials used are, as a rule, of good quality, especially the armor plates, about which rigid inspection and great care are exercised.

The Bellerophon is being constructed with double bottoms, connected with water-tight internal walls, thus making a double ship from end to end. Throughout the central portion, in which the engines and boilers are placed, the inner and outer bottoms or hulls are from three to four feet apart, in order that there may be ample space for cleaning and painting; the space between the bottoms or hulls is divided into numerous water-tight compartments, and will consequently form a series of buoyant cells, any one or more of which may be injured without the sea being admitted into others. Beyond the central portion of the ship, the lower deck forms the interior bottom, and the space below it is made available for stowage, by means of water-tight bulkheads, rising above the water-lines.

In all the vessels, either of wood or iron, the beams are iron, with knees attached, each beam, with its knee, being a solid piece; the beams of the upper decks are covered with plate-iron, from $\frac{3}{8}$ to $\frac{3}{4}$ inch in thickness, riveted to them, and on that the wooden decks are laid. In two vessels only, viz: those built for the rebels, are the wooden decks covered with iron. The gun-ports are 42 inches deep by 24 inches wide outboard, with the same depth inboard, but of greater width. They are unprovided with port-shutters, except those necessary to prevent the sea from washing in during rough weather. The armor in the Minotaur class of vessels is $5\frac{1}{2}$ inches thick; the plates are 15 feet in length by 4 feet in width, neatly joined together; behind them is a wooden backing of teak nine inches thick, all secured to the hulls of the vessels with through-bolts having counter-sunk heads and double-lock nuts inside. The hollow masts of the iron vessels constitute ventilation-tubes of the best kind, and advantage is taken of them to discharge the foul air from below decks; there are also foul air discharge-pipes of large size, and inlet-pipes arranged to receive the supply of fresh air from the spar decks, introduced into each compartment and state-room. Water-pipes are conducted overhead, on either side of the lower decks, with fire-hose attachments. Telegraphs are introduced into all departments, including the magazines. The spar-decks of the largest vessels are provided with three bridges and two chart-houses each, and the fire-rooms of those last built have each a cupola for heating shot. The capstans are operated and the anchors hoisted by independent engines situated on the forward lower decks. The motive engines are of the types common to English frigates, viz: Penn's trunk, Mauldslay's back-action, or Humphrey and Tennant's direct-acting. The boilers are of the fire-tubular variety, of precisely the same kind used in all English war sea steamers, duplicates of which are provided and kept in store for every important ship in commission, so that when an old boiler is to be removed from a vessel a new one is ready to replace it. The principal objections to the largest ships are—the difficulty in manœuvring such immense bodies, the expense of keeping them in commission, and the great draught of water they require; the latter evil, one common to all British armored ships.

About the 1st of April, 1862, or soon after the naval battle at Hampton Roads, the admiralty directed work to cease on all vessels then under construction in the dock-yards; subsequently a few of them were selected for iron-clads and altered from the original models, rebuilt and cased with iron, and are now comprised in the list of sea-going armored vessels. Those considered unfit for conversion still remain on the stocks in the condition in which they were when work was suspended on them—some in frame, and some partially and some wholly planked; they are as follows:

At Portsmouth... Dryad, 51 gun screw frigate.
 Harlequin, 6 gun screw sloop.
At Devonport... Robust, 89 gun screw ship, 3,176 tons.
 Istér, 36 gun screw frigate.
 Bittern, 4 gun screw sloop.
At Chatham... Reindeer, 6 gun screw sloop, 950 tons.
 Myrmidon, 4 gun screw vessel, 695 tons.
 Belvidere, 51 gun screw frigate, 3,027 tons.
 Bulwark, 89 gun screw frigate, 3,716 tons.
 Menae, 21 gun screw corvette, 1,857 tons.
At Woolwich... Dartmouth, 36 gun screw frigate, 2,478 tons.
 Sylvia, screw vessel, 695 tons.
 and others at Pembroke.

THE IMPERIAL NAVY OF FRANCE.

Description.	Steam.	Sailing.
Ships-of-the-line	37	7
Frigates	60	24
Batteries	21	..
Corvettes and avisos	142	..
Gunboats	70	..
Screw transports	50	..
Corvettes, brigs, schooners, and transports	..	79
Total	<u>380</u>	<u>110</u>

Of the sailing vessels, only some of the smallest class are in service as war vessels; the ships-of-the-line are hulks or prison-ships, and the frigates are partly in the reserve and partly used as transports.

The following list will show the strength of the imperial navy in armored ships:

THE IRON-CLADS OF FRANCE.

Afloat.

Name.	Nominal horse-power.	Cost.
Magenta	1,000	12,000,000 francs.
Solferino	1,000	12,000,000 "
Couronne	900	7,000,000 "
Normandie	900	7,000,000 "
Invincible	900	7,000,000 "
Gloire	900	7,000,000 "
Provence	900	7,000,000 "
Heroine	900	7,000,000 "

NOTE.—Of the above, the Couronne and Heroine, only, have iron hulls.

Building.

Name.	Nominal horse-power.	Remarks.
Savoie.....	900	
Revanche.....	900	
Surveillante.....	900	
Flandre.....	900	
Guyenne.....	900	
Gauloise.....	900	
Valoreuse.....	900	
Magnanime.....	900	
Taurea.....	900	Cupola.
(Unnamed).....	900	"
Protectrice.....	150	Private yard.
Impregnable.....	150	"
Embuscade.....	150	"
Refuge.....	150	"
Arrogante.....	150	"
Implacable.....	150	"
Opiniatre.....	150	"

Five vessels building at Toulon, two at Bordeaux, and one at L'Orient.

NOTE.—Several of the above are since completed.

Reserve.

Name.	Nominal horse-power.	Remarks.
Tounante.....	225	At Toulon.
Devastation.....	225	"
Lave.....	225	"
Foudroyante.....	225	Cherbourg.
Congreve.....	225	Brest.
Saigon.....	300	Rochefort.
Palestro.....	300	"
Peiho.....	300	"
Paixhans.....	300	"

Summary.

Vessels afloat.....	8
Vessels building.....	25
Vessels in reserve.....	9
Total.....	42

CONCLUSION.

We have neither such dock-yards as are to be found in England or France, nor such a collection of iron ship building yards as there is in Great Britain; the combined capabilities of all the iron yards within our limits not being equal to the first of the great iron ship building yards on the river Thames. The materials, of superior variety, we have in abundance, the resources of the nation in iron and coal being unlimited; but a proper constructive yard capable of turning out iron ships of any class is wanting. Under existing circumstances the best of our private yards could not construct one such vessel as the British frigate Achilles within three or four years: several iron gunboats, which were contracted for more than two years ago, are not yet completed, and will not be for

some months. Truly, therefore, may it be said, the want of a proper constructive iron yard is a national misfortune.

For the location of such a yard we have advantages, in our great rivers, not possessed by any European nation. *In an entirely secure position, far from the sea, in fresh water, and within easy reach of iron and coal*, an iron yard may be erected. These advantages are weighty and cannot be overestimated: still we have another advantage, the rise and fall of our tides being comparatively so small, we do not necessarily require basin accommodations—the most expensive of European dock-yard constructions—all we need in this regard being a position affording ample wharfage room.

Location does not belong properly to the subject-matter of this report, but cannot be considered entirely foreign to it, because it is the first and most important consideration. Government officials in England and France were free in expressing their opinions to me, that since the invention of guns capable of propelling destructive projectiles several miles, and the construction of armored ships, an inland location for a great dock-yard becomes almost imperative.

The advantages of fresh water for iron vessels to lie in when repairing and fitting out is another point to be considered, for it must be remembered that the adhesion of barnacles, oysters, and mussels to the bottoms of iron vessels, whilst lying still in sea-water, is rapid and excessive; in fresh water the iron is entirely free from them.

In England, after an iron war vessel is prepared for sea it becomes a necessity to dock her previous to sailing, for which there is ample provision, each dock-yard having a number of stone dry docks, at present 32 in all, but will soon number 44, besides as many belonging to private yards. On the Mersey alone are 24 dry or graving docks, eight of which are each upwards of 400 feet long; seven, each 500 feet; and two, each 750 feet; the latter capable of taking in two vessels at a time.

At present we have three stone dry docks and three floating docks belonging to the navy. Location being decided on, the second subject for consideration is the plan, and the creation of the works the third. Here grave responsibilities have to be incurred: such an important subject, in the shape of construction, has never yet been presented for the consideration of the department.

Our present navy yards have become what they are by gradual process of accretion, partly of permanent and partly of make-shift additions; the latter forced by war, the former in the more orderly schemes of peace. The total expenditure has been large, but the results comparatively small. None of them are sufficient for present requirements, being of small dimensions, and not possessing facilities for rapid and economical construction or repair and equipment.

The navy yard at Philadelphia does not cover as much ground as the basin water area in any one of the principal European dock-yards: it has only two covered building-slips, with the necessary wood-work shops and storehouses, and is not provided with any stone docks or means of repairing steam machinery.

The New York yard, the most important, does not at present cover more than twelve acres; it is provided with one stone dry dock and two building-slips, with ship-houses over them; the necessary wood-work shops, including a saw-mill, improperly prepared for heavy work on the upper, and light work on the lower floor; a smithery, foundry, boiler shop and machine shop; all improperly located, inferiorly arranged, and not possessing facilities for conveying materials and finished work to the vessels at the wharves or from one to another.

The smithery was formerly always filled with smoke, and the machine shop building was, until I caused several internal alterations to be made, unfit for the purpose, and, after all, is but a make-shift. Our new navy yard should therefore be a magnificent establishment, with capacity commensurate with, and sufficient to meet the demands of, a great naval power. It should be a model in perfection of detail in all its branches and as a whole, and so substantial as to

endure for generations. In laying out the works, the judicious arrangement of the buildings, separately and collectively, the proper adaptation and distribution of machinery, tools, and appliances, and the conveniences within and without the docks, building-slips and buildings, will in a very large degree depend whether ships of war are to be built and equipped rapidly and economically, or slowly and extravagantly.

It is estimated by the British dock-yard engineers, that with the same number of men, and in a given time, 50 per cent. more work is accomplished by means of their improved facilities than was twelve years ago. The importance, therefore, of exercising great care in laying out and constructing the new works must be seen.

I am directed by the order to give "descriptions of the machinery, tools, and appliances necessary for such an establishment as our government would need." As before stated, my sojourn in Europe was entirely too limited to permit the making of minute examinations of machinery necessary for the various branches of such an establishment; furthermore, previous to this being done, the nature and extent of the works should be first decided upon, when drawings of the necessary machinery, with their descriptions, can be furnished. From the information secured the department will comprehend the extent and capacity of the English and French dock-yards and their facilities for executing work.

The mode adopted by the British admiralty for securing plans for their great Chatham factory works was as follows: An able dock-yard chief engineer was selected and ordered to examine all the important engine factories and iron works in Europe, after which to make the general plans; this being accomplished and the drawings submitted to the admiralty, a board of five competent engineers were ordered to examine and decide on their merits and alter or revise or make new plans. The board adopted the original plans with alterations, after which they were approved and the works commenced. As previously stated, these works are designed to excel in capacity and completeness all similar works in Europe or elsewhere. The plans are good, but not free from criticism. We can, doubtless, originate an establishment that will excel the Chatham works.

In the creation of plans a better course might be pursued, viz: a commission of competent officers intrusted with the work instead of confiding it to one; for, however well qualified one officer may be to plan and arrange a specialty, yet when many branches are to be provided, each requiring peculiar knowledge, attainable only by study and experience, all to harmonize, and the whole, when completed, be faultless, the experience and judgment of several is more than desirable.

The sea-going armored ships of the British navy, built and building, number twenty; of these ten are heavy iron vessels and ten wood cased with iron, besides one iron and one wooden cupola vessel.

In concluding, I beg leave to say, that my best thanks are due to Thomas H. Dudley, esq., United States consul at Liverpool; Hon. F. H. Morse, United States consul, London; Benjamin Moran, esq., secretary United States legation, London; John Bigelow, esq., United States consul, Paris; and especially to Monsieur Edouard Liais, vice-consul at Cherbourg, for kind attention and assistance.

I have the honor to be, sir, respectfully, your obedient servant,

J. W. KING,

Chief Engineer United States Navy.

Hon. GIDEON WELLES,

Secretary of the Navy.
